THE OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 324—No. 1. TUESDAY, JULY 1, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Amendment to Trade-Mark Laws.

[PUBLIC—No. 263—68TH CONGRESS.]

[S. 3324.]

An act to amend section 5 of the Trade-Mark Act of 1905, as amended, relative to the unauthorized use of portraits.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the fourth proviso of subdivision (*b*) of section 5 of the act entitled "An act to authorize the registration of trade-marks used in commerce with foreign nations or among the several States or with Indian tribes, and to protect the same," approved February 20, 1905, as amended, is amended to read as follows: "*Provided further*, That no portrait of a living individual may be registered as a trade-mark except by the consent of such individual, evidenced by an instrument in writing, nor may the portrait of any deceased President of the United States be registered during the life of his widow, if any, except by the consent of the widow evidenced in such manner."

Approved, June 7, 1924.

Interference Notices.

U. S. PATENT OFFICE, *Washington, June 13, 1924.*

Vincent Visconti, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Joseph F. Malatesta, of 162 Commercial Street, Boston, Mass., for registration of a trade-mark and trade-mark registered June 13, 1916, No. 110,793, to Vincent Visconti, 217 Twenty-first Street, Pittsburgh, Pa., and a notice of such declaration sent by registered mail to said Vincent Visconti at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Vincent Visconti, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, June 17, 1924.*

Rice Cereal & Milling Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Cumpson-Doelman, Inc., 588 Louisiana Street, Buffalo, N. Y., for registration of a trade-mark and trade-mark registered August 28, 1917, No. 118,331, to Rice Cereal & Milling Co., Fort Wayne, Ind., and a notice of such declaration sent by registered mail to said Rice Cereal & Milling Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Rice Cereal & Milling Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, June 5, 1924.*

A. F. Cook & Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between Leland Coal Mining Company, 12 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered June 15, 1909, No. 74,035, to A. F. Cook & Company, 279 Dearborn Street, Chicago, Ill., and a notice of such declaration sent by registered mail to said A. F. Cook & Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said A. F. Cook & Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, June 5, 1924.*

Blue Bird Beverage Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between Citrus Products Company, 54–56 East Kinzie Street, Chicago, Ill., for registration of a trade-mark and trade-mark registered December 11, 1917, No. 119,641, to Blue Bird Beverage Company, 601 South Peters Street, New Orleans, La., and a notice of such declaration sent by registered mail to said Blue Bird Beverage Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Blue Bird Beverage Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

IN RE CARR.

No. 1,632. Decided March 3, 1924.

DOUBLE PATENTING.

The decision of the Commissioner of Patents holding that any difference between the applicant's machine and method and those of his prior patent resides in the leaf springs employed in the later machine, and since a claim covering this difference was allowed by the Examiners in Chief, to allow more would amount to double patenting, affirmed.

Mr. W. G. Henderson and *Mr. F. E. Dennett* for Carr.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before ROBB and VAN ORSDEL, Justices, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.:*

Appeal from a decision of the Patent Office refusing to allow 17 claims for patent, some of which were for a method and others for an apparatus for tamping newly-laid concrete, so as to compact it.

The machine employed is power driven and provided with a transversely-extending tamping bar yieldingly suspended from the frame of the carriage by means of stiff leaf springs. The bar is given rapid vertical vibratory movements by means of an eccentrically-weighted section of the flexible power-driven shaft. The function of the downward movement of the bar is to compact the concrete, while the rapid upward movement tends to produce a suction, causing the concrete to move upwardly. It is a theory of the invention that these opposite movements of the concrete tend to prevent the permanent formation in bridged relation of the stones therein, thereby facilitating compacting of the mass.

The Patent Office has found, and in that finding we concur, that any difference between this method and machine and those of applicant's prior patent, (No. 1,204,245, granted Nov. 7, 1916), resides in the leaf springs employed in the later machine. Claim No. 15, disallowed by the Examiner, covers these differences, and, since that claim was allowed by the Examiners in Chief, we agree with the conclusion reached that to allow more would amount to double patenting. It is unnecessary, in view of the carefully-considered decisions below, to extend this discussion.

The decision is affirmed.

Affirmed.

ADJUDICATED PATENTS.

(D. C. N. Y.) The Woolf patent, No. 971,097, for lollypop-manufacturing machinery, claims 1, 2, 4, and 12 *Held* valid, but not infringed. *Racine Confectioners' Machinery Co.* v. *Metro Chocolate Co.*, 297 Fed. Rep. 635.

(C. C. A. Conn.) The Alleyn patent, No. 995,758, for an antifriction tip for furniture, *Held* not infringed. *Lincoln* v. *Waterbury Button Co.*, 297 Fed. Rep. 619.

(C. C. A. Mich.) The Coffield patent, No. 1,270,379, for gearing for washing machines, claims 8, 9, and 10 *Held* invalid. *Coffield* v. *Sunny Line Appliance*, 297 Fed. Rep. 609.

1,388,450. (See Re. 14,380.)

1,394,256. (See 1,161,094.)

1,403,475. (See Re. 14,380.)

1,409,439. (See 1,048,819.)

1,435,911, W. S. Bechtold, Article of manufacture, suit filed Apr. 26, 1924, D. C., S. D. N. Y., Doc. E 29/127, *Newark Tortoise Shell Novelty Co.* v. *The Art Ivory Mfg. Co., Inc.*

1,442,146. (See Re. 14,380.)

1,442,147. (See Re. 14,380.)

1,448,550. (See Re. 14,380.)

1,450,080, L. A. Hazeltine, Method and electric-circuit arrangement for neutralizing capacity coupling, decree pro confesso in favor of plaintiff, sustaining patent, adjudging infringement, and granting injunction filed Apr. 30, 1924, D. C., S. D. N. Y., Doc. E 28/344, *Hazeltine Research Corp. et al.* v. *Dobert & Manoilowitch (Great Northern Radio Co.).*

1,487,181, F. H. Robinson, Lighting fixture, suit filed Mar. 29, 1924, D. C., E. D. N. Y., Doc. 1615, *National Metal Spinning & Stamping Co.* v. *Greenfield Electrical Supply Corp.*

Re. 14,380, E. H. Colpitts, System for the transmission of intelligence; 1,442,146, R. A. Heising, Modulating and transmitting system; 1,442,147, same, Production of modulated high-frequency oscillations; 1,231,764, F. Lowenstein, Telephone relay; 1,129,943, H. D. Arnold, Gaseous repeaters in circuits of low impedance; 1,448,550, same, Thermionic amplifier circuit; 1,403,475, same, Vacuum-tube circuit; 1,388,450, Colpitts & Arnold, Transmission of intelligence; 1,385,777, A. B. Clark, Grid circuits for electron tubes, suit filed Mar. 5, 1924, D. C., E. D. N. Y., Doc. 1567, *American Telephone & Telegraph Co.* v. *Wired Radio, Inc., et al.*

Des. 60,463, R. F. Lindemann, Husk for lighting fixtures, final decree entered on stipulation in favor of plaintiff Jan. 30, 1924, D. C., E. D. N. Y., Doc. 1373, *A. Vester Sons, Inc.*, v. *M. R. Horowitz (Standard Metal Spinning Co.).*

Des. 63,184, Des. 63,185, J. F. Kohler, Combined lamp shade and stand, suit filed Mar. 5, 1924, D. C., E. D. N. Y., Doc. 1566, *Metal Lamp Corp.* v. *S. Zises.*

Des. 63,185. (See Des. 63,184.)

Des. 64,229, H. Smolen, Shoe, suit filed Mar. 25, 1924, D. C., E. D. N. Y., Doc. 1602, *H. Smolen & Co.* v. *Eagle Shoe Mfg. Co., Inc., et al.*

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,296,361, C. B. Bryant, Highway-crossing signal, decided May 23, 1924, claims 1 to 8 and 10 to 34, inclusive.

Pat. 1,438,007, J. T. Welch, Line-distributing device for reels, decided June 9, 1924, claim 6.

TRADE-MARKS CANCELED.

168,362. Malt sirup for food purposes. Popel-Giller Co., Warsaw, Ill. Registered May 22, 1923. Canceled May 27, 1924.

176,930. Hosiery. Real Silk Hosiery Mills, Indianapolis, Ind. Registered December 4, 1923. Canceled June 10, 1924.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 1, 1924.

[VOL. 324. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 156,703. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE MASTER-CORD BELT COMPANY, Denver, Colo. Filed Dec. 14, 1921.

MASTER-CORD

No claim is made to the word "Cord" apart from the mark shown.

Particular description of goods.—Rubber and Fiber Cord Pulley Belts.

Claims use since May 19, 1919.

Ser. No. 158,635. (CLASS 43. THREAD AND YARN.) MANUFACTURERS SUPPLIES COMPANY, St. Louis, Mo. Filed Jan. 30, 1922.

WESTGATE

Particular description of goods.—Threads.

Claims use since Aug. 22, 1919.

Ser. No. 170,518. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BLACKSTONE MANUFACTURING CO., Newark, N. J. Filed Oct. 10, 1922.

TRUTH BRAND

No claim is made to the word "Brand" apart from the mark shown in the drawing. The picture shown is that of George Washington.

Particular description of goods.—Pure Vanilla Extract, Lemon Extract, Strawberry Flavor, Pineapple Flavor, Mocha Extract, Almond Extract, Orange Extract, Banana Flavor, Raspberry Flavor, for Food-Flavoring Purposes.

Claims use since about June 1, 1917.

Ser. No. 170,570. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE EUCLID CANDY CO., Cleveland, Ohio. Filed Oct. 11, 1922.

Cherry Flappers

Particular description of goods.—Candy.

Claims use since May 15, 1921.

Ser. No. 173,908. (CLASS 12. CONSTRUCTION MATERIALS.) AKTIESELSKABET AALBORG PORTLAND-CEMENT-FABRIK, Aalborg, Jutland, Denmark. Filed Dec. 28, 1922.

Particular description of goods.—Cements.

Claims use since July 23, 1890.

Ser. No. 174,114. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SPECIAL PRODUCTS LABORATORY, INC., O'Fallon, Ill. Filed Jan. 2, 1923.

FRUITART

Particular description of goods.—Flavors and Flavoring Extracts for Use in Making Confectionery, Ice Cream, Ices, Cakes, Pastry, and Icings.
Claims use since Jan. 1, 1914.

Ser. No. 174,380. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FRANK G. ARATA, Portland, Oreg. Filed Jan. 10, 1923.

CROCE VERDE

The cross in the trade-mark is colored green in accordance with the conventional lining for color, as shown.
Particular description of goods.—Olive Oil.
Claims use since May 7, 1912.

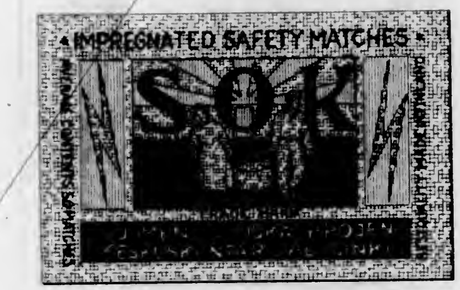
Ser. No. 175,228. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) WHEARY-BURGE TRUNK COMPANY, Racine, Wis. Filed Jan. 27, 1923.

The words "Cushioned Top," "Wardrobe," and "Racine, Wisconsin" are disclaimed apart from the mark as shown.
Particular description of goods.—Trunks.
Claims use since Dec. 15, 1922.

Ser. No. 175,280. (CLASS 37. PAPER AND STATIONERY.) UNITED CREDITORS' ASSOCIATION, Los Angeles, Calif. Filed Jan. 29, 1923.

Particular description of goods.—Printed Forms of Letters and Circulars.
Claims use since June 1, 1918.

Ser. No. 177,560. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) INTERLOCKING TOGGLE RIM CO., Fort Valley, Ga. Filed Mar. 16, 1923.



No claim is made to the exclusive representation of the goods apart from the mark shown.
Particular description of goods.—Automobile Rims.
Claims use since Feb. 13, 1923.

Ser. No. 177,928. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) SUOMEN OSUUSKAUPPOJEN KESKUSKUNTA R. L., Helsinki, Finland. Filed Mar. 23, 1923.

The perpendicular lining is intended to indicate red color, the checked or intersectional lining yellow color, and the solid-black black color, and the words "Average Contents 50 Matches" and "Manufactured in Finland", and "Impregnated Safety Matches" are disclaimed apart from the mark shown on the drawing.
Particular description of goods.—Safety Matches.
Claims use since May 20, 1922.

Ser. No. 177,929. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) SUOMEN OSUUSKAUPPOJEN KESKUSKUNTA R. L., Helsinki, Finland. Filed Mar. 23, 1923.

The perpendicular lining of drawing is to indicate red color, the checked or intersectional lining yellow color, and the solid-black black color, and the words "Impregnated Safety Matches," "Trade Mark," "Helsinki," "Average Contents 50 Matches" and "Best Quality Made in Finland" are disclaimed apart from the mark shown in the drawing.
Particular description of goods.—Safety Matches.
Claims use since May 20, 1922.

Ser. No. 177,992. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) M. C. PETERS MILL CO., Omaha, Nebr. Filed Mar. 24, 1923.

The drawing is lined to indicate red.
Particular description of goods.—Poultry Feeds.
Claims use since Sept. 15, 1907.

Ser. No. 177,994. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) M. C. PETERS MILL CO., Omaha, Nebr. Filed Mar. 24, 1923.

RED FEATHER

Particular description of goods.—Poultry Feeds.
Claims use since June 2, 1909.

Ser. No. 178,054. (CLASS 45. BEVERAGES, NONALCOHOLIC.) THE MOXIE COMPANY, Portland, Me., and Boston, Mass. Filed Mar. 26, 1923.

MOXIE

Particular description of goods.—Nonalcoholic, Multless Carbonated Beverage and Sirup for Making the Same.
Claims use since 1885.

Ser. No. 178,703. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ASSOCIATED MERCHANDISING CORPORATION, Newark, N. J., and New York, N. Y. Filed Apr. 7, 1923.

The lining of drawing expresses the color blue.
Particular description of goods.—Scissors.
Claims use since September, 1922.

Ser. No. 178,925. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LAWRENCE J. REID, Fort Morgan, Colo., assignor to Morgan Maid Canning Co., Fort Morgan, Colo. Filed Apr. 10, 1923.

MORGAN MAID
BRAND

Applicant makes no claim to the use of the word "Brand" apart from the other features shown in the drawing.

Particular description of goods.—Canned Fruits and Vegetables.

Claims use since July 31, 1922.

Ser. No. 179,494. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) SWANTEX PRODUCTS CORPORATION, New York, N. Y. Filed Apr. 21, 1923.

Particular description of goods.—Sanitary Napkins.

Claims use since Jan. 6, 1923.

Ser. No. 179,637. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) ARENDROTH BROTHERS, Port Chester, N. Y. Filed Apr. 25, 1923. Under ten-year proviso.

YORK

Particular description of goods.—Gas Ranges, Gas Stoves, Gas Heaters, Hot-Air Furnaces, Coal Stoves, Coal Ranges, and Cast-Iron Low-Pressure House-Heating Boilers for Steam or Hot Water.

Claims use since 1882.

Ser. No. 179,825. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) SELRITE PRODUCTS INC., New York, N. Y. Filed Apr. 27, 1923.

HOME-RUN KING

Particular description of goods.—Animated Figure Toys.

Claims use since about Feb. 23, 1923.

Ser. No. 180,786. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROBERT FREDRICK BONVILLAIN, Shreveport, La. Filed May 18, 1923.

B & B
Tube Radiator
Dope.

No claim is made for the words "Tube Radiator Dope" apart from the mark shown in the drawing.

Particular description of goods.—Preparation for Use in Automobile Radiators to Prevent Leaking.

Claims use since Feb. 1, 1923.

Ser. No. 181,940. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed June 13, 1923.

Makes Cotton
Look and Feel
Like Linen

No claim is made to the individual words except as comprised in the mark.

Particular description of goods.—Laundry Starch.

Claims use since May 1, 1923.

Ser. No. 183,007. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) ST. LOUIS PUMP & EQUIPMENT COMPANY, St. Louis, Mo. Filed July 9, 1923.

VISILUBE

Particular description of goods.—Hand-Operated Measuring Pumps for Oil and Other Liquid.

Claims use since Apr. 15, 1923.

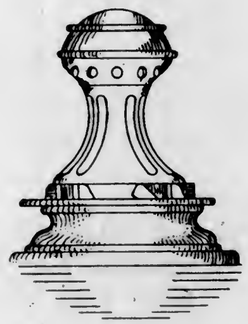
Ser. No. 185,544. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) VOSS & STERN, New York, N. Y. Filed Sept. 8, 1923.

LUSTRO satine

No claim is made to the word "Satine" apart from the mark shown in the drawing. No common-law right to the mark or any feature thereof is waived by this disclaimer.

Particular description of goods.—Cotton-Sateen Piece Goods.

Claims use since Aug. 10, 1923.

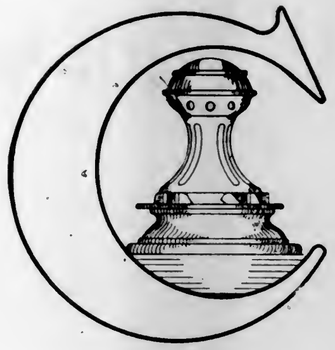


Ser. No. 185,747. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE EUROPEAN EXPORT CORPORATION, Washington, D. C. Filed Sept. 13, 1923.

COLONNE D'ORO

Particular description of goods.—Olive Oil and Olives.

Claims use since February, 1921.



Ser. No. 185,956. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE WILLIAM CRAMP & SONS SHIP & ENGINE BUILDING CO., Philadelphia, Pa. Filed Sept. 20, 1923.

Particular description of goods.—Brass and Bronze Castings, Babbitt Metal, Bronze Ingots, and Iron and Steel Castings and Forgings.

Claims use since Aug. 15, 1923.

Ser. No. 185,957. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE WILLIAM CRAMP & SONS SHIP & ENGINE BUILDING CO., Philadelphia, Pa. Filed Sept. 20, 1923.

Particular description of goods.—Metals and Metal Castings, Babbitt Metal, Bronze Ingots, and Iron and Steel Castings and Forgings.

Claims use since Aug. 15, 1923.

Ser. No. 185,959. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE WILLIAM CRAMP & SONS SHIP & ENGINE BUILDING CO., Philadelphia, Pa. Filed Sept. 20, 1923.

CRAMPADIUM

Particular description of goods.—Nonferrous Metals and Nonferrous Metal Castings and Forgings.

Claims use since Aug. 15, 1923.

Ser. No. 186,155. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PLOUGH CHEMICAL COMPANY, doing business as Gerstle Medicine Co., Memphis, Tenn. Filed Sept. 24, 1923.

St. Joseph's

Trade-mark "St. Joseph's."

Particular description of goods.—Medicinal Preparations—viz, Vegetable Compound Tonic, Antiseptic Powder, Kidney Pills, Sarsaparilla Compound, Blood Remedy, Chill Tonic, Cough Sirup, Pine-Tar Honey, Worm Sirup, Eye Water, Liver Sirup; Liniment, a Vegetable Compound for the Treatment of Colic, Cramps, Cholera, and Kindred Complaints; Aspirin, Liver Pills, Quinine Sulphate, Castor Oil, Spirits of Turpentine, Epsom Salts, and Sulphur.

Claims use since Jan. 1, 1893.

Ser. No. 186,251. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SHULL CANDY COMPANY INC., Lancaster, Pa. Filed Sept. 26, 1923.

SHULL'S

Particular description of goods.—Candy.
Claims use since Sept. 1, 1923.

Ser. No. 186,636. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) FRANKLIN HARDWARE CO. INC., New York, N. Y. Filed Oct. 6, 1923.

FRANKLIN

Particular description of goods.—Twist Drills, Taps and Dies, Milling Cutters, Gear Cutters, Metal-Splitting Saws, Files, Reamers, Hack-Saw Blades, Wrenches, and File Handles.
Claims use since Aug. 2, 1923.

Ser. No. 186,772. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) BURLOCK NON-SKID TIRE CORPORATION, New York, N. Y. Filed Oct. 10, 1923.

Burr-Lockt

Particular description of goods.—Rubber Tires and Rubber Pneumatic Tires for Motor Vehicles.
Claims use since Jan. 1, 1922.

Ser. No. 187,028. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) WALTER J. TERRY, Seattle, Wash. Filed Oct. 15, 1923.

T. D. S.

Particular description of goods.—Dental Supplies—Namely, Hand Pieces, Drills, Finishing Strips, Disk Holders, Stone Truers, Plate Swagers, and Face Bows.
Claims use since Mar. 1, 1922.

Ser. No. 188,182. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) COLUMBIA X-RAY & ELECTRIC CORPORATION, New York, N. Y. Filed Nov. 10, 1923.

ENDO-FORM

Particular description of goods.—Dental Casts, Forms, Models of Teeth, Gum Structures, and Display Stands Therefor, and Dental Plates and Bridgework.
Claims use since Jan. 1, 1923.

Ser. No. 188,285. (CLASS 38. PRINTS AND PUBLICATIONS.) VICTOR BUYERS' COMMODITY SERVICE, INC., Boston, Mass. Filed Nov. 13, 1923.

The words "The Pen That Writes Our Famous Market Letters That Save You Money" are disclaimed apart from the rest of the design.
Particular description of goods.—Weekly Commodity Market Publication.
Claims use since Sept. 4, 1923.

Ser. No. 188,286. (CLASS 38. PRINTS AND PUBLICATIONS.) VICTOR BUYERS' COMMODITY SERVICE, INC., Boston, Mass. Filed Nov. 13, 1923.

The Pen is Mightier than the Sword

Particular description of goods.—Weekly Commodity Market Publication.
Claims use since Sept. 4, 1923.

Ser. No. 188,290. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) E. MARVIN BAILEY, Houston, Tex. Filed Nov. 14, 1923.

SELF HEATING
RADIANT
HOT PAD

No claim is made to the exclusive use of the words "Self Heating" and "Hot Pad" apart from the mark as shown.
Particular description of goods.—Heat Pad for Medical Purposes.
Claims use since Oct. 10, 1923.

Ser. No. 188,434. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) RESEARCH CLUB, INC., Chicago, Ill. Filed Nov. 16, 1923.

RESEARCH

Particular description of goods.—Rubber-Tube Patching, Inner Tubes, Blow-Out Patches, and Radiator Hose.
Claims use since June 1, 1922, on rubber-tube patching; since Jan. 12, 1923, on inner tubes; since July 14, 1921, on blow-out patches; since Apr. 8, 1922, on radiator hose.

Ser. No. 188,435. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) RESEARCH CLUB, INC., Chicago, Ill. Filed Nov. 16, 1923.

Particular description of goods.—Rubber-Tube Patching, Inner Tubes, Blow-Out Patches, and Radiator Hose.
Claims use since June 1, 1922, on rubber-tube patching; since Jan. 12, 1923, on inner tubes; since July 14, 1921, on blow-out patches; since Apr. 8, 1922, on radiator hose.

Ser. No. 188,584. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) A. W. CADMAN MANUFACTURING CO., Pittsburgh, Pa. Filed Nov. 20, 1923.

No claim is made to the use of the abbreviations "Pgh. Pa." apart from the mark shown on the drawing.
Particular description of goods.—Bearing Metals.
Claims use since Oct. 31, 1921.

Ser. No. 188,630. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JAMES E. GROSS, Chicago, Ill. Filed Nov. 21, 1923.

ZE-A-GINE

Particular description of goods.—Powdered Mixture of Substances Used as a Cathartic to Relieve Suffering from Gallstone Trouble and Aids the Liver to Function Normally.
Claims use since Sept. 23, 1922.

Ser. No. 189,028. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ARABOL M'F'G CO., New York, N. Y. Filed Nov. 30, 1923.

Particular description of goods.—Oils, Greases, and Gums Used in the Treatment of Textiles for Finishing, Weighting, Softening, Sizing, Printing, and Waterproofing Same.
Claims use since about Apr. 1, 1887.

Ser. No. 189,148. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) WORLD NOVELTY CO., New York, N. Y. Filed Dec. 1, 1923.

World

Particular description of goods.—Glass Beads and Beads Not Made of Precious Metal, Beaded Bags Mounted on Frames Not Made of Precious Metal, Beading Needles, Bag Patterns, Chains Not Made of Precious Metal, Combs Not Made of Precious Metal, Girdles for Dress Ornamentation, and Novelty Braids.
Claims use since Oct. 1, 1921.

Ser. No. 189,334. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) NORTHWEST ENGINEERING COMPANY, Green Bay, Wis. Filed Dec. 6, 1923.

NORTHWEST

Particular description of goods.—Trench Excavators, Drag-Line Excavators, Hoisting Machines, Locomotive Cranes, Shoveling Machines, and Power Shovels.
Claims use since July 1, 1920.

Ser. No. 189,889. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GILLEN & BONEY, INC., Lincoln, Nebr. Filed Dec. 19, 1923.

Golden Rod

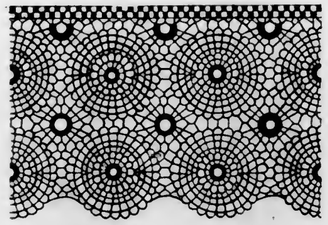
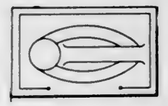
65,074. DOLL. REBEKAH D. MILLER, New York, N. Y. Filed May 6, 1924. Serial No. 9,506. Term of patent 14 years.



The ornamental design for a doll, as shown.

65,075. DOLL. REBEKAH D. MILLER, New York, N. Y. Filed May 6, 1924. Serial No. 9,507. Term of patent 14 years.

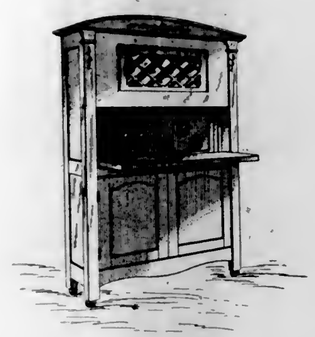


The ornamental design for a doll, as shown.

65,076. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 6, 1924. Serial No. 8,850. Term of patent 14 years.

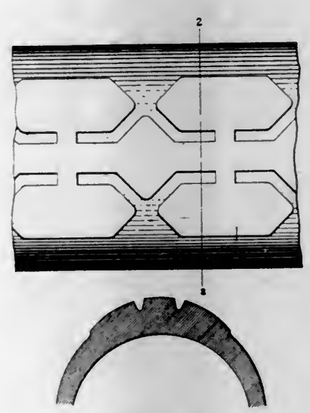
The ornamental design for lace substantially as shown.

65,077. POSTMARK STAMP. ARTHUR H. PITNEY, Stamford, Conn., assignor to Pitney-Bowes Postage Meter Company, Stamford, Conn., a Corporation of Delaware. Filed May 8, 1924. Serial No. 9,525. Term of patent 14 years.



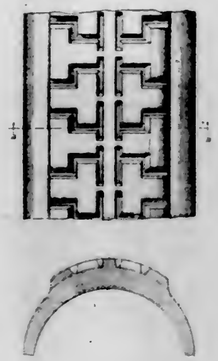
The ornamental design for postmark stamp substantially as shown.

65,078. INDIVIDUAL COFFEE MAKER. ERNEST M. PRESSLEY, Kansas City, Mo. Filed July 27, 1922. Serial No. 3,215. Term of patent 14 years.



The ornamental design for an individual coffee maker, as shown.

65,079. RADIO CABINET. ALBERT O. PRICE, Cosbocton, Ohio. Filed May 6, 1924. Serial No. 9,491. Term of patent 14 years.



The ornamental design for a radio cabinet as shown.

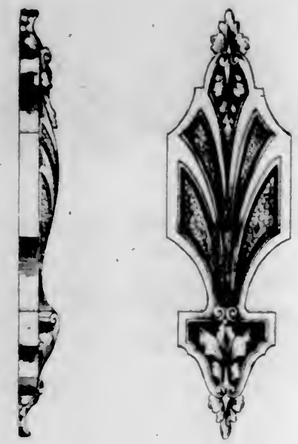
65,080. TIRE TREAD. HAROLD D. REICHARD, Akron, Ohio. Filed Feb. 8, 1922. Serial No. 605. Term of patent 14 years.

The ornamental design for a tire tread as shown.

65,081. PNEUMATIC TIRE. SAMUEL B. ROBERTSON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1922. Serial No. 4,580. Term of patent 14 years.

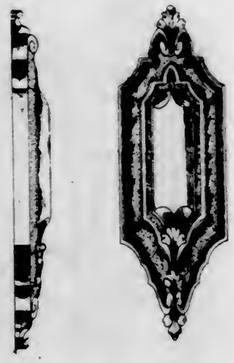
The ornamental design for a pneumatic tire as shown.

65,082. PAPER. THOMAS L. STONE, Newark, N. J., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1923. Serial No. 7,007. Term of patent 14 years.



The ornamental design for paper as shown and described.

65,083. BADGE OR SIMILAR ARTICLE. JOHN R. VOORHIS, New York, N. Y., assignor to The Society of Tammany or Columbian Order, New York, N. Y., a Corporation of New York. Filed May 7, 1924. Serial No. 9,519. Term of patent 14 years.

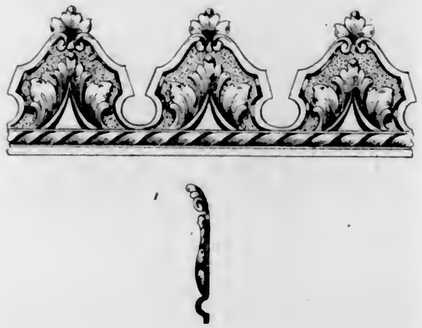


The ornamental design for a badge or similar article, as shown.

65,084. BRACKET BACKPLATE FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., a Copartnership composed of William Goldberg and Abe Goldberg, Newark, N. J. Filed May 9, 1924. Serial No. 9,537. Term of patent 7 years.

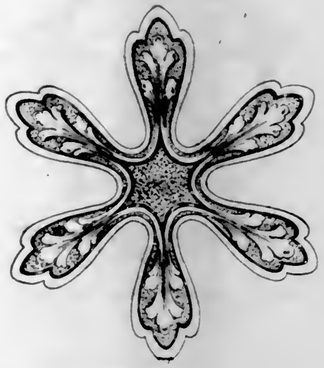
The ornamental design for a bracket backplate for lighting fixtures, as shown.

65,085. BRACKET BACKPLATE FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., a Copartnership composed of William Goldberg and Abe Goldberg, Newark, N. J. Filed May 9, 1924. Serial No. 9,538. Term of patent 7 years.



The ornamental design for a bracket backplate for lighting fixtures as shown.

65,086. BRACKET BACKPLATE FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., a Copartnership composed of William Goldberg and Abe Goldberg, Newark, N. J. Filed May 9, 1924. Serial No. 9,539. Term of patent 7 years.

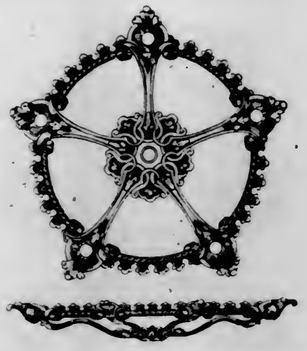


The ornamental design for a bracket backplate for lighting fixtures, as shown.

65,087. BANDING FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., a Copartnership composed of William Goldberg and Abe Goldberg, Newark, N. J. Filed May 9, 1924. Serial No. 9,540. Term of patent 7 years.

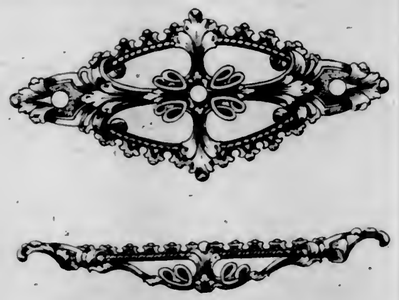
The ornamental design for banding for lighting fixtures, as shown.

65,088. HUSK ROSETTE FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., a Copartnership composed of William Goldberg and Abe Goldberg, Newark, N. J. Filed May 9, 1924. Serial No. 9,541. Term of patent 7 years.



The ornamental design for a husk rosette for lighting fixtures, as shown.

65,089. ARM FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., a Copartnership composed of William Goldberg and Abe Goldberg, Newark, N. J. Filed May 9, 1924. Serial No. 9,542. Term of patent 7 years.



The ornamental design for an arm for lighting fixtures, as show...

65,090. BODY FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., a Copartnership composed of William Goldberg and Abe Goldberg, Newark, N. J. Filed May 9, 1924. Serial No. 9,543. Term of patent 7 years.

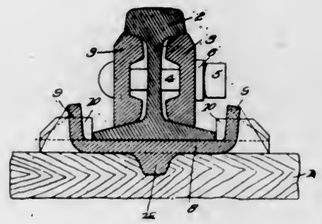
The ornamental design for a body for lighting fixtures, as shown.

65,091. BODY FOR LIGHTING FIXTURES. ERNEST A. WALKER, Newark, N. J., assignor to The G. & G. Fixture Co., a Copartnership composed of William Goldberg and Abe Goldberg, Newark, N. J. Filed May 9, 1924. Serial No. 9,544. Term of patent 7 years.

The ornamental design for a body for lighting fixtures, as shown.

65,092. LINGERIE CLASP. FRANK E. WILSON, East Cleveland, Ohio, assignor to The Wilson Fastener Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 29, 1923. Serial No. 8,190½. Term of patent 14 years.

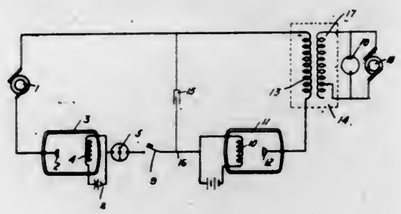
The ornamental design for a lingerie clasp, substantially as shown.



65,093. RADIO LOUD SPEAKER. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed Apr. 12, 1924. Serial No. 9,237. Term of patent 7 years.

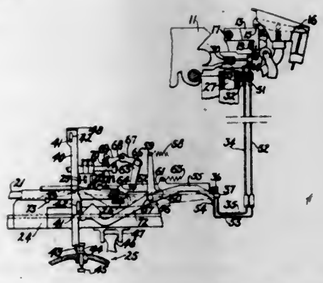
The ornamental design for a radio loud speaker, substantially as shown and described.

PATENTS



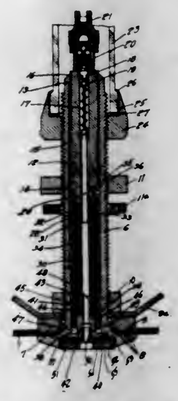
GRANTED JULY 1, 1924.

1,499,324. BASE PLATE FOR RAIL JOINTS. FRANKLIN E. ABBOTT, Buffalo, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company of New York, Inc., a Corporation of New York. Filed Nov. 26, 1920. Serial No. 426,427. 1 Claim. (Cl. 238—210.)



The combination in a rail joint of the two rails having their ends arranged adjacent and splice-bars secured to said two rail ends and a rail joint plate positioned beneath the meeting rail ends, said plate being provided with upturned marginal side flanges and a centrally longitudinally extending reinforcing rib depending from its under surface directly beneath the rail web and of a length corresponding to the normal spacing between ties and said plate being provided at its ends with bearing portions adapted to rest upon supporting ties, and provided at its extremities with upturned aligning lugs adapted to engage the opposite sides of the rail flanges, and each of said splice-bars being formed to be nonprojecting beyond the outer marginal edges of the rail flange in position of non-engagement with the aligning lugs, substantially as described.

1,499,325. MEASURING SYSTEM. CHESTER T. ALLCUTT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 1, 1917. Serial No. 189,346. 3 Claims. (Cl. 175—183.)

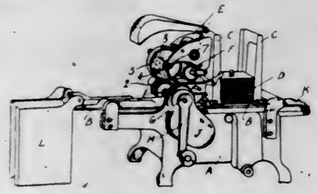


3. A measuring system comprising two sources of alternating voltage, means for changing said alternating voltages to unidirectional voltage, said means having the unidirectional sides thereof connected together and the alternating-voltage sides thereof connected to said sources, a condenser connected at one terminal between said means and at the other terminal between said sources, and indicating means disposed between said means.

1,499,326. COMBINED TYPEWRITING AND COMPUTING MACHINE. LOUIS L. ANSART, New York, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1921. Serial No. 520,799. 16 Claims. (Cl. 235—60.)

10. In combination, a traveling carriage, computing mechanism normally set for addition and including means for indexing numbers and a general operator for effecting computation of numbers so indexed, carriage-actuated means for determining computing zones, subtraction-setting means, and means, actuable by backing the carriage into a subtraction zone, to set the machine for subtraction, if set for addition.

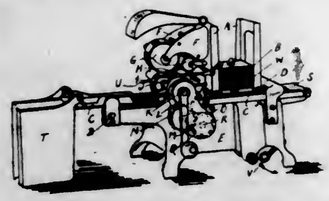
1,499,327. PRESSURE GAUGE FOR TIRES. ALFRED BADOWSKI, Charleston, W. Va., assignor, by mesne assignments, to Tiregage Valve Corporation, Charleston, W. Va., a Corporation of West Virginia. Filed Oct. 29, 1920. Serial No. 420,511. 4 Claims. (Cl. 152—11.5.)



1. In a pressure gauge for tires, the combination of a stem sleeve having a head at its inner end in which there is a socket extending from the inner face; a plunger in the sleeve; an inflation valve in the plunger; a rubber tube secured to the plunger; a spring secured to the plunger; an anchor plate in the socket; and means for securing the tube and spring to the plate, the assembled plunger, tube, spring and plate being adapted to be inserted from the inner end of the stem sleeve.

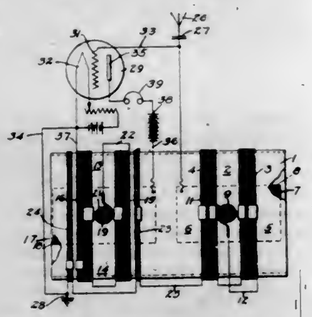
1,499,328. PRESSURE GAUGE FOR TIRES. ALFRED BADOWSKI, Charleston, W. Va., assignor, by mesne assignments, to Tiregage Valve Corporation, Charleston, W. Va., a Corporation of West Virginia. Filed Jan. 22, 1921. Serial No. 439,065. 1 Claim. (Cl. 152—12.)

In a pressure gauge for tires, the combination with a tire stem of a plunger in the stem indicating by its position the pressure in the tire; a spring secured to the inner end of the plunger; a rubber tube secured to the inner end of the plunger; and a head on the inner end of the stem, the stem and head having aligned openings, of an anchor piece insertable into the inner end of the openings and forming a closure for said openings, said anchor piece having a nipple for securing the tube and a shoulder for securing the inner end of the spring.



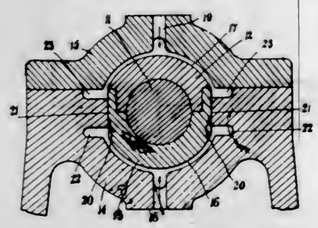
1,499,329. INKING DEVICE OR ATTACHMENT MORE PARTICULARLY FOR USE WITH ADDRESSING MACHINES. LOUIS MAURICE BARMAN, London, England, assignor to Roneo Limited, London, England, a British Company. Filed Aug. 21, 1922. Serial No. 583,420. 1 Claim. (Cl. 101—348.)

Means for obtaining an even film of ink for printing addresses comprising a set of distributing rollers carried in arms or brackets depending from a side standard, a pinion mounted upon the foremost distributing roller shaft engaging an idle wheel secured to one of the arms or brackets, a skew disc operable with said idle wheel, an intermediate distributing roller having its shaft resting in open bearings in the arms or brackets, and a collar upon which said shaft grooved for the reception of the face of the skew disc so that an oscillating movement may be transmitted to the intermediate distributing roller.



1,499,330. ADDRESSING MACHINE OR LIKE PRINTING MACHINE. LOUIS MAURICE BARMAN, London, England, assignor to Roneo Limited, London, England, a British Company. Filed Aug. 21, 1922. Serial No. 583,423. 7 Claims. (Cl. 101—49.)

1. The combination with an addressing or like printing machine having means to print an impression from a stencil card or the like, of means to engage a stencil and return it for repeated printing operations, comprising a member projecting into the path of movement of

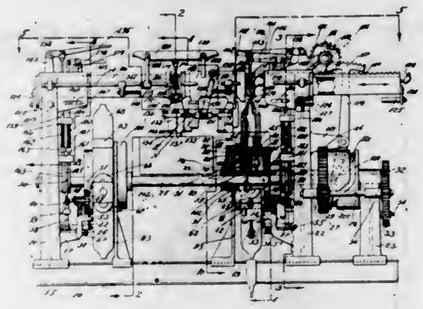


said stencil and means connected with said member to cause said member and stencil to be returned to initial position.

1,499,331. WIRELESS RECEIVING CIRCUIT. MAX C. BATSEL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 11, 1922. Serial No. 606,029. 14 Claims. (Cl. 250—20.)

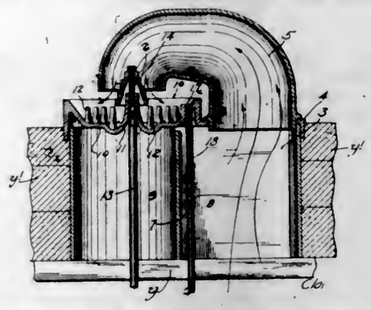
3. An evacuated electric device having input and output circuits, variable inductors individual to the respective circuits providing feed-back coupling therebetween and means for establishing such additional feed-back coupling that the degree of regeneration is substantially independent of all adjustments of the inductor in said input circuit.

1,499,332. FLUID-PRESSURE SUPPORT FOR BEARINGS. KARL BAUMANN, Urmston, England, assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 23, 1919. Serial No. 299,217. 8 Claims. (Cl. 64—47.)



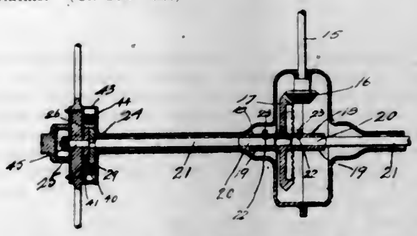
1. A floating bearing construction comprising a bushing or bearing member, a housing for the bushing or bearing member, said housing slidably engaging a portion of the bushing or bearing member and defining therewith a plurality of clearance spaces, a plurality of inlets in the housing for independently supplying fluid under pressure to the respective clearance spaces, and a plurality of outlets for fluid, whereby a bushing or bearing member cushioned on continuously-flowing fluid is provided.

1,499,333. BACKBAND BUCKLE. WILLIAM L. BECTON, Halls, Tenn. Filed June 9, 1923. Serial No. 644,434. 3 Claims. (Cl. 54—55.)



3. In a device of the character described comprising a pair of hinged plates adapted to move to open and closed relation, the said plates being transversely corrugated whereby the corrugations may register with each other when the plates are closed, one of the said plates being connected at its free end to a loop, a supporting hook hinged to the other plate at its free end and adapted for cooperation with the same loop to maintain the said binding plates in closed position, one of the said binding plates also having retaining hooks at its opposite marginal edges, tongues formed on the said loop element of the latch, and adapted to be out of engagement with said retaining hooks when the latch is open, the said tongues being adapted to move into engagement with said retaining hooks when the latch is closed, whereby the said binding plates will be moved into close relation, and a strip of webbing adapted to be threaded through the space between the corrugations of the said binding plates.

1,499,334. GLASS-MOLDING MACHINE. WILLIAM G. BERGMAN, Toledo, Ohio. Filed Dec. 24, 1919. Serial No. 347,204. 21 Claims. (Cl. 49—5.)



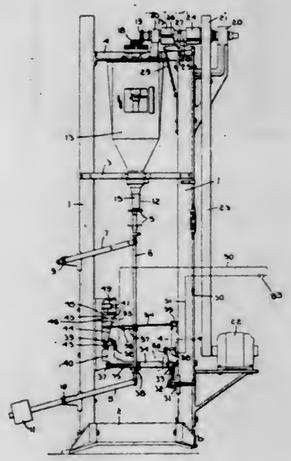
21. The combination with a glass furnace having a discharge neck of a glass molding machine having a set of finishing molds on each side of said neck, a single blank mold for each set of finishing molds, means for intermittently reciprocating said blank molds constructed and arranged to cause the blank mold for each of said sets to be reciprocated into alternate engagement with said discharge neck and its respective finishing molds to deliver a charge of molten glass to said finishing molds, means to release said charge from said blank mold as it is moved into engagement with its respective finishing mold, means to move said finishing molds into position to be engaged by said blank molds simultaneously with the movement of said blank molds, means to hold said finishing molds against movement during the stoppage of reciprocation of said blank molds, and means to admit fluid pressure alternately to each set of said finishing molds while said blank molds and finishing molds are stationary.

1,499,335. HYDROCARBON BURNER. CLARENCE A. BERKINS, Minneapolis, Minn. Filed Oct. 28, 1922. Serial No. 597,454. 2 Claims. (Cl. 158—91.)

1. A burner of the kind described comprising a bowl having on its bottom a plurality of laterally spaced upstanding combined heat-radiating and gas-deflecting pins or projections, a generating cone positioned centrally above the bowl, means for delivering fluid fuel to the upper portion of said generating cone, and an air pipe having a delivery end surrounding said cone and arranged to deliver air downward and between said pins.

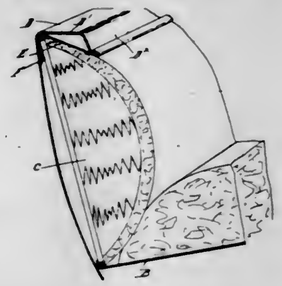
1,499,336. DIFFERENTIAL DRIVE CLUTCH FOR AUTOMOBILES. JASPER BLACKBURN, Webster Groves, Mo. Filed Jan. 12, 1920. Serial No. 350,783. 4 Claims. (Cl. 192—56.)

1. In a differential drive for automobiles wherein an axle is provided, and wheels loosely mounted on the axle and adapted to revolve freely thereon, a clutch member comprising a housing secured to a wheel, a disc loosely mounted within the housing adjacent said wheel, a disc rigidly secured to the axle and mounted adjacent the first mentioned disc and located within the housing, roller pawls carried by said discs and adapted to engage with recesses formed in the housing when the axle is revolved in either direction, said roller pawls adapted to be disengaged from the housing by the partial rotation of the fixed disc in relation to the loose disc, and means located on the loose disc for limiting the amount of rotation of the fixed disc in relation thereto.



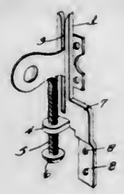
1,499,337. METAL ROOF FOR FREIGHT CARS. CARTER BLATCHFORD, Chicago, Ill. Filed May 14, 1923. Serial No. 638,841. 1 Claim. (Cl. 108—54.)

In a railway car having side plates, of a metallic roof comprising a plurality of roof sheets spaced apart from said side plates and extending transversely across the car, seam caps positioned above and connecting the adjacent roof sheets, supporting plates positioned over said side plates and supporting said roof sheets, chairs sup-



porting the roof sheets, seam caps and supporting plates upon the side plate, carlines passing along the center line of each roof sheet and supporting the roof sheet and supporting plate upon the side plate.

1,499,338. MACHINE FOR FILLING CONTAINERS. CHARLES L. BOND, Boston, Mass., assignor to Percy E. Ginn, Jamaica Plain, Mass. Filed Aug. 4, 1921. Serial No. 489,693. 14 Claims. (Cl. 226—25.)



1. In a machine for filling containers, the combination with a vertically-movable platform to receive the container to be filled, of means to deliver material to said container, said container and platform being depressed as the container fills, means including a clutch to operate the delivery mechanism, a device for holding the clutch in operation, a magnet for releasing said device, a circuit for the magnet arranged to be closed at two places, and means to close the circuit at one place when the platform is raised to bring the container into filling position and at the other place when the platform is lowered to a predetermined point.

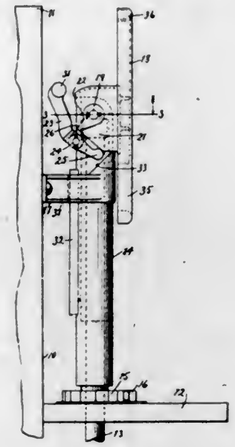
1,499,339. DETACHABLE UPHOLSTERY FOR METALLIC BODIES OF VEHICLES. PAUL E. BRENEMAN, Philadelphia, Pa., assignor to C. R. Wilson Body Company, Detroit, Mich., a Corporation of Michigan. Filed June 19, 1920, Serial No. 390,069. Renewed Dec. 12, 1923. 3 Claims. (Cl. 155—184.)

1. The combination with a vehicle body, of a turned flange forming a border rail of a desired contour with a channel on its inner face, an upholstery unit having a portion extending within said channel, and a member of angular cross section secured to said flange extending parallel to the facing of said upholstery unit to form a retaining seat therefor.

1,499,340. WINDOW-SHADE ADJUSTER. GEORGE T. BUNDY, Jr., Far Rockaway, N. Y. Filed Feb. 18, 1921. Serial No. 446,073. 1 Claim. (Cl. 156—24.)

In a device of the character described, the combination with a window frame and shade bracket provided with means whereby it may be secured to the window frame, of a fastening plate, a guide member carried by the fastening plate and including a vertically disposed portion having a longitudinally extending slot open at its upper end to allow the fastening plate to be withdrawn after the shade bracket has been secured to the window frame, a lug at the lower end of the guide member and provided with a screw threaded opening, an adjusting screw mounted in the said opening and having a screw head at its lower end, the said screw being adapted to be disposed parallel with the guide slot whereby the shade bracket mounted in the said slot will be engaged by the screw to be raised and lowered when the screw is adjusted.

1,499,341. DENTAL PULP TESTER. WILL J. CAMERON, Chicago, Ill. Filed Mar. 20, 1922. Serial No. 545,392. 6 Claims. (Cl. 174—89.)

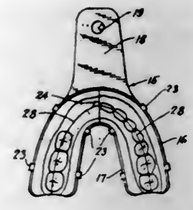


1. A surgical and dental appliance comprising an electric plug connector, a tubular body mounted therein and extending therefrom; said body being closed at the end opposite said plug, tubular bushings extending through the closed end of said body, terminals mounted in said bushings, and conductors leading from said terminals to the respective electrical elements of said plug.

1,499,342. BRAKE MECHANISM FOR RAILWAY CARS. PERCY B. CAMP, Maywood, Ill., assignor to Universal Draft Gear Attachment Company, a Corporation of Illinois. Filed July 11, 1923. Serial No. 650,872. 12 Claims. (Cl. 74—113.)

1. In a device of the class described, the combination of a car, a shaft including telescoping upper and lower

sections, a hand wheel hinged to the upper section, a pawl for locking the hand wheel in operative position

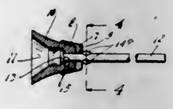


and means for effecting a release of the pawl when the upper section is lowered.

1,499,343. COMBINED STEPLADDER AND IRONING BOARD. FREDERICK A. CHARLAND, Lyndonville, Vt. Filed Mar. 2, 1923. Serial No. 622,381. 1 Claim. (Cl. 228—4.)

In a combined step ladder and ironing board, the combination of a ladder member comprising side bars and steps extending between the side bars, said side bars being provided with notches in their opposite edges, the notches nearer the free ends of the side bars being alined with one of the steps, an ironing board member pivotally connected with the ladder member, bracing levers pivotally mounted upon the ironing board member and adapted to engage the ladder member, stops on the ironing board member, legs pivoted between their ends upon the side bars of the ladder member, and rungs connecting the said legs at the ends thereof and adapted to engage the notches in the side bars of the ladder member in inactive position, and one of the rungs in active position of the legs engaging one of the stops on the ironing board member.

1,499,344. IMPRESSION TRAY. ISIDOR CHIGE and ISRAEL ZADIKOW, New York, N. Y. Filed Nov. 13, 1922. Serial No. 600,756. 2 Claims. (Cl. 32—6.)

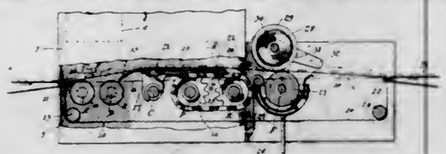


1. An impression tray comprising a channelled body having outwardly inclined walls, paired cells fitting the channel in said body, the adjacent walls of said cells meeting approximately at the center lengthwise of the channel, and hook shaped clips formed with the edges of the outer walls of said cells engageable with the corresponding walls of said body both interiorly and exteriorly of said body.

1,499,345. TEETH-CLEANING INSTRUMENT. EDWARD L. CHOTT, Chicago, Ill. Filed Oct. 13, 1923. Serial No. 668,262. 6 Claims. (Cl. 32—13.)

1. A device of the class described comprising a head having a socket at one end and a bore extending through the other end thereof and into the bottom of said socket; a tubular contact piece inserted in said socket with its bore in alignment with the bore in said head; and a stem inserted through the bore in said head and into the bore in said contact piece and constituting a stem for mounting said head, substantially as described.

1,499,346. TEETH-CLEANING INSTRUMENT. EDWARD L. CHOTT, Chicago, Ill. Filed Oct. 13, 1923. Serial No. 668,264. 3 Claims. (Cl. 32—13.)

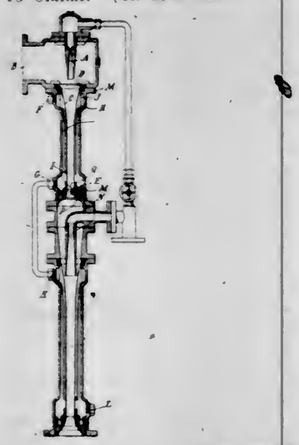


1. A device of the class described comprising a head having a socket at one end and a bore extending through the other end thereof and into the bottom of said socket, a contact piece substantially in cup form and inserted in said socket there being a bore extending through the bottom of said contact piece in alignment with the bore in said head; and a headed stem extending through the bores in said contact piece and head, the head of said stem being positioned in the bottom of said contact piece, and the stem extending beyond said head and constituting a mounting for said head, substantially as described.

1,499,347. BOTTOMER FOR CANDY-COATING MACHINES. JAMES CONTE, Bloomington, Ill. Filed Feb. 27, 1922. Serial No. 539,597. 8 Claims. (Cl. 91—2.)

1. The combination with an enrobing apparatus having a conting discharge nozzle and a reticulated conveyor movable past said nozzle, of an elevating frame comprising rails disposed longitudinally of said conveyor upon which said conveyor travels after leaving said noz-

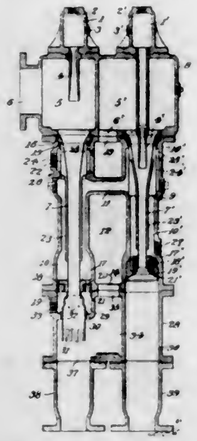
zle, devices for vibrating said frame whereby said conveyor is agitated to remove the surplus coating from the articles thereon, a transverse cylinder below and supporting said conveyor after the latter leaves said frame, means for supplying said cylinder with a film of coating and devices for maintaining said conveyor in contact with said cylinder while passing the latter.



1,499,348. SUPPOSITORY AND METHOD OF MAKING THE SAME. FREDERICK D. CRANE, Montclair, N. J., and WILLIAM JAY SCHIEFFELIN, New York, N. Y. Filed Sept. 3, 1918. Serial No. 252,450. 7 Claims. (Cl. 167—9.)

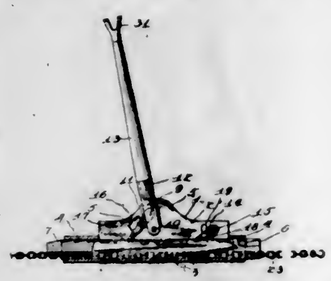
1. The process of making suppositories which consists in dissolving a higher fatty acid in an oil base adding an alcoholate of an alkali metal to the solution thus formed, and forming the resulting product into suppository form.

7. A suppository consisting of a paraffin oil base solidified by a sodium salt of a higher fatty acid in the presence of ethyl alcohol.



1,499,349. EJECTOR WITH COOLED WALLS. ALBERT DELAS, Paris, France, assignor to Delas Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 18, 1919. Serial No. 324,391. Renewed Nov. 17, 1923. 16 Claims. (Cl. 230—13.)

1. In an ejector, in combination, a nozzle for the motive fluid, an inlet for the fluid to be exhausted, a diffuser with which said nozzle and inlet communicate, a casing surrounding said diffuser but spaced therefrom and provided with a cooling fluid inlet and outlet passage, and means for substantially excluding cooling fluid from said diffuser but permitting expansion of the latter.

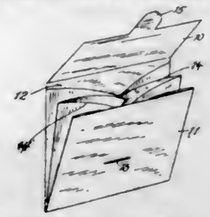


1,499,350. ELASTIC-FLUID EJECTOR. ALBERT DELAS, Paris, France, assignor to Delas Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed July 13, 1920. Serial No. 396,018. Renewed Nov. 15, 1923. 15 Claims. (Cl. 230—13.)

1. In combination in an ejecting apparatus, an ejector comprising a combined combining and diffuser tube having an inlet to which fluid to be ejected is delivered, and a nozzle for delivering motive fluid to said tube, a second ejector arranged to communicate with the source of fluid to be ejected and to discharge both the fluid ejected and the motive fluid delivered to it to the inlet of the first mentioned ejector, an interstage condenser into

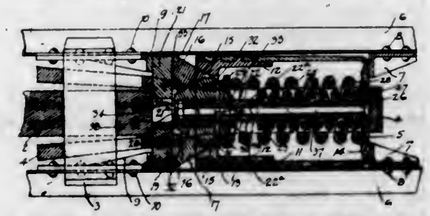
which said second ejector discharges and means for maintaining the ratio of the ratios of compression of said ejectors substantially constant over a considerable variation in the total ratio of compression of said apparatus.

1,499,351. VEHICLE PULLING DEVICE. JAMES LAMBERT DIBRELL, Little Rock, Ark. Filed Nov. 6, 1922. Serial No. 599,239. 8 Claims. (Cl. 254—71.)



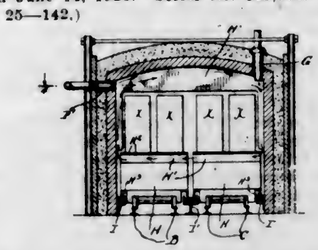
1. A vehicle pulling device comprising a body portion, means for securing the same in position, a pulling element slidably mounted in said body portion and provided with a series of link receiving recesses, means for moving said pulling element through said body portion, a chain the links of which are adapted to enter said recesses and means for attaching said chain to a vehicle, substantially as described.

1,499,352. ENVELOPE. ADOLPH DIETSCHE, New York, N. Y., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1921. Serial No. 503,607. 1 Claim. (Cl. 229—87.5.)



A blank adapted to be folded to form a hair net envelope having a plurality of pockets therein, said blank consisting of a central main section provided with a folding line to form the front and back panels of said envelope, a pair of semi-circular side sections projecting laterally from said main section, said side sections being provided with a plurality of folding lines radiating from

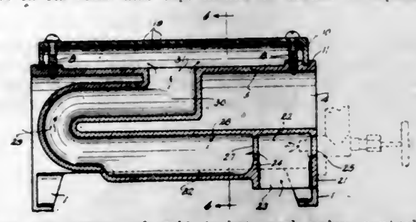
the ends of the folding line of said main section, and a portion of said side sections being cut out adjacent the meeting points of said lines to permit said side sections to be folded within said front and back panels to form a plu-



rality of overlapping members, which divide the folded envelope into a plurality of pockets and the top edges of which members extend downwardly in a curve from the tops of said panels toward the bottom thereof.

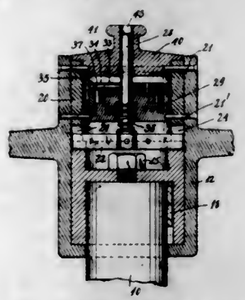
1,499,353. FRICTION DRAFT RIGGING. GEORGE BINET DOREY, Montreal, Quebec, Canada, assignor to William H. Miner, Chazy, N. Y. Filed Dec. 14, 1921. Serial No. 522,383. 15 Claims. (Cl. 213—26.)

1. A friction draft rigging having a follower, a depending portion fixed relatively thereto and extending therefrom, such depending portion having substantially parallel faces and frictional shoes in engagement therewith and transversely movable wedges acting thereon.



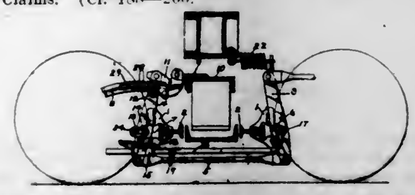
1,499,354. TWIN-TUNNEL KILN AND METHOD OF OPERATING THE SAME. CONRAD DRESSLER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., Cleveland, Ohio, a Corporation of New York. Filed June 14, 1923. Serial No. 645,307. 11 Claims. (Cl. 25—142.)

1. The method of regulating the rate of heat transfer from the hotter ware to the colder ware in the end portion of a twin tunnel kiln, which consists in setting up a forced circulation of the kiln atmosphere in said portion of the kiln along paths looped about the kiln axis.



1,499,355. HYDROCARBON-OIL BURNER. CHARLES E. ECKERLE, Birmingham, Ala. Filed Sept. 29, 1922. Serial No. 591,261. 6 Claims. (Cl. 158—65.)

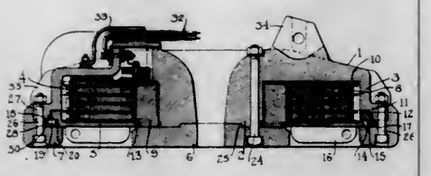
6. In a burner, an elongated arched hollow base casting having a reverse bend mixing passage cast thereunder in spaced relation to its side walls, said passage having a bottom air inlet at its intake end and having its discharge end opening upwardly through the middle of the casting, a jacket mounted on the base casting with its intermediate portion spaced therefrom and having burner slots in its sides and top, means to mount a vaporizer



along one corner of said jacket, and valve controlled means to discharge gas from said vaporizer in the form of a jet flowing above said air inlet into said mixing passage.

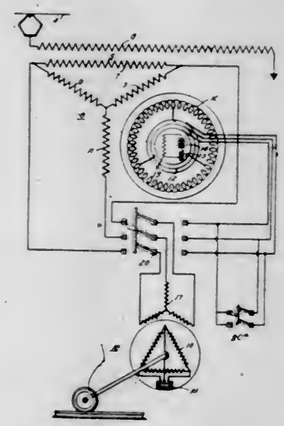
1,499,356. LOCK FOR AUTOMOBILE STEERING WHEELS. JOSEPH ERDEY, New York, N. Y., assignor, by mesne assignments, to The Safelock Co., Inc., Cleveland, Ohio, a Corporation of Delaware. Filed Apr. 6, 1921. Serial No. 459,041. 5 Claims. (Cl. 70—129.)

2. In a vehicle, a steering shaft, a sleeve fixed to the top of said shaft, a steering wheel having a hub loosely enclosing said sleeve and projecting axially therebeyond to provide a lock casing, a second sleeve fixed in the said projecting portion of the hub, said sleeves having co-acting notches in their adjacent ends, a bar extending diametrically across the hub and adapted to engage at its ends in the said notches, the notches in the second sleeve being of sufficient depth to permit of the bar being raised to clear the end of the first sleeve, the notches in the first sleeve being of less depth, a spindle extending axially of the hub and fixed to said bar, a spring normally urging said bar toward the first sleeve, and combination lock mechanism adapted to hold said spindle in position with the said bar clear of the notches in the first sleeve.



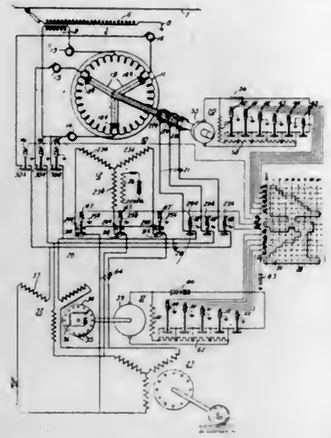
1,499,357. SLACK ADJUSTER. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 19, 1923. Serial No. 640,179. 4 Claims. (Cl. 188—200.

4. In a slack adjuster, the combination with a ratchet bar having teeth and a pawl engaging the teeth of the ratchet bar, of a pocket associated with said pawl and



having an inclined face and a ball resting on said face and movable on said face by momentum to a position for limiting the movement of the pawl relative to said ratchet bar.

1,499,358. LIFTING MAGNET. BERNHARD E. FERNOW, Jr., Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 12, 1920. Serial No. 358,294. 11 Claims. (Cl. 175—367.)



7. In a lifting magnet, in combination, an energizing winding, a magnet frame having inner and outer poles and an annular recess between said poles to receive said winding, the inner wall of said outer poles having a circumferential groove adjacent its lower edge, a coil shield arranged between said poles for supporting said winding and protecting the same, said coil shield having a face on its under side adjacent said groove, a split ring expanded within said groove and engaging said face to lock said coil shield to said magnet frame, a spacing member within said groove and interposed between the ends of said ring to prevent contraction thereof and a key inserted between said member and a surface on said coil shield to lock said spacing member within said groove.

1,499,359. COMBINED FREQUENCY CHANGER AND PHASE CONVERTER. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1918, Serial No. 254,313. Renewed Nov. 19, 1923. 6 Claims. (Cl. 172—281.)

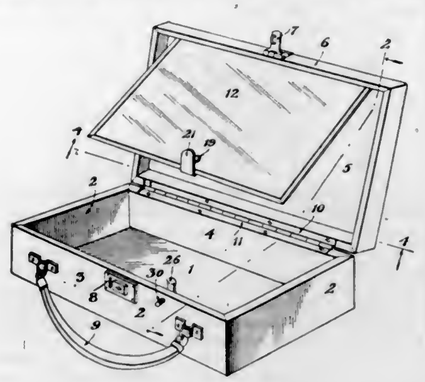
1. The combination with a dynamo-electric machine of the alternating-current type embodying a forwardly rotating substantially constant-speed rotor member having a winding in which polyphase currents having a backwardly rotating phase sequence tend to flow, of means for deriving currents of varying frequencies from said rotor member.

1,499,360. FREQUENCY-CONVERTER METHOD AND SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 27, 1922. Serial No. 556,859. 25 Claims. (Cl. 172—238.)

4. In combination, a phase and frequency converter having an armature member, a field member, a plurality of slip-rings for said armature member, a single-phase system connected to said slip-rings, polyphase terminals connected to said slip-rings, a wound damper winding on said field member, a variable-frequency translating device, and means for, at times, connecting said translating device to said polyphase terminals, and, at other times, connecting said translating device to said damper winding.

8. The combination with a source of variable-frequency currents, of means for varying said frequency, at will, a translating device, a series eradicator machine connecting said translating device and said source, means for driving said series eradicator machine, and means for varying the speed of said driving means simultaneously with said frequency-varying means.

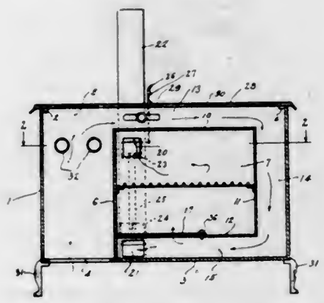
13. The combination with a synchronous single-phase machine having a commutator-type primary winding, of a rotatable brush system co-operating with the commutator member, said brush system including a plurality of substantially symmetrically spaced brushes for deriving polyphase currents from said synchronous machine, means for varying the speed of said brush system, and means for impeding certain polyphase currents of one phase sequence while permitting the flow of certain polyphase currents of another phase sequence.



21. A system including a frequency converter having primary windings, slip-rings for said primary windings, a commutator cylinder for said primary windings, a rotatable brush system co-operating with said commutator cylinder, means for varying the speed of said brush system, a variable-frequency translating device, and means for, at times, connecting said translating device to said brushes, and, at other times, connecting said translating device to said slip rings.

25. The combination with a commutator electric machine, of means tending to cause undesirable alternating currents of relatively high frequency to flow in the circuit including said commutator, and an induction machine connected in series relation to said circuit and adapted to rotate substantially in synchronism with said currents.

1,499,361. VANITY BOX. MAX FREUND, New York, N. Y., assignor to Freund Bros. & Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 21, 1923. Serial No. 675,988. 7 Claims. (Cl. 206—15.6.)

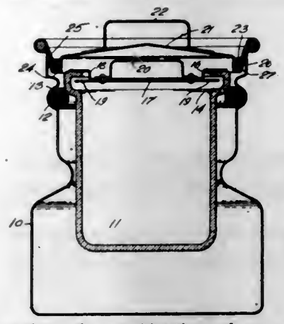


1. An article of the class described comprising a box having a containing compartment, a hinged cover therefor,

a mirror hinged to the iner face of said cover adjacent the free end of the same, and a foldable brace member connecting the mirror and cover and adapted to hold the

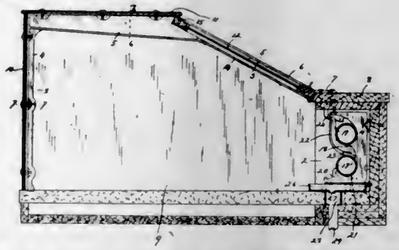
mirror above and away from the containing compartment and at an angle to the cover when the cover is in its open position.

1,499,362. GAS STOVE. ARNOLD F. GLASS, Birmingham, Ala. Filed Jan. 20, 1923, Serial No. 613,916. Renewed Dec. 20, 1923. 3 Claims. (Cl. 126—39.)



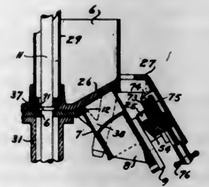
1. A gas burning stove having at one side a fire chamber with gas burners therein, a closed top for the stove having removable lids, partitions forming within the stove an oven, the partitions being spaced from the top and bottom walls and the end wall of the stove remote from the fire chamber to form a flue about the oven, the partition adjacent to the fire box being extended to met the bottom wall, a plurality of heat inlet ports disposed in the forward corner of the oven bottom adjacent to the fire chamber, a stack having heat outlets leading from the oven and from the flue below the oven, and damper means to control said outlet ports.

1,499,363. PROCESS FOR EXTRACTING CERTAIN VALUABLE CONSTITUENTS, AS BY-PRODUCTS, FROM THE COOKING LIQUORS DERIVED FROM THE PRODUCTION OF WOOD PULP TO BE CONVERTED INTO PAPER. EDWARD G. GOODELL, Stevens Point, Wis. Filed Oct. 28, 1922. Serial No. 597,517. 6 Claims. (Cl. 23—22.)



1. The process of distillation which consists of spraying a fluid substance into a highly heated retort whereby the volatile portions of said substance are rendered into vaporous or gaseous form and the non-volatile portions are precipitated as residue.

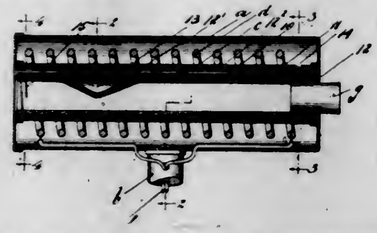
1,499,364. COOKING VESSEL. EDWARD W. GOODRICK, Buffalo, N. Y. Filed Aug. 7, 1922. Serial No. 580,047. 3 Claims. (Cl. 53—1.)



2. In a cooker, the combination of an outer vessel adapted to contain liquid to be heated, an inner container in said vessel and adapted to contain material to be cooked, a resilient supporting and releasable sealing ring between the sides of said container and the inner sides of said vessel, a cover on said vessel, and automatically releasable sealing means between said cover and said vessel.

1,499,365. COUNTER INCLOSURE. JOHN A. GUSTUS, Detroit, Mich., assignor to Detroit Butcher Supply Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 28, 1922. Serial No. 584,683. 6 Claims. (Cl. 211—25.)

1. In a counter inclosure, a pair of spaced top bars having flanges along their lower edges, downwardly and rearwardly inclined bars having opposed lateral flanges along their lower edges connecting with the lower flanges respectively of said spaced top bars, a top supported on said top bars, and a door normally resting freely upon the said lateral flanges of the inclined bars and adapted to be lifted at its rear end to slidably engage the lower flanges of the said top bars along the length of the opposite edges of the door when slid into open position.



1,499,366. CAN-FILLING MACHINE. OSWALD H. HANSEN, Port Washington, Wis., assignor, by direct and mesne assignments, to Hansen Canning Machinery Corporation, a Corporation of Wisconsin. Filed Dec. 24, 1919. Serial No. 347,110. 41 Claims. (Cl. 226—96.)

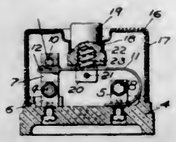
1. In a filling machine, a measuring pocket revoluble about an axis which is inclined relatively to the longitudinal axis of said pocket, a displacement piston mov-

able longitudinally within said pocket and away from said axis of revolution, means for moving said piston, and means for admitting material to said pocket in the direction of movement of said piston.

1,499,367. APPARATUS FOR HAIR WAVING. PAUL E. HERRMANN, New York, N. Y. Filed Feb. 27, 1923. Serial No. 621,571. 14 Claims. (Cl. 219—24.)

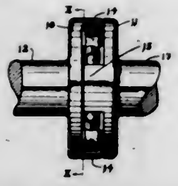
1. In a hair curling apparatus of the character described, a steaming device, comprising a tube of heat conducting material, a shell or lining of liquid absorbing material in said tube and means therein for replenishing the liquid as it is being vaporized.

1,499,368. MEANS FOR INDICATING AND DISCONNECTING DEFECTIVE BRANCHES FROM ELECTRIC-CURRENT NETWORKS. MARTIN HÖCHSTÄDTER, 's Gravenhage, Netherlands, assignor to N. V. Lyn-Protectie, The Hague, Netherlands, a Dutch Corporation. Filed Mar. 30, 1921. Serial No. 457,108. 2 Claims. (Cl. 175—294.)



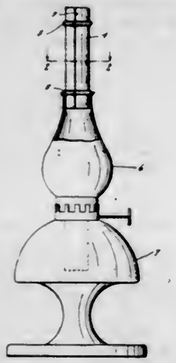
2. In an electrical distributing system, a line section comprising two conductors having their respective ends jointly connected to the respective section terminals, means for disconnecting said line section from the system at said terminals, and gap safety devices connected between said conductors adjacent to said section terminals and being responsive to abnormal potential differences between said conductors, and operative connection between said gap safety devices and said disconnecting means, causing the latter to operate on response of said gap safety devices, and reactance means interposed in at least one of said conductors between a section terminal and the gap safety device located adjacent thereto.

1,499,369. CANDY PACKAGE. ANDREW W. HOLLAND, Sherborn, Mass., assignor, by mesne assignments, to Walter M. Lowney Company, a Corporation of Massachusetts. Filed Sept. 20, 1922. Serial No. 589,377. 1 Claim. (Cl. 229—42.)



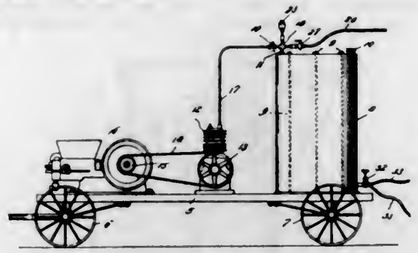
A candy package comprising a box, a plurality of superposed trays fitting within said box and having depending supporting flanges and each having a series of openings, floors on which the flanges of the trays rest, combined with upwardly flaring cups fitting said openings and having flat bottoms to support the candy articles.

1,499,370. PUSH-BUTTON SWITCH. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1920. Serial No. 425,458. 5 Claims. (Cl. 200—159.)



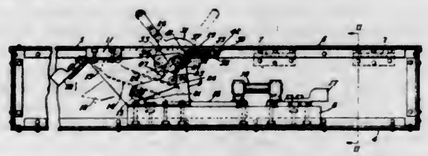
1. In an electric switch, a stationary contact member, a movable contact member normally yieldingly held in engagement with the stationary contact member, a push button for actuating the movable contact member, a guide for the push button, and a yielding connection between the push button and the movable contact member for permitting the push button to be guided through a path of travel independent of the direction of movement imparted to the movable contact member.

1,499,371. UNIVERSAL JOINT. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 2, 1921. Serial No. 448,973. 19 Claims. (Cl. 64—89.)



1. In a shaft coupling, the combination of a pair of coupling members, projections carried by the coupling members, struts interposed between the projections and capable of rolling motion relative thereto, and a separate means cooperating with one of the coupling members and with the struts to resist centrifugal force developed thereby in operation.

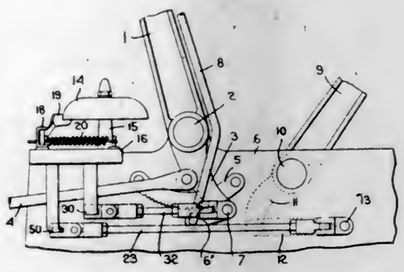
1,499,372. ATTACHMENT FOR LAMP CHIMNEYS. RUDOLPH KERNAUL, Pullman, Mich. Filed June 20, 1923. Serial No. 646,644. 3 Claims. (Cl. 240—96.)



1. A cylindrical attachment arranged to fit in the top of a lamp chimney, and provided with a surrounding ridge adjacent each of its open ends for re-enforcing said attachment and supporting it with either end in said chimney.

1,499,373. STUMP BURNER. OTTO KOHSE, Chehalis, Wash. Filed Apr. 9, 1923. Serial No. 631,041. 1 Claim. (Cl. 158—36.)

A portable stump burner including a wheeled frame, an oil tank mounted on the rear end portion of said frame, securing means extending through said tank and the frame for securing said tank thereto, and an air compressor mounted on said frame, means for driving said air compressor, a fitting mounted on the upper end of said tank and having communication therewith, a pipe connecting said fitting to said air compressor for conveying the air compressed to the tank, said fitting having a plurality of valved outlets, air hose secured to each of said outlets, a pressure relief valve mounted in said fitting, an outlet mounted at the bottom of the tank, hose connections with said outlet having a valve for controlling the outlet of fluid from the tank, and burner nozzles mounted on the end of said last mentioned hose whereby the air compressed in said compressor will be conveyed to the tank and air hose and maintained under a predetermined pressure for forcing oil through the last mentioned hose when the valve controlling communication thereto is opened and forcing air thru the first mentioned hose when the valve controlling the outlet thereto is open, the burner nozzles providing a fuel oil flame for burning the stump and the first mentioned hose connection providing the air for said flame.

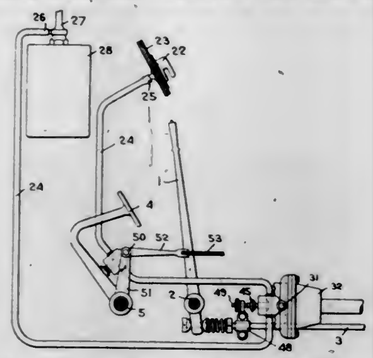


1,499,374. SWITCH BOX. HUBERT K. KRANTZ, Brooklyn, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 26, 1920. Serial No. 426,467. 6 Claims. (Cl. 200—68.)

1. Switch mechanism comprising a switch member pivoted for rotary movement, a follower carried by the switch member, a spring engaging the follower for normally holding the switch in open position, a cam member pivoted adjacent the follower for actuating the follower and having a contact portion engaging therewith and movable past a line traversing the axes of rotation of the switch member and the cam member, an operating member having a lost-motion connection to the cam member and movable to open and to closed positions, and means for yieldingly retaining the operating member in either of said positions.

1,499,375. AUTOMOBILE BRAKE GUARD. JOHN HOWARD LACY, Boston, Mass. Filed Feb. 6, 1922. Serial No. 534,367. 5 Claims. (Cl. 116—56.)

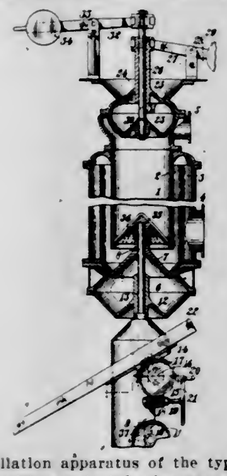
4. In an automobile a brake actuator movable to apply and release brake mechanism, a connection actuator movable to effect the connection and disconnection of the engine to the driving elements, a bell, a movable striker for the bell, a dog movably mounted on the connection actuator and acting when in operative position to engage and effect the actuation of the striker upon a movement of the connection actuator requisite to effect connection of the engine to the driving elements, and means controlled by the brake actuator acting to maintain the dog in operative position upon the absence of the brake actuator from releasing position.



1,499,376. AUTOMOBILE BRAKE GUARD. JOHN HOWARD LACY, Boston, Mass. Filed Mar. 14, 1922. Serial No. 543,587. 8 Claims. (Cl. 116—58.)

6. In an automobile, a brake actuator movable to apply and release brake mechanism, a connection actuator movable to effect the connection and disconnection of the engine to the driving elements, a suction operated signal, a pipe connection between the signal and the intake manifold of the engine, two valves in said pipe connection arranged in series, a spring normally holding each valve closed, means controlled by the brake actuator and operative to open one valve when the brake mechanism is applied, and means controlled by the connection actuator to open the other valve upon operation of said actuator, whereby a signal is given if an attempt is made to start the automobile with the brake mechanism applied.

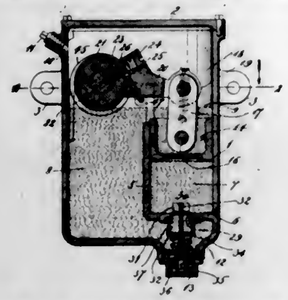
1,499,377. AUTOMOBILE BRAKE GUARD. JOHN HOWARD LACY, Boston, Mass. Filed Nov. 4, 1922. Serial No. 599,030. 9 Claims. (Cl. 116—58.)



4. In an automobile a connection actuator movable to effect the connection and disconnection of the engine to the driving elements, a pneumatically actuated normally inactive signal, a pipe connected to the signal and having an elastic compressible section, means for inducing a flow of air in the pipe sufficient to actuate the signal,

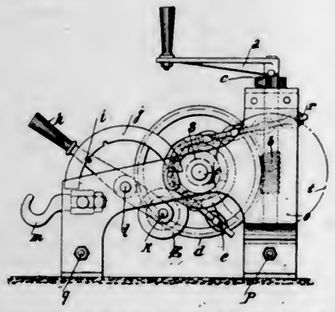
and means acting when the connection actuator is in connecting position to compress the pipe section to cut

off, and when the connection actuator is in disconnecting position to relieve the pressure on the pipe section to permit, the signal actuating flow of air in the pipe.



1,499,378. RETORT OR STILL. FREDERICK LAMPLOUGH, Feltham, England, and NEVILLE CHARLES THOMASON HARPER, Durban, Natal, South Africa. Filed Dec. 13, 1922. Serial No. 606,584. 9 Claims. (Cl. 196—19.)

1. In distillation apparatus of the type described, the combination with a retort having an apertured bottom and having an outlet for the vapors of distillation in the upper portion thereof, of means to admit material to be distilled to said retort, a casing comprising at least two jacket-spaces one within the other surrounding said retort, the inner of which jacket-spaces communicates at the bottom with the retort below said apertured bottom and at the top with a surrounding jacket-space and the outer of which jacket-spaces is provided with an inlet near the bottom to admit heating fluid thereto whereby the heating fluid is compelled to flow upwardly in the outer jacket and downwardly in the inner jacket and thereafter pass through the material in the retort in an upward direction.

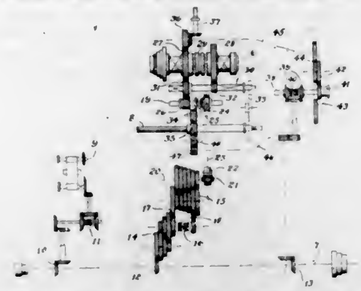


1,499,379. SHOCK ABSORBER. JAMES S. LANG, Watertown, Mass. Filed Aug. 22, 1922. Serial No. 583,473. 9 Claims. (Cl. 188—88.)

1. In a fluid check shock absorber for controlling the movement of relatively movable parts, the combination comprising an element attachable to one of said parts and having a pressure chamber, said element being provided also with a port permitting of the circulation of a contained fluid into and out of said chamber, a piston attachable to the other of said parts and reciprocable in said pressure chamber, a valve for controlling said

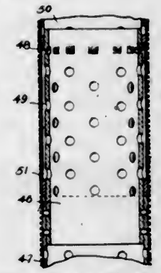
port, and means for arranging and supporting said valve whereby it may close said port or pass therethrough and open in reverse directions and permit of a more free passage of fluid through said port in one direction than in a reverse direction.

1,499,380. HAULING WINDLASS FOR THE LOADING OF VEHICLES. RENÉ LARMIGNAT, Paris, France. Filed Mar. 21, 1921. Serial No. 454,183. 1 Claim. (Cl. 254—176.)



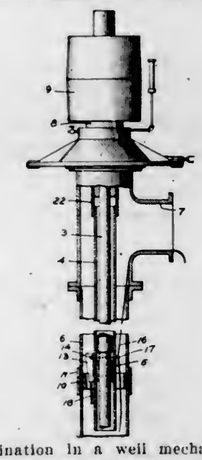
In a hauling windlass, a framework, a chain pulley rotatably mounted in said framework a chain trained about said pulley, means for driving said pulley, a pivotally mounted lever, an idler roll having a groove therein rotatably mounted on said lever, the edges of said idler roll adapted to retain said chain in engagement with said chain pulley and said groove serving to guide said chain in its passage towards said chain pulley while permitting the passage of the chain links through said groove and means to hold said lever in either of two positions in one of which the idler roll holds said chain in engagement with said chain pulley and in the other of which disengagement of said chain from said chain pulley is permitted.

1,499,381. REVERSING MECHANISM FOR THREAD-MILLING MACHINES. FREDERICK J. LARSON, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 23, 1920. Serial No. 418,890. 8 Claims. (Cl. 10—154.)



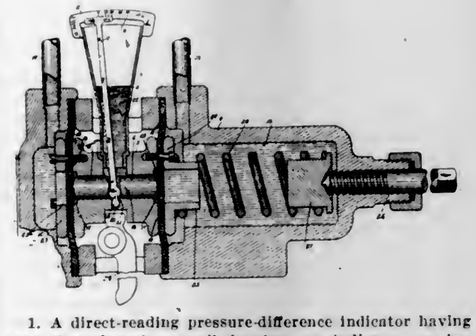
1. In a metal working machine, the combination of a rotary work spindle, a cutter carriage movable longitudinally of the spindle, a screw for so moving the carriage, a drive shaft, operative connections including a positively acting clutch from the drive shaft to the spindle and screw, and a rapid power traversing mechanism for the screw including a rapid power traversing shaft driven from the drive shaft, a gear frictionally

mounted thereon whereby breakage of the gears of undue strain on the machine is prevented when the rapid power



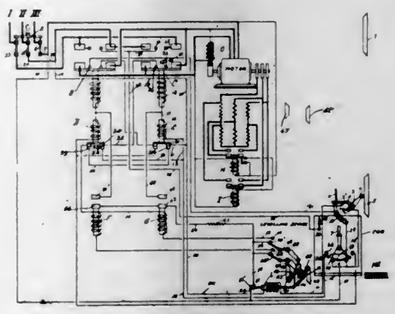
traversing mechanism is thrown into mesh and a toothed clutch for connecting the traversing mechanism with the drive shaft.

1,499,382. WELL SCREEN. MAHLON E. LAYNE, Los Angeles, Calif. Filed Sept. 8, 1920. Serial No. 408,945. 6 Claims. (Cl. 166—8.)



1. In combination in a well screen, a plurality of screening sections arranged in series and a series of slip joints between the ends of the succeeding sections to permit each section to be moved upward from its operative position of use in the ground before the upward movement of the next section beneath.

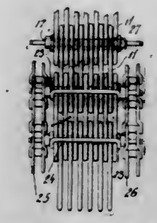
1,499,383. WELL MECHANISM. MAHLON E. LAYNE and SAMUEL N. HALL, Los Angeles, Calif.; said Hall assignor to said Layne. Filed Mar. 6, 1922. Serial No. 541,289. 5 Claims. (Cl. 103—102.)



5. In combination in a well mechanism, a pump, a discharge casing extending upwardly from the pump, a power transmission shaft extending upward from the pump, a shaft casing surrounding the shaft and provided with a series of spaced bearings for the shaft, a series of wedges arranged at intervals along the length of the shaft between such casing and the discharge casing, flexible securing means for fastening the wedges releasably to the shaft casing above their positions of use, and a flexible means extending up between the casings to the upper end thereof and fastened to said securing means for releasing such means and permitting the wedges to move to wedging position after the casings are assembled.

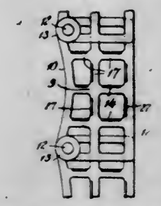
1,499,384. DIRECT-READING PRESSURE-DIFFERENCE INDICATOR. HENRY B. LEE, New London, Conn., assignor to The D. E. Whiton Machine Co., New London, Conn., a Corporation. Filed Mar. 13, 1920, Serial No. 365,670. Renewed Nov. 27, 1923. 7 Claims. (Cl. 73—110.)

1. A direct-reading pressure-difference indicator having a graduated scale, an oil-chamber, an indicator moving in a body of oil in the said oil-chamber, whereby the operation of the indicator is stabilized and a prime-mover simultaneously subjected to the opposing pressures whose difference is to be indicated, the said prime-mover being connected with the indicator for the operation thereof.



1,499,385. CAR-LEVELING APPARATUS. DAVID L. LINDQUIST, Hartsdale, White Plains, and FREDERICK HYMANS, Yonkers, N. Y., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 2, 1920. Serial No. 370,680. 31 Claims. (Cl. 187—29.)

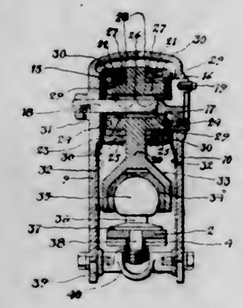
6. In an electric elevator, the combination of a hoisting electric motor mechanism, a switch for operating the elevator, and cams in the hatchway, a car stopping device to control and stop the car with a predetermined load level with the landing, said stopping device controlled by the switch for operating the elevator and by said cams in the hatchway, an automatic car leveling device, switches on the leveling device to control the hoisting mechanism, and cams in the hatchway to open the switches on the leveling device, after said leveling device



has automatically caused the car with any other load than the predetermined load to become level with the landing in case the car overruns or underruns the landing.

1,499,386. CHAIN PUMP. RAMON LONG, New York, N. Y., assignor to American Liquolift Corporation, a Corporation of Delaware. Filed July 29, 1922. Serial No. 578,503. Renewed Dec. 18, 1923. 9 Claims. (Cl. 103—72.)

1. The chain pump comprising an upper supporting wheel formed with sprockets, a top casing arranged in co-operation with said supporting wheel, a continuous liquid carrying chain cooperating with said supporting wheel and casing and formed of intermeshing water carrying wire links and cooperating connecting pivots, each of said links having a connector member cooperating with and substantially enclosing two adjacent connecting pivots and having laterally projecting water carrying portions arranged on both sides of said connector member and comprising a series of longitudinal members and connected end loops projecting beyond said connector member and adjacent the end loops of the laterally aligned chain links, spacing and driving rolls arranged between said water carrying links on said connecting pivots to form transversely separated chain sections and an intermediate sprocket driving wheel engaging said driving rolls to operate said liquid carrying chain from a point below said upper supporting wheel.



1,499,387. CHAIN PUMP. RAMON LONG, New York, N. Y., assignor to American Liquolift Corporation, a Corporation of Delaware. Filed July 29, 1922, Serial No. 578,504. Renewed Dec. 18, 1923. 9 Claims. (Cl. 103—72.)

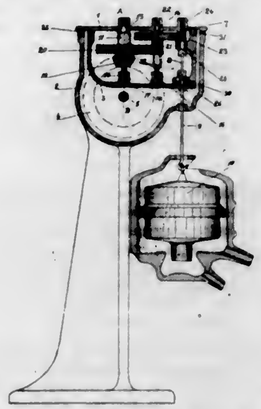
1. The chain pump comprising a wheel and a continuous liquid carrying chain formed of intermeshing perforated sheet metal links having rigidly connected bearing portions spacing the adjacent links apart transversely of the chain and cooperating connecting pivots, said links having transversely projecting water carrying flanges adjacent the perforations in said links and extending in a lateral and longitudinal direction to promote the liquid carrying capacity of the links.

1,499,388. ANTIFRICTION-BEARING MECHANISM FOR SPRING SHACKLES. RALPH M. LOVEJOY, Boston, Mass. Continuation of application Serial No. 551,584, filed Apr. 11, 1922. This application filed Jan. 20, 1923. Serial No. 613,890. 9 Claims. (Cl. 267—34.)

6 A spring shackle for vehicles comprising a casing adapted to be secured to the frame of a vehicle, a member presenting flat faces having trunnions extending therefrom, pivotally mounted in said casing to swing about a horizontal axis, outer tubular sleeves of oil-soaked wood of greater length than said trunnions having the grain extending in a direction substantially parallel to the axis of said sleeve surrounding said trunnions, abutting at their inner ends against the flat faces

of said swinging member and engaging at their outer ends sockets rigid with said casing and inner tubular bearings of oil-soaked wood having the ends of the grain engaging the top and bottom portions of said trunnions and means for pivotally connecting said swinging member to the spring.

1,499,389. NECKTIE HOLDER. PETER L. MARKEY, Chicago, Ill. Filed June 13, 1923. Serial No. 645,016. 10 Claims. (Cl. 24—59.)



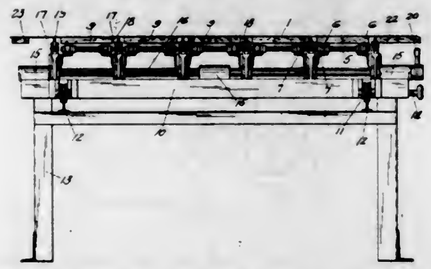
1. A necktie holder comprising a base, arms extending outwardly from said base, prongs connected to the outer ends of said arms, a reinforcing member formed integrally with said base and a slot extending in said base and reinforcing member for detachably securing the necktie holder on a collar button.

1,499,390. PROCESS OF MANUFACTURING SWISS CHEESE. KENNETH J. MATHESON, Washington, D. C., dedicated, by mesne assignments, to the People of the United States of America. Filed Jan. 30, 1922. Serial No. 532,901. 1 Claim. (Cl. 99—11.) Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

In the manufacture of Swiss cheese the step of passing milk, after preliminary warming, through a separator, and subsequently reincorporating the separated cream and skim milk.

1,499,391. CREAM SEPARATOR. ALFRED MÉLOTTE, Remicourt, Belgium. Filed Apr. 8, 1921. Serial No. 459,646. 1 Claim. (Cl. 74—7.)

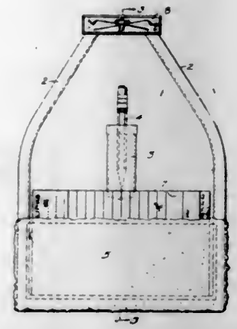
A cream separator comprising in combination with a support having a chamber in its upper portion, and a pendantly supported rotatable separator bowl, of a cover detachably secured over the chamber, a shaft journalled in the walls of the chamber, said shaft having means for manual operation, a support bracket fixed on the lower side of said cover, spindles journalled at their ends respectively in said cover and bracket, one of said spindles having driving connections with said bowl, multiplying gears on said spindles, said gears constituting a train, a bevel pinion on the spindle most remote from



the separator driving spindle, and a bevel gear on said shaft meshing with said pinion, said cover, bracket and gear train being removable from said support as a unit.

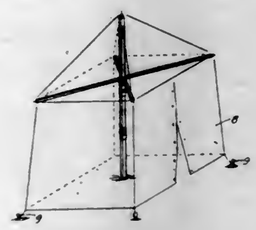
1,499,392. PNEUMATIC VEHICLE TIRE. JOHN L. MELTON, Portsmouth, Va. Filed June 15, 1923. Serial No. 645,604. 3 Claims. (Cl. 152—20.)

3. The combination of a pneumatic tire; a plurality of lugs secured to the tire, a transverse recess cut from the center of each lug thereby forming a projection at each end thereof; and a wheel rim provided with recesses for receiving the lugs, and ridges formed in the recesses to engage the transverse recesses in the lugs.



1,499,393. CRACKING-OFF DEVICE FOR SHEET GLASS. JOHN H. MOLLER, Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 1, 1922. Serial No. 598,428. 9 Claims. (Cl. 49—48.)

1. The combination with a table on which sheet glass is supported while being scored, of a cracking-off device movable to different positions beneath the table and sheet to elevate the sheet at the score line.

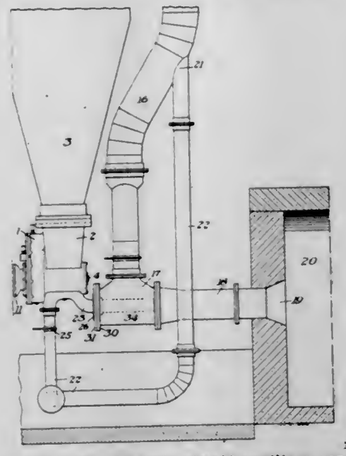


4. The combination with a moving table or conveyor on which the glass sheet is carried while being scored, of a cracking-off device movable to position beneath the score line and comprising means to elevate the sheet.

1,499,394. HAND CLEANER. MARY A. MOORE, Hayden Lake, Idaho. Filed Apr. 2, 1921, Serial No. 457,905. Renewed Nov. 23, 1923. 1 Claim. (Cl. 24—13.)

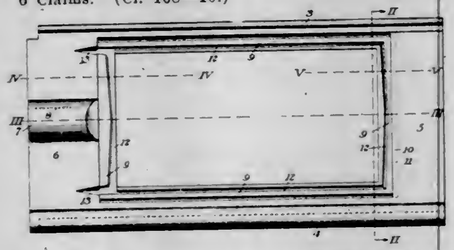
A hand cleaner of the character described adapted to be attached to an outer garment, comprising a flexible backing sheet, a wiping pad appreciably smaller than the backing sheet, comprising a piece of sheepskin having its side edges and lower edge secured to the side and lower edges of the backing sheet with the hair side of the skin outermost, said pad and backing sheet cooperating to form a score card receiving pocket, a pencil pocket on the face of the backing sheet above the wiping pad, the lower end of said pencil pocket adapted to be concealed by a score card in the first-mentioned pocket, and means carried by the upper end of the backing sheet for attaching said sheet to an outer garment.

1,499,395. TENT-SUPPORTING APPARATUS. ADOLPH MUEHLEISEN and GROVER C. MUEHLEISEN, San Diego, Calif. Filed Aug. 5, 1921. Serial No. 489,948. 5 Claims. (Cl. 135—2.)



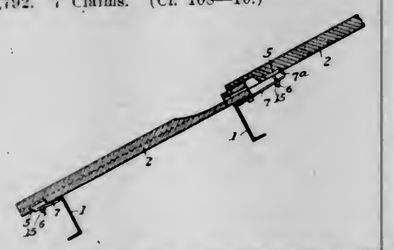
1. A tent apparatus, including a tent cover, a central pole, a plurality of spreader supports secured to said pole and radiating therefrom, a plurality of spreader members secured to said supports and extending outwardly therefrom and supported by said cover at their outer ends and a special spreader member, its one end adapted to engage said pole and when drawn downwardly against said pole to an approximately horizontal position for tightening the tent will engage one of said radiating spreader supports.

1,499,396. APPARATUS FOR FEEDING PULVERIZED FUEL. HENRY MUELLER, Pittsburgh, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 26, 1923. Serial No. 614,961. 3 Claims. (Cl. 302—49.)



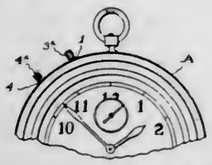
1. In apparatus for feeding pulverized fuel, an auxiliary air conduit, means for feeding fuel into said conduit, a main air conduit, an extension detachably secured to

said auxiliary conduit and projecting into the main conduit, a flexible annular diaphragm secured between



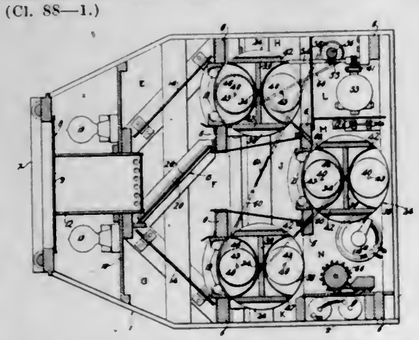
flanges on the adjacent ends of said auxiliary conduit and extension, and means adjustably clamping said diaphragm to said main conduit, substantially as described.

1,499,397. ROOFING TILE. SOLOMON B. MYERS, Pittsburgh, Pa., assignor to American Cement Tile Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 25, 1922. Serial No. 596,791. 6 Claims. (Cl. 108—10.)



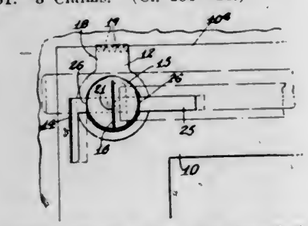
1. A roofing tile comprising a tile frame and a translucent pane seated therein, the tile frame having a moisture-conducting gutter in the pane-receiving seat thereof beneath the edge of the pane and extending to the outer surface of the tile beyond the lower edge of the pane, substantially as described.

1,499,398. TILE ROOFING. SOLOMON B. MYERS, Pittsburgh, Pa., assignor to American Cement Tile Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 25, 1922. Serial No. 596,792. 7 Claims. (Cl. 108—10.)



1. A roofing tile having a metal socket cast therein, said socket having an elongated slot for receiving a hold-down device, substantially as described.

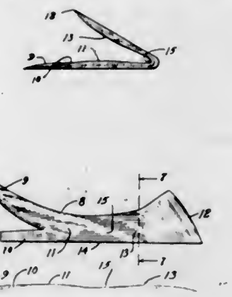
1,499,399. INDICATOR FOR ALARM CLOCKS. ALBERT A. OHLER, Painesville, Ohio. Filed Sept. 28, 1923. Serial No. 665,301. 4 Claims. (Cl. 58—16.)



1. The combination with an alarm clock having an alarm control member movable into "alarm" and "silent" positions, of an indicating means including a finger piece on the control member, an opposed finger piece and signal member adjacent to one end of the path of movement of the control member, and luminous paint on the two finger pieces.

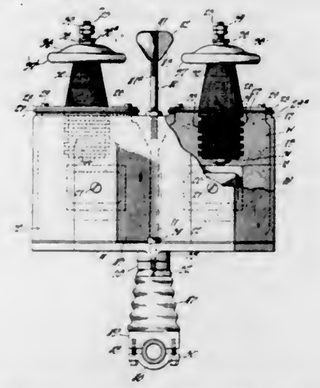
1,499,400. EXHIBITION DEVICE. ALFRED E. OSWALD, Bogota, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 11, 1920. Serial No. 416,247. 60 Claims. (Cl. 88—1.)

20. An exhibition device comprising, in combination, a housing, a sight device to limit the direct vision to a definite path through the housing, a plurality of exhibit-carriers in said housing but outside of said path, and means, including a reflecting device mounted for movement to different positions, to reflect an exhibit on any one of said carriers through the sight device, said plurality of exhibit-carriers including a carrier provided with a plurality of exhibits.



1,499,401. COMBINED SHADE-ROLLER AND CURTAIN-POLE BRACKET. ALONZO E. PACKER, New Philadelphia, Ohio. Filed Sept. 12, 1922. Serial No. 587,661. 3 Claims. (Cl. 156—24.)

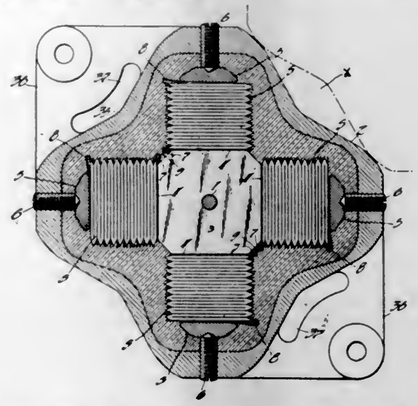
2. A bracket device of the class described, comprising three sheet metal parts, one of said parts being of unitary construction substantially disk-shaped in form and provided with an outwardly pressed portion forming a chamber opening outwardly through the rear face thereof, said outwardly pressed portion being apertured centrally thereof with an elongated aperture, the opposite side walls of said outwardly pressed portion being



provided with other apertures, said part being provided with an upwardly, backwardly and downwardly directed extension by means of which the same may be mounted in connection with a suitable support and another of said parts being substantially T-shaped in form and being adapted to be passed through the elongated aperture of said first named part for detachably connecting said part with said first named part, said last named part extending outwardly at right angles to the first named part and being provided with means for receiving and supporting the shanks of a shade roller.

1,499,402. PLOWPOINT. FRED PETERSEN, Longmont, Colo. Filed Jan. 18, 1923. Serial No. 613,376. 2 Claims. (Cl. 97—125.)

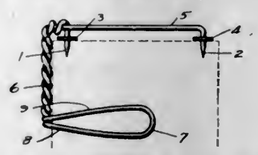
1. A plow point comprising a bar of rectangular cross-section, having one end split into two parts, one of which is curved away from the other, the other end of the bar being curved outwardly to one side, said bar having its ends thinned to an edge; a thickened portion near each end; and an intermediate thinner portion.



1,499,403. ELECTRICAL CONDENSER. WILLIAM H. PRIESS, Belmont, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Dec. 5, 1921. Serial No. 519,868. 22 Claims. (Cl. 250—41.)

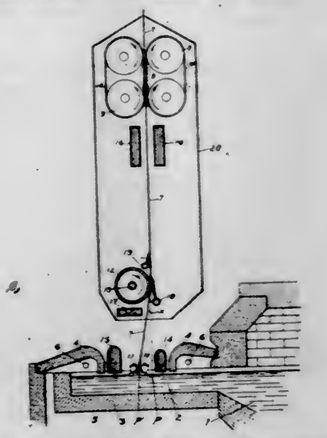
1. An electrical condenser comprising a plurality of stacks of sheets, a common metal casing for said plurality of stacks by which casing said stacks are connected in series; and a corresponding number of condenser terminals extending from the stacks through the casing and insulated therefrom.

17. An electrical condenser comprising a plurality of stacks of sheets each of which stacks is short for heat conduction as compared with a single stack electrically equivalent to the plurality of stacks; said stacks being arranged end to end in pairs and each pair having a heat-absorbing member located between the adjacent ends; a plurality of heat-radiating means located outside said casing; and a corresponding plurality of heat-conducting condenser-connections extending from said respective heat-absorbing members, through but insulated from said casing, and to said heat-radiating means, respectively; the outer ends of said double stacks being in good thermal and electrical conducting relation with said metal casing.



1,499,404. ELECTRICAL CONDENSER. WILLIAM H. PRIESS, Belmont, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Dec. 5, 1921. Serial No. 519,869. 24 Claims. (Cl. 250—41.)

1. An electrical condenser comprising a plurality of stacks of sheets each of which stacks is short for heat conduction as compared with a single stack electrically equivalent to the plural stacks; a common enclosure for said plural stacks; two heat-radiating members outside said enclosure; a heat-conducting condenser-connection from one set of electrical ends of said plurality of stacks to one of said heat-radiating members; the other set of electrical ends of said plural stacks being thermally and electrically connected to the other of said heat-radiating members, whereby said plural stacks are connected in parallel between the two radiators.

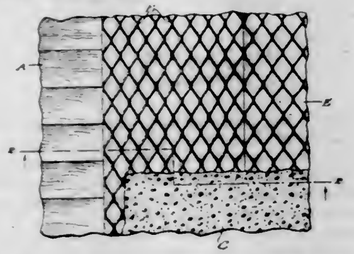


14. In an electrical condenser, a casing, a condenser stack mounted within the casing, said casing comprising a part of the clamping means for the stack, insulating material filling said casing and surrounding the stack, and means for allowing the expansion and contraction of said insulating material without affecting the clamping on the stack, said means comprising a flexible diaphragm facing the insulating material.

1,499,405. CAN OPENER AND SEAL. HYLE N. ROBERTS, Globe, Ariz. Filed Jan. 29, 1923. Serial No. 615,550. 1 Claim. (Cl. 220—51.)

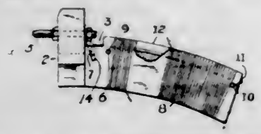
A device for punching and sealing holes in a can which is constructed of one piece of wire that is bent in the form of a semi-circle at the lower end, then bent over and back to the center where the two ends are twisted together to form a vertical member at the upper end of which one of the ends extends outward to form a horizontal member, the outer end of which is bent downward and pointed, and the other of the ends is bent around the horizontal member and downward to form a second point; said points having collars around them.

1,499,406. DRAWING AND FLATTENING SHEET GLASS. CLIFFORD A. ROWLEY, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed July 22, 1922. Serial No. 576,668. 10 Claims. (Cl. 49—17.)



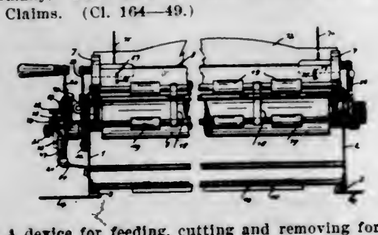
9. In an apparatus for drawing and flattening sheet glass, a receptacle containing a mass of molten glass, means for drawing a continuous sheet of glass upwardly therefrom, a deflecting member for the sheet positioned between the molten glass and the drawing means, and having its sheet engaging surface in vertical alignment with the sheet engaging surface of the drawing means, and a pair of coolers one at either side of the sheet source, the cooler at the side beneath the deflecting member having the greater heat absorbing capacity.

1,499,407. POOL-BALL TRAY. EUGENE J. SAVOIE, Woonsocket, R. I. Filed May 19, 1922. Serial No. 562,117. 6 Claims. (Cl. 46—6.)



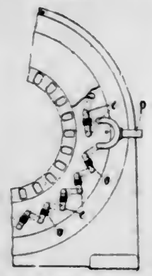
2. A portable pool ball and pool ball frame holding device of the character described comprising a body portion, means for retaining the frame in proper position thereon, handles, means for preventing the device from slipping on the table and one beveled margin of the body portion over which the balls and frame may be withdrawn without shock to the table.

1,499,408. WATERPROOFED LATHING. CHARLES H. SCAMMELL, New York, N. Y., assignor to Charles H. Scammell Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 13, 1922. Serial No. 543,134. 3 Claims. (Cl. 72—116.)



2. A new article of manufacture, comprising metal lathing formed to anchor plastic material between it and a plain surface in contact with such lathing, a backing sheet and an interposed layer of waterproof material adhesively securing said backing sheet and lathing together.

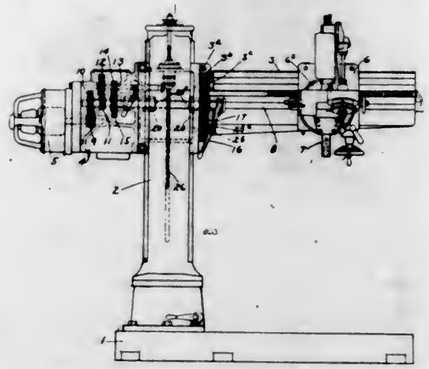
1,499,409. ELECTRIC HEATING ELEMENT. OTTO SCHAUMBERG, Pittsburgh, Pa. Filed Nov. 1, 1922. Serial No. 598,274. 3 Claims. (Cl. 219—63.)



1. An electric heating element comprising a body portion having one edge thereof formed with a longitudinal groove, a terminal block formed integrally with said body portion, a pair of terminals fixed in said terminal block, and a resistance coil consisting of one continuous length of wire and including lead wires connected with said terminals one of said lead wires positioned in said groove, substantially as described and for the purpose set forth.

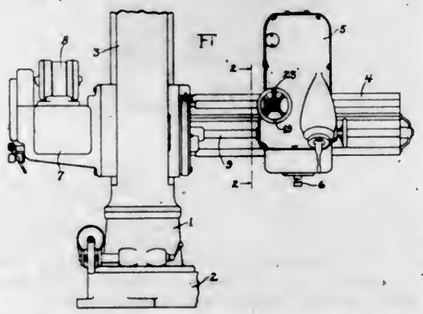
1,499,410. DEVICE FOR TYPEWRITING MACHINES FOR FEEDING, CUTTING OFF, AND REMOVING FORMS. WILHELM SCHOENENBERG, Cologne-Deutz, Germany. Filed Feb. 13, 1922. Serial No. 536,048. 11 Claims. (Cl. 164—49.)

1. A device for feeding, cutting and removing forms in typewriting machines comprising a platen, a feed roller, a cutting device, a hand lever, movable in one direction to turn said feed roller through the length of a form and in the opposite direction to actuate said cutting device, a removing rake operated after the cutting device and means for receiving forms removed by said rake, said rake being actuated by said handle near the end of its reverse movement.



1,499,411. MEANS FOR CARRYING OFF HEAT GENERATED IN ELECTRICAL APPARATUS. GIULIO SCHROEDER, Hale, England. Filed Mar. 11, 1921. Serial No. 451,628. 3 Claims. (Cl. 171—252.)

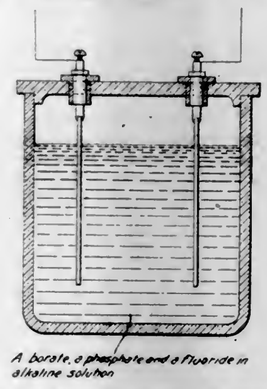
1. In an electric machine, the combination with a core, of a cooling arrangement comprising a circulating system for cooling liquid consisting of longitudinal tubes which run through the core and are separate from the electric conducting winding in the latter, interconnecting hollow parts at the ends of said tubes, said tubes and said parts forming a closed system in the machine, and



hollow insulating pieces so inserted in the said system as to prevent the existence of electric conductive continuity therein while maintaining the completeness of the closed passage for liquid through the machine.

1,499,412. DRILLING MACHINE. WILLARD T. SEARS, Montclair, and ROSWELL H. RAUSCH, Plainfield, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 21, 1921. Serial No. 446,547. 8 Claims. (Cl. 77—28.)

1. A radial drilling machine comprising the combination of a column, an arm vertically adjustable on the column, a shaft extending along the arm and into the column, a drill spindle carried by the arm and operatively connected to the portion of the shaft extending along the arm, mechanism comprising change speed gearing connected to the portion of the shaft extending into the column, the said mechanism being adapted to rotate the shaft, a hand operated element adjacent the column between the column and spindle, and means providing an operative connection from the said element to the change speed mechanism whereby the element is adapted to shift such mechanism to vary the speed of the shaft.



1,499,413. COMBINED SADDLE TRAVERSING AND LOCKING MECHANISM. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 8, 1922. Serial No. 550,813. 11 Claims. (Cl. 77—28.)

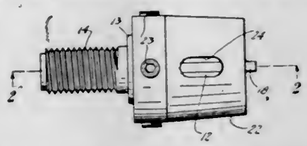
1. The combination of a support provided with a guideway thereon, a saddle slidably mounted on the guideway, and means on the saddle including a single handle for moving the saddle along the guideway and for clamping the saddle against such movement.

6. In a drilling machine, the combination of an arm, a saddle slidably mounted on the arm, a rack on the arm, a pinion on the saddle engaging the rack, a hand wheel operatively connected to the pinion for rotating the same, and means including a handle on the hand wheel for securing the saddle against movement on the arm.

1,499,414. ELECTROLYTE FOR ELECTROLYTIC CELLS. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1920. Serial No. 425,339. 8 Claims. (Cl. 175—315.)

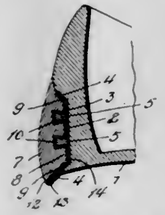
1. An electrolyte for electrolytic condensers, lightning arresters, rectifiers, and the like comprising a boron compound and a phosphate.

1,499,415. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 25, 1918. Serial No. 246,649. 4 Claims. (Cl. 197—126.)



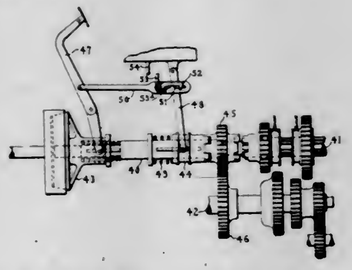
1. In a typewriting machine, the combination with a revoluble platen, of a letter-feeding carriage for said platen, said carriage having a rearward extension over which superposed webs are fed to the platen, a carbon-sheet-carrier reciprocable forwardly and rearwardly on said extension, holders extending from one side of said carrier between successive webs to hold the rear ends of carbon-sheets interleaved therebetween, and a manually-operable fastening device having two co-operating parts and mounted on the extension at the side thereof toward which said holders extend and at the rear of the rearward position of the carriage, the location of said co-operating parts being such that the adjacent margins of the webs pass therebetween and may be attached together by said device when desired, said holders being so short as not to reach said margins, whereby the attached portions of said margins may pass the ends of said holders without interference therewith, and relative creeping of said webs may be prevented.

1,499,416. COMPOUND TOOL. JOSEPH G. STECH, Berwyn, Ill., assignor to Woodrow Nipple Mfg. Co., Chicago, Ill. Filed Nov. 23, 1922. Serial No. 602,862. 3 Claims. (Cl. 77—73.)



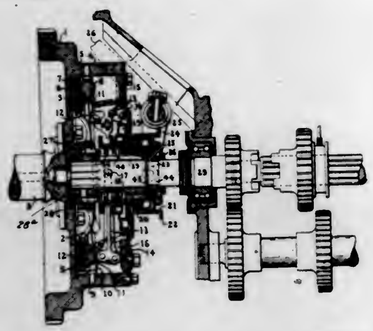
1. A tool comprising a reaming head tapering toward the front and rear and having slots in the forward part,

reaming, chamfering and finishing cutters removably mounted in said slots substantially filling the same and extending forward therefrom, a shell movable in a longi-



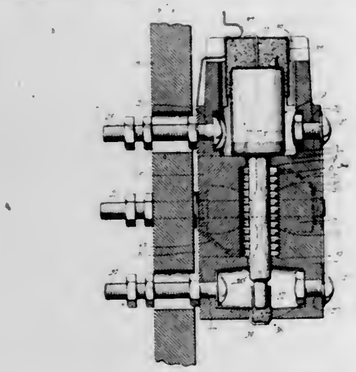
tudinal direction on said head, and fastening means rotatably mounted in said shell engaging the rear tapering part of said head rearward of said cutters.

1,499,417. ARTIFICIAL TOOTH. ADOLF STECKELMACHER, Eppingen, Germany. Filed Dec. 6, 1921. Serial No. 520,292. 2 Claims. (Cl. 32—9.)



1. An artificial tooth including a chambered mounting comprising a back wall and top, side, and bottom walls extending continuously around and each projecting obliquely forwardly and outwardly from the margin of, the back wall, in combination with a tooth marginally beveled upon its posterior portion and fitting at said posterior portion snugly within the mounting, the tooth having a cavity opening upon its rear face, and means including a dowel fixed upon and projecting forwardly from the back wall of the mounting and into the cavity of the tooth for rigidly fastening the tooth to the mounting.

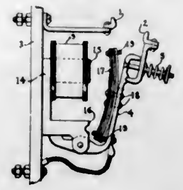
1,499,418. TRANSMISSION MECHANISM. WILLIAM CLIFFORD STEVENS, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 1, 1920. Serial No. 420,934. 3 Claims. (Cl. 192—48.)



2. In a variable speed transmission in combination, speed change gearing and driving connections therefor including a releasable friction clutch and a releasable jaw clutch having its driving member connected to the driven member of said friction clutch and its driven member connected to said gearing, a spring associated with said jaw clutch to oppose release thereof and means for effecting release of said jaw clutch following release of said friction clutch and for insuring substantially instantaneous re-engagement of the former clutch under the action of said spring prior to resetting of the latter clutch.

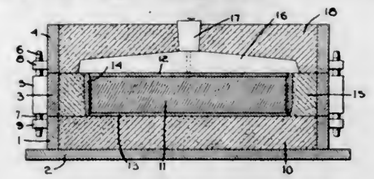
1,499,419. CLUTCH MECHANISM. WILLIAM C. STEVENS, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 31, 1920. Serial No. 434,202. 9 Claims. (Cl. 192—53.)

1. In a clutch unit, in combination a friction clutch having driving and driven friction elements, the latter element having a central opening therein, a shaft rotatable with respect to said latter element, a jaw clutch between said shaft and said driven friction element including co-operating jaw members, one being fixed to said shaft and the other being loose thereon, said latter jaw clutch member being arranged within the opening in said driven friction element and being splined thereto and common operating means for disengaging said friction clutch and said jaw clutch sequentially.



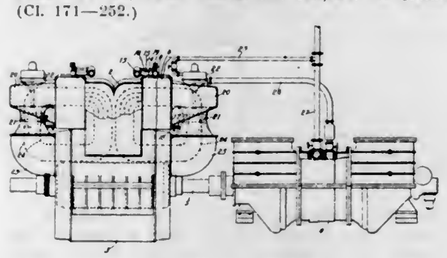
1,499,420. THERMALLY-CONTROLLED CIRCUIT INTERRUPTER. ERWIN R. STOEKLE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 3, 1920. Serial No. 378,400. 20 Claims. (Cl. 200—122.)

1. In a circuit interrupter the combination with a control element comprising a container and a conductor therein which is fluid at working temperature and a heater adapted to subject said conductor to action of a fluid under pressure for effecting electrical discontinuity thereof, of means for delaying response of said element within a given range of variations of such influence.



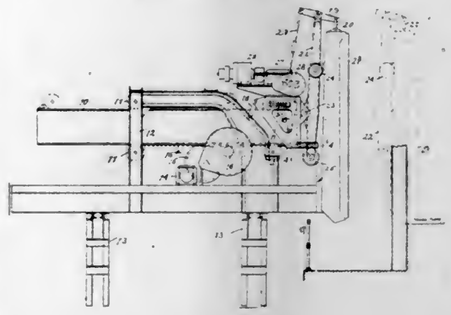
1,499,421. ELECTROMAGNETIC SWITCH. ERWIN R. STOEKLE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 10, 1920. Serial No. 429,616. 6 Claims. (Cl. 200—87.)

3. In an electromagnetically operated device, in combination, a winding, an armature member to be attracted thereby and a core for said winding to be engaged by said armature member upon attraction thereof, said armature member including a plurality of yielding magnetic parts adapted to be arrested successively by said core.



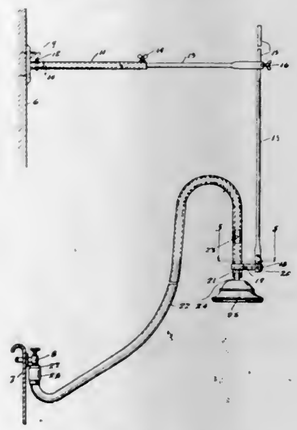
6. In an electromagnetically operated switch, in combination, co-operating stationary and movable contacts, an operating lever for the latter, and operating means for said lever including a winding, a magnet frame therefor and an armature for said winding secured to said lever and adapted to seal with said frame, said armature including a plurality of spring laminations arranged with their faces at substantially right angles to the line of travel of said arm and adapted to be flexed to different degrees upon attraction thereof.

1,499,422. CAST-METAL CUTTING DIE AND PROCESS OF PRODUCING THE SAME. JOHN E. SWANSON, Jamaica Plain, Mass. Filed Oct. 7, 1922. Serial No. 592,998. 6 Claims. (Cl. 22—190.)



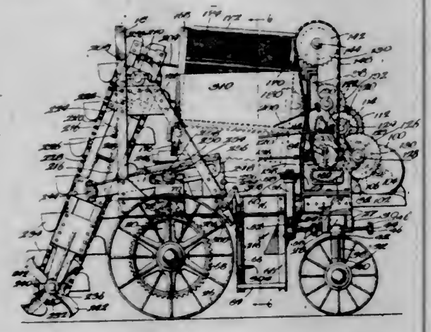
1. The process of moulding hollow articles which consists in placing in a suitable mould a templet having a contour conforming substantially to the inner wall or walls of the article, arranging upon said templet a series of juxtaposed units corresponding in cross section to like portions of the wall or walls of the article to be cast, filling the mould with sand, removing the templet, filling the space occupied by the templet with sand to form a core, withdrawing the units and pouring the molten material to form the article into the mould thus produced.

1,499,423. SYSTEM OF VENTILATION AND OPERATING MEANS THEREFOR. WILFRED SYKES, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1919. Serial No. 339,434. 3 Claims. (Cl. 171—252.)



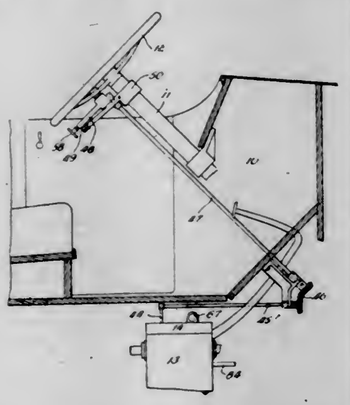
3. In combination, a machine of relatively large proportion adapted to be driven, an enclosing casing for said machine, means for propelling a cooling medium though said casing, means for driving said large machine comprising a turbine of relatively large proportions, and means for driving said air-propelling means comprising a turbine of relatively smaller proportions and having a smaller number of stages than said large turbine, the exhaust of said smaller turbine discharging into an intermediate stage of said larger turbine.

1,499,424. DOOR-SHIFTING MECHANISM. IVOR D. THOMAS, Cleveland Heights, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 12, 1920. Serial No. 395,477. 10 Claims. (Cl. 212—4.)



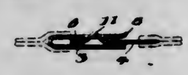
1. In a door shifting mechanism, a door shifting member movable toward and from an oven, an upright arm pivoted intermediate its ends to said member and provided with a lifter adapted to engage an appropriate part of the door, and abutments carried by the arm above and below the pivot thereof and adapted to engage the door.

1,499,425. SHOWER-BATH ARRANGEMENT. JOSEPH TOMASELLO, Chicago, Ill. Filed June 14, 1923. Serial No. 645,438. 4 Claims. (Cl. 4—154.)



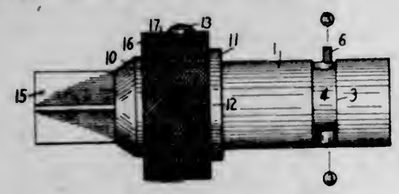
1. The combination with a bath tub, of a shower bath arrangement including a bracket provided with a stud; tubular supporting means adjustably embracing said stud; an extension member mounted for telescopic adjustment in said tubular means; a hanger rod mounted in the end of said extension member for vertical and rotational adjustment; a spraying nozzle having a flexible connection with a water supply; and a clamping member embracing said flexible connection and being detachably and adjustably secured to the lower end of said rod; substantially as described.

1,499,426. SAND CUTTING AND SCREENING MACHINE. JOHN S. TOWNSEND, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed May 12, 1920. Serial No. 380,714. 3 Claims. (Cl. 262—2.)



1. In mechanism of the class described, a supporting frame, an elevator mechanism pivotally mounted near the top of the frame so that its lower end can swing toward and from the frame, and a pair of rods on opposite sides of the elevator slidable approximately horizontally thru the frame, a rack on each rod, a shaft mounted in the frame having a pinion adjacent to each rack, a power shaft adjacent to the first mentioned shaft, a reversible friction drive mechanism between the power shaft and the first mentioned shaft, and means for selectively moving said friction drive mechanism to determine in which direction the power shaft shall move the first shaft and consequently the elevator, for the purposes set forth.

1,499,427. CONTROLLING MEANS FOR MOTOR-DRIVEN VEHICLES. WILLIAM E. TULLAR, Chicago, Ill. Filed Feb. 11, 1922. Serial No. 535,710. 12 Claims. (Cl. 74—81.)



1. The combination of a clutch, speed changing mechanism, a pivotally mounted clutch operating lever connected with said clutch, a pivotally mounted speed changing lever connected with said speed changing mechanism, and a single pivotally mounted lever for operating said clutch operating lever and said speed changing lever and comprising an arm continuously engaging said clutch operating lever, the several levers having independent pivotal axes.

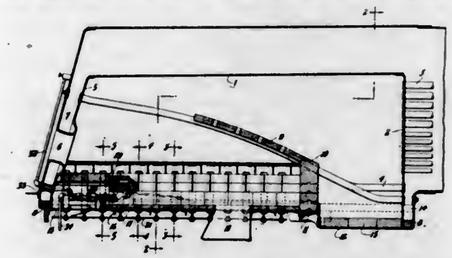
1,499,428. GARMENT FASTENER. IRA D. WAGNER, St. Louis, Mo. Filed June 2, 1923. Serial No. 642,962. 3 Claims. (Cl. 24—230.)

1. In a garment fastener, a pair of separable members, one of said members approximately U-shaped and having an aperture formed in one leg of the same, the second member comprising a plate having a tongue struck out of same, and a hump formed on said tongue to be received in the aperture in one leg of said U-shaped member while the plate engages the other leg of said U-shaped member for securely locking the two members together.

1,499,429. TUBE CUTTER. GUSTAV WIEDEKE, Dayton, Ohio, assignor to Gustav Wiedeke & Company, Dayton, Ohio, a Firm. Filed May 28, 1923. Serial No. 641,908. 12 Claims. (Cl. 81—194.)

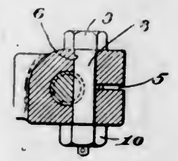
1. A tube cutter comprising a body portion having a longitudinal bore and having circumferential slots near the respective ends thereof, said slots communicating with said bore, a tool mounted within said body portion and having a cutting edge extending into one of said slots and adapted to be projected beyond the outer surface of said body portion, a member rotatably mounted in said bore and so connected with said tool that the relative rotation of said member and said body portion will project and retract said cutting edge, a pin extending through the other slot in said body portion and operatively connected with said rotatable member, and a guard rotatably mounted on said body portion adjacent to said other slot and having an opening into which the outer end portion of said pin extends.

1,499,430. CLOTHES STICK. HERBERT B. WIEMELS, West Park, Ohio. Filed Sept. 11, 1922. Serial No. 587,404. 3 Claims. (Cl. 68—6.)



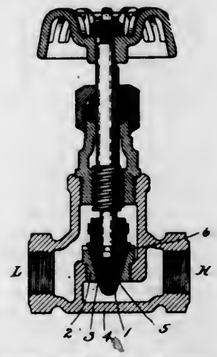
1. A clothes stick, comprising a metal union section having two parallel bores and a connecting web, and separate wooden sticks removably inserted into said bores and extending in opposite directions from said middle section.

1,499,431. FIRE-BOX STRUCTURE. ALFRED H. WILLETT, West New York, and HARRY S. MARTIN, Ridgewood, N. J., assignors to American Arch Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 25, 1920. Serial No. 368,491. 20 Claims. (Cl. 158—3.)



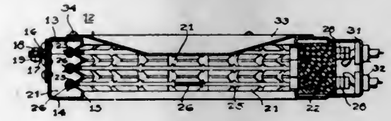
1. A fire box structure having within the fire box chamber a pair of longitudinally disposed refractory

walls constituting a flameway or trough, said walls being spaced away from the walls of the fire box chamber,



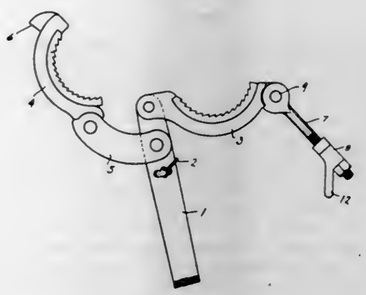
and a plurality of air passages in said walls extending upwardly and then laterally inward into the fire box chamber adjacent the flame stream.

1,499,432. ROD-SECURING MEANS. BELVIN T. WILLISTON, Somerville, Mass., and HOWARD E. EDDY, East Orange, N. J., assignors to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed June 2, 1921. Serial No. 474,448. 1 Claim. (Cl. 287—53.)



A device of the class described comprising a member constituting an element of a universal joint, said member having a part provided with an internally threaded circular bore and having a slot extending from the bore to its outer surface, the slot extending longitudinally of the bore, a torsion rod having a threaded extremity engaging the threaded bore in said part, and a binding bolt extending through said part transversely to the slot therein for drawing the opposite walls of the slot together to bind the rod in the threaded bore, said binding bolt engaging a notch in the circumferential surface of the threaded end of the rod positively to prevent rotation of the latter relatively to the part having the threaded bore.

1,499,433. THROTTLING VALVE. BELVIN T. WILLISTON, Somerville, Mass., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed May 15, 1923. Serial No. 639,084. 5 Claims. (Cl. 251—159.)

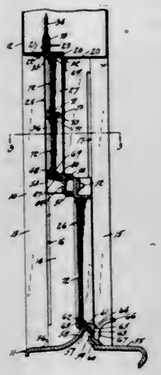


3. In a throttling valve, the combination of mutually fitting conical closure and seat members adapted to form a frusto-conical annular passage for fluid, the said passage characterized by a ratio of intake area to delivery area not substantially greater than $\frac{1}{2.25}$ and by a ratio of major diameter to axial length not substantially greater than $\frac{3}{2}$, the cone of the closure member being extended from the smaller end of the aperture and rounded at its extremity.

1,499,434. TUBING-HEAD HEATER. JAMES C. WOODSON, Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Nov. 16, 1921. Serial No. 515,687. 4 Claims. (Cl. 219—19.)

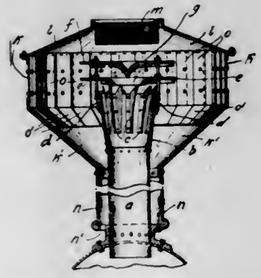
3. In an electrically heated device for maintaining a predetermined temperature at the end of a tubing-machine head, in combination, a substantially circular metallic casing having an open inner surface, a plurality of refractory resistor-supporting members located in side-by-side relation in said casing, each of said supporting members having a plurality of grooves extending laterally therethrough on the inner surface thereof, a helically wound resistor-member extending through said grooves, a terminal block in said casing and extending outwardly therefrom, terminals mounted in said block, a cover member for said terminals, a reflector partly enclosing the outer lateral surface of said casing and means for securing said casing against said tubing-machine head.

1,499,435. TONGS. MILES F. YOUNT, Beaumont, Tex. Filed Aug. 13, 1923. Serial No. 657,028. 7 Claims. (Cl. 81—66.)



1. A tong latch including side bars, and an adjustable latch block mounted on said bars at one end thereof.

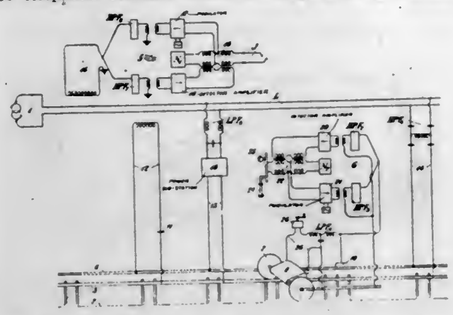
1,499,436. DOUBLE-HUNG STEEL SASH. MATHEW ZEMAN, Cleveland, Ohio. Filed Mar. 25, 1922. Serial No. 546,816. 3 Claims. (Cl. 189—66.)



1. A sash embodying dividing rails each substantially T-shaped in cross section and one of which is continuous and provided in the stem portion thereof with an opening, the other of said rails being formed in sections,

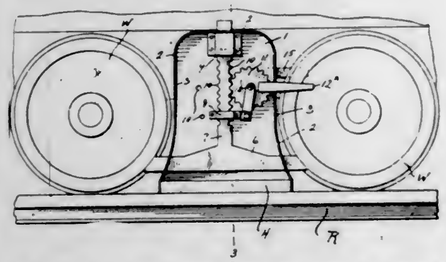
the head portions of which have a jointed connection with the head of the continuous rail, the stems of said

sections being provided with projecting portions extending into said opening and maintaining the head portions thereof in alignment.



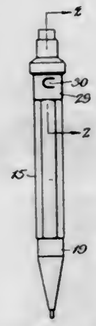
1,499,437. SPARK ARRESTER. RALPH ADAMS, Portland, Oreg. Filed Apr. 25, 1921. Serial No. 464,483. 8 Claims. (Cl. 183—102.)

1. In a spark arrester, a stack, spiral deflectors arranged longitudinally with, and on the interior of the upper end of said stack, thereby to impart a swirling motion to the discharged products of combustion before issuing from the stack, a horizontal deflector plate extending across the upper end of the stack but spaced therefrom, a smoke-bell encompassing the upper end of the stack, an annular cinder trap on the interior of the smoke-bell, said cinder trap comprising a series of vertically arranged, overlapped plates affixed to, but spaced from the interior of the smoke-bell and concentric with the axis thereof, said plates being arranged at an angle to the inner periphery of said smoke bell and extending a substantial distance below the discharge end of the stack, the top of the smoke-bell substantially closing the upper ends of the spaces behind said plates.



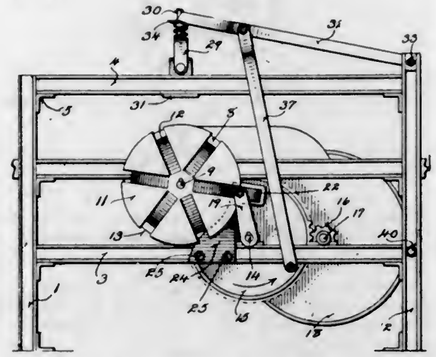
1,499,438. SYSTEM OF COMMUNICATION WITH MOVING VEHICLES. HERMAN A. APPEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 18, 1921. Serial No. 478,597. 2 Claims. (Cl. 179—2.)

1. In a system for communicating with moving vehicles, a high tension electric power line, a secondary distribution line associated with said high tension line, a moving vehicle having a connection from said secondary line to the telephone apparatus in said vehicle, a plurality of auxiliary circuits suitable for the transmission of telephone currents interconnecting said high tension



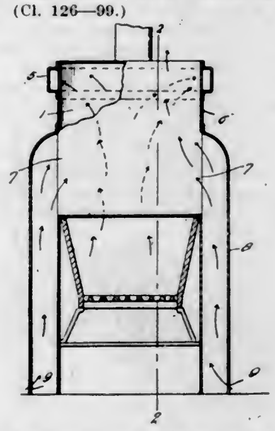
line and said secondary line at frequent intervals along the route of said lines, and means for applying telephone current to said high tension line.

1,499,439. CAR BRAKE. ALFRED R. ANDERSEN, Rock Springs, Wyo. Filed Mar. 17, 1923. Serial No. 625,829. 7 Claims. (Cl. 188—55.)



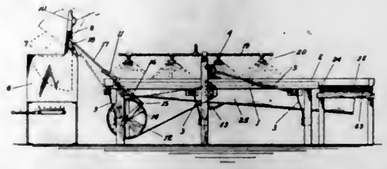
1. A brake of the class described adapted to engage a rail of a trackway and the wheels of a car traveling on said trackway to raise the adjacent side of a car, said brake being entirely separate from the car.

1,499,440. PENCIL. RAYMOND T. BELL, Chicago, Ill. Filed Jan. 9, 1922. Serial No. 527,979. 10 Claims. (Cl. 120—18.)



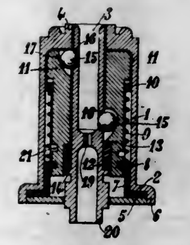
4. A pencil embodying a sheath, a collar secured about one end thereof, one or more laterally projecting lugs on the collar, a second collar encompassing the first recited collar and provided with bayonet slots opening through one end to receive the said lugs for rotatably and detachably securing the second recited collar, a cap for the end of the sheath, a portion of the cap encompassing the second recited collar, means securing the cap to the second recited collar for rotation therewith and with respect thereto, and a lead or crayon projecting element within the sheath and secured to the cap for rotation therewith, the said means embodying a spring tongue on the cap and a circumferential groove in the face of the second recited collar adjacent the cap and into which groove the said tongue projects.

1,499,441. INTERMITTENT FEED FOR MACHINES. LEWVEAN L. BOLSTEAD, Oconomowoc, Wis. Filed Nov. 23, 1922. Serial No. 602,836. 2 Claims. (Cl. 74—41.)



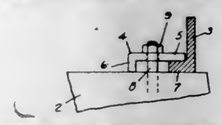
1. Mechanism for converting continuous rotary motion into intermittent motion comprising a revolubly mounted crank having a projection adjacent its outer end, a movably mounted member having a plurality of slots adapted to successively receive said projection during a portion of a revolution of said crank, and means, releasable by said projection, for locking said member when said projection is free from engagement with said member.

1,499,442. AIR HEATER. HOWARD E. BROWNING, Chester, Ill. Filed Feb. 18, 1924. Serial No. 693,680. 2 Claims. (Cl. 126—99.)



1. An air heater for use in conjunction with a furnace comprising pocket members having mouths adapted to be disposed above the fire pot of the furnace, the pocket members being spaced from each other and disposed in parallel relation, the pocket members being provided at their upper portions with outlet openings through which the products of combustion may make exit, a hood disposed over the pocket members and provided at its sides with openings, skirt portions depending from the hood and disposed over the openings therein and adapted to extend along the sides of the furnace, the said skirt portions being provided in the vicinity of their lower edges with air inlet openings.

1,499,443. FRUIT DIPPING AND CLEANING APPARATUS. FRANK CARPENTER CHAPMAN, Modesto, Calif. Filed Oct. 1, 1923. Serial No. 665,888. 9 Claims. (Cl. 146—196.)

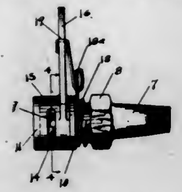


1. In a fruit cleaning apparatus, a shaker table on which the fruit to be cleaned is dumped, and a tray conveyor extending transversely of the table at one end thereof, said end being cut diagonally, the diagonal edge extending over a tray for the full width thereof.

1,499,444. SAFETY SPRING BARREL APPLICABLE TO LOCKS OR ANY KEY-LOCKING SYSTEM. PIERRE GUSTAVE CAILLOIS, Paris, France. Filed Jan. 4, 1923. Serial No. 610,680. 6 Claims. (Cl. 70—46.)

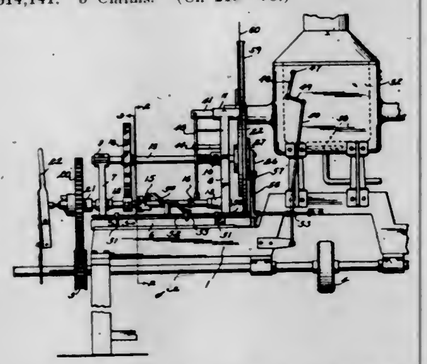
1. In a safety spring barrel for locks, the arrangement in the barrel of a key pipe capable of receiving longitudinal and angular displacements about its axis and having a central bore for receiving a key therein to permit of the pushing of the key pipe into the barrel, means on the key for angularly displacing said key pipe, a plurality of balls, the walls of the key pipe having orifices therein serving as housings for the balls, and means for independently pushing the balls toward the axis of the key pipe when the latter is longitudinally displaced.

1,499,445. LAMP-POST. JAMES S. CLAY, Indianapolis, Ind., assignor to Caldwell & Drake Iron Works, Columbus, Ind., a Corporation of Indiana. Filed Oct. 7, 1921. Serial No. 506,183. 5 Claims. (Cl. 189—28.)



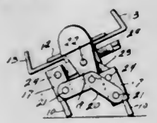
1. The combination with a hollow post having an inwardly directed flange, and a supporting base for the post, of a plurality of clips for clamping the post to the base each clip comprising a horizontal portion adjusted to extend over and engage said flange and having a portion for engagement with said base, and means fixed to said base adapted to clamp the clips on the flange.

1,499,446. COCK. JOHN C. CODE, Portland, Oreg. Filed Feb. 23, 1923. Serial No. 620,832. 2 Claims. (Cl. 251—149.)



1. A cock having a cylindrical portion and an orifice opening upon said cylindrical portion; a cap rotatably mounted upon said cylindrical portion, and having a slot adapted to coact with said orifice to open the latter; a spring adapted to keep said cap in position closing

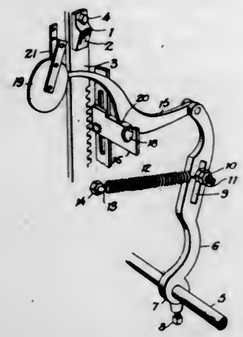
said orifice; an extension upon said spring adapted to produce a force upon said cap in a direction transverse



to the longitudinal axis of said cock; and a pin upon said cock projecting through said slot and limiting the angular movement of said cap.

1,499,447. MACHINE FOR CASTING LEAD SEALS. ORVAL G. COOK, Columbus, Ohio, assignor to The Muin-Cook Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Jan. 22, 1923. Serial No. 614,141. 5 Claims. (Cl. 219—58.)

1. In a machine for casting lead seals, a rotating disk having open ended molds formed therein, means for closing the ends of the molds, and means for discharging molten lead from one closing means into the molds and in opposition to the other closing means.

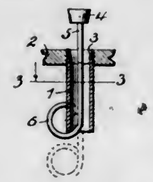


1,499,448. SKATE. WILBER D. CRAWFORD, Scottsbluff, Nebr. Filed July 3, 1922. Serial No. 572,458. 8 Claims. (Cl. 46—30.)

7. A skate having a forward pair of runners and a rearward pair of runners, upper and lower parallel links pivotally connected at their ends to said runners whereby the runners shall have parallel motion, and a body having arms pivotally connected to each of said pairs of links at the middle thereof.

1,499,449. STOP MECHANISM FOR LOOMS. CARL C. DORN, JOHN L. SMITH, and WILLIAM P. LEISTER, Wallhalla, S. C. Filed June 4, 1923. Serial No. 643,333. 7 Claims. (Cl. 139—340.)

1. In a loom a gear, means for automatically stopping said loom when a desired length of cloth has been woven, said means comprising a lever associated with the loom stopping mechanism, a retaining member for holding said lever out of stopping position, means actuated by the gear for tripping said lever, and yieldable means associated with said lever for moving it, when tripped, to actuate said loom stop mechanism, said retaining mem-



ber being adjustable, whereby it can be set so that said lever will be tripped when a predetermined length of cloth has been woven.

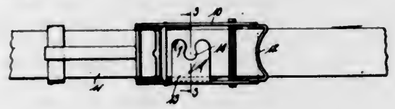
1,499,450. LAMP SUPPORT. NICKOLAS ENDRES, Scio, Oreg. Filed May 5, 1923. Serial No. 636,943. 2 Claims. (Cl. 240—61.)

1. On an automobile, a pair of concentric members, one rotating upon the other; means upon the extremities of the inner of said members to secure the same to the fender aprons of the automobile, said means being adjustable to the various angles of said aprons; yieldable coacting means upon said members to retain them in relative position, and to return them to said relative position after the outer of said members has been rotated; means to mount lamps upon said rotatable member; and means to operate said rotatable member from the driver's seat.

1,499,451. DRAIN VALVE. FRED H. ETZENHOUSER, Mount Washington, Mo. Filed Aug. 22, 1921. Serial No. 494,076. 3 Claims. (Cl. 251—135.)

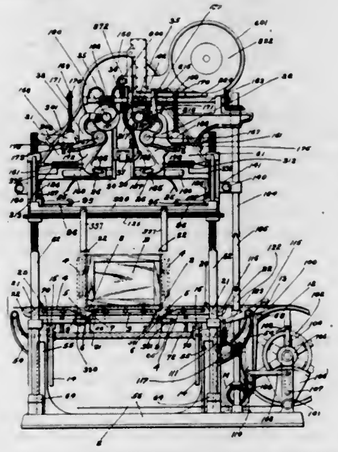
1. A device of the kind described comprising a tube having a seat, and a longitudinally movable valve adapted to fit said seat and having a stem extending through the outer end of said tube, the outer portion of the stem having a transversely divided spring ring portion arranged to clampingly engage said tube for holding the valve in the open position, substantially as set forth.

1,499,452. CIGAR HOLDER AND ASH RECEIVER. IRA A. GAY, Chicago, Ill. Filed Jan. 19, 1921. Serial No. 438,434. 2 Claims. (Cl. 131—51.)



2. In an ash tray, the combination of a pocket, a receptacle removably fitting in the upper end of the

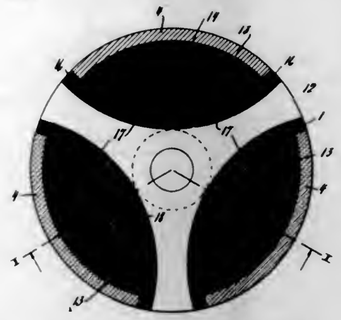
pocket and having an imperforate bottom wall spaced above the bottom of the pocket, and a bar extending



across the interior of the receptacle between opposite walls thereof dividing the receptacle into compartments.

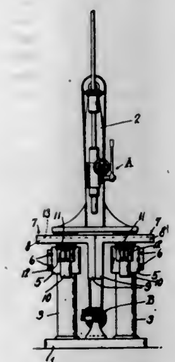
1,499,453. BELT BUCKLE. JOE DE GROOTE, Pecatonica, Ill. Filed Oct. 26, 1923. Serial No. 670,912. 2 Claims. (Cl. 24—73.)

2. A belt buckle including a trousers engaging hook carried at one end and lying in a plane behind the buckle, and a button engaging clasp carried on the back of the buckle and spaced adjacent the other end thereof substantially as described.



1,499,454. BOX-STRAPPING MACHINE. ARTHUR G. G. GUENTHER, Chicago, Ill., assignor to Signode System, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 7, 1918. Serial No. 210,616. 59 Claims. (Cl. 100—31.)

1. A machine for use in strapping boxes including in combination means for stretching a metallic strap or binder applied about a box or package with the ends of said strap in mutually overlapped relation and in alinement, and means for joining the said overlapped strap ends by forming simultaneously therein interlocking tension resisting deformations.



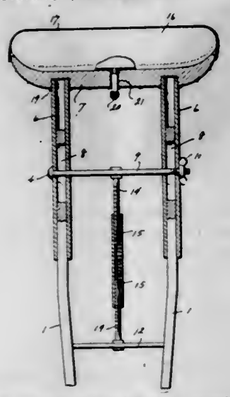
51. In apparatus of the class described and in combination means for applying a tension resisting binder about a box or package, and yielding means for stretching said binder.

1,499,455. IMPELLER FOR ROCK CRUSHERS. ALVAH D. HADSEL, San Francisco, Calif., assignor of one-half to Frederick N. Woods, jr., San Francisco, Calif. Filed June 4, 1923. Serial No. 643,458. 8 Claims. (Cl. 83—46.)

1. An impeller of the character described, comprising a rotary element formed to receive material centrally and to discharge the same peripherally and soft cushioning members within the same for guiding the material.

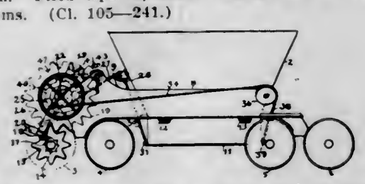
1,499,456. DRILL-PRESS TABLE. RICHARD A. HARTMANN, Hartford, Conn., assignor to H. S. & S. Manufacturing Co., Hartford, Conn. Filed Aug. 8, 1921, Serial No. 490,796. Renewed Nov. 19, 1923. 4 Claims. (Cl. 77—63.)

1. A table for drill presses comprising a pair of sections each consisting of an angle member having one leg horizontal and one leg vertical, and means to support said sections arranged to permit adjustment of said sections horizontally toward and from each other, adjustment of said sections vertically with respect to each other and adjustment of any side of one section in juxtaposition to any side of the other section and means to secure said sections in adjusted position.



1,499,457. DEVICE FOR FREEING POINTS OF A PERFORATING RULE FROM PAPER OR ANY MATERIAL BEING PERFORATED. JOSEPH W. HEJDA, Virginia, Minn. Filed May 14, 1920. Serial No. 381,458. 1 Claim. (Cl. 164—98.)

A perforated attachment for printing presses, in combination with an ordinary perforated rule, a device comprising a base, a top bar, each having aligned counterbores, springs interposed between the two and exerting pressure outwardly, pins running transversely of the counterbore of the base for holding the springs in place,

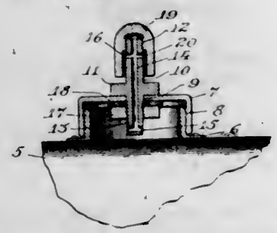


said bars adapted to be placed on each side of the rule in such a manner that when the pressure of the press is applied, the compressing of the device permits the perforated rule to perforate the paper, and immediately on releasing the pressure push the paper from the perforated rule.

1,499,458. CRUTCH. CHARLES B. HUGHES, New Orleans, La., assignor of one-half to Angelo J. Gumina, New Orleans, La. Filed May 26, 1923. Serial No. 641,676. 1 Claim. (Cl. 135—50.)

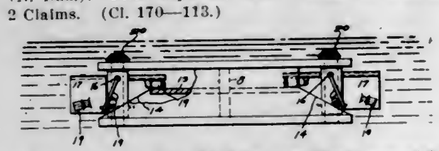
An extensible crutch comprising, in combination, a saddle, sleeves depending therefrom, crutch rods telescopically engaged within the sleeves, the inserted end portions of the crutch rods being provided with longitudinally disposed slots, a rod extending through the sleeves and through the slots of the crutch rods, said second named rod bridging the space between the sleeves, said second named rod being provided with means co-acting with the sleeves to hold the rod in a fixed position lengthwise of the slots of the crutch rods, a second rod connecting the crutch rods outwardly of the sleeves, and a turn-buckle connection between said last named rods.

1,499,459. DUMP CAR. JOHN JOHNSON, Iron River, Mich. Filed Apr. 2, 1921. Serial No. 458,169. 3 Claims. (Cl. 105—241.)



1. The combination with a dump car and the drop-door therefor, of a door-closing mechanism; means actuated by the wheels upon which the body of said car is mounted for actuating said mechanism and means rendering inoperative said door closing mechanism when the doors have reached their closed position.

1,499,460. BEARING FOR RIFLES. HUGH A. KENNEDY, Newport, Wash. Filed Sept. 7, 1922. Serial No. 586,685. 1 Claim. (Cl. 42—91.)

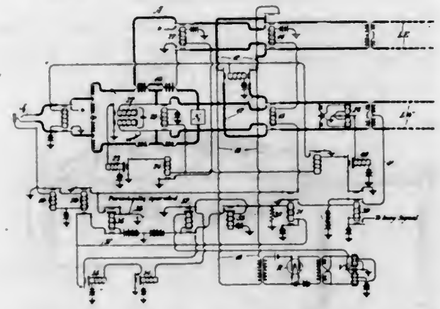


As a new article of manufacture, a device for facilitating the cleaning of gun barrels comprising a frusto-conical-shaped centering member for engaging the bore of the gun barrel, an elongated cylindrical bearing sleeve of the same diameter throughout its length formed on the tapered end of the centering member, the centering member and the elongated bearing sleeve having plain outer surfaces and a smooth longitudinally extending axially disposed gun cleaning rod receiving bore, and an annular flange formed on the enlarged end of the centering member for forming an anvil for facilitating the placing of the device in a gun barrel.

1,499,461. AIR VENT. ANTHONY J. KRUPPA, Chicago, Ill. Filed June 21, 1922. Serial No. 569,845. 2 Claims. (Cl. 220—44.)

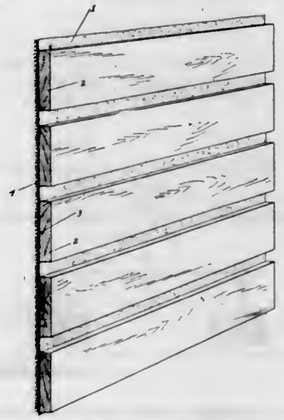
1. An air vent comprising a cap, a member secured to said cap, said member having an aperture extending longitudinally thereof and terminating in oppositely disposed apertures at the lower end of said member, oppositely disposed apertures formed in the upper end of said member and communicating with said longitudinally extending aperture, and a head secured to said member having a channel communicating with the aperture in the upper end of said member.

1,499,462. FLUID-CURRENT MOTOR. LARS LARSEN, T. 132 N., R. 106 W. of the fifth principal meridian, (N. Dak.). Filed Sept. 28, 1921. Serial No. 503,915. 2 Claims. (Cl. 170—113.)



1. A device of the character described comprising spaced horizontally disposed top and bottom plates, a centrally disposed division wall extending longitudinally therebetween, vertical walls extending between the upper and lower walls at the front of the structure and disposed at an angle to form a substantially V shaped portion horizontally disposed walls extending between the upper and lower walls and outwardly from the central division wall upon each side thereof, vertical shafts journaled in the upper and lower plates outwardly of the last named horizontal walls, inclined portions at the rear end of said horizontal walls, radially disposed members traveling about the axis of each of the vertical shafts, wings pivoted to swing from vertical to horizontal and supported from said radial elements, and anti-friction element carried by said wings and disposed in position to engage said inclined portions ahead of any other portion of said wings and to be guided thereby into a substantially horizontal position as said wings travel around the inner sides of said shafts and along the last named horizontal walls, the rear ends of the vertical walls constituting the V shaped portion terminating in substantial longitudinal alignment with the centers of said shaft.

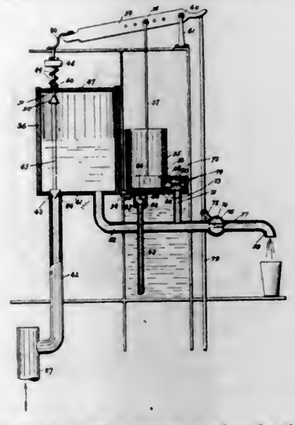
1,499,463. FURNITURE POLISH. ROLAND LEIS, Francesville, Ind. Filed Aug. 14, 1923. Serial No. 657,432. 1 Claim. (Cl. 134—24.)



A furniture polish comprising linseed oil 72%, pure turpentine 15%, kerosene 10%, castor oil 2%, and raw umber 1%.

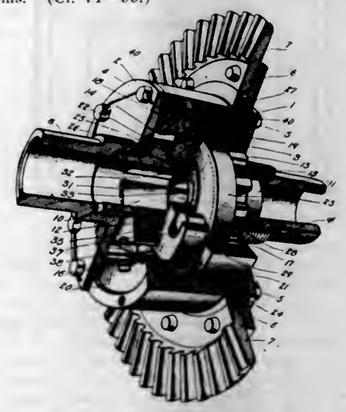
1,499,464. TRANSMISSION-REGULATING CIRCUITS. OWEN H. LOYNES, Woodridge, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 26, 1921. Serial No. 440,103. 16 Claims. (Cl. 178—44.)

1. A four-wire circuit comprising two lines for transmitting in opposite directions, means normally looping the lines together at their ends, terminal arrangements for connecting said lines with terminal two wire lines, and means responsive to the connection of said two wire lines with said terminating arrangements for opening said loop connections and connecting the lines of the four wire circuit with said terminating arrangements.



1,499,465. PLASTER LATH. JOHN F. MAKOWSKI, Stockton, Calif., assignor to California Cedar Products Company, Stockton, Calif., a Corporation. Filed Mar. 21, 1923. Serial No. 626,562. 6 Claims. (Cl. 72—116.)

1. A plaster lath comprising a plurality of spaced strips, a sheet of material on which the strips are mounted, and plaster holding means on the outer surface of said sheet.

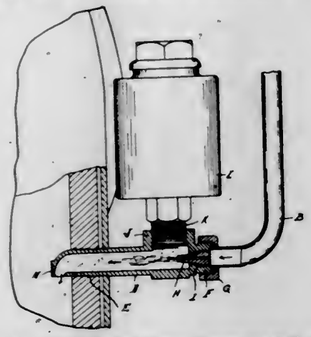


1,499,466. SODA-WATER FOUNTAIN. ALEXANDER S. MANDEL, New York, N. Y. Filed Aug. 21, 1923. Serial No. 658,592. 6 Claims. (Cl. 225—21.)

1. In a device of the character described, the combination with a syrup container, of an aerated water tank, a discharging pipe for said tank having a dispensing valve, a pump device comprising a cylinder having a piston head therein, inlet and outlet valves for said cylinder, a suction pipe extending from the syrup container to said inlet valve through which the syrup is drawn into the cylinder when the piston head is elevated, a discharge connection between said outlet valve and said discharging pipe through which to discharge the syrup into said discharging pipe when said piston head is lowered, and

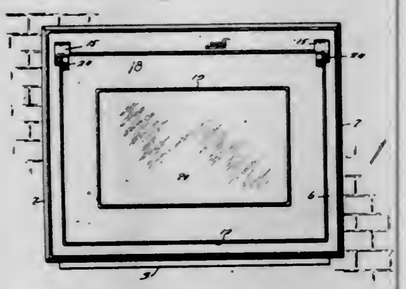
means associated with said piston head and said dispensing valve for holding the piston head elevated when the dispensing valve is closed.

1,499,467. DIFFERENTIAL MECHANISM. CLARENCE F. MEAD, Los Angeles, Calif. Continuation of application Serial No. 643,274, filed June 4, 1923. This application filed Oct. 27, 1923. Serial No. 671,103. 12 Claims. (Cl. 74—99.)



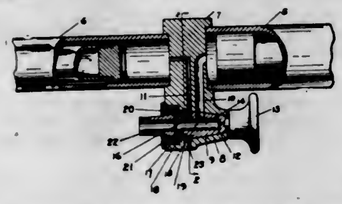
1. A differential mechanism comprising a rotatable housing, axle driving pinion gears mounted in the ends of the housing concentric to the axis of rotation of the housing, internally toothed rings mounted in the ends of the housing eccentric to and in mesh with the pinions, and members concentric with the rings and eccentric with the pinions, said members being effective to hold the housing, rings and pinions together against relative rotation when the housing overruns the pinions, and to permit the holding effect on one of the pinions and rings to be destroyed whenever that pinion overruns the housing so that differential action can take place.

1,490,468. LUBRICATOR. ELIJAH MCCOY, Detroit, Mich., assignor to Edwin C. Nagel, Detroit, Mich. Filed Oct. 2, 1922. Serial No. 591,977. 5 Claims. (Cl. 184—53.)



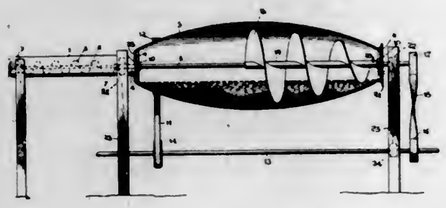
2. In a lubricator, the combination with a tallow pipe, a nozzle at the end of said pipe and a casing to which said tallow pipe is connected, of a fitting forming the attachment means between said tallow pipe and casing, said

fitting having a threaded portion for engagement with said casing, coupling means for attachment to the tallow



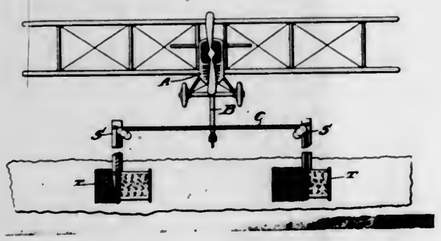
pipe, and an intermediate nipple between said nozzle and said casing for alternative engagement of a plug and an auxiliary lubricator.

1,499,469. COAL CHUTE. JOHN E. MCMINN, Louisville, Ky., assignor to Peerless Manufacturing Company, Louisville, Ky., a Corporation of Kentucky. Filed Sept. 28, 1923. Serial No. 665,484. 8 Claims. (Cl. 193—34.)



1. In a device of the character set forth, the combination of a chute, a door which when in a vertical position is arranged to close the chute, connections between the door and chute permitting the door to be swung from a vertical to a horizontal position and then slid into the chute, a latch carried by the edge of the door for locking engagement with a part of the chute when the door is in closed position, and a flexible element having connection with the latch and extending through suitable guides to a remote point from which the latch may be released by a pull upon the flexible element.

1,499,470. THROTTLE VALVE. WILLIAM G. NAISMITH, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Mar. 18, 1921. Serial No. 453,237. 9 Claims. (Cl. 251—95.)

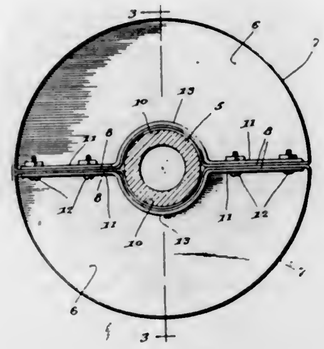


1. In apparatus of the character set forth, the combination with a valve casing having a fluid inlet and a fluid outlet, of a rotary valve therein, means for creating end thrust on the valve, and means independent of said fluid outlet for varying the force of the thrust when the valve is shifted to different positions.

1,499,471. ORE CONCENTRATOR. LEWIS HORACE PECK and WILLIAM ARTHUR OLSON, Delta, Utah. Filed Apr. 10, 1923. Serial No. 631,193. 4 Claims. (Cl. 83—86.)

1. An ore concentrator comprising a sand trough, a chute at the discharge end of the trough, a cylinder having an opening into which the chute discharges, a shaft extending through the cylinder, means by which it is supported, spiders carried by the cylinder having boxes furnishing bearing for the cylinder on the shaft, means for rotating the cylinder independently of the shaft, means for rotating the shaft in the opposite direction and at a different speed from that of the cylinder, a worm in the trough, means by which the worm is connected to the shaft, and a worm on the shaft in the cylinder adapted to agitate sand and move it toward the discharge end of the cylinder.

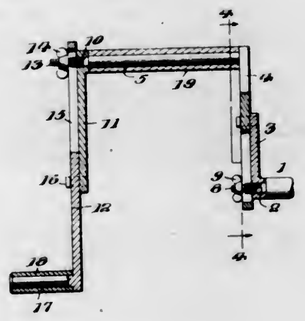
1,499,472. AIRPLANE-LANDING MECHANISM. HAZEN C. PRATT, Cambridge, Mass. Filed July 14, 1922. Serial No. 575,131. 16 Claims. (Cl. 244—2.)



6. Air craft landing mechanism, comprising an engaging hook attached to the craft at a point in the rear of its center of gravity, and a guiding device to support said hook until detached by the landing mechanism.

15. The method of landing airplanes which consists in applying to such plane from a fixed retarding device at the landing surface while the plane is still in flight, a force which acts in the rear of its center of gravity and tends to maintain the plane in an upright position when it strikes the landing surface.

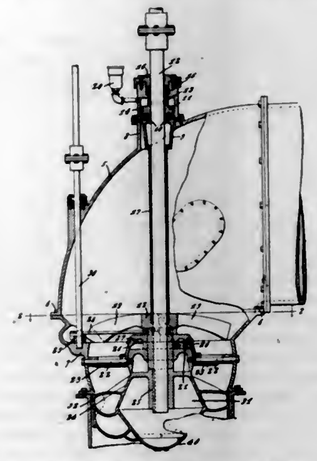
1,499,473. FLOWER BOX. DAVID PRICE, Buffalo Center, Iowa. Filed Dec. 21, 1920. Serial No. 432,261. 2 Claims. (Cl. 47—34.)



1. A flower box for verfical posts comprising sections having side walls, the ends of each side wall being overlapped at the point of engagement with the posts and being free from permanent connection with each other,

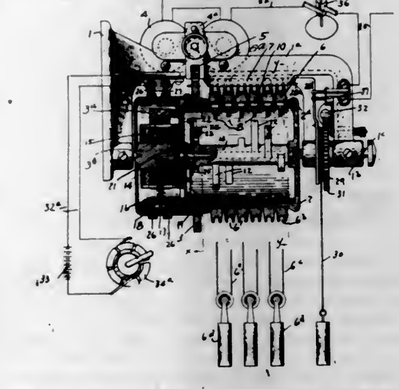
clamping straps extending along the upper edge portion of said side walls with their intermediate portions overlying the overlapped ends of the side walls of each sec-

tion, and bolts extending through the straps and the side walls to tightly engage the upper edge portions of the overlapped ends of the side walls with a post.



1,499,474. CRANK. RALPH H. PRICE, Crooksville, Ohio. Filed June 15, 1923. Serial No. 645,600. 2 Claims. (Cl. 74—33.)

1. In a crank, comprising a shaft having a square portion of reduced size formed on one end, a screw threaded extension formed on said reduced portion, an arm formed integral with the opposite end of said shaft, a second arm adjustably connected to the first mentioned arm, and a sweep mounted on the reduced square portion of the shaft and adjusted to various lengths.

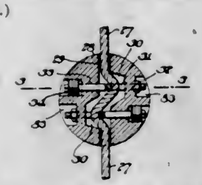


1,499,475. TURBINE WATER WHEEL. JOHN H. PRINCE, Valliant, Okla. Filed Dec. 8, 1921. Serial No. 520,952. 2 Claims. (Cl. 253—155.)

1. In a water motor, a casing, bearings supported within the casing, a water wheel within the casing, bolts extending through the casing, pivoted blades arranged above the wheel and mounted on the bolts for pivotal movement, a segmental rack disposed at an angle and carried by each blade, a ring gear disposed above the segmental racks and in mesh therewith, means having connection with the ring gear for moving the same to swing the pivoted blades on their bolts to regulate the

passage of fluid to the water wheel, and guiding blades arranged above the pivoted blades to direct fluid to the water wheel.

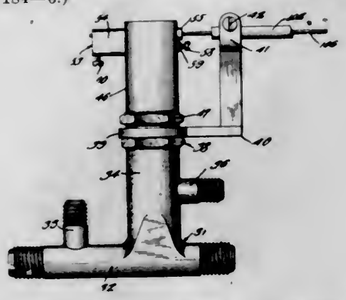
1,499,476. MEANS INDICATING AVERAGE RATE FLOW OF ENERGY. GEORGE E. QUINAN, Seattle, Wash. Filed Aug. 5, 1918. Serial No. 248,430. 12 Claims. (Cl. 234—5.5.)



4. A meter comprising an indicating member, a rotating member responsive to the accumulations of units of a varying quantity, and a series of actuating members to actuate and operate the indicating member, said actuating members being normally movable with the rotating member, and being successively disconnected from the rotating member for a predetermined period thru the influence of a second varying quantity.

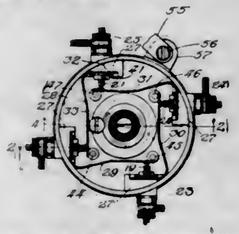
5. A meter comprising indicating means, a rotating element responsive to the accumulations of units of a varying quantity, and a series of actuating members normally clutched to the rotating member and adapted to operate the indicting means, the clutches of the actuating members being opened thru the influence of a second varying quantity for predetermined periods.

8. In a meter, an indicating means, a rotating element responsive to the accumulations of units of a varying quantity, a series of rings having clutch connection with the rotating element and adapted to successively actuate the indicating means, and means whereby said rings may



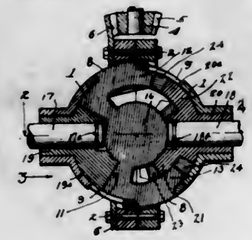
be successively disconnected from the rotating element for a predetermined period thru the influence of a second varying quantity.

1,499,477. CABLE ATTACHMENT. JAMES F. REILLY, Philadelphia, Pa. Original application filed Aug. 24, 1921, Serial No. 495,059. Divided and this application filed Sept. 13, 1923. Serial No. 662,404. 12 Claims. (Cl. 24—114.5.)



8. An attachment for hoisting and power cables and the like comprising a member adapted to be mounted upon the cable, said member having a hole extending therethrough and a plurality of recesses extending from said hole, a U-bolt arranged in conjunction with each of said recesses and adapted to deform the cable within said recesses, a reinforcing member bearing against said U-bolt, and means for securing said reinforcing member comprising a plug threaded in said member and bearing against said reinforcing block.

1,499,478. VALVE. JAMES K. ROBINSON, Jacksonville, Fla., assignor of one-fourth to S. S. Rickett and one-fourth to C. G. Robertson, both of Jacksonville, Fla. Filed Mar. 17, 1923. Serial No. 625,905. 3 Claims. (Cl. 184—6.)

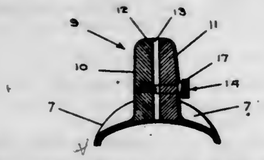


1. In a device of the class described, a tubular body so constructed that liquid may flow therethrough, the body having a supplemental outlet, a valve controlling the passage of liquid from the body through the outlet, yieldable means for holding the valve closed, and mechanism under the control of an operator, and independent of the spring means, for limiting positively the movement of the valve toward open position.

1,499,479. ELECTRICAL TIMING DEVICE. GUSTAF A. SAFSTROM, Chicago, Ill. Filed Aug. 21, 1922. Serial No. 583,262. 5 Claims. (Cl. 200—27.)

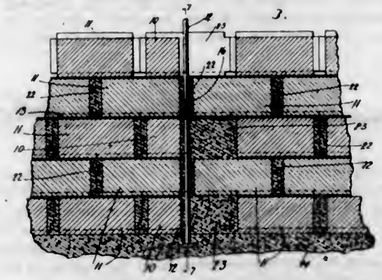
2. In an electrical device, the combination of a support, a spring contact member, and a binding post forming a contact securing said member to said support and insulated from said member, said support being recessed to receive said member, with its walls so disposed as to position said member on said support out of contact with said post.

1,499,480. DIFFERENTIAL MECHANISM. FERDINAND W. SEECK, Lebanon, Oreg. Filed June 1, 1922. Serial No. 565,029. 14 Claims. (Cl. 74—7.)



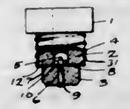
1. In a differential mechanism, a driven case, axle sections journaled in opposite sides of the case, an eccentric portion carried by each axle section, a transmission element located between the axle sections, coupling the eccentric portions thereof, the case and transmission element being respectively provided with slots and trunnions bearing in the slots, thereby permitting the transmission element rotary motion about an axis normal to and intersecting the line of said axle sections, and also oscillatory motion in the plane in which the axle sections and said normal axis lie.

1,499,481. APPARATUS FOR THE TREATMENT OF FLUIDS. EDWARD SHAW, Toronto, Ontario, Canada. Original application filed Jan. 25, 1918, Serial No. 213,756. Divided and this application filed July 24, 1919. Serial No. 313,124. 4 Claims. (Cl. 257—242.)



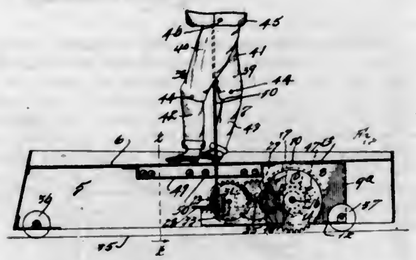
1. Apparatus for the treatment of fluids for the purposes described comprising a conduit having opposite walls corrugated to form a zig-zag passageway, the sides of the salient bends of the corrugations of one wall within the conduit meeting at such an angle as to form acute apices, the salient bends of the corrugations of both walls being in substantially longitudinal alinement with one another.

1,499,482. DENTAL TRAY. HENRY CHARLES SIMMONS, Atlanta, Ga. Filed July 19, 1922. Serial No. 575,967. 2 Claims. (Cl. 32—6.)



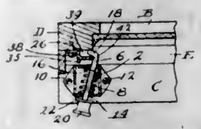
1. A dental tray having a handle, said tray and handle being divided, the handle sections having a tongue and groove at their adjacent sides extending longitudinally of the handle to fit together, and means for clamping the handle sections together.

1,499,483. WALL CONSTRUCTION. JAMES H. SIMMS, Beverly Hills, Calif. Filed Feb. 13, 1923. Serial No. 618,759. 3 Claims. (Cl. 72—30.)



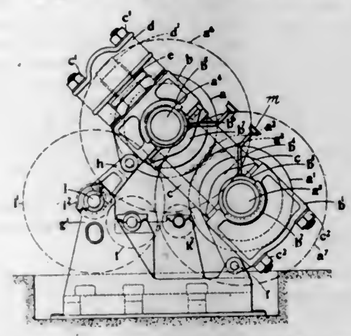
1. A reenforced block structure, comprising a series of spaced parallel reenforcing rods, and a plurality of courses of blocks, the courses being transverse of the reenforcing rods, and the blocks adjacent the reenforcing rods having grooves in their end surfaces to embrace the rods; the blocks of adjacent courses being laid in staggered relation, and the rod embracing grooves of blocks in one course being comparatively shallow and of blocks in an adjacent course being comparatively deep and reaching in depth from the end of the block to approximately its center.

1,499,484. FUSE PLUG. WENN L. SMITH, San Francisco, Calif. Filed Oct. 25, 1921, Serial No. 510,228. Renewed May 10, 1924. 2 Claims. (Cl. 200—130.)



1. A device such as described comprising an externally threaded plug having a central bore therein; a fuse element arranged transversely in said plug and passing through said bore; a fuse binding element adapted to engage said fuse in said bore and a metal annulus adapted to engage the threaded portion of said plug and contact with the projecting ends of said fuse.

1,499,485. MECHANICAL TOY. FERDINAND STRAUSS, New York, and ALBERT DINGFELD, Brooklyn, N. Y., assignors, by mesne assignments, to said Strauss. Filed Feb. 23, 1922. Serial No. 538,425. 6 Claims. (Cl. 46—45.)

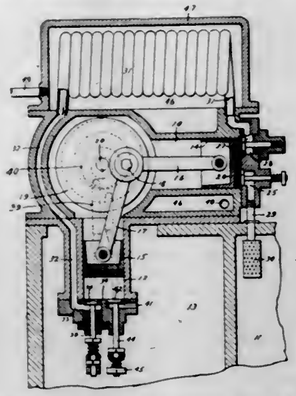


6. In a toy, a movable member, a figure mounted on said movable member, means for actuating said figure including a train of gears, and a motor to propel said movable member along a suitable support and to actuate said train of gears, said motor including a toothed gear and a spring to operate said toothed gear, one gear of said gear train being in mesh with said motor toothed gear, said motor toothed gear bearing directly on the support for said movable member, whereby said motor gear both acts to drive the gear train to actuate said figure and simultaneously acts as a traction agent on said support to propel said movable member.

1,499,486. SASH FASTENER. WILLIAM STRICKER, Kansas City, Mo. Filed Sept. 23, 1922. Serial No. 590,141. 3 Claims. (Cl. 299—262.)

1. In a sash fastener, a flange spaced from the upper sash, means for securing said flange to the upper sash, a housing fixed to the lower sash, a bolt slidably and laterally movable in said housing and adapted to engage the lower end of the flange to lock the sash in closed position, or be adjusted laterally to slide against the free margin of the flange when the sash are partly opened, a laterally projecting hook on the forward end of said bolt to traverse the space between the flange and the upper sash, and a stop at the upper portion of the flange arranged in the path of said hook to limit the opening of the sash.

1,499,487. MACHINE FOR COMPRESSING OR BRIQUETTING COAL OR OTHER MATERIAL. EDGAR ROUSE SUTCLIFFE, Leigh, England. Filed Dec. 22, 1923. Serial No. 682,266. 4 Claims. (Cl. 25—77.)

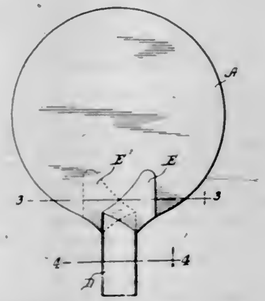


1. A compressing or briquetting machine, comprising in combination a pair of coacting rolls, housings supporting the said rolls, means for applying pressure between the said rolls, tension elements upon which the said housings together with the said rolls are relatively movable and through which pressure is applied, driving gear by which both rolls of the said pair are driven, and means comprising links for permitting in the operation of the machine the relative movement of the said housings together with their rolls, substantially as described.

1,499,488. SHOE-STIFFENING MATERIAL. CHARLES E. SWETT, Boston, Mass., assignor of one-half to Harry H. Beckwith, Brookline, Mass. Filed Oct. 14, 1921. Serial No. 507,758. 4 Claims. (Cl. 91—68.)

1. A shoe stiffener consisting of a fibrous body impregnated with a stiffening agent adapted to be softened or liquefied by the application of heat and to become stiff and resilient when set, and having a flexible surface coating of a heat-resistant stiffening material.

4. The herein described process which comprises treating a fibrous material with a stiffening agent adapted to be softened or liquefied by the application of heat and to become stiff and resilient when cold, coating the impregnated material with an additional stiffening agent consisting of a colloidal material resistant to such heat, and cutting the fibrous material into blanks having skived edges.



1,499,489. REFRIGERATING APPARATUS. RAYMOND W. TIBBETTS, Pawtucket, R. I. Filed July 3, 1919. Serial No. 308,397. 6 Claims. (Cl. 62—95.)

1. A refrigerating apparatus of the class described having means for compressing and expanding air, the air expanding means having a cold air exhaust port and automatic means for compressing and expanding air, the air expanding means having a cold air exhaust port and automatic means for dislodging ice from such port.

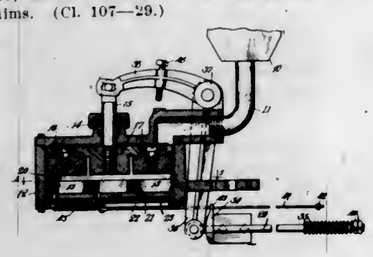
6. A refrigerating apparatus having a cylinder with a motor-driven piston, a motor, a fluid supply pipe having a valve, motor-controlled means to open and close the valve comprising an endless transmitting band actuated by the motor, and a part connected with the movable member of the valve resting in contact with one of the band runs, said band run being slack when the motor is not operating and allowing movement of the movable valve member to close the valve.

1,499,490. FAN. EDWARD WEIL, Brooklyn, N. Y. Filed Mar. 7, 1922. Serial No. 541,729. 2 Claims. (Cl. 230—33.)

1. As a new article, a fan embodying a body portion, a handle integral therewith, and a plurality of wings extending from the handle into overlapping relation to the body on the respective faces thereof, said wings contacting with the body adjacent the union with the handle and said wings extending in opposite directions from an axial line intersecting the handle and the body.

1,499,491. SCREW DRIVER. PETE WEISSBECK and LEE TIBBALS, Kansas City, Mo. Filed May 5, 1923. Serial No. 636,877. 1 Claim. (Cl. 145—50.)

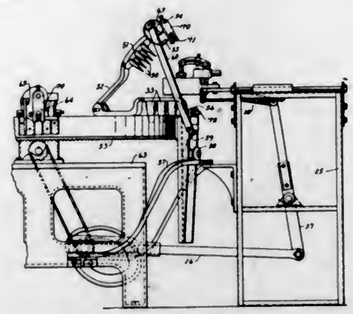
In a screw driver, a handle, a blade connected to the handle and having a bore extending longitudinally and communicating with a slot extending through the outer end thereof, a gripping bar mounted in the bore and having a portion disposed in the slot and adapted to be disposed in the plane of the blade or to be rotated so as to have corners thereof project beyond the sides of the blade, the inner end of the bar being provided with a laterally extending screw connected thereto, a coil spring embracing the blade and having one end secured



to the laterally extending screw, a casing carried by the handle and enclosing the coil spring and the casing having an L-shaped slot provided therein and an operating pin mounted in the L-shaped slot of the casing and connected to the end of the coil spring opposite to that connected to the screw whereby movement of the pin controls the position of the gripper bar.

1,499,492. PREPARATION OF ARTIFICIAL BASE-EXCHANGING BODIES. OSWIN W. WILLCOX, Ridgewood, N. J., assignor to American Zeolite Corporation, Paterson, N. J., a Corporation of New York. Filed Feb. 19, 1920. Serial No. 359,843. 14 Claims. (Cl. 23—13.)

1. The process of making base-exchanging substances of maximum content of exchangeable base which consists in mixing dilute aqueous solutions of a salt of an amphoteric metal in which the metal acts as a base and an excess, beyond that required for neutrality, of an alkali silicate to produce a precipitate, drying the precipitate and quenching the dried precipitate in a solution capable of yielding an alkali metal oxide to the product.

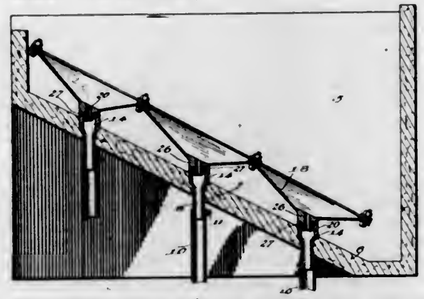


1,499,493. FEEDING MECHANISM. SAMUEL E. WINDER, Chicago, Ill., assignor to Novelty Products, Inc., Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1919, Serial No. 343,274. Renewed Oct. 1, 1923. 4 Claims. (Cl. 107—29.)

1. Feeding mechanism comprising a closed casing, a plurality of cylindrical chambers in the bottom of said casing, each of said chambers having an outlet in the bottom thereof, a plate movably mounted in said casing, a plurality of pistons fixed to said plate, the respective pistons registering respectively with said chambers, said plate having openings therethrough between said pistons, means for passing a semi-liquid substance into said casing above said plate, means for reciprocating said plate vertically, and means for opening and closing said outlets.

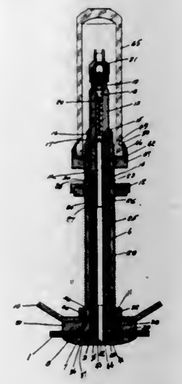
1,499,494. MOLDING AND BAKING MACHINERY. SAMUEL E. WINDER, Chicago, Ill., assignor to Novelty Products, Inc., Chicago, Ill., a Corporation of Illinois. Filed Mar. 13, 1920. Serial No. 365,424. 3 Claims. (Cl. 107—581.)

1. Mechanism for molding and cooking semi-liquid substances comprising a plurality of molds, a plunger for each of said molds adapted to be forced into said molds, means for locking said plungers in said molds, means for unlocking said locking means and for elevating said plungers from said molds, said locking means comprising a pivoted hook member adapted to be rotated by said unlocking means, and a shoulder formed on said hook member adapted to break the plungers away from the cooked substance.



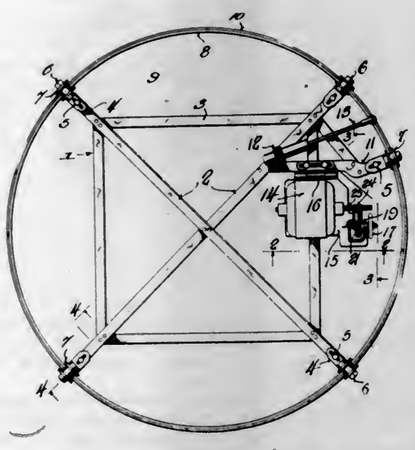
2. Mechanism for molding and cooking semi-liquid substances comprising a plurality of molds, a plunger for each of said molds adapted to be forced into said molds, means for locking said plungers in said molds, means for unlocking said locking means and for elevating said plungers from said molds, a rotatable member, said locking means comprising a hook fixed to said rotatable member said rotatable member being adapted to be rotated by said unlocking means, said member having a stop thereon adapted to come in contact with said unlocking means and to prevent further rotation of said member when said hook is unhooked, whereby said unlocking means then elevates said plungers.

1,499,495. SANITARY BATHING APPLIANCE. CHARLES H. WINDSOR, Palmyra, N. J. Filed Aug. 25, 1922. Serial No. 584,278. 12 Claims. (Cl. 4—166.)



1. In a bathing appliance, the combination of a bowl supporting ring, and vertically offset supports projecting laterally from said ring, the vertical sections of said supports being spaced from said ring to provide clearance for a bowl flange.

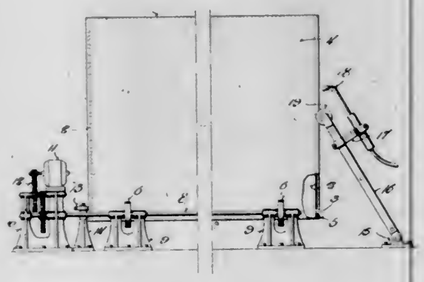
1,499,496. AIR PAN. ERIC HERMAN ANDERSON, Magna, Utah. Filed Jan. 30, 1923. Serial No. 615,945. 5 Claims. (Cl. 261—102.)



1. An apparatus for use in the flotation process which consists of a cell having a bottom provided with openings, bushings extending through said cell and having their upper portions flared, and an air pan having nipples exteriorly tapered and received within the flared portions of said bushings.

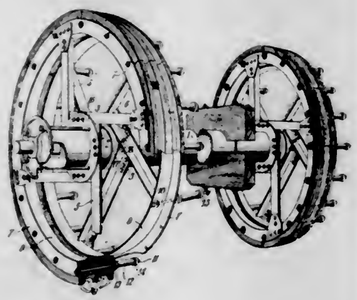
1,499,497. PRESSURE GAUGE FOR TIRES. ALFRED BADOWSKI, Charleston, W. Va., assignor to Tirometer Valve Corporation of America, Charleston, W. Va., a Corporation of West Virginia. Filed Jan. 22, 1921. Serial No. 439,066. 1 Claim. (Cl. 152—11.5.)

In a pressure gauge for tires the combination with a sleeve having a head at its inner end; an inwardly opening socket in the head; a plunger slidingly mounted in the sleeve; a tube secured to the plunger; an anchor piece inserted into the socket to which the tube is secured; a gasket seating on the anchor piece and engaging the peripheral walls of the socket, of a shoulder on the anchor piece extending into the center of the gasket; and a nut arranged in the socket and operating against the gasket to seal the gasket against the anchor piece and the peripheral walls of the socket.



1,499,498. WELDING MACHINE. EDGAR A. BIENENSTOK, Milwaukee, Wis., assignor to Milwaukee Tank Works, Milwaukee, Wis. Filed July 2, 1923. Serial No. 649,016. 5 Claims. (Cl. 113—59.)

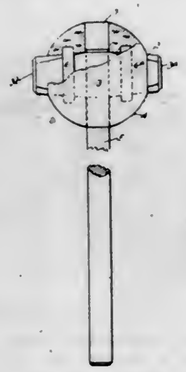
1. In a seam welding machine, the combination of a motor driven friction wheel engaging the article to be



welded for obtaining relative movement between the welding torch with said article, and means connected with the welding torch for guiding the same in proper alinement with the seam.

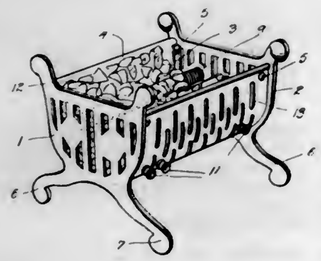
1,499,499. WELDING MACHINE. EDGAR A. BIENENSTOK, Milwaukee, Wis., assignor to Milwaukee Tank Works, Milwaukee, Wis. Filed July 2, 1923. Serial No. 649,017. 2 Claims. (Cl. 113—59.)

1. In a seam welding apparatus the combination of, means for imparting movement to the article to be welded, a pivotally anchored arm, a grooved roller carried by said arm and engageable with the edge of said article, whereby the arm is guided with relation thereto, and a welding torch carried by said arm.



1,499,500. BULL-WHEEL STRUCTURE. RICHARD R. BLOSS, Columbus, Ohio, assignor to The International Derrick & Equipment Company, Columbus, Ohio, a Corporation of Ohio. Filed Feb. 6, 1922. Serial No. 534,468. 10 Claims. (Cl. 64—17.)

1. In bull wheel structure, a wheel comprising independent separately supported units, the outer portions of each unit being bodily movable to accommodate cant structures of different widths.

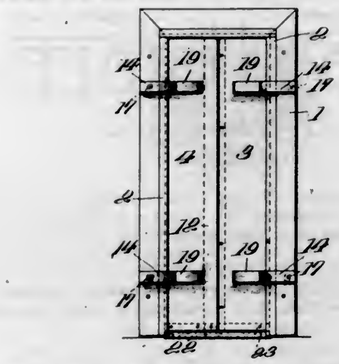


7. In bull wheel structure, a tubular shaft, a tapered circular gudgeon having a telescoping contact within one end of said shaft and means positioned outside of said tubular shaft and connecting said gudgeon and said shaft for maintaining said telescoping relation by tension stresses.

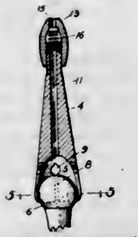
1,499,501. HAMMER. ROBERT O. BOYKIN, Rogue River, Oreg. Filed July 23, 1923. Serial No. 653,294. 6 Claims. (Cl. 145—29.)

1. In a hammer, an eye for said hammer, a handle for said eye, a striking face on said hammer, a spherical mass of resilient material surrounding the body of said hammer and securely retained in place and leaving said striking face exposed.

1,499,502. ELECTRIC GRATE. JAMES H. CARMEAN, Kansas City, Mo. Filed Nov. 30, 1923. Serial No. 677,691. 1 Claim. (Cl. 219—34.)



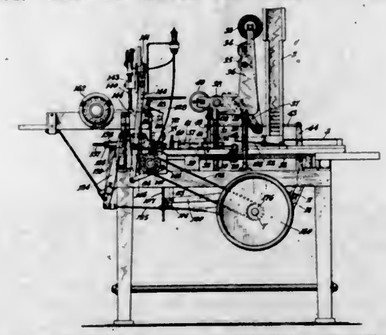
A heater comprising a receptacle having two duplicate ends, each having an inwardly projecting lug, a heater element comprising a tube receiving the ends of said lugs, means for fastening the two ends together to cause the lugs to engage the heater element and coarse loose material surrounding the heating element.



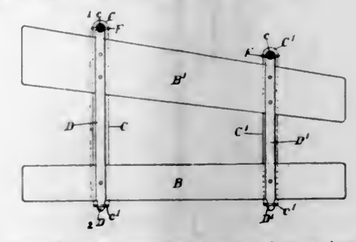
1,499,503. CLOSURE FOR COLD-STORAGE COMPARTMENTS. BENJAMIN J. CLARK and JOHN HUHN, Baltimore, Md., assignors to American Ice Company, Baltimore, Md., a Corporation of New Jersey. Filed Dec. 7, 1923. Serial No. 679,162. 3 Claims. (Cl. 20—16.)

1. A closure for a cold storage compartment including a doorway frame, doors for closing said doorway hinged to said frame so that said doors may swing into the compartment, yielding means for normally holding the doors closed, guides secured to the door frame and projecting

inwardly into the doorway, said guides being curved outwardly from said position to a position considerably beyond the doorway whereby moving articles may be directed into the doorway and against the doors for opening the same.

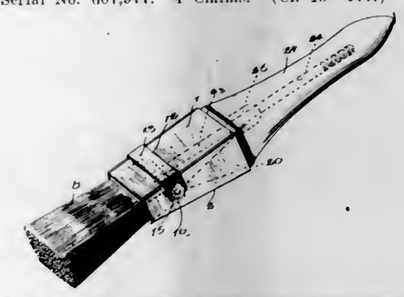


1,499,504. NECKWEAR CONTRIVANCE. MAX COLTON, San Francisco, Calif. Filed Dec. 24, 1923. Serial No. 682,414. 2 Claims. (Cl. 24—40.)



1. A neckwear contrivance comprising a slender body and a nut, said body having means at an end thereof to carry a coil-spring and threads adjacent said end for the reception of said nut, the said body and nut having a bore therethrough to engage the shank of a scarf pin, the nut adapted to envelop and compress the spring against the shank in holding relation, and the nut provided with an upset tongue to prevent its disengagement with said body when the scar pin is released.

1,499,505. MACHINE FOR WRAPPING AND SEALING METAL FOIL. EDWIN JEROME CONLEY, New York, and EDWARD JAMES WHALEN, Howard Beach, N. Y., assignors to The Conley Foil Company, New York, N. Y., a Corporation of New York. Filed Apr. 27, 1922. Serial No. 556,952. 48 Claims. (Cl. 93—2.)

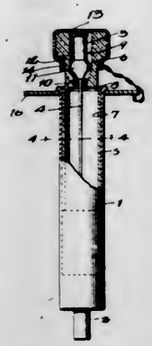


1. A machine for the purpose described comprising the combination of means for advancing a package into a sheet of foil, means for folding the foil against the package to provide overlapping edges, and fusing irons positioned to move against the said foil edges after the package has left the said folding means.

1,499,506. TROUSERS PRESS. JOHN WILLIAM COOPER, Kingston-upon-Hull, England. Filed July 10, 1923. Serial No. 650,634. 1 Claim. (Cl. 100—57.)

A trousers press, comprising opposed press boards, bars secured to the press boards and projecting over their side edges, the said bars having at one side of the press means for slidably engaging with each other to prevent the press boards from being moved apart, screws secured to the projecting end portions of certain of the bars at the other side of the press and projecting through openings in the bars opposite to them, and nuts screwed on the said bolts and operating to clamp the bars together, with the trousers between the press boards.

1,499,507. BRUSH. RICHARD H. CRUMMETT and JOSEPH B. WAGGONER, Monterey, Va. Filed Dec. 20, 1922. Serial No. 607,977. 4 Claims. (Cl. 15—177.)



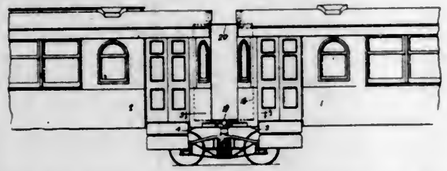
4. In a brush, bristles folded intermediate their ends to provide two similar return portions, a bristle holder comprising two separate sections, a rod extending through the bent portion of the bristles between the return portions of the latter, said bristle holder sections having means with which the ends of the rod are releasably engageable to pivotally connect said sections together intermediate their length and to maintain the bend portion of said bristles between the forward portions of the bristle holder sections, a wedge member insertable between the rear portions of said sections to cam the latter apart and to thus cause the forward portions of said sections to grip said bristles, said wedge member having a bore extending longitudinally therethrough, a second rod extending through said bore and having a hooked end engageable with said first named rod, and a handle adjustably engageable with the outer end portion of said second named rod and adapted to abut said wedge at the outer end of the latter.

1,499,508. HYPODERMIC SYRINGE. HERBERT C. DEANE, Shoshone, Idaho. Filed Apr. 7, 1923. Serial No. 630,526. 4 Claims. (Cl. 128—220.)

1. In a syringe, a plunger hollow for part of its length and being open at one end thereof, a stopper closing the hollow plunger at a point adjacent to the open

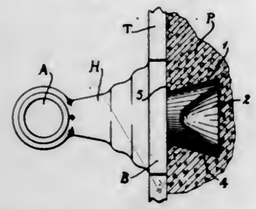
end of the latter, said stopper being made of a material adapted to be pierced by the needle of the syringe, and

a spring cap engageable with the plunger at the open end of the latter for retaining the needle within the plunger.



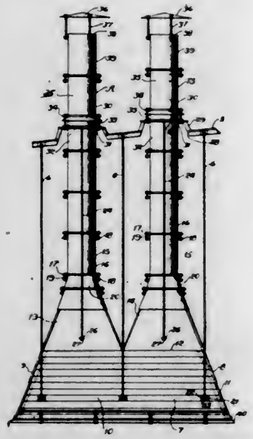
1,499,509. METHOD OF AND APPARATUS FOR REMOVAL OF FLUIDS FROM WELLS. IRWIN L. DUNN, Marietta, Ohio. Filed Oct. 19, 1922. Serial No. 595,526. 9 Claims. (Cl. 166—3.)

1. An apparatus for removing oil from wells comprising a pipe for conveying a pressure medium into the well, a discharge pipe adapted to extend into the well and the oil therein and having an orifice for the admission of a minor portion or volume of the pressure medium and an exhaust pipe adapted to communicate with the interior of the well to draw off the major volume or portions of the pressure medium after an oil discharging operation in the well.



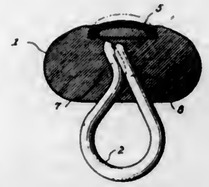
1,499,510. RAILWAY CAR. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 8, 1923. Serial No. 617,662. 11 Claims. (Cl. 105—3.)

1. The combination with two adjacent cars and a supporting truck common to both cars and to which they are articulated, of a vestibule unit comprising a separate closure adapted to ride on the adjacent platforms of such



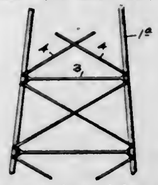
cars and supported on said truck through the intermediary of said platforms, and having door ways through opposite portions of the side walls.

1,499,511. PORCELAIN WALL FITTING. WILLIAM ELSTEIN, New York, N. Y. Filed May 9, 1922. Serial No. 559,683. 10 Claims. (Cl. 72—101.)



1. A wall fixture comprising, an anchorage member, a base member, and a holder; the anchorage member being adapted to be embedded in the plaster of the wall and the base member being formed to become a part of the wall with its outer surface flush with the outer surface of the wall and cooperate with the anchorage member for maintaining the device in operative position.

1,499,512. SMOKEJACK. ARTHUR J. FILKINS, Riverside, Ill. Filed July 17, 1922. Serial No. 575,674. 4 Claims. (Cl. 104—52.)

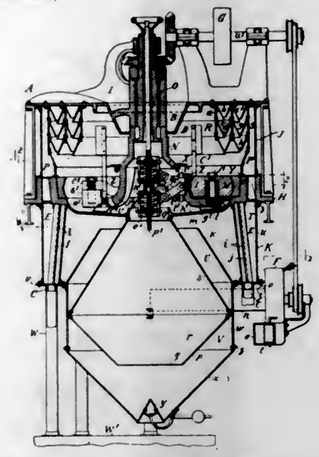


1. A smokejack including a plurality of stacks passing through the roof of a roundhouse, and an elongated hood arranged to extend some distance over a track and with said stacks communicating with the interior of said hood, said hood having an unobstructed interior whereby any smoke entering said hood may be withdrawn through said stacks, and means depending from the roof and engaging said hood for supporting said jack in position in the roundhouse.

1,499,513. BUTTON. JULIUS FISCHL, New York, N. Y. Filed Jan. 23, 1924. Serial No. 688,076. 4 Claims. (Cl. 24—90.)

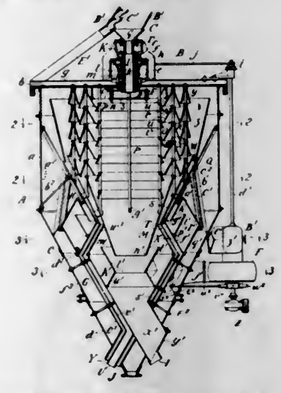
1. A button comprising a body portion, a shank with a portion thereof imbedded in said body portion, and a reinforcing structure imbedded in said body portion in a manner to strengthen the button in the region weakened by imbedding the portion of said shank therein.

1,499,514. DERRICK STRUCTURE. ALEXANDER FRANCE, Mars, Pa. Filed Aug. 17, 1922. Serial No. 582,526. 2 Claims. (Cl. 189—19.)



1. A derrick structure formed by the combination of corner posts girds and braces, the girds being formed with terminal truss-forming bifurcations, and each gird at each end being assembled with two braces and the whole secured to the corner post by a belt through each bifurcation of the gird and through one of the two brace members.

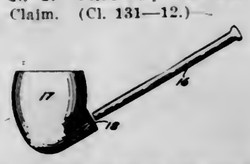
1,499,515. AIR AND OTHER SEPARATOR. GEORGE HOLT FRASER, Brooklyn, N. Y. Filed July 19, 1917, Serial No. 181,538. Renewed Oct. 3, 1923. 24 Claims. (Cl. 83—40.)



1. In combination, a casing affording a separating chamber, means within said casing partitioning said chamber, and affording an endless current passage therein, means for causing material to descend across said passage in a downward path, means below said partitioning means for causing a fluid current to flow through said passage across said path to float fine material therefrom, means in said passage beyond said path for separating fine material from said current, means affording a return conduit communicating between said separating means and the other side of said path for returning said current to the other side of said path, and means affording a coarse outlet for coarse material below said path.

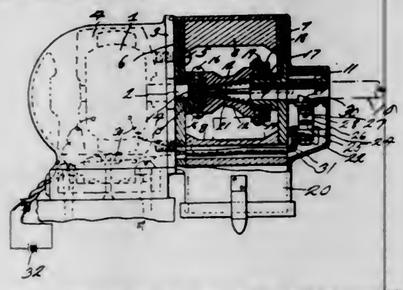
1,499,516. PULVERIZING MILL. GEORGE HOLT FRASER, Brooklyn, N. Y. Filed Apr. 30, 1918, Serial No. 231,599. Renewed Sept. 25, 1923. 35 Claims. (Cl. 83—45.)

1. In combination, a pulverizer, a main frame or casing, a plurality of annular deflectors within said casing, means exhausting air from said casing outwardly of said deflectors, means filtering such air, and means returning the air inwardly of said pulverizer into said casing inwardly of said deflector.



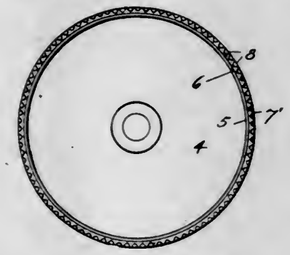
1,499,517. SEPARATOR. GEORGE HOLT FRASER, Brooklyn, N. Y. Original application filed Aug. 27, 1914, Serial No. 858,797. Divided and this application filed July 12, 1919, Serial No. 310,328. Renewed Nov. 9, 1923. 10 Claims. (Cl. 83—40.)

1. In combination, a casing enclosing a chamber, an upper receptacle mounted in said chamber and having upper and lower openings communicating therewith, a lower receptacle having an open upper part affording communication between said chamber and said lower opening, means for supplying material to be separated to said upper receptacle, means for causing a fluid current to flow through said upper receptacle and upper opening into said chamber and return between said receptacles to said lower opening, filtering means within said casing for



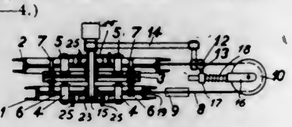
intercepting particles floating in such current comprising downwardly extending faces in the path of and opposed to such current and affording downward ways for intercepted particles and affording intermediate of such ways apertures affording inwardly extending passages for such current, and means below such passages for resisting upward flow of such current relatively to them.

1,499,518. SMOKER'S PIPE. BYRON B. GOLDSMITH, New York, N. Y. Filed July 18, 1921. Serial No. 485,604. 1 Claim. (Cl. 131—12.)



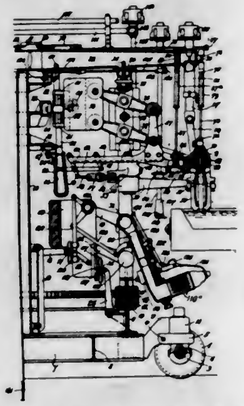
A pipe having a stem made of refractory and porous material containing a plurality of small passages extending from end to end thereof.

1,499,519. ELECTRIC PENCIL SHARPENER. JOHN GROEGER, Lincoln, Ill. Filed Apr. 12, 1923. Serial No. 631,608. 1 Claim. (Cl. 120—96.)



A pencil sharpening machine, said machine comprising an encased motor, a casing detachably connected to the motor, a shaft carried by the motor and extending into the casing, a tubular member for the reception of a pencil and in axial relation to the shaft, cutter members detachably connected to the shaft, the other ends of said cutter members being mounted on a bearing carried by the tubular member, a pencil point engaging depression in the end of the shaft and forming means for engaging a pencil, a bevelled block extending through an aperture in the tubular member and into the path of the pencil, said bevelled member forming means whereby, when moved, a circuit maker and breaker will be actuated for controlling the motor.

1,499,520. PULLEY. HAROLD M. GUSDORF, Indianapolis, Ind. Filed Feb. 12, 1923. Serial No. 618,484. 2 Claims. (Cl. 64—45.)

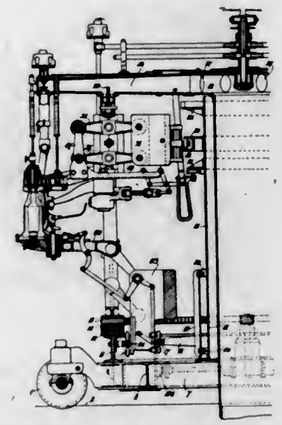


1. A surface cover for pulleys made out of hog-skin having the grain side next to the pulley and the flesh side out.

1,499,521. MAGNETIC PHONOGRAPH. WALDEMAR HAGEMANN, Berlin-Lichterfelde, Germany, assignor to Vox Maschinen-Aktiengesellschaft, Berlin, Germany. Filed May 29, 1922. Serial No. 564,574. 5 Claims. (Cl. 274—4.)

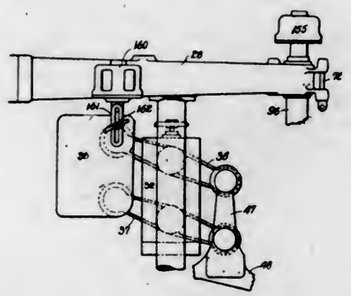
1. A magnetic phonograph having two revolubly mounted driven members, friction means carried by said reels adapted to normally restrain any movement thereof relative to said driven member, and means adapted to move said driven member with respect to said reels so as to increase the hold of said friction means on one of said reels and decrease it on the other.

1,499,522. MACHINE FOR THE MANUFACTURE OF GLASS ARTICLES. ROBERT FREDERICK HALL, Moseley, near Birmingham, England. Original application filed Mar. 13, 1918, Serial No. 222,257. Divided and this application filed July 27, 1920. Serial No. 399,427. 13 Claims. (Cl. 49—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



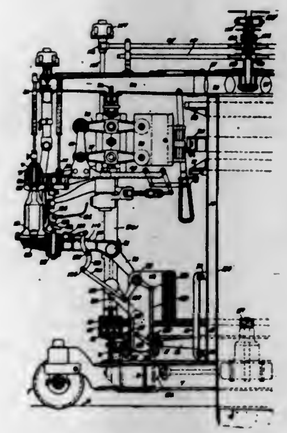
10. In a machine for the manufacture of glass articles, the combination of a fixed base, a ring mounted rigidly upon the said base, the said ring forming a lower member of an anti-friction bearing, another ring rotatable with respect to the first mentioned ring and forming the upper member of the anti-friction bearing, hollow columns mounted upon the second mentioned ring, hollow radial arms in connection with the said hollow columns, such radial arms being also connected to an air supply, mechanisms carrying a parison mold mounted upon the said hollow columns, downwardly extending hollow forks in connection with the hollow radial arms, such forks being provided with apertures to enable cooling air to be supplied to the outside of the molds and parts to be cooled, and means for cutting off the supply of cooling air at appropriate times, substantially as described.

1,499,523. MACHINE FOR THE MANUFACTURE OF GLASS ARTICLES. ROBERT FREDERICK HALL, Moseley, near Birmingham, England. Original application filed Mar. 13, 1918, Serial No. 222,257. Divided and this application filed July 27, 1920. Serial No. 399,428. 3 Claims. (Cl. 49—5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A machine for the manufacture of glass articles comprising a stationary frame, a rotatable frame supported thereon, said rotatable frame including an upper member having a plurality of laterally extending radial

arms, and a lower member, a removable vertical column interposed between each radial arm and the lower member and connected therewith, each of said columns having a vertically elongated opening therein, a parison mold supporting frame journaled in means in the elongated opening, a parison mold thereon, a finishing mold

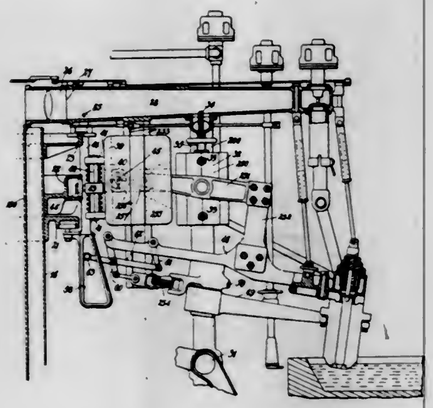


carrying frame journaled in the elongated opening, a finishing mold carried thereby, and means for effecting the actuation of the parison and finishing molds, the arrangement being such that when one of the columns is removed, the parison and finishing molds and their associated parts may also be removed independently of the similar parts carried by the other columns.

1,499,524. MACHINE FOR THE MANUFACTURE OF GLASS ARTICLES. ROBERT FREDERICK HALL, Moseley, near Birmingham, England. Original application filed Mar. 13, 1918, Serial No. 222,257. Divided and this application filed July 27, 1920. Serial No. 399,429. 12 Claims. (Cl. 49—41.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

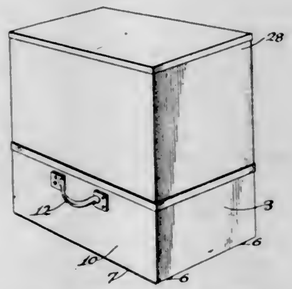
11. In a rotary machine for the manufacture of glass articles, the combination of a rotatable framework, rotatable about a fixed central column, a secondary frame adapted to slide vertically with respect to the said framework, in order to adjust the machine for parison molds of different lengths and for different levels of the molten glass, means for so adjusting the said secondary frame and for retaining it in various vertical positions, two levers of the first order, of equal length, one pivoted above the other to the said secondary frame, a link pivotally connected to the outer ends of the said levers, another link pivotally connected to the inner ends of the said levers, so as to constitute a parallel link lever mechanism of the first order, a sectional parison mold carried from the outer link, means operating upon the inner link for lowering and raising the parison mold at appropriate times, such means being adjustable in order to regulate and accommodate the dipping according to the various adjusted positions of the secondary frame, substantially as described.

1,499,525. MACHINE FOR THE MANUFACTURE OF GLASS ARTICLES. ROBERT FREDERICK HALL, Moseley, near Birmingham, England. Original application filed Mar. 13, 1918, Serial No. 222,257. Divided and this application filed July 27, 1920. Serial No. 399,430. 16 Claims. (Cl. 49—41.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



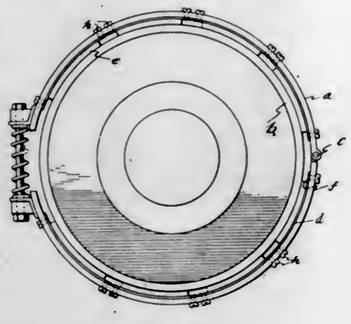
11. In a machine for the manufacture of glass articles, the combination of a rotatable framework, a lever of the first order pivoted to the said framework, a sectional finishing mold carried by the outer arm of the said lever, a link pivoted to the inner arm of the said lever, another link pivoted to the first mentioned link, parallel to the inner arm of the lever and pivoted to the framework so as to constitute a parallel link lever mechanism, means for raising and lowering the lever at appropriate times, a toothed quadrant pivoted to the outer arm of the lever in proximity to the finishing mold, said toothed quadrant carrying a fork adapted when swung over to embrace the top of the article being finished, another toothed quadrant meshing with the first mentioned quadrant and also pivoted on the outer arm of the lever, and a rod connecting the latter quadrant to a portion of the framework in such a way that as the finishing mold opens, the said fork engages the top of the article, substantially as described.

1,499,526. MACHINE FOR THE MANUFACTURE OF GLASS ARTICLES. ROBERT FREDERICK HALL, Moseley, near Birmingham, England. Filed July 27, 1920. Serial No. 399,432. 20 Claims. (Cl. 49—41.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



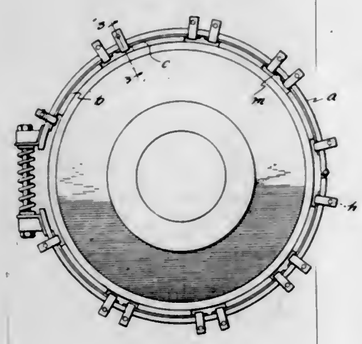
20. In a machine for the manufacture of glass articles, the combination of a fixed central column, a framework rotatable about the said central column, a secondary frame adapted to slide vertically with respect to the said framework, in order to adjust the machine for different lengths of parison molds and for different levels of molten glass, means for adjusting the said secondary frame and for retaining it in various vertical positions,

a lever of the first order pivoted to the said secondary frame, a sectional parison mold, the sections of which are pivotally carried in fixed relation to the outer arm of the said lever, a counterbalance weight in connection with the inner arm of the said lever, means in connection with the said inner arm of the said lever for lowering and raising the parison mold, link mechanism for opening and closing the said parison mold, an arm in



connection with and adapted to operate the said link mechanism, a depending arm pivoted to the rotatable framework of the machine, a tapering slot at the lower end of the said arm, means on said arm engaging the said tapering slot, a horizontal box cam in connection with the said central column, and a follower to the said cam, connected to the said depending arm, substantially as described.

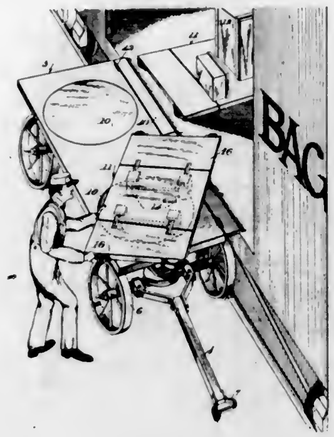
1,499,527. FOLDABLE POSTING TRAY. CECIL B. HARRISON, Los Angeles, Calif., assignor to H. S. Crocker Co. Inc., Los Angeles, Calif., a Corporation of California. Filed June 15, 1923. Serial No. 645,558. 8 Claims. (Cl. 129—1.)



1. A bookkeeping sheet posting tray comprising a base-forming structure, having a bottom, end walls, and a short back wall, a receiver hingedly connected to the front of the base structure and adapted to be swung from a vertical to a forwardly inclined position, a tiltable back device attached to the back wall, and a platform attached to the tiltable back and interposed above the base structure and between the front receiver and the back device, and upon which sheets stand while in stacked relation in the back device.

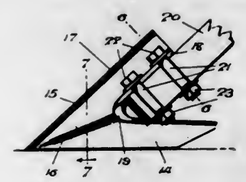
1,499,528. BRAKE BAND AND LINING. RICHARD B. HARTMAN, Cordell, Okla., assignor to Hartman Brake Corporation. Filed Feb. 2, 1920, Serial No. 355,845. Renewed Dec. 18, 1923. 5 Claims. (Cl. 188—249.)

5. In a brake, the combination of a band provided with openings therein, brake-lining segments comprising each a backing and a piece of brake-lining material secured thereto, each backing being provided with one or more bosses rising from the rear thereof and adapted to be engaged in one or more of the openings in the brake band to properly line up the segment with the band, and means for removably securing the brake-lining segment to the band.



1,499,529. BRAKE BAND AND LINING. RICHARD B. HARTMAN, Cordell, Okla., assignor to Hartman Brake Corporation. Filed Feb. 4, 1920, Serial No. 356,337. Renewed Dec. 18, 1923. 5 Claims. (Cl. 188—249.)

5. In a brake, the combination of a band, a plurality of brake lining segments comprising each a backing of metal and a brake lining material extending short of the ends, and removable jaws adapted to engage the adjoining exposed ends of the backings of the brake lining segments, and means for clamping the jaws removably to the band.

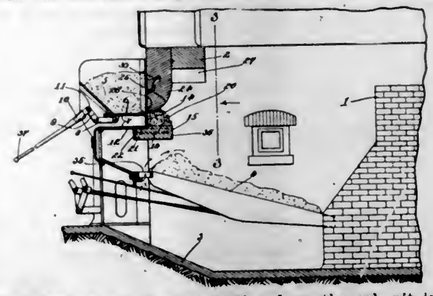


1,499,530. TRUCK. JOHN WIMBISH HENDERSON, Tunica, Miss. Filed Apr. 17, 1923. Serial No. 632,735. 3 Claims. (Cl. 214—38.)

1. In combination with a main truck provided with turntables of an auxiliary truck adapted to rotate thereon, said auxiliary truck having a folding platform, the central portion thereof being provided with rollers and

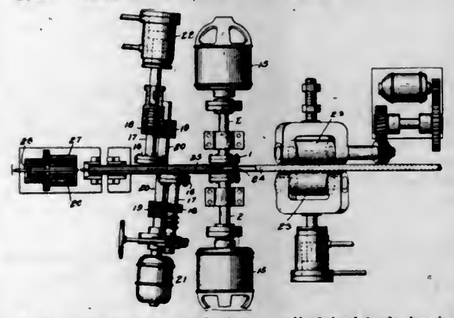
the end portions being hingedly connected to the central portion and adapted to fold thereupon in the manner described.

1,499,531. CULTIVATOR SWEEP. CARL M. HOERBGOTT, Alvin, Tex. Filed June 13, 1922. Serial No. 568,018. 1 Claim. (Cl. 97—204.)



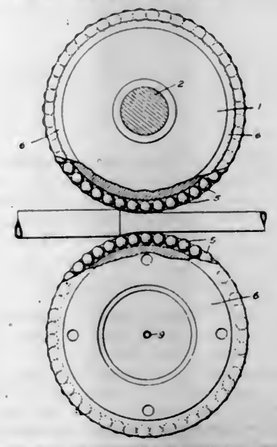
A cultivator sweep comprising a wing, a raised rib at one end of the wing with an angle between said wing and rib, a shank extended rearwardly from said rib, said wing being inclined and said rib and shank being inclined at a greater angle than the wing, the rib and shank having rearwardly diverging sides with a ridge between them forming a shin, the side of the shank adjacent to the wing having an inturned flange at its rear edge behind the shank and extending toward the opposite side of the shank for securing the shank to a standard, and a web connecting the forward end of said flange and rear edge of the wing and bent back forwardly under the juncture of said wing and rib, the forward end portion of said flange and the web projecting forwardly beyond the corner between the rear edge of the wing and the corresponding side of the shank and leaving the forward end portion of the flange unobstructed by the web above and below said flange.

1,499,532. FURNACE. CHARLES J. HUBER, Baltimore, Md. Filed July 19, 1923. Serial No. 652,521. 3 Claims. (Cl. 110—24.)



2. In a furnace having a fire box, a grate, a flue, and a feed opening at the front of the furnace above the grate, a coking shelf extending backward into the furnace near the bottom of the feed opening, said shelf being composed of resistive, ceramic material, a heat retaining and transmitting member immediately over

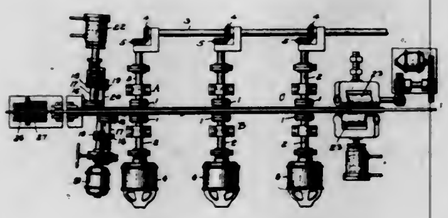
the shelf, the same being exposed to the direct radiation from the fire and being in contact with the fuel on the



shelf, and an air opening leading from the ash pit into the fire box beneath the coking shelf and spaced forwardly from the rear edge thereof.

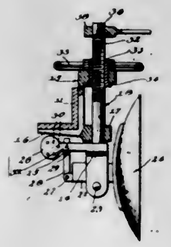
1,499,533. REDUCING CYLINDRICAL BODIES. JOHN A. KATZENMEYER, Ellwood City, Pa. Filed June 5, 1922. Serial No. 566,083. 10 Claims. (Cl. 80—11.)

9. A mechanism for reducing a cylindrical body having in combination a rotatable head provided with an annular raceway, a plurality of balls arranged within the raceway, and mechanisms for controlling the movements of the body while being reduced, said mechanism being arranged on opposite sides of the head and adapted to support the body so that its axis will be substantially at right angles to the axis of rotation of the head.



1,499,534. REDUCING CYLINDRICAL BODIES. JOHN A. KATZENMEYER, Ellwood City, Pa. Filed June 5, 1922. Serial No. 566,084. 4 Claims. (Cl. 80—11.)

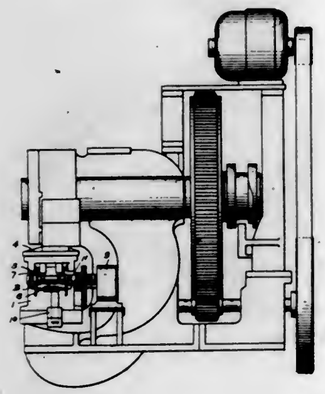
1. A mechanism for reducing a cylindrical body having in combination means for rotating and moving said body



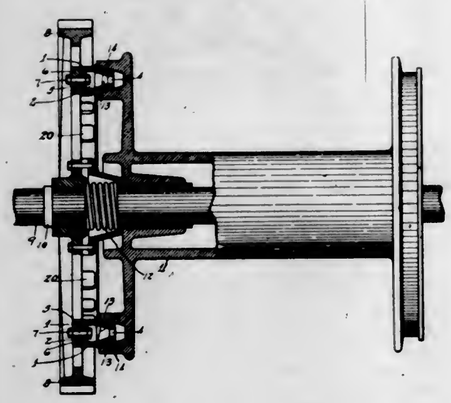
longitudinally, a head adapted to rotate in a plane approximately coincident with the axis of the article and provided with a peripheral raceway and a plurality of spherical elements arranged in the raceway.

1,499,535. METHOD OF MANUFACTURING TUBES AND A CONTINUOUS MILL THEREFOR. JOHN A. KATZENMEYER, Ellwood City, Pa. Filed Aug. 12, 1922. Serial No. 581,377. 7 Claims. (Cl. 80—11.)

7. In a metal reducing mill the combination of reducing rolls adapted to effect longitudinal and rotary movements of the article being operated on, and rotating heads carrying an annularly arranged series of independently movable members, the heads being so arranged that the members will engage the article intermediate the rolls.



1,499,536. DISK-PLOW MOUNTING. MOYNE LECLERQUE KELLY, Waco, Tex. Filed Sept. 21, 1922. Serial No. 589,670. 6 Claims. (Cl. 97—53.)

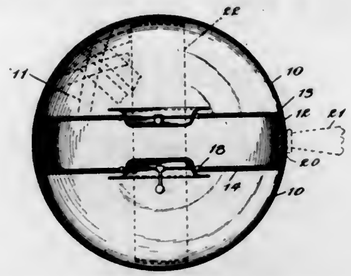


1. In combination, a running gear, a spindle rotatably carried by said running gear and arranged in vertical relation thereto, a casting carried upon the lower end of said spindle, a block supported within said casting and adapted for tilting movement, and a disk plow rotatably supported by said block.

1,499,537. TIE-PLATE MACHINE. JOSEPH KURKOWSKI, Pittsburgh, Pa. Filed June 12, 1923. Serial No. 644,853. 4 Claims. (Cl. 164—40.)

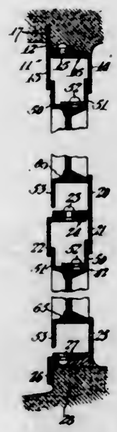
1. Feed mechanism for a machine including relatively reciprocatory parts, said feed mechanism including work-engaging members an electric motor for driving said work-engaging members, an energizing circuit for said motor, a normally closed make-and-break device arranged in said circuit and adapted to be opened by the advance of the work, and a second make-and-break device arranged in said circuit and adapted to be opened and closed by the relative reciprocation of the parts first named.

1,499,538. FRICTION CLUTCH. JAMES H. LA MOREE, Portland, Oreg.; Winnie Mae La Moree, administratrix, and Chriss A. Bell, administrator, of said James H. La Moree, deceased, assignors of one-third to Winnie Mae La Moree and of two-thirds to Winnie Mae La Moree, trustee for Henry-Etta Mae La Moree and Anna Ellen La Moree. Filed Jan. 16, 1922. Serial No. 529,527. 10 Claims. (Cl. 192—113.)



1. In a friction clutch, the combination of a hollow metal frame having on its inner and outer walls converging conically-shaped friction surfaces; and means for forcing a current of air through the frame between the walls.

1,499,539. SOUNDING TOY. ERNEST E. LANDON, Washington, D. C. Filed Apr. 17, 1922. Serial No. 553,539. 6 Claims. (Cl. 46—46.)



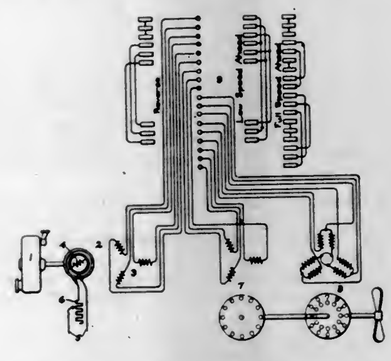
1. In a sounding toy, a hollow ball, a pair of elastic members extending across the interior of said ball in

parallelism, and tympani each mounted for swinging movement on a respective member said elastic members

and tympani being positioned that swinging movement of the latter cause them to strike together.

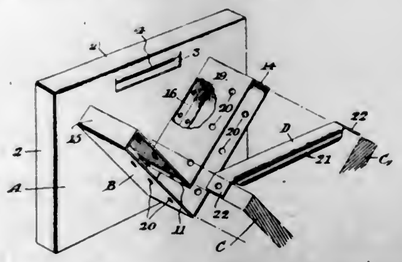
1,499,540. WINDOW CONSTRUCTION. WILLIAM C. LEA, Los Angeles, Calif. Filed Feb. 24, 1921. Serial No. 447,381. 1 Claim. (Cl. 189—69.)

The combination forming a window construction comprising a metal window frame, the head of said frame consisting of two angle irons arranged to form a channel, an angle iron extending upwardly therefrom and rivets for securing said irons together, a meeting rail for said frame consisting of three angle irons, two of said irons forming a channel, the third iron extending upwardly therefrom and rivets for securing said irons together, a bottom member for said frame consisting of two angle irons arranged with oppositely extending flanges and rivets for securing said irons together, side members for said frame consisting of three angle irons, two of said irons being arranged to form a track, the third iron extending away from said track and rivets for securing such irons together, a sash for said frame arranged to extend into said channel in closed position, and a roller in each side of said sash arranged to ride in said track in the side members of said frame.



1,499,541. PIPESTEM CLEANER. JOHN J. MCCARTHY, Middleboro, Mass. Filed July 18, 1923. Serial No. 652,246. 2 Claims. (Cl. 131—13.)

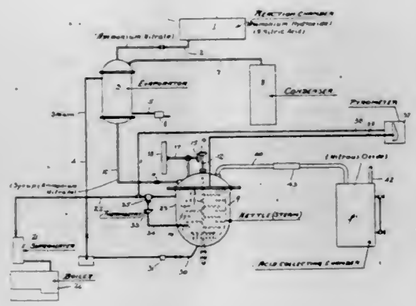
1. A pipe-stem cleaner composed of two flat-sided wire members, each oblong in cross section, placed side by side and intertwisted so that their longitudinal edges form helical two-part scrapers extending lengthwise of the cleaner, each scraper presenting two scraping corners, one following the other when the cleaner is rotated in a pipe stem the outer ends of said members being V-shaped, and flush with each other and forming a



two-part pointed reaming cutter the point of which is on the longitudinal center of the cleaner the gage of the wire forming said members being such that the cleaner is adapted to enter the bore of a pipe stem and has a sufficient flexibility to conform to curvature thereof, each member supporting the other and confining the said V-shaped ends beside each other.

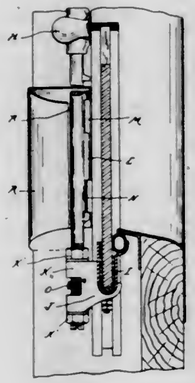
1,499,542. POWER SYSTEM. CAMPBELL MACMILLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 11, 1923. Serial No. 638,416. 5 Claims. (Cl. 172—8.)

1. A power system comprising an alternating current generator, a motor insulated for the full voltage of said generator and constructed for operation on a single pole number, a motor insulated for approximately one-half the voltage of said generator and arranged for operation on a plurality of pole numbers, and means for interconnecting said motors in series with each other to the terminals of said generator.



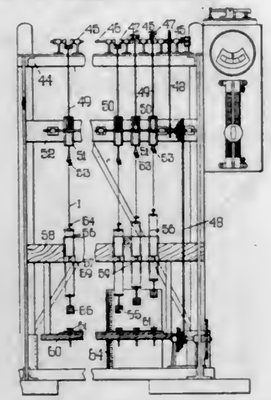
1,499,543. METAL FEED-TROUGH END. ANDREW G. MEISTER, Copeland, Kans. Filed Dec. 4, 1923. Serial No. 678,469. 3 Claims. (Cl. 119—61.)

1. A metal feed trough end comprising two sheet metal parts, one of which is a flanged rectangular member, and



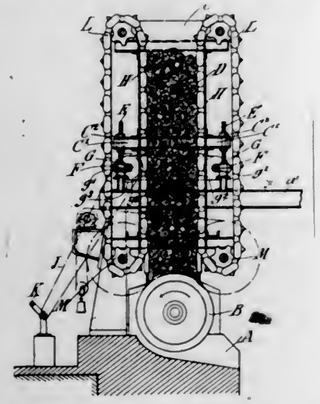
the other of which is a hollow V-shaped member provided with an edge flange for attachment to the first member.

1,499,544. METHOD OF MAKING NITROUS OXIDE. MAX P. MILLER and MAURICE F. ROCHE, Cleveland, Ohio, assignors to The Lennox Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 7, 1920. Serial No. 379,497. 4 Claims. (Cl. 23—10.)



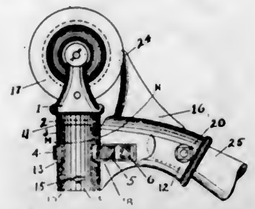
1. In a method of making nitrous oxide, the steps which consist in treating ammonium hydroxide with nitric acid, evaporating the water formed by such reaction, and then heating the hot ammonium nitrate strongly while still hot from such evaporating and collecting the nitrous oxide evolved.

1,499,545. WINDOW-CONTROL MECHANISM. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Durn Company, Toledo, Ohio, a Corporation of Delaware. Filed May 22, 1922. Serial No. 562,871. 7 Claims. (Cl. 292—202.)



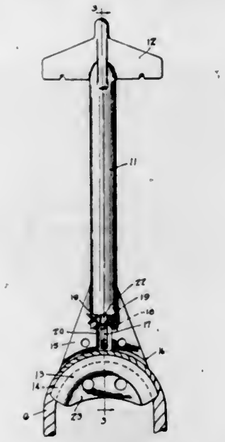
1. In a window control mechanism, the combination with a sliding closure for a window opening, of a control rod for said closure extending upon the latter in the direction of movement thereof and rotative to exercise a latch function, a latch element carried by said rod substantially co-extensive therewith and a fixed latch element engageable by said latch member through rocking of said rod.

1,499,546. TESTING MACHINE. ARTHUR EARNEST OXLEY, Didsbury, Manchester, England, assignor to The British Cotton Industry Research Association, Didsbury, Manchester, England. Filed Feb. 13, 1924. Serial No. 692,618. 9 Claims. (Cl. 73—51.)



1. In a machine for testing threads or the like the combination of means to suspend said thread means to apply a cyclical variation of tensile stress axially of said thread, and means to prevent the rotation of said thread about its axis tending to untwist the same.

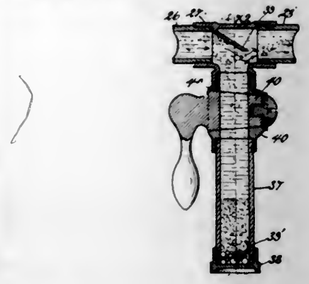
1,499,547. MACHINE FOR GRINDING WOOD INTO PULP. PAUL PRIEM, Heidenheim A/Brenz, Germany, assignor to American Voith Contact Company, New York, N. Y., a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,652. 3 Claims. (Cl. 83—75.)



1. In a magazine grinder for grinding wood into pulp, the combination of a unitary magazine hopper having an open end at its upper portion and feeding means, extending along the sides of the magazine hopper to the lower portion thereof, for receiving a charge of wood billets, a grindstone below the magazine hopper, and at the lower portion thereof, and adapted to operate upon the wood billets directly as they are fed by the feeding means from out of the magazine hopper itself upon the grindstone, and means for moving the unitary magazine hopper with its feeding means towards and away from the grindstone, whereby the action of the feeding means of the magazine hopper upon the wood billets is transferred directly upon the grindstone from the magazine hopper with magazine hopper pressure and the magazine hopper may be moved away from the grindstone to enable the grindstone to be moved clear of the magazine hopper.

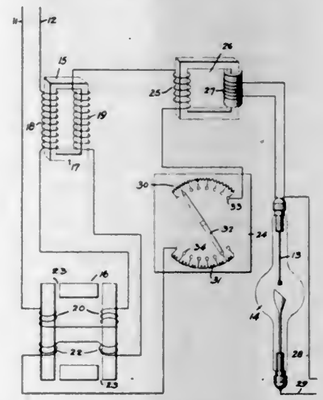
1,499,548. TROLLEY HARP AND MEANS FOR EFFECTIVELY OPERATING THE SAME. HENRY RAMELOW, Springfield, Ill. Filed Nov. 12, 1923. Serial No. 674,265. 6 Claims. (Cl. 191—60.1.)

1. The combination with a trolley wheel and vertical trolley harp of a tubular support for the harp, and a solid integral shank of the harp removably fitted into the tubular support; annular, integral flanged cap means with said solid harp shank for covering the supporting shoulder of the tubular support for the harp; a vertical fin guard integral with the harp support and positioned in front of the trolley wheel with a point between the flanges thereof adapted to normally hold the extent of wheel oscillations within predetermined limits; means provided in corresponding opposite cooperating springs for normally retracting the oscillations of the harp and wheel to a position of alignment with the trolley pole after turning a curve and yet permitting slight limited oscillations of the wheel allowing the same to keep in perfect alignment with the trolley wire while turning the curve.



1,499,549. CROSSHEAD. JAMES P. RATIGAN, Los Angeles, Calif. Filed Feb. 8, 1923. Serial No. 617,898. 3 Claims. (Cl. 74—17.)

1. In a cross-head, the combination of a stem, a connecting member having a web joined to one end of the stem and having an arcuate groove adapted to engage a cable, there being a slot in one face of the web extending from edge to edge thereof above the level of the groove and communicating with the groove to admit of the passage of the cable to and from the groove and the web overhanging the groove.

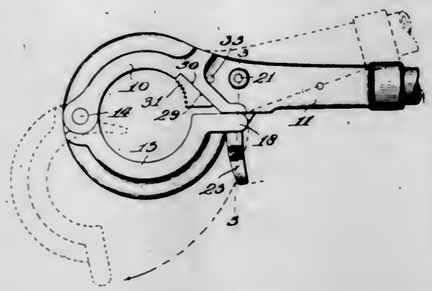


1,499,550. MATERIAL-TESTING APPLIANCE FOR WELL-DRILLING APPARATUS. JOHN T. REA, Los Angeles, Calif. Filed May 14, 1919. Serial No. 297,123. 1 Claim. (Cl. 83—82.)

The appliance set forth for testing material passing through a conveyor pipe and recovering precious metal therefrom comprising a T pipe interposed in a conveyor pipe connecting a drilling apparatus with a vacuum tank, said T pipe arranged so that its axially aligned arms are held horizontally and the other arm extending downward vertically so that the passages through the pipe are horizontal and vertical; a baffle plate integral with said T pipe, said plate positioned near mid-center of said T pipe and inclined from the inlet toward the horizontal outlet of said pipe and arranged so that material passing

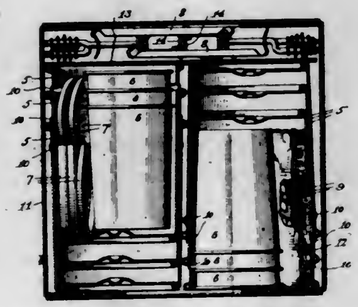
through the conveyor pipe is deflected downward toward the vertical passage in the T pipe so that heavy material will pass by gravity through the vertical and the light material will be carried by suction on through the horizontal passage; a test pipe arranged in a vertical position; and a valve interposed between said test and T pipes said valve adapted to be closed when the contents of said test pipe are to be examined so that the examination can be made without interrupting suction through the conveyor pipe.

1,499,551. ALTERNATING-CURRENT SYSTEM. FRANK RIEBER, Berkeley, Calif. Filed Sept. 26, 1921. Serial No. 503,369. 9 Claims. (Cl. 171—119.)



1. In an alternating current system for supplying current to a load in such a way that the current stays substantially constant at any one of a number of optional values, means for selecting the value of the current to be supplied, and means for causing this current value to be independent of fluctuations in the supply voltage.

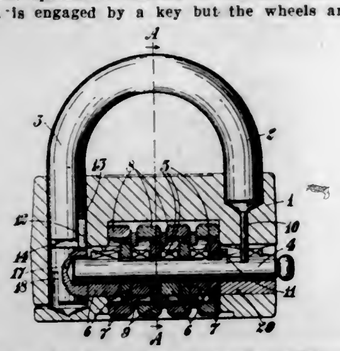
1,499,552. PIPE TONGS. WILLIAM C. REYNOLDS, Los Angeles, Calif., assignor of one-half to Franklin J. Young, Los Angeles, Calif. Filed Oct. 10, 1922. Serial No. 593,609. 3 Claims. (Cl. 81—66.)



1. The herein described pipe tongs comprising a jaw, a handle rigidly secured thereto, a jaw hinged to the first mentioned jaw, a spring pressed slip arranged for sliding

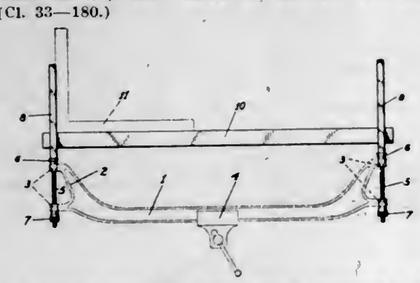
movement on the first mentioned jaw, a latch pivoted to the first mentioned jaw for securing the hinged jaw in

closed position, and connections between the latch and slip whereby the latter is retracted when the latch is moved to release the hinged jaw.



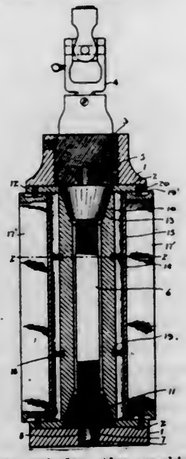
1,499,553. SHIPPING PACKAGE. MICHAEL A. ROLLMAN, Mount Joy, Pa. Filed Nov. 25, 1922. Serial No. 603,201. 3 Claims. (Cl. 206—65.)

1. A shipping package for dismantled ice-cream-freezers of the type wherein the bucket and cream can are both tapered to provide nesting in shipping, the sizes of the buckets and cream-cans being so proportioned that a given number of buckets when nested will provide a space in the inner bucket approximately equal to the length of the nested set of an equal number of cream-cans, comprising a shipping box, two sets of such ice-buckets enclosed within said box side-by-side, each set consisting of a plurality of dismantled nested buckets, and two sets of such cream-cans each consisting of a plurality of dismantled nested cream-cans, one set being enclosed within the outer bucket of each set of said ice-buckets.



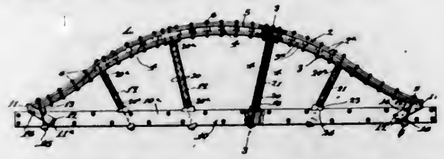
1,499,554. PERMUTATION LOCK. WILLIAM CHARLES RULE, Godstone, England, assignor of one-half to Charles Edward Atlee, London, England. Filed Feb. 19, 1923. Serial No. 620,032. 15 Claims. (Cl. 70—113.)

1. In a permutation lock, the combination with a spindle having keys spaced apart in the longitudinal direction thereof, toothed wheels threaded on said spindle and having each a key-way to receive one of said keys, and rotatable indicating-members mounted concentrically each on one of said toothed wheels, of a separate spacing bush threaded on said spindle between each pair of said wheels and having a key-way to receive one of said keys, which keys are of such a length and are so spaced apart in relation to the axial length of said bush and the axial thickness of said wheels that in one axial position of the spindle in relation to the bush and wheels the bush is engaged by a key but the wheels are free



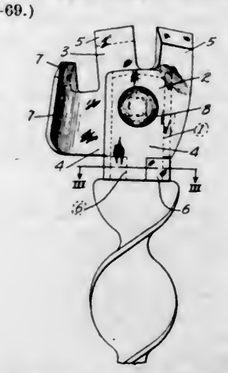
to rotate on the spindle, and in another axial position the keys engage ways in the bush and the wheels, substantially as described.

1,499,555. AXLE SET. OTTO SALBACH, Stockton, Calif. Filed Feb. 20, 1922. Serial No. 537,767. 4 Claims. (Cl. 33—180.)



1. A motor-vehicle axle testing device including a pair of bars, and means for holding and centering said bars in vertical alinement with the spindle-bolt holes of the axle, the bars having means whereby a straight edge may be supported at a common distance on both bars from the adjacent bolt-holes.

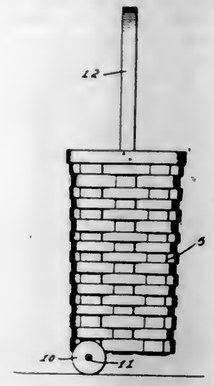
1,499,556. CYLINDER GRINDER. NELSON SARGENT, Picton, Ontario, Canada, assignor of one-half to Frederick T. Knight, Picton, Canada. Filed Jan. 22, 1923. Serial No. 614,323. 4 Claims. (Cl. 51—206.)



1. In a cylinder grinder, the combination with a rotatable block and a radially adjustable member therein, of a radially adjustable stone, a pivotal member extending longitudinally of and bearing against the inner side of said stone, and spring means for holding said pivotal means in contact with the stone.

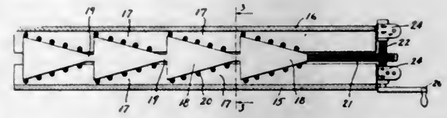
1,499,557. ROOF TRUSS. ALBIN E. SHODIN, Los Angeles, Calif. Filed May 18, 1923. Serial No. 639,813. 1 Claim. (Cl. 108—23.)

In a timber truss, a bow-shaped top member of laminated structure in which certain of the laminæ are vertically spaced between the ends, spacing blocks between the spaced laminæ and secured thereto, a bottom chord forming a tie between the extremities of the top member, said chord being built of timbers set face to face, thrust straps secured to end portions of said chords, the sides of each of said straps being secured to opposite sides of said chord and at an angle thereto, the transverse portions of said straps being adapted to support the ends of said bow-shaped member, wedges interposed between the end portions of said bow-shaped member and said chord and set into mortises in said chord, plates on the upper face of said bow-shaped member at end portions of the latter, plates under said chord at end portions thereof connected to the first mentioned plates, buttress members seated in mortises in said chord, radially disposed stanchions extending between said bow-shaped member and said buttresses, said stanchions being of the built-up type and being hollow, and tie bolts extending through said stanchions and through said bow-shaped member and said chord transversely.



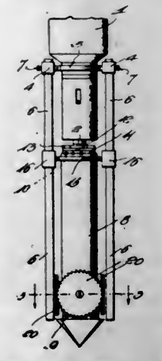
1,499,558. DRILL. SAMUEL T. SKEEN, Centralia, Ill., assignor of one-half to Charles E. Stead, Centralia, Ill. Filed Aug. 1, 1922. Serial No. 578,858. 5 Claims. (Cl. 255—69.)

1. A drill comprising a stem, a pair of cutting elements secured to said stem, a portion of each of said cutting elements embracing a portion of the associated cutting element, and means whereby said cutting elements are secured to said stem.



1,499,559. GRAVITY BASKET. ROSALIE J. SMITH, Washington, D. C. Filed Oct. 21, 1921. Serial No. 509,367. 1 Claim. (Cl. 280—51.)

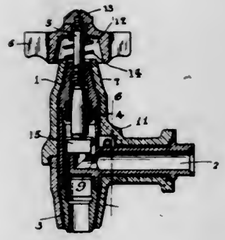
1. In a wheeled carrier, an elongated body portion including a bottom member, said body portion and bottom member being constructed of interwoven transversely and vertically extending slat members, an axle member resting on one of the slat members of the bottom portion,



slats disposed over the axle and secured thereto to hold the axle against displacement, wheels on the axle, and a handle at one end of the body portion.

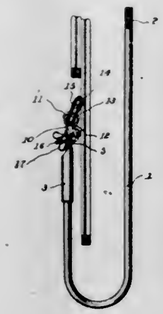
1,499,560. JACK. PEDER O. STANGELAND, Los Angeles, Calif. Filed Sept. 29, 1922. Serial No. 591,284. 4 Claims. (Cl. 254—104.)

1. A jack comprising a pair of U-shaped jaws arranged with the channels facing each other, a plurality of wedge shaped cams fixed in the channels and all pointing in the same direction, the cams of one jaw being directly opposite the cams of the other jaw, rollers journaled in the jaws along the faces of the cams, a plurality of movable wedge shaped cams connected together and engaging the rollers so that when the movable cams are forced one way the jaws will spread and when the movable cams are forced the other way the jaws will move towards each other and rack and pinion means for holding the jaws and moving the cams.



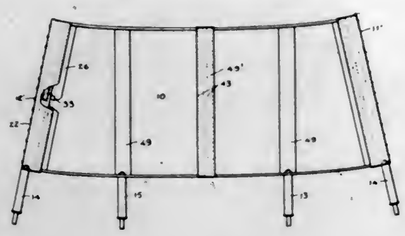
1,499,561. DRILL. PETER STEFANICH, Indiana Harbor, Ind., assignor of one-half to Barney Stefanich, Indiana Harbor, Ind. Filed Nov. 16, 1922. Serial No. 601,408. 2 Claims. (Cl. 145—122.)

1. In combination with a drill, a chuck for driving the drill, and a stationary member toward and from which



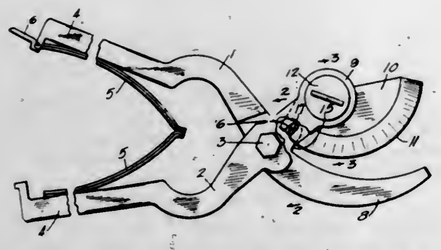
said chuck is movable; an elongated casing through which said drill passes, means connecting the drill and casing for axial movement as a unit, rotary cutters carried by the lower end of said casing and driving connections between said cutters and drill, a collar clamped around said stationary member and having diametrically opposed external sockets, a pair of parallel guide rods at the exterior of said casing and chuck rigidly held at one end in said sockets, a second collar clamped around said casing, and diametrically opposed external sockets carried by said second collar and slidably surrounding said guide rods.

1,499,562. COCK. RENÉ JEAN CAMILLE TAMPIER, Boulogne-sur-Seine, France. Filed May 22, 1922. Serial No. 562,834. 3 Claims. (Cl. 137—111.)



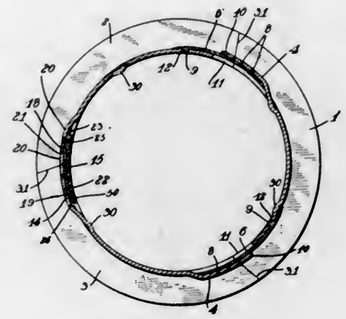
3. The combination, with a cock comprising a body and a valve rod disposed therein, of a removable casing comprising separable upper and lower members adapted to fit over the upper and lower portions of the cock body, the lower member having lugs at opposite sides thereof, a spring straddling one part of the lower member and having its ends engaged with said lugs, to hold said lower member in place on the cock body, and a key for operating the valve rod having an opening in its lower part wherein the upper end of the upper casing member is enclosed; substantially as described.

1,499,563. WINDOW-CLEANING DEVICE. GEORGE W. TYLER, Washington, D. C. Filed June 27, 1923. Serial No. 648,056. 1 Claim. (Cl. 15—220.)



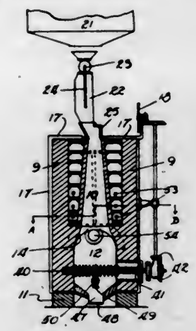
A window cleaning device comprising a U-shaped member, one of the arms of which is substantially one-half the length of the other arm thereof, and a wiper holder having a socket adapted to be detachably mounted on the end of either arm of said member; the proportions of parts being such that the entire interior surface of a closed window may be cleaned with the wiper when attached to the long arm, and the entire exterior surface of a window may be cleaned only by reaching over the top to clean a half section and around the bottom to clean that half section with the wiper attached to the short arm.

1,499,564. REDUCING GARMENT. LOUIS M. ULLMAN and DAVID A. LEDERER, New Haven, Conn. Filed Mar. 29, 1924. Serial No. 702,853. 2 Claims. (Cl. 2—29.)



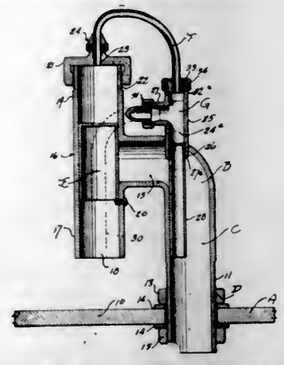
2. As a new article of manufacture, a closed-back, open-front rubber reducing-corset comprising a body-strip consisting of a single length of sheet-rubber with its ends positioned adjacent to each other at the front of the corset, reinforcing-strips adhesively secured to the inner faces of the respective ends of the said body-strip and extending from the upper to the lower edges thereof, multiple-layer assembly-strips, each having its layers separated at its inner edge and receiving between the said layers an end of the said rubber body-strip and a reinforcing strip, to both of which the edges of the said layers are stitched, stays located in the upper ends of the respective assembly-strips, clasps mounted in the stays of one assembly strip, complementary studs mounted in the stays of the other assembly strip, complementary hooks and eyes mounted in the respective assembly-strips below and in line with the said pairs of stays therein, a reinforcing strip adhesively secured to the inner face of the body-strip midway the length thereof and extending from the upper to the lower edge thereof, a stay-casing strip applied to the outer face of the body-strip midway the length thereof and stitched through the rubber body-strip to the reinforcing strip last mentioned, stays located in the said stay-casing strip, and hose-supporters secured to the lower ends of the respective assembly-strips, whereby the draft of the said supporters is removed from the body-strip and devolved upon the said assembly-strips and whereby the same are drawn flat over the abdomen and prevented from buckling.

1,499,565. PRUNING SHEARS. JOSEPH URBAN, Los Angeles, Calif. Filed Apr. 28, 1921. Serial No. 465,103. 2 Claims. (Cl. 30—11.)



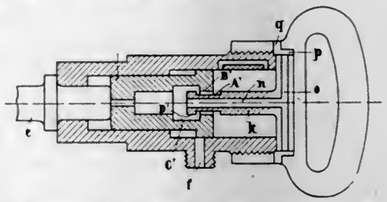
1. Shears comprising crossed pivoted handles, a stationary blade fixed on one of the handles, a movable blade pivoted on the other handle, and a pin-and-slot connection between the movable blade and the handle for the stationary blade, said connection being normally disposed between the pivot of the handles and the pivot of the blade so associated with the blade and handle as to be completely covered irrespective of the position of the handles or blades.

1,499,566. RIM. CHARLES A. VOLZ, Pigeon, Mich. Filed Mar. 1, 1923. Serial No. 622,079. 3 Claims. (Cl. 301—31.)



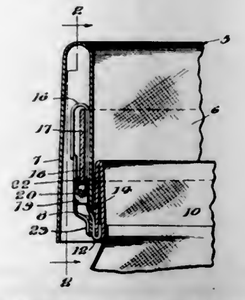
1. In a device of the class described, rim sections, one of which is provided with an outwardly offset keeper, the other of which carries a tongue which is insertable beneath the keeper, the tongue being provided on its inner surface with an inwardly extended projection spaced from the end of the tongue, the first specified section having an opening adapted to receive the projection.

1,499,567. GAS RETORT. HERBERT WOOD, Sydney, New South Wales, Australia. Filed Mar. 25, 1921. Serial No. 455,439. 1 Claim. (Cl. 48—123.)



A vertical retort, an outer wall between which outer wall and the retort are a series of superimposed heating chambers open to each other at opposite sides alternately, the lowermost of said chambers being in communication with the generator, a passage formed by a midfeather wall whereby heat from the generating area is conducted to the lowermost of the heating chambers and upwardly through said chambers to the atmosphere, dampers in said passage closable after preliminary heating, continued by gas burners projecting into the surrounding superimposed chambers for heating the same, and a gas outlet for exit of the blow gases from the generator.

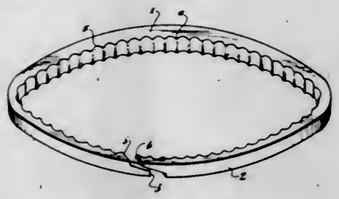
1,499,568. AUTOMATIC SIPHON. RUSSELL J. ANDREWS, Denver, Colo. Filed May 7, 1921. Serial No. 467,536. 10 Claims. (Cl. 137—106.)



7. An automatic siphon comprising a main siphon, a valve for controlling flow of liquid through the main siphon, an auxiliary siphon, and means connecting the auxiliary siphon to the main siphon for controlling operation of the valve in the latter.

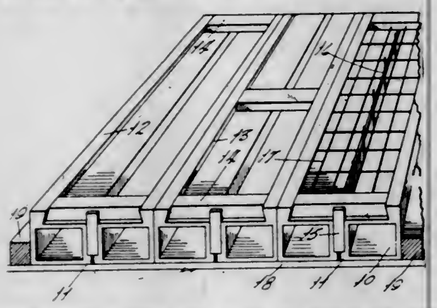
1,499,569. PNEUMATIC HAMMER. ARMAND BAILLY, Paris, France. Filed Dec. 22, 1921. Serial No. 524,278. 2 Claims. (Cl. 121—11.)

1. In a pneumatic hammer, the combination of a cylinder provided at its rear end with a stationary axial exhaust tube; and a reciprocatory impact piston in the cylinder having a socket in its rear end to receive said tube and a passage leading from its front end into said socket; the piston and exhaust tube having openings adapted to coact in establishing temporary communication between the cylinder and the atmosphere and thereafter to interrupt such communication and thereby cause the automatic stoppage of the piston.



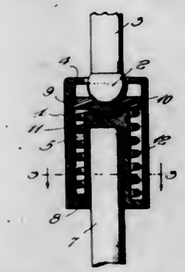
1,499,570. COLLAR-ATTACHING DEVICE. DANIEL C. CARR, Chicago, Ill. Filed Nov. 5, 1923. Serial No. 672,954. 3 Claims. (Cl. 24—61.)

1. A collar attachment comprising a body having one end portion offset for extending through the button hole in the inner fold of a collar and being provided with



means to engage the neck band of a shirt, the other end portion of the body being formed with an open ended loop adapted to slidably receive and support a necktie, and a spring actuated latch pivoted to said body and engaged with said open ended loop for normally closing the loop.

1,499,571. PISTON RING. MORRIS A. DAVIS, Los Angeles, Calif. Filed Nov. 11, 1920. Serial No. 423,337. 7 Claims. (Cl. 74—109.)

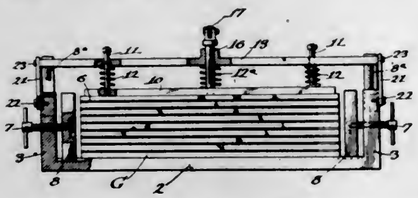


1. A piston ring having its inner periphery formed at intervals with relatively sharp projections.

1,499,572. SLAB FORM. LEONARD L. ELDRIDGE, San Antonio, Tex. Filed May 28, 1923. Serial No. 641,935. 6 Claims. (Cl. 25—118.)

1. In a slab molding form, a pair of longitudinal members, each having a marginal overhanging flange for forming a bevelled edge and a longitudinal rib, the members forming a T-shaped casting space with the ribs at the bottom thereof and bulkheads fitting in the casting space for forming the ends of the slab cast in said space.

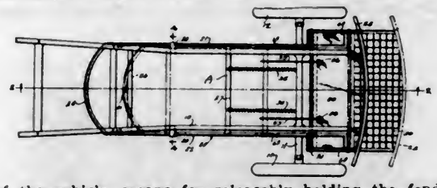
1,499,573. VALVE SILENCER. ANDREW C. ENNIS, Smithfield, N. C. Filed Nov. 12, 1923. Serial No. 674,295. 3 Claims. (Cl. 123—90.)



3. A device of the class described comprising an outer sleeve open at its upper end to receive the lower end of an upper push-rod section, an inner sleeve disposed concentrically within said outer sleeve in spaced relation and having its lower end open to receive the upper end of a lower push-rod section, the upper end of said inner sleeve being closed and being spaced downwardly from the corresponding end of the outer sleeve, and a web connecting the lower ends of said sleeves for closing the space therebetween.

1,499,574. BARREL TONGS. ARTHUR HAROLD EVANS, Tulsa, Okla. Filed May 23, 1923. Serial No. 640,944. 2 Claims. (Cl. 294—4.)

1. A device of the class described, comprising a bar and a handle therefor, a pair of barrel engaging jaws connected with the handle and adapted to swing with reference thereto, said jaws including a deflected portion and a portion extending therefrom at approximately a right angle, the portions last named being turned toward each other, and a spring engaging said jaws.

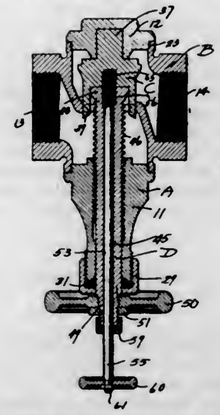


1,499,575. GLASS-PLATE HOLDER. GEORGE GLAUDEL, Los Angeles, Calif., assignor of forty-two and one-half per cent to George L. Mitchell, Santa Monica, Calif., and fifteen per cent to Herman Miller, South Pasadena, Calif. Filed Mar. 29, 1923. Serial No. 628,678. 7 Claims. (Cl. 51—217.)

1. In a jig for lining up and holding pieces of plate glass in a stack, a holder having a bottom upon which the pieces are stacked one above the other, end guide means for the ends of the pieces and a removable front guide plate against which the pieces are positioned in alignment in the stack, and means for clamping the stack of pieces whereby to hold the same when the front guide plate has been removed to expose the aligned edges of the plates to be sand blasted.

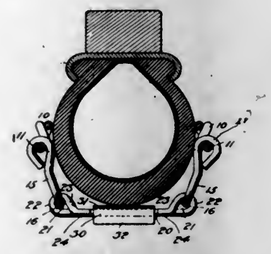
1,499,576. AUTOMATIC SAFETY DEVICE FOR VEHICLES. RALPH VINTON GLOVER, Rochester, N. H., assignor of one-half to Fannie Hall Mathes, Rochester, N. H. Filed Feb. 21, 1924. Serial No. 694,341. 5 Claims. (Cl. 293—25.)

1. In a safety attachmen' of the class described, the combination of a vehicle, a fender frame, means collapsibly mounting the fender frame upon the vehicle, springs normally tending to throw the fender frame forwardly



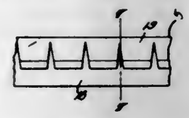
of the vehicle, means for releasably holding the fender frame extended, and means for releasably retaining the fender frame collapsed.

1,499,577. COMB. LEO A. HENTER, Hot Springs, Mont., assignor to Nu-Comb Manufacturing Company, Hot Springs, Mont., a Corporation of Montana. Filed Mar. 1, 1923. Serial No. 622,142. 1 Claim. (Cl. 24—3.)



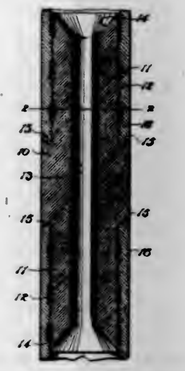
The combination with a vest pocket comb having a back portion thereof provided with a convex rib extending laterally of the plane of the teeth of said comb and longitudinally of the said back portion, of a clip comprising an attaching portion secured to said back portion and within the longitudinal margins of said rib, a resilient tongue extending from said attaching portion longitudinally of said rib, and a ball at the free end of said tongue normally engaging the crown of said convex rib.

1,499,578. STOP AND CHECK VALVE. ROBERT A. HERA, Connersville, Ind. Filed Sept. 29, 1921. Serial No. 504,034. 5 Claims. (Cl. 251—140.)



5. A valve construction comprising a casing, a valve member operable in said casing, a bonnet carried by said casing providing an interiorly screw threaded opening therein, a hollow main stem in screw threaded adjustment with the screw threaded opening of said bonnet, said main stem adapted to be adjusted upwardly whereby to lift the valve member off its seat in said casing or to be adjusted in said bonnet whereby the valve may coact in the casing as a check valve, an auxiliary stem slidably mounted in the main stem, and means for detachable connection of the auxiliary stem to said valve.

1,499,579. TREAD GRIP. CARLTON L. HOFF, York, Pa. Filed Apr. 21, 1923. Serial No. 633,734. 12 Claims. (Cl. 152—14.)

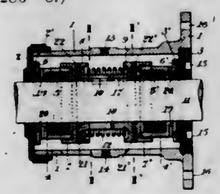


1. In an anti-skid device, a plurality of side chains, a plurality of transverse cross bars connecting said chains, and a non-cylindrical member loosely mounted to oscillate on each of said cross bars.

1,499,580. PISTON RING. FRED M. HOWE, Wellsboro, Pa. Filed Nov. 30, 1921. Serial No. 518,932. 1 Claim. (Cl. 74—109.)

An auxiliary piston ring or piston ring expander, comprising a strip of spring metal having transversely extending edge tongues disposed at an angle to the body.

1,499,581. ROTARY WELL-BORING PIPE COUPLING. OTTO B. KIBELE, Los Angeles, Calif. Filed Mar. 1, 1922. Serial No. 540,331. 1 Claim. (Cl. 285—197.)

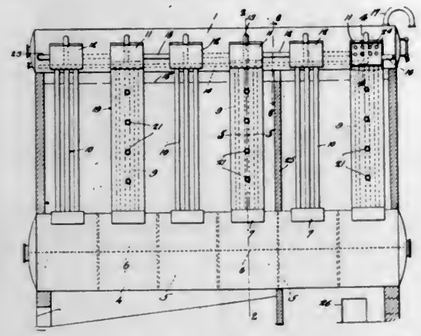


A pipe coupling, including a tubular body having a reduced end which is roughened, the body having an under cut shoulder at the reduced part, to receive an applied pipe end, and a pipe having an internally roughened end and being spot welded on the coupling end.

1,499,582. TYPEWRITING MACHINE. JOSEPH LAGUIONIE, Paris, France. Filed May 9, 1923. Serial No. 637,900. 6 Claims. (Cl. 197—126.)

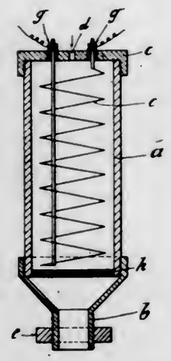
1. In a typewriting machine a carriage, a luminous platen therein and means to permit of placing on the carriage the sample to be reproduced under the sheet to be impressed in the same visual field relatively to each other.

1,499,583. CONSTRUCTION OF STUFFING BOXES FOR REVOLVING SHAFTS OF ALL KINDS AND ESPECIALLY OF TURBINE SHAFTS AND THE LIKE. JULES LEROY, La Garenne Colombes, Seine, France. Filed Nov. 28, 1921. Serial No. 518,391. 1 Claim. (Cl. 286—8.)



A stuffing means for rotatable shafts, comprising, in combination, a casing, bearing surfaces on the casing, two complete stuffing boxes in the casing, the stuffing boxes ends having a bearing surface on one side cooperating with the casing bearing surfaces, and each having a recess on the opposite side, an annular member having two parts, a coil spring separating the two parts, the two parts being interposed between the stuffing boxes, said two parts having interengaging portions to restrain the parts to rotate together, one of said two parts being keyed to the rotatable shaft with which used, and a projection on each of the two parts, fitting into a recess in each of the stuffing boxes.

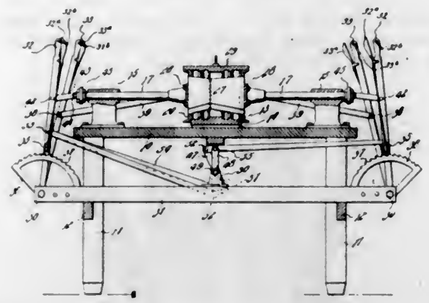
1,499,584. TOOL FOR DRILLING OR BORING METALS. ISAAC W. LITCHFIELD, Newtonville, Mass. Filed Oct. 7, 1920. Serial No. 415,429. 8 Claims. (Cl. 77—65.)



1. A drill having an interrupted cutting edge and an uninterrupted cutting edge adapted to follow said interrupted cutting edge and remove the ridges left by the interruptions therein, the uninterrupted cutting edge being axially to the rear of said interrupted cuttling edge sufficiently to produce a balanced cut.

1,499,585. BOILER. WILLIAM HENRY MCGRATH, Roselle Park, N. J., assignor of forty-nine per cent to William Brogan, Elizabeth, N. J. Filed Apr. 25, 1922. Serial No. 556,433. 9 Claims. (Cl. 122—347.)

1. A device of the class described comprising a lower drum; an upper drum, headers on opposite sides of the upper drum; tubes connecting the headers with the lower drum; connections between the headers, the connections on one side of the upper drum alternating with the connections on the opposite side of the upper drum; and means whereby the headers are connected to the upper drum.



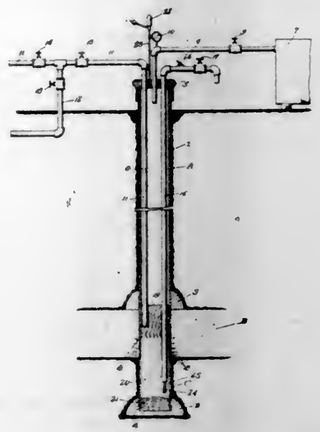
1,499,586. HEATING DEVICE FOR EXPLOSION MOTORS. JEAN JULES PAUL MARCÉ, Paris, France. Filed Dec. 8, 1921. Serial No. 520,983. 3 Claims. (Cl. 218—38.)

1. An attachment for an internal combustion engine comprising a flange member having an integral extension, said extension having a threaded aperture therein; a threaded member threaded to said flange member at its aperture; a tubular member on said threaded member; and a resistance coil in said tubular member, said flange member being adapted to be secured at any suitable place to the suction pipe or the carbureter of said internal combustion engine.

1,499,587. CEMENT-BLOCK-MAKING MACHINE. WILLIAM MEYER, Gladbrook, Iowa. Filed Feb. 23, 1923. Serial No. 620,734. 5 Claims. (Cl. 25—41.)

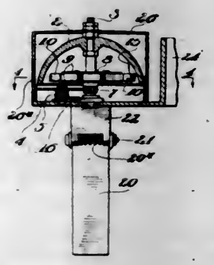
5. In a block machine, a supporting table adapted to carry a pallet, pairs of bearing members mounted upon the table, rods slidable through said bearing members and having their outer ends connected, face plates carried by the inner ends of said rods, end plates hinged upon the sides of the table and adapted to be received between the face plates, said face plates being formed with openings, and a plurality of core plugs slidably mounted through said openings, a lever mechanism at each end of the table connected with said rods for moving the face

plates, and an independent mechanism at each end of the table connected with said core plugs, the corresponding levers at each end of the table being connected for simultaneous movement.



1,499,588. FIRE ESCAPE. ELMER ELLSWORTH MULLINIX, Burlington, Kans. Filed Feb. 6, 1923. Serial No. 617,301. 1 Claim. (Cl. 227—26.)

A cable clamp for fire escapes comprising a pair of jaws in the form of elongated semi-cylindrical castings having longitudinally extending grooves on their inner faces, the grooves tapering in depth toward one end of the clamp, the depth of the grooves at the lower ends of the castings being deep enough to permit the clamp to slide freely on the cable in connection with which it is to be used, apertured lugs extending from one side edge of the castings near their lower ends and designed to support a body encircling member, means detachably connecting said lugs, other lugs at the upper ends of the castings on the opposed side edges thereof to those carrying the first mentioned lugs, and a controlling screw mounted in the upper lugs for varying the clamping action of the jaws on the cable.

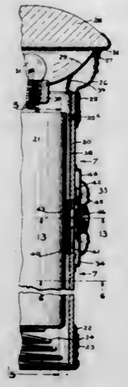


1,499,589. METHOD AND APPARATUS FOR EXTRACTING OIL FROM WELLS. FRANK NAVIN, Los Angeles, Calif. Filed Aug. 27, 1923. Serial No. 659,685. 9 Claims. (Cl. 166—2.)

1. The method of extracting clean oil from a well which consists in separating the oil, while in the well, from the water, sand and emulsion, in thereafter forcing the separated oil out of the well by the utilization of a

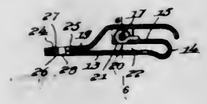
compressed fluid, and in simultaneously utilizing the same compressed fluid to force the water out of the well without contact with the oil.

1,499,590. SOFT-TIRE ALARM. OTTO NELSON, Hollywood, Calif. Filed Dec. 13, 1923. Serial No. 680,430. 6 Claims. (Cl. 116—34.)



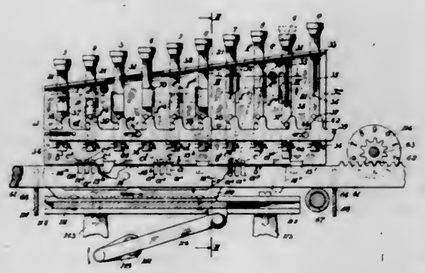
4. A soft tire alarm device comprising in combination, means adapted to be clamped to a part of a wheel provided with a pneumatic tire and including a bell, means for striking the bell to produce a sound signal, a lever arm pivotally mounted and extending downwardly into engagement with the tire and operating the bell-striking means when the tire bulges laterally unduly, said bell-striking means including an element extending laterally to be engaged by the lever when swung by the tire, and a spring for normally pressing the lever against the tire, said spring being connected to the said member to draw the same outwardly.

1,499,591. HANDLAMP. ARTHUR P. PAINE, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn. Filed June 9, 1920. Serial No. 387,657. 43 Claims. (Cl. 240—8.5.)



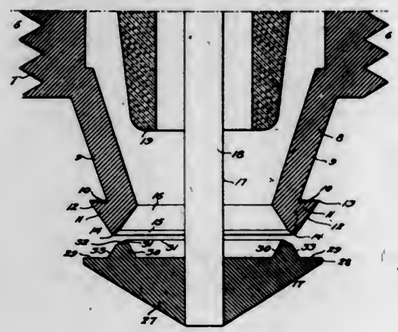
1. In a battery hand lamp, a casing, a battery therein, a bulb in said casing, means for making and breaking contact between the terminals of said bulb and battery,

comprising a conductor member within the casing, and means mounting said conductor for movement to three distinct positions, to produce three distinct effects and



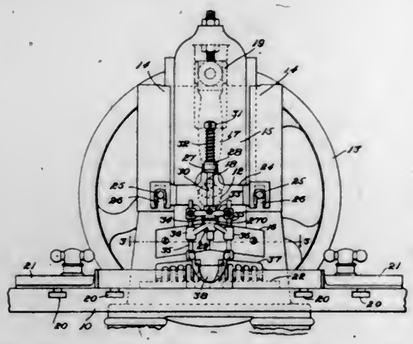
means for completing the circuit through the bulb and battery in two of said positions without further circuit closing movement of the conductor member.

1,499,592. GARMENT CLAMP AND THE LIKE. PERCY G. PHILLIPS, Rye, N. Y. Filed Dec. 28, 1923. Serial No. 683,093. 6 Claims. (Cl. 24—253.)



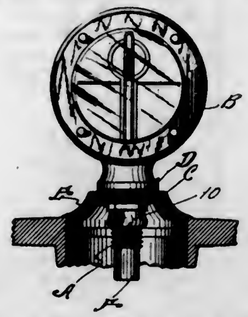
5. In a device of the class described, a pair of relatively movable jaws one of which has an opening therein, and a transversely arranged rib at each end of said opening; the other of said jaws also having an opening, and a longitudinally arranged rib at each side of said opening, each pair of ribs of a jaw being adapted to freely enter the opening of the other jaw to thereby form a plurality of bights in the material to be clamped; and means to normally retain said jaws in clamped position.

1,499,593. CALCULATING MACHINE. PAUL REISS, Danzig (Free City of), assignor to the Firm Gutschow & Co. G. m. b. H., Danzig. Filed Apr. 18, 1922. Serial No. 555,321. 11 Claims. (Cl. 235—60.)



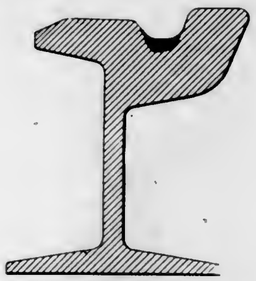
1. In a calculating machine the combination of a counting mechanism, a slidable rack operatively connected to said mechanism, a stationary stop adapted to limit the movement of said rack in one direction, depressible keys, coupling members operatively connected to said keys and engageable with said rack at different points, and means for moving said rack in the one and in the other direction.

1,499,594. SPARK PLUG. ELLSWORTH B. RILEY, Philadelphia, Pa. Filed June 9, 1922. Serial No. 567,142. 9 Claims. (Cl. 123—169.)



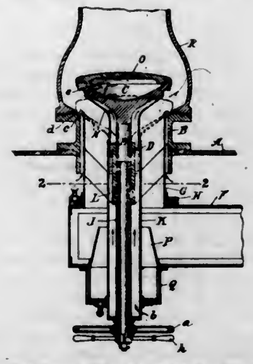
1. A spark plug including a depending electrode body providing an opening at its lower end; and an electrode having a cap provided with a sparking crest below said end of the body, said crest in cross section having its outer side slanting outwardly and downwardly, said outer side of the crest having its upper portion extending to a position closer to the longitudinal axis of the plug than is the lowest part of the wall of said opening whereby oil running down from said wall will drop onto said outer side of the crest.

1,499,595. GUARD FOR CORNER-CUTTING MACHINES. JOHN T. ROBINSON and GEORGE E. GOODING, Boston, Mass., assignors to John T. Robinson Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 1, 1923. Serial No. 655,055. 15 Claims. (Cl. 74—105.)



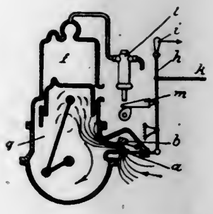
1. The combination with mechanism for cutting the corners of box blanks, said mechanism including a movable knife, of mechanism for shielding said knife to prevent injury to the operator, said shielding mechanism being attachable to and removable from said cutting mechanism as a unit and comprising a knife guard, means for movably supporting said guard, and means engaged by the work upon introduction of the latter into the machine for moving said guard.

1,499,596. FASTENING DEVICE. ROBERT C. RUSSELL, Dallas, Tex., assignor to Rees-Russell Manufacturing Company, Dallas, Tex., a Copartnership comprised of William Rees, Robert C. Russell, and Evan Rees. Filed May 22, 1923. Serial No. 640,678. 5 Claims. (Cl. 151—14.)



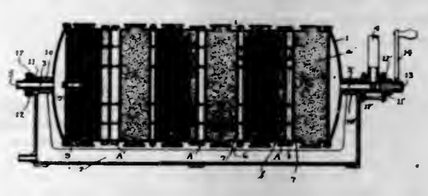
1. A fastening device for engaging screw threads comprising a collar having an annular pocket, and a resilient split ring adapted to expand into said pocket when engaged with screw threads.

1,499,597. RAIL. NEIL E. SALSICH, Bethlehem, Pa. Filed Mar. 20, 1923. Serial No. 626,361. 3 Claims. (Cl. 238—148.)



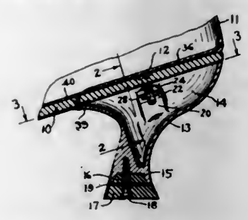
1. A method of treating a rail having a flange groove which consists in heating the bottom of the groove and thereafter in immediately cooling the heated bottom.

1,499,598. DEVICE FOR DISCHARGING COMBUSTION GASES FROM SUBMARINES. WILHELM SCHMIDT, Cassel-Wilhelmshohe, Germany. Filed Sept. 27, 1922. Serial No. 590,812. 12 Claims. (Cl. 114—16.)



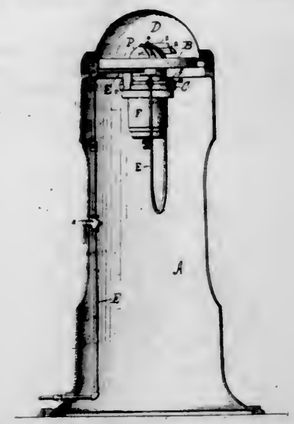
1. In combination with a passage for the discharge of hot gases, and particularly the combustion gases of power plants for the operation of submarines, and with a shut-off device adapted to control said passage, and a seat for said device, a protective device for throwing a screen of a gaseous medium between the meeting surfaces of said shut-off device and of its seat, so as to protect said surfaces against contact with the hot gases.

1,499,599. AIR SUPPLY FOR INTERNAL-COMBUSTION ENGINES. EDUARD SEPPELER, Berlin-Neukolln, and PAUL SCHÜTTLER, Berlin-Halensee, Germany. Filed Aug. 29, 1921. Serial No. 496,434. 7 Claims. (Cl. 123—123.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an internal combustion engine in combination, a fuel pump, an air inlet, means for adjusting said air inlet in accordance with the regulation of said pump and an air-float at the rear of said air inlet.

1,499,600. MAKING COLLOIDAL SUSPENSIONS. CAROLYN S. SMITH, Brooklyn, N. Y. Filed Apr. 5, 1922. Serial No. 549,907. 6 Claims. (Cl. 204—25.)

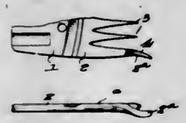


1. In a filtering tank a plurality of sections through which liquid under pressure percolates, each section containing a chamber filled with electrolytic materials and a chamber containing an inert mixture of metal and silica.

1,499,601. SHOE HEEL. ERROLL M. AUGUR, New Haven, Conn. Filed Jan. 10, 1922. Serial No. 528,281. 3 Claims. (Cl. 36—40.)

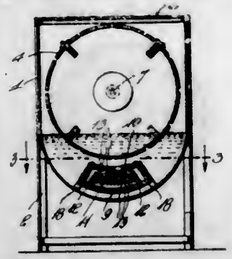
1. In a heel structure, a metal body having a top cavity, oppositely disposed lugs, provided on the sides of the body, having slots therein extending longitudinally of the heel, a member adjustably mounted in the slots and spanning the cavity, and fastening members designed to be secured to the shoe and to said member at spaced points transversely of the heel, said lugs being relatively short and having the slots opening through the edges thereof to admit said member.

1,499,602. COMPASS. ROYAL E. BIBBINS, New York, N. Y., assignor to Bibbins Ball Compass, Inc., a Corporation of Delaware. Filed May 17, 1921. Serial No. 470,291. 5 Claims. (Cl. 33—204.)



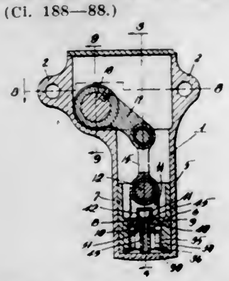
1. A compass which comprises a spinning ball adapted to be supported and driven by a current of air under proper conditions of pressure and direction, whereby the directive force of said compass is supplied, a covered vessel adapted to contain said spinning ball without physical contact therewith and carrying a compass card,—said vessel being adapted to float freely suspended in a current of air and to be controlled by the directive force of said spinning ball,—and means depending from said vessel whereby it is steadied and its centre of gravity lowered with relation to its point of suspension.

1,499,603. LOOM SHUTTLE. ALEXANDRE BOITEL, Puteaux, France, assignor to Georges Delmousee, Paris, France. Filed Jan. 4, 1923. Serial No. 610,554. 7 Claims. (Cl. 139—125.)



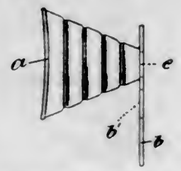
1. A shuttle enabling any loom to operate as a loom with a continuous weft feed, comprising a shuttle body, and means carried by said body and having thread hooks terminating exteriorly of the ends of the body and movable endwise thereof by inertia, whereby as the body is propelled in alternate directions, the hooks will by inertia, be alternately moved into operative and inoperative positions.

1,499,604. SHEEPSHEARING-MACHINE COMB. FRANCIS GEORGE WILLIAM BRISTOW, Sydney, New South Wales, Australia. Filed Jan. 4, 1922. Serial No. 526,978. 7 Claims. (Cl. 30—1.)



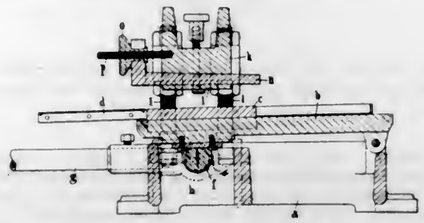
1. A sheep shearing machine comb comprising a plurality of intermediate teeth, and an end tooth extending beyond the arc formed by the tips of the intermediate teeth, said extended tooth being outwardly splayed, the extended portion of said tooth being downwardly curved and the tip thereof blunted.

1,499,605. CLOTHES-WASHING MACHINE. ORA S. BROWN, Virginia, Minn. Filed Feb. 27, 1922. Serial No. 539,480. 3 Claims. (Cl. 68—18.)



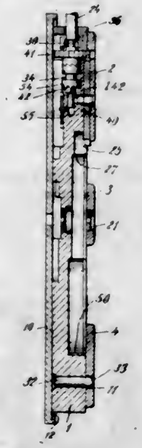
1. In a washing machine, a tub designed to contain a cleaning fluid, a clothes cylinder rotatable in the tub and spaced from the bottom thereof, said cylinder being equipped with openings to permit the circulation of water therethrough, and a body located in said tube and spaced from both the cylinder and bottom of the tub to permit free circulation of the cleaning fluid, the opposed longitudinal sides of said body converging toward said clothes cylinder to direct the fluid through the openings in said cylinder when the latter is set into rotation.

1,499,606. SHOCK ABSORBER. ELLIOTT S. CHURCH, Newton, and FREDERICK J. SHEPARD, Jr., Auburndale, Mass. Filed Mar. 20, 1922. Serial No. 545,211. 11 Claims. (Cl. 188—88.)



1. In a shock absorber, a pair of relatively movable members adapted to be interposed between the body and axle of a vehicle, means permitting said members to move freely relatively in one direction, and means interposing a resistance to the relative movement of said members in the opposite direction depending in extent directly on the speed of relative movement of said members.

1,499,607. FIBER-TREATING APPLIANCE FOR DRAWING AND PREPARING FIBERS FOR SPINNING INTO YARNS. JAMES HENRY DAWSON, Brierfield Mills, near Burnley, England. Filed Mar. 10, 1921. Serial No. 451,147. 14 Claims. (Cl. 19—150.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



9. A fiber treating device for conducting a sliver comprising a trough or conduit having a narrow elongated portion and provided at one end with a splayed mouth or inlet and at the other with a contracted outlet, and an intermediate series of fiber-contacting ribs projecting inward from the enclosing wall of the conduit and arranged in planes right angular to the sliver path.

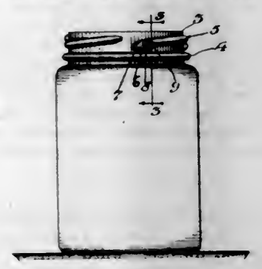
1,499,608. EMBOSSING APPARATUS. FRANK HEDLEY EVANS, Beaconsfield, and HAROLD AGUTTER EVANS, South Harrow, England, assignors to George Stanley Walpole, London, England. Filed Oct. 2, 1922. Serial No. 591,970. 10 Claims. (Cl. 101—3.)

1. An embossing machine comprising a frame, a table hinged at one end to said frame, a lower platen normally carried by said table at an angle to the horizontal plane of said frame, a vertically adjustable upper platen, and means for raising said lower platen to a position of parallelism with respect to said upper platen.

1,499,609. WATCH-WINDING DEVICE. JOSEPH A. FREUND, Newtonville, Mass., assignor to The Keystone Watch Case Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1919, Serial No. 283,324. Renewed Feb. 3, 1921. Serial No. 442,324. 3 Claims. (Cl. 58—68.)

1. In watch movements, a thick dial plate, a series of cooperating relatively thin bridge members removably secured to one side of said dial plate, a dial of approximately the same thickness as said bridge members secured to the other side of said dial plate, a winding stem having at one end a reduced diameter winding stem pivot and having a polygonal portion to rotate therewith the longitudinally movable clutch pinion, a winding pinion secured to said winding stem, there being a series of recesses formed in said dial plate to constitute a bearing aperture for said winding stem pivot and to constitute a thrust block recess of larger diameter than said winding pinion to permit the endwise insertion of said winding stem and cooperating parts into said dial plate, and a winding pinion thrust block removably secured in said thrust block recess to determine the penetration of its teeth with the teeth of the cooperating crown wheel.

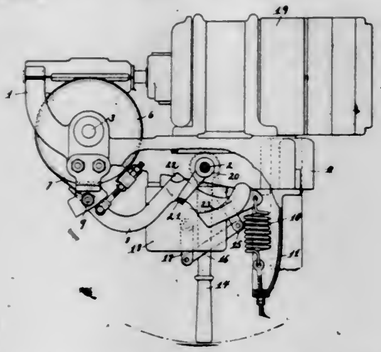
1,499,610. MECHANICAL PENCIL. BYRON B. GOLDSMITH, New York, N. Y. Filed Apr. 21, 1921. Serial No. 463,248. 6 Claims. (Cl. 120—18.)



4. A pencil of the character set forth in claim 1 hereof, wherein a casing is provided with a revoluble tip to which the container is fixed and wherein a fixed jaw within the casing receives the wing.

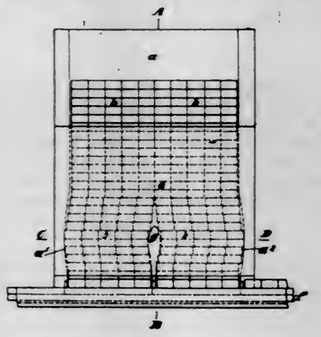
5. A pencil of the character set forth in claim 4 hereof, wherein the jaw is formed by a shell fixed within the casing and having a slotted bottom.

1,499,611. PHOSPHORIC ACID IN DEHYDRATED FORM AND METHOD OF MAKING THE SAME. JAMES H. GRAVELL, Elkins Park, Pa. Filed May 9, 1922. Serial No. 559,597. 2 Claims. (Cl. 23—1.)



1. The method of making phosphoric acid in liquid and dehydrated form which consists in treating phosphoric acid with phosphorus pentoxide and adding alcohol.

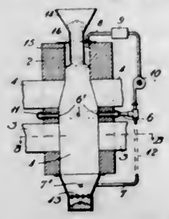
1,499,612. GLASS CONTAINER. CHARLES HAMMER, Hollis Court Boulevard, N. Y. Filed Nov. 29, 1922. Serial No. 603,989. 16 Claims. (Cl. 215—1.)



1. A glass container made from the use of a mold, the parts of which swing in a plane perpendicular to the axis of the container, and having a projection inclined downwardly from the top of the container, the configuration of the under surface of the projection at or near the parting of the mold parts being such as to prevent binding action between the said projection and mold when the latter is opened.

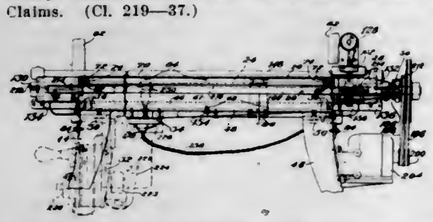
1,499,613. HOISTING MECHANISM. CHARLES HAYES, Brooklyn, N. Y., assignor to Gillis & Geoghegan, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 27, 1921. Serial No. 464,905. 6 Claims. (Cl. 192—2.)

1. In a mechanism of the character set forth, a brake lever arranged to apply a brake by exerting a normally constant tension thereon, an arcuate surface on said lever, an operating lever, and means mounted on the shaft of said operating lever and cooperable with said arcuate surface.



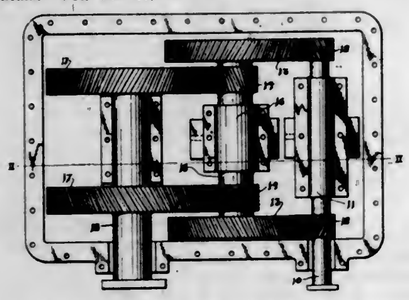
1,499,614. MATCH-BOX-FILLING MACHINE. LUDWIG HENNINGER, Durlach, Germany, assignor to Badische Maschinenfabrik & Eisengiesserei vorm. G. Sebold and Sebold & Neff, Durlach, Germany. Filed June 7, 1922. Serial No. 566,523. 1 Claim. (Cl. 198—30.)

In a match-box filling machine, the combination of a storage receptacle for the piles of boxes, a double-wedge-shaped stationary dividing tongue, situated at the middle of its lower portion adapted to displace the downward moving boxes in opposite directions and recessed side walls in said receptacle adapted to permit said lateral displacement and to move said boxes together again.



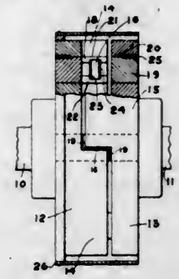
1,499,615. ELECTRICAL HEAT TREATMENT OF MATERIAL. TORSTEN ANDREAS FRITHIOFSSON HOLMGREN, Stockholm, Sweden. Filed Oct. 19, 1921. Serial No. 508,815. 2 Claims. (Cl. 204—64.)

1. The process of treating material in electric furnaces, which consists in passing the charge of material between electrodes disposed opposite each other and in contact with the charge throughout substantially its entire breadth, supplying an electric current to said electrodes thereby to form at least one heating zone approximately at right-angles to the direction of movement of the charge and extending throughout the entire cross-section thereof, introducing gas into the furnace chamber below the electrodes and passing said gas in the opposite direction from the charge and through at least one heat-



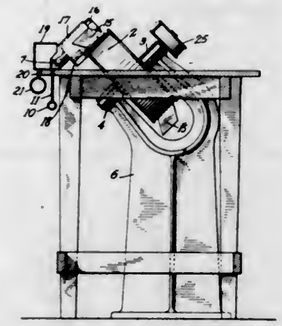
ing zone, and conducting said gas into contact with a part of the charge which has not reached the heating zone.

1,499,616. HEATING APPARATUS. ALBERT E. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 12, 1920. Serial No. 416,501. 41 Claims. (Cl. 219—37.)



11. Heating apparatus having, in combination, an electrically heated support of heat storage capacity upon which the material to be heated is placed, a movable electric heating device disposed in proximity to said support for heating the material to the desired temperature as it moves past it, and means for interrupting the supply of electric energy to said support and said heating device, leaving the support of heat storage capacity to maintain the heated material in heated condition after the supply of electric energy is interrupted.

1,499,617. REDUCTION GEARING. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed May 10, 1921. Serial No. 468,439. 3 Claims. (Cl. 74—7.)

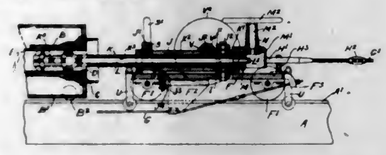


1. In a reduction gear, the combination of meshing pinion and gear members, each having a plurality of toothed portions, supporting means for the pinion and gear members arranged between the toothed portions so that the latter overhang the supporting means, said means furnishing the entire support of the respective pinion and gear members, and flexible means for supporting the pinion supporting means.

1,499,618. SHAFT COUPLING. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed July 12, 1921. Serial No. 484,071. 16 Claims. (Cl. 64—96.)

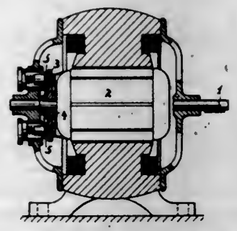
1. A coupling for a pair of rotatable elements comprising a pair of coupling members having opposed recesses and disk-shaped transmitting members in the recesses having spherically-shaped edges bearing against the recesses.

1,499,619. BOTTLE-CAPPING MACHINE. KENNETH H. KIEFER, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Dec. 29, 1921. Serial No. 525,645. 9 Claims. (Cl. 226—80.)



1. In a bottle capping machine, the combination of means for advancing the bottle neck down at an angle to the vertical, a tank for containing a coating liquid, means for dipping and withdrawing the bottle into and out of the tank, and means for withdrawing the gases over the liquid and recovering vapors therefrom.

1,499,620. RETRACTABLE PIPE SUPPORT. JAMES B. LADD, Ardmore, Pa., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed June 12, 1923. Serial No. 644,954. 3 Claims. (Cl. 22—94.)

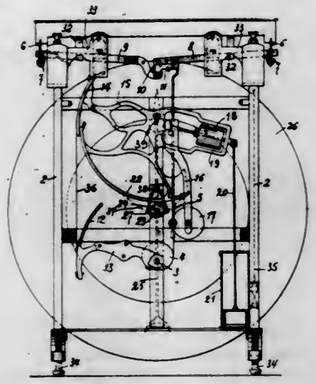


3. Mechanism for supporting cast pipes as they are drawn from a mold comprising a guideway for a carriage, a carriage supporting pipe, gripping mechanism movable to and fro on said guideway, pipe supporting means pivotally supported below the guideway so that they can be turned to operative position or to inoperative position out of the path of the carriage, means connected to said pivoted supports for retaining them in either operative or inoperative position and means actuated by the moving carriage whereby the pipe supporting means are successively brought to operative position as the carriage draws a pipe over them and retracted in advance of the carriage as it moves towards the mold.

1,499,621. MECHANISM FOR DRAWING CAST PIPES FROM MOLDS. JAMES B. LADD, Ardmore, Pa., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed June 12, 1923. Serial No. 644,955. 5 Claims. (Cl. 22—94.)

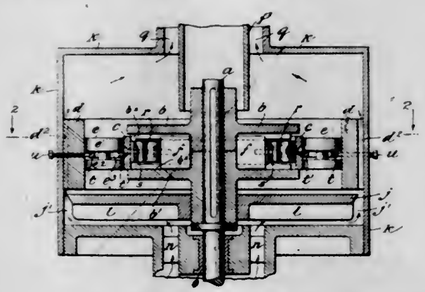
2. Mechanism for drawing cast pipe from molds comprising a longitudinally movable carriage, a longitudinally extending guide, a universal joint whereby the guide is secured to the carriage, elastic supporting and aligning means for supporting the free end of the guide, a tubular support for pipe gripping mechanism, longitudinally movable in said guide, means for moving said tubular support in the guide, pipe gripping mechanism supported on the end of the tubular support, a rod for actuating the gripping mechanism movable in the tubular support and means for moving said rod to actuate the gripping mechanism.

1,499,622. DISK COMMUTATOR FOR ELECTRO MOTORS AND DYNAMOS. HERMANN MARKWALDER, Wurenlos, Switzerland. Filed July 23, 1923. Serial No. 653,296. 1 Claim. (Cl. 171—320.)



A disk commutator for electro motors and dynamos comprising in combination with the rotor shaft a commutator disk made of insulating material mounted on said rotor shaft, and contact plates fastened to the sides of said disk designed to come in contact with the brushes so that said commutator disk may be reversed after one side has become worn out so that the other side may be used.

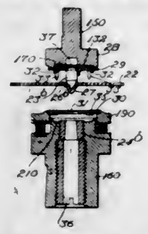
1,499,623. AUTOMATIC WEIGHING APPARATUS. MARIUS MATHIEU, Paris, France. Filed May 7, 1921. Serial No. 467,752. 3 Claims. (Cl. 265—62.)



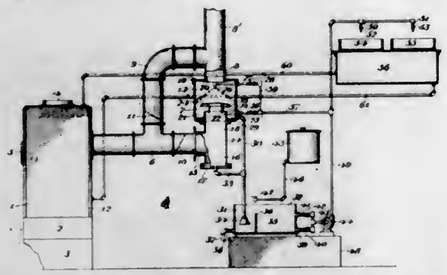
1. An automatic weighing apparatus comprising in combination a frame, a scale pan above said frame, lugs one at each end of the scale pan, suspension hooks in said lugs, two supporting levers oscillably mounted in said frame and supporting on their ends said scale pan, a link connecting the inner ends of said oscillating levers, an axle journaled in said frame, a cam having a rectifying curve keyed on said axle, a metal band attached with one end to said rectifying cam and partly wound around the same and means connecting said band with the other end to said system of supporting levers,

an oscillating arm keyed on said axle of the rectifying cam, a beam, an axle for oscillably mounting said beam in said frame, an oscillating arm keyed on the axle of said beam, a circular segment at the end of said oscillating arm on the beam axle, a metal band attached with

one end to said circular segment on which it is guided and attached with the other end to the oscillating arm of the axle of the rectifying cam, and a downwardly extending lever for said beam axle and a counterweight on the end of said lever for balancing said beam.



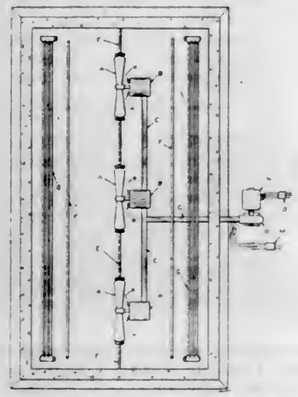
1,499,624. GRINDING MACHINE. KRISTIAN MIDDELBOE, Frederiksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Mar. 8, 1921. Serial No. 450,533. 6 Claims. (Cl. 83—45.)



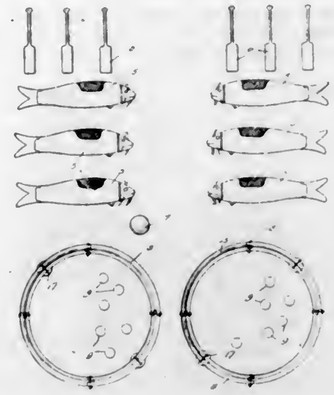
1. In a grinding machine, the combination of a grinding ring, cylindrical grinding bodies co-operating with the grinding ring and channeled circumferentially between their ends, and an annular guide engaging the circumferential channels of the grinding bodies to maintain them with their axes substantially in fixed relation with the axis of the grinding machine.

1,499,625. METHOD OF SETTING FASTENERS. WILLIAM C. J. MILLER and VINCENT P. RUMELY, Detroit, Mich. Original application filed Nov. 17, 1922, Serial No. 601,544. Divided and this application filed July 10, 1923. Serial No. 650,609. 4 Claims. (Cl. 218—29.)

2. The herein described method of setting in fabric fasteners having tubular shanks, which consists in cupping the fabric at a point at which a fastener is to be set and removing the cupped portion of said fabric by means of a punch to form a hole of greater diameter than said punch, forcing the shank of the fastener over said punch and through said hole while said punch remains therein, and clinching said shank on the opposite side of said fabric from that from which the fastener is inserted.

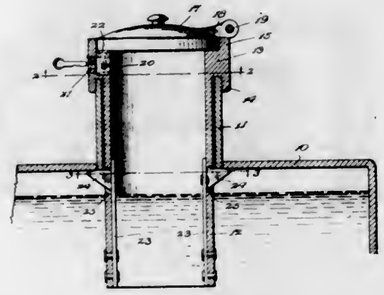


1,499,626. METHOD OF AND APPARATUS FOR TREATING NITROGENOUS WASTE MATERIALS. FRANK N. MOERK, Philadelphia, Pa., assignor of one-half to Clarence P. Landreth, Philadelphia, Pa. Filed Mar. 25, 1920. Serial No. 368,602. 12 Claims. (Cl. 23—21.)



1. The process of disposing of nitrogenous waste material, which comprises incinerating the material, washing the resulting gases with an absorption liquid, recovering absorbed material from said liquid, and adding said material to the ash resulting from incineration.

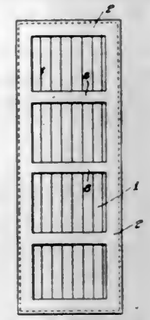
1,499,627. REVERSIBLE-CIRCULATION INTERNAL-FAN KILN. ROLF THELEN, Madison, Wis. Filed July 21, 1921. Serial No. 486,564. 1 Claim. (Cl. 34—19.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



In a drying apparatus the combination with a receptacle containing the material to be dried of a series of motor-driven reversible fans mounted in a row lengthwise of the interior of said receptacle and a common means for supplying cold air to cool all of the motors.

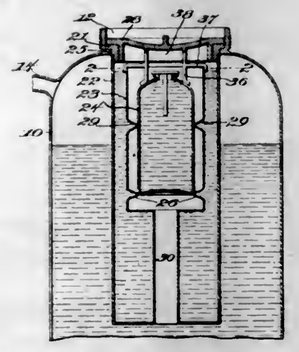
1,499,628. AQUATIC GAME. DON L. ALGER, Avalon, Calif. Filed Sept. 19, 1923. Serial No. 663,533. 4 Claims. (Cl. 46—61.)

1. In an aquatic game of the character set forth, a pair of buoyant goal elements within each of which is to be positioned a series of buoyant counting elements, a buoyant playing ball, a series of buoyant participant supporting elements, and a steering and batting paddle for each participant for use in assisting in moving from place to place and for striking the ball in endeavoring to knock the same into the goal piece of the opposing side.



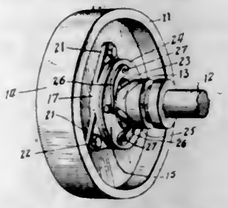
1,499,629. CLOSURE FOR TANKS OR THE LIKE. CLARENCE L. ARNOLD, Columbus, Ga. Filed Jan. 10, 1923. Serial No. 611,876. 8 Claims. (Cl. 220—24.)

1. The combination with a container having a filler pipe, of a closure including a shell extending within the pipe, means securing the shell to the outer end of the pipe, means carried by the shell to engage the pipe locking the shell against outward displacement, and a lock controlled movably mounted cover closing the shell.



1,499,630. PORTABLE WALL SECTION FOR HOUSE BUILDING. KARL HELMER ARONSSON, Huvudsta, Sweden, assignor to Einar Johannes Wiel-Berggren, Morby, Stocksund, Sweden, Forester. Filed June 2, 1923. Serial No. 643,114. 1 Claim. (Cl. 20—4.)

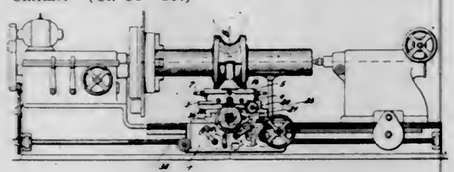
Portable wall-sections for house-building comprising a plate or panel and rails fixed on opposite sides of the said panel, at the edges of same and extending outside the edges of the plate, the said rails effecting grooves, in which and corresponding grooves in the adjacent



wall-section, roof-sill, bonding-sill, window-frame, door-case, etc., tightening feathers may be introduced for fixing the said sections.

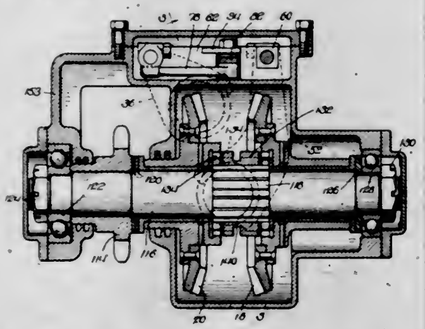
1,499,631. FIRE EXTINGUISHER. RALPH W. AUSTIN, Quincy, Mass. Filed Sept. 20, 1922. Serial No. 589,355. 7 Claims. (Cl. 23—5.)

7. A carbonate solution for fire extinguishers comprising as essential ingredients potassium carbonate and potassium hydroxide substantially in the proportions of 3 to 1.



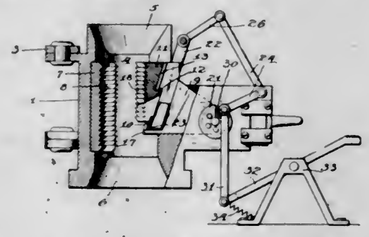
1,499,632. CLUTCH RING. HERBERT BANKE, Maywood, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 17, 1920. Serial No. 424,586. 2 Claims. (Cl. 192—110.)

1. In a friction clutch wheel, the combination of a shaft, a wheel which may run freely relative to said shaft or be frictionally clutched therewith, a body element keyed with the shaft and forming a journal on which said wheel is mounted and having a flange extending radially beyond its journal portion, expansible friction elements movably mounted at the inner side of said flange, pivot elements extending through said flange and having their inner ends constructed to expand said expansible elements, a clutch shifter and



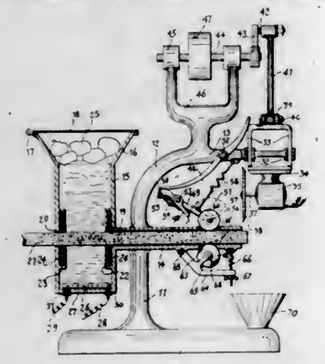
means for thereby turning said pivot elements, and a continuous clutch ring rigidly secured to and separable from said wheel and enclosing said expansible elements and engaged on its edge by said flange of the body element.

1,499,633. LATHE. HANS BECKER, Dusseldorf, Germany. Filed Aug. 5, 1921. Serial No. 490,058. 3 Claims. (Cl. 82—19.)



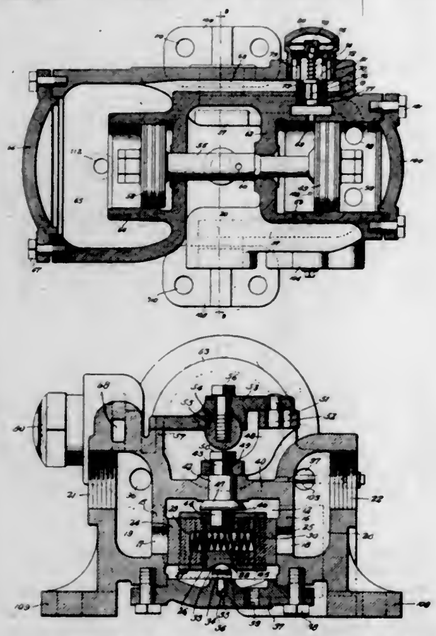
1. In a device of the kind described in combination, a lathe carriage, a compound slide rest adapted to turn in a horizontal plane, a cutting tool carrier on said slide rest, a rotary cam disc and gearing for imparting to said slide rest a reciprocating forward and return motion, and a worm gear for imparting to it an angular motion.

1,499,634. TRANSMISSION. RAYMOND A. BECKWITH, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 5, 1922. Serial No. 558,630. 25 Claims. (Cl. 74—59.)



1. In combination, two shafts, four sets of two gears each, one gear of each set being on each shaft, and means for connecting said shafts through any one of three of said sets, or through the fourth set in series with two other sets.

1,499,635. TUBING SPIDER. CHARLES H. BENCKENSTEIN, Vinton, La. Filed Mar. 18, 1922. Serial No. 544,903. 9 Claims. (Cl. 24—241.)

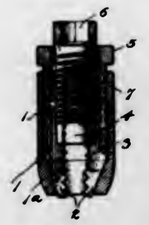


2. A piping spider composed of two sections, means for securing the two sections together, the two sections being so arranged as to form a substantially cylindrical passage therethrough when the two sections are together, a rocking arm journaled in one of the sections and adapted to project into said passage, and means cooperating with the journal for positively locking said arm against accidental displacement from said passage.

1,499,636. PROCESS OF MAKING CORK DISKS. RALPH W. BOOTH, Brooklyn, N. Y. Filed Jan. 17, 1923. Serial No. 613,275. 2 Claims. (Cl. 144—309.)

1. The process of cutting rods of cork or other suitable materials into comparatively thin disks, which consists in first applying a thin coat of paraffin, ceresin or similar oily, fatty or waxy materials to said rods and then passing said rods through suitable devices for the cutting of said disks.

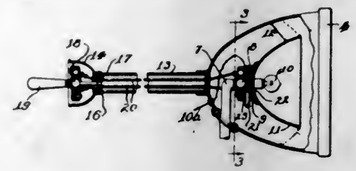
1,499,637. ATTACHMENT FOR LOCOMOTIVES. RICHARD W. BRADEN, New York, N. Y., and CHARLES STERN, Jersey City, N. J., assignors to B. & S. Manufacturing Products Corporation, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 7, 1923. Serial No. 623,525. 11 Claims. (Cl. 121—137.)



11. In combination with a locomotive having a source of steam and valve chests, of an attachment therefor comprising a chamber in communication separately with the source of steam and the steam chests, valve means in the casing for controlling the communication between the source of steam and said steam chests, and actuating means for said valve means being remote and independent of said valve means and coupled thereto, said actuating means having opposed surfaces of differential area alike accessible to the pressure within the steam chests whereby such pressure acting against the surface of larger area will shift the actuating means in one direction to close said valve means, and means to trap the steam pressure against the face of the actuating means having the smaller area whereby, when the steam chest pressure falls, such accumulated pressure will act to shift the actuating means in the opposite direction and open said valve means.

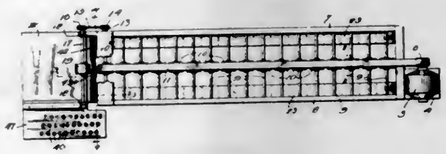
1,499,638. CAR-CONTROLLING DEVICE. LLOYD ARLINGTON BRAKE, Crawfordsville, Ind. Filed Mar. 16, 1923. Serial No. 625,605. 3 Claims. (Cl. 213—211.)

1. The combination with a track and a train of cars thereon, and a releasable coupling for the cars of the train, a brake carried by the track and cooperable with the cars, and means operated by the cars of the train for setting the brake, the brake also being engageable with the releasable coupling of the cars for successively uncoupling the same.



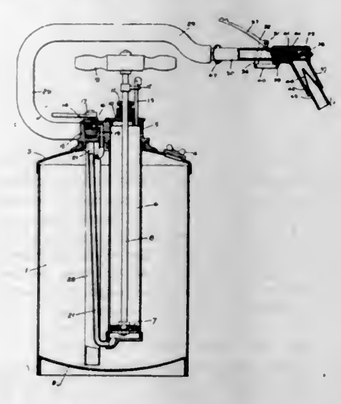
1,499,639. CHUCK. LAWRENCE A. BURCH, Jamestown, N. Y. Filed Dec. 7, 1922. Serial No. 605,459. 4 Claims. (Cl. 279—36.)

1. A tool holding device of the class described comprising a socket, a pair of jaws mounted therein, a jaw holder for adjusting the jaws by reciprocal movement with respect to the socket, an independent adjusting means for said jaws disposed intermediate the holder and the socket, means upon the adjusting means to engage the jaw holder and effect joint rotation therewith, and means upon said adjusting means for its rotative adjustment relative to the socket.



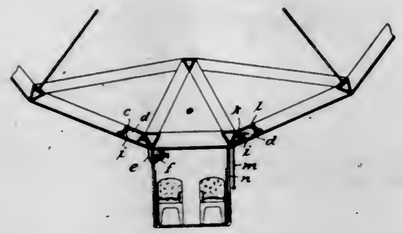
1,499,640. DIRIGIBLE LAMP. LUCIUS D. COPELAND, Sawtelle, Calif. Filed Nov. 16, 1921. Serial No. 515,529. 1 Claim. (Cl. 240—41.)

In an automobile the combination of lamp holder casings attached to the frame of the machine; posts secured to the frame of the machine, said posts extending into said casings and having arms terminating in rounded knobs; lamp blocks mounted on said knobs for rotative movement; lamps and reflectors mounted on said blocks; a rod connecting the block in one casing with the block in the other casing; a tube extending from one of the lamp holder casings to the steering wheel of the machine; a pierced plug in said tube adjacent the steering wheel; a rod projecting from said plug, said rod terminating in a round knob; a control handle mounted on said last knob for rotative movement; wires extending from the



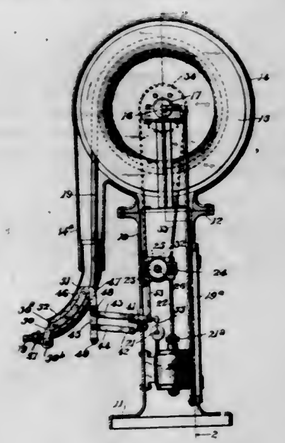
base of said control handle to and connected to said lamp block; and springs connected to the reflectors and to the lamp holder casings.

1,499,641. SORTING MACHINE. GEORGE W. COX, Jr., Washington, D. C., assignor to National Assorting Company, Washington, D. C., a Corporation of Delaware. Filed July 20, 1920. Serial No. 397,761. 31 Claims. (Cl. 214—11.)



1. In a sorting machine, a plurality of receptacles, conveyor elements extending longitudinally over the receptacles, guide members having a portion extending in substantial parallelism with said elements and thence directed towards said receptacles, a selector adapted to deliver an article to any of said members, and means for feeding the article to said selector.

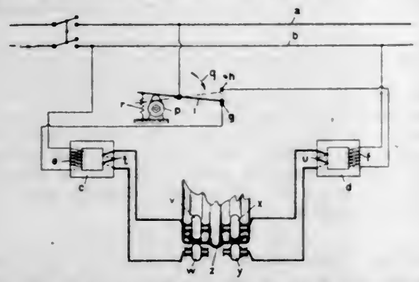
1,499,642. FILLER TANK. HUGH CRAIG, Calgary, Alberta, Canada. Filed June 15, 1923. Serial No. 645,585. 6 Claims. (Cl. 221—80.)



1. A filler tank comprising a sealed tank body, a single co-acting air pump mounted within the tank, a pipe adapted to serve either as an inlet or outlet communicating with the bottom portion of the tank, and means co-acting with the pump for increasing or decreasing at will the air pressure in the upper portion of the tank.

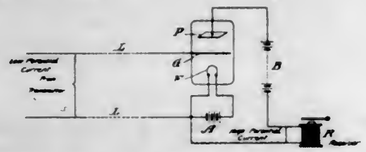
1,499,643. MOUNTING OF PARACHUTES. CLAUDIUS DORNIER, Friedrichshafen-on-the-Bodensee, Germany, assignor of one-half to the Firm: Dornier, Metallbauten Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Nov. 17, 1922. Serial No. 601,596. 2 Claims. (Cl. 244—21.)

1. Air craft comprising in combination a hull, a closed cabin suspended from and closely adjoining said hull, a receptacle in said hull directly adjoining an outer wall of said cabin above an opening in said wall, a parachute stored in said receptacle and a cord suspended from said parachute in front of said opening.



1,499,644. AUTOMATIC HOSE REEL. ANTONE DOWRELIO, Crockett, Calif. Filed June 19, 1923. Serial No. 646,422. 9 Claims. (Cl. 242—86.)

1. An automatic hose reel comprising a frame, a drum rotatably supported thereby, a hose reeled on said drum, a driving motor carried by the frame operatively connected to said drum for driving the same in a direction tending to wind said hose on the drum, and means operated by the hose adapted to render the connection between the motor and the drum inoperative whereby the hose may be unreeled from the drum.

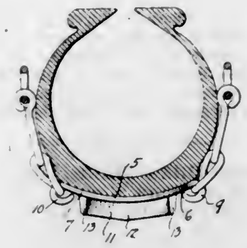


1,499,645. ELECTRIC WELDING. SVEND DYHR, Berlin-Charlottenburg, assignor to Deutsche Schweiss-Maschinen-Fabrik Becker & Co., A. G., Berlin-Schoneberg, Germany. Filed Aug. 26, 1921. Serial No. 495,772. 2 Claims. (Cl. 219—10.)

1. In a process of welding by alternating electric currents in accordance with the resistance principle, producing a plurality of series of spot welds in one and the same piece of work by pairs of electrodes each of which takes current from a separate low-tension transformer, the primary coils of the low-tension transformers being supplied with current at alternate intervals, whereby the period of welding at one pair of electrodes is made to

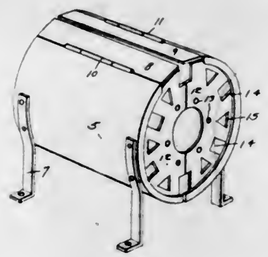
correspond with the non-welding period of another pair of electrodes and the individual welds are separated in time and space.

1,499,646. TELEGRAPHY. AUGUST EBELING, Berlin-Schoneberg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Aug. 24, 1921. Serial No. 495,087. 2 Claims. (Cl. 178—63.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. The method of eliminating disturbing inductive effects of telegraph lines or the like on neighboring lines, which consists in reducing the working current, normally required to operate the receiving instrument, to a value at which its inductive effect on neighboring lines becomes negligible, and in amplifying said subnormal working current at the receiving end of the line to a value suitable to operate the receiving instrument.

1,499,647. COMBINATION DRAWERS AND ABDOMINAL SUPPORT FOR MEN. ANNIE EMSLEY, Providence, R. I. Filed July 14, 1923. Serial No. 651,578. 11 Claims. (Cl. 2—236.)



6. A one-piece undergarment for men, comprising a boned abdominal supporting belt portion and a drawers portion permanently attached to the lower edge thereof.

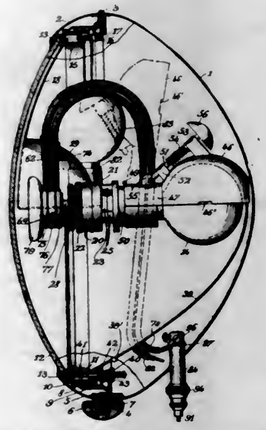
1,499,648. TIRE-CHAIN SHOE. EARL FRANCIS, Minot, N. Dak. Filed Dec. 9, 1922. Serial No. 605,857. 1 Claim. (Cl. 152—14.)

A tire chain shoe consisting of a plate longitudinally curved in accordance with the degree of curvature of the tread of an average size tire, said plate being relatively narrow and having its end portions gradually reduced and continued by elongated extensions, each of said extensions being substantially circular in cross section and extended back upon the plate and toward each other to provide a relatively large eye and a traction lug formed integral with the convex face of the plate, said lug projecting beyond the eyes in spaced relation thereto, said eyes serving as mud lugs.

1,499,649. ICE-CREAM-CONE-BAKING MACHINE. GIUSEPPE GERACE, Lebanon, Pa. Filed Nov. 1, 1923. Serial No. 672,113. 5 Claims. (Cl. 107—58.)

1. The combination with a cone baking machine comprising a plurality of mold sections rotating about a horizontal axis and a core carrying arm associated with each of said mold sections and mounted to swing radially outward, of a casing within which said mold sections travel, said casing comprising a fixed cylindrical portion and a rotative end wall and moving with the mold sections.

3. A structure as recited in claim 1 wherein said rotative wall has a plurality of notches formed in its periphery within which said radially moving arms lie, during the rotation of the machine.

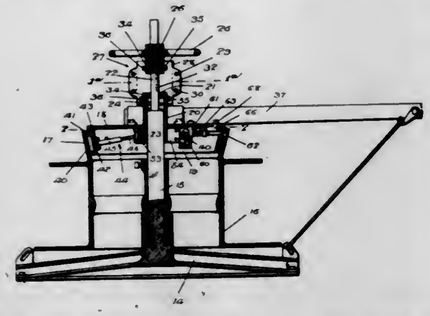


1,499,650. SMOKER'S SET. JOSEPH GOSSNER, New York, N. Y. Filed Feb. 20, 1922. Serial No. 537,803. 1 Claim. (Cl. 131—51.)

A smoker's set, comprising an ash receptacle, a plurality of cigar rests mounted on the edge of said receptacle in such a way as to be movable from operative position to a position within said receptacle, and a cover

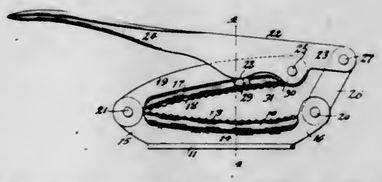
fitting on said receptacle when said cigar rests are stored within the same.

1,499,651. SEARCHLIGHT. STEPHEN GREBEL, Paris, France. Filed Oct. 11, 1922. Serial No. 593,752. 10 Claims. (Cl. 240—41.)



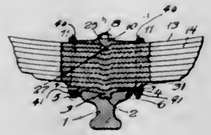
1. A search light particularly for automobiles, comprising in combination, a casing, a cover hinged to said casing, a reflector consisting of the lower half of a paraboloid arranged coaxially to and in the rear part of said casing, a lamp arranged in the axis of said reflector and pointing towards the rear part of said casing, a lamp supporting member consisting of a ring shaped part hinged to said casing, a plate fixed to said ring shaped part and extending over the upper half of the casing and a cylindrical portion integral with said plate and coaxially arranged with said casing for supporting the lamp, and a spherical reflector arranged above said lamp and limiting the illumination to the part below the horizontal plane of the search light.

1,499,652. CLUTCH. SAMUEL P. GRIFFIN, North Judson, Ind. Filed May 19, 1922. Serial No. 562,163. 1 Claim. (Cl. 192—76.)



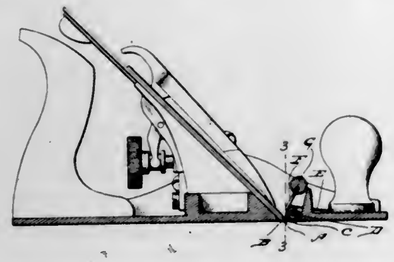
A clutch device comprising a rotary member having an annular flange, a rotary disk having an annular flange within the aforesaid flange and provided with openings,

shoes slidably mounted in said openings for movement toward and away from the disk and for movement toward and away from the center of the disk, said shoes having portions to bear against the inner surface of the second named flange for limiting the outward movement of said



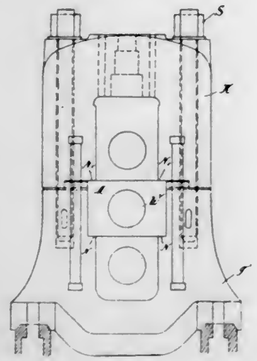
shoes, toggle link connections between said shoes and disk to force the shoes into engagement with the first-named flange when the flanges are moved together, and spring means for urging the shoes toward said member in said openings.

1,499,653. NUTCRACKER. EMMETT G. HAGADORN, Buffalo, N. Y. Filed Aug. 5, 1922. Serial No. 579,823. 1 Claim. (Cl. 146—16.)



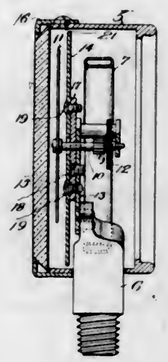
A nut cracker comprising a stationary lower face provided on its upper side with a fixed jaw, an upper vertically movable jaw arranged above the fixed jaw and pivotally connected therewith at one of its ends, a link pivoted at one end of the opposite end of said lower jaw, and a hand lever pivotally connected between it ends to the other end of the upper jaw and having an outwardly projecting arm pivoted to the other end of said link and an inner arm adapted to project over the upper jaw in the closed position of the nut cracker.

1,499,654. VEHICLE SPRING. WILLIAM HASELHERST, Baltimore, Md. Filed June 19, 1922. Serial No. 569,207. 1 Claim. (Cl. 267—52.)



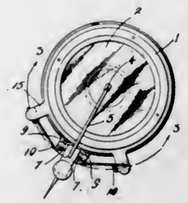
In a vehicle spring seating means, the combination of a lower chair member provided with a lug adapted to fit a recess in the axle of the vehicle and with turned down flanges adapted to fit the opposite rims of said axle; said chair member also provided with one set of ears extending out beyond said rims and with a second set of ears extending longitudinally of said axle and also provided with a partially spherical depression in its top surface opposite said lug; a plurality of spring leaves each provided with a partially spherical projection and depression in its central portion adapted to nest with each other, the lowest projection of said leaves adapted to fit in the first mentioned depression of said chair member; an upper companion chair member having turned up flanges and a partially spherical projection adapted to fit the topmost depression of said leaves, said upper chair member also provided with ears extending beyond the edge of said leaves; U-shaped clamping members coacting with said turned up edges of said upper chair member and passing through the first mentioned set of ears of said lowermost chair member; and bolts passing through the second set of ears of said lowermost chair member and through the ears of said topmost chair member along the outer edges of said leaves.

1,499,655. SMOOTHING PLANE. HARRY W. HARGIS, Charlotte, N. C. Filed May 31, 1923. Serial No. 642,501. 2 Claims. (Cl. 145—5.)



1. In a smoothing plane and in combination with the knife and knife passage thereof, a roller yieldingly mounted in said passage to guide the shavings therethrough, and a guard disposed in proper relation to said yielding roller.

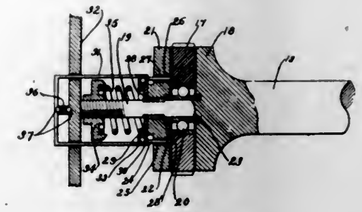
1,499,656. MEANS FOR SUPPORTING THE ROLLS OF ROLLING MILLS. RICHARD HEIN, Witkowitz, Czechoslovakia. Filed Apr. 13, 1923. Serial No. 631,893. 3 Claims. (Cl. 80—55.)



3. A roll supporting standard in a three rolls rolling mill comprising a lower stationary part T, a detachable head or top part K supporting shoulders N in the said lower part for the bearing and supporting member M of the middle roll to rest upon, corresponding shoulders N^1 in the said top part to cooperate with the former for firmly holding the said bearing and supporting member in place and connecting means, such as screws and nuts for rigidly uniting the two parts of the standards with the bearings and supporting member immovably enclosed therebetween substantially as described.

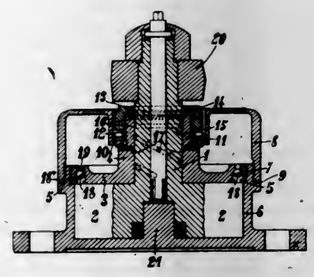
1,499,657. PRESSURE GAUGE. OTTO W. HEISE and CARL H. GRAESSER, Bridgeport, Conn., assignors to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Nov. 21, 1921. Serial No. 516,525. 2 Claims. (Cl. 73—109.)

1. A pressure gauge comprising a cylindrical casing, a transparent cover plate secured to the front end of the casing, the rear end of the casing being arranged to permit free relief of abnormal pressure generated within the casing, a movement supporting frame within the casing, and a dial plate secured at its central portion to the frame and having its peripheral portions free and spaced from the inner wall of the casing.



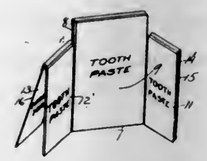
1,499,658. PHONOGRAPH REPRODUCER. JOSEPH HOFFAY, New York, N. Y. Filed May 7, 1920. Serial No. 379,449. 12 Claims. (Cl. 274—35.)

1. A phonographic sound box comprising a casing and a diaphragm in said casing, a stylus carrier having an operative connection with said diaphragm and fulcrumed upon said casing, means for holding said carrier upon its fulcrum, said holding means held by said casing so that it may oscillate with said carrier, and means for varying the pressure on the diaphragm by longitudinal adjustment of said carrier-holding means.



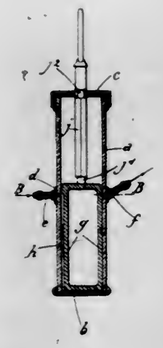
1,499,659. CLUTCH MECHANISM. FREDERICK J. HOLMES, Toledo, Ohio, assignor of one-third to S. H. Foster, Toledo, Ohio. Filed May 4, 1920. Serial No. 378,883. 2 Claims. (Cl. 192—67.)

2. The combination with a rotatable stem, a disk rotatable therewith, and a member rotatable on the stem, of coupling pins carried by the disk and normally disengaged from the member, a spring pressed ring upon the stem, means for transmitting thrust from the ring to the pins for engagement with the member, a yoke extending



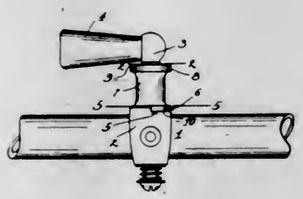
from said means, and a wedge for shifting the yoke to release the pins and move the ring out of normal position.

1,499,660. LIQUID SHOCK ABSORBER. MAURICE HOUDAILLE, Levallois-Perret, France. Filed June 28, 1921. Serial No. 481,155. 9 Claims. (Cl. 188—89.)



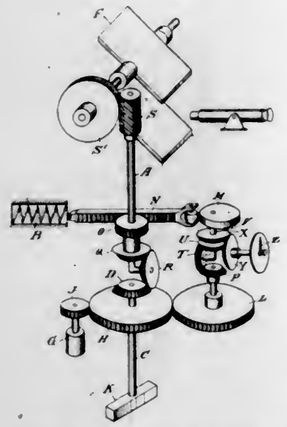
1. In combination, a casing forming a working chamber, a cover member for said chamber having an elongated hollow boss, a shaft member extending through said boss and provided with blades operating in said working chamber, means cooperating with said shaft member and boss to prevent oil from the working chamber reaching the exterior, oil conduits provided in said boss, one of said members being provided with grooves communicating with said conduits, and a second casing forming a compensating chamber adapted to receive oil from said conduits.

1,499,661. ADVERTISING DISPLAY SCREEN. GEORGE S. HURST, Glastonbury, Conn., assignor to The J. B. Williams Company, Glastonbury, Conn., a Corporation of Connecticut. Filed Feb. 1, 1923. Serial No. 616,227. 3 Claims. (Cl. 40—146.)



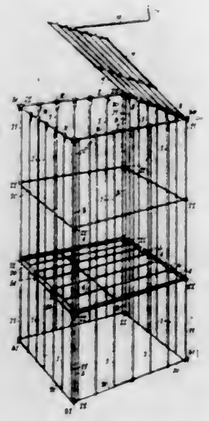
1. A display screen comprising a back piece, side wings hinged thereto, and a flap hinged to the upper edge of each side wing and foldable thereover for assuming positions either forwardly or rearwardly of the back piece and side wings.

1,499,662. VALVELESS SUCTION AND FORCE SYRINGE. LOUIS JURÉ, Paris, France. Filed May 21, 1923. Serial No. 640,473. 1 Claim. (Cl. 128—214.)



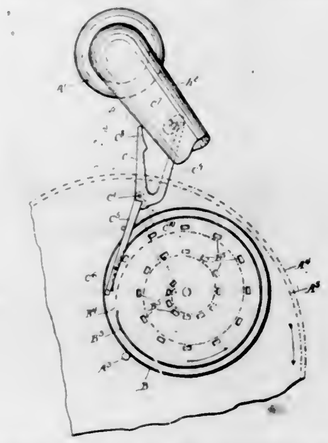
A valveless suction- and force-syringe for any liquids and gases and especially for the transfusion of blood, comprising in combination a cylindrical pump having at opposite points midway of its height two holes, a straight tubular arm for the suction extending from one of said holes, an inclined tubular arm for the forcing extending from the other hole, a piston in said cylindrical body having a groove extending along one of the generating lines to the bottom surface of the piston but not to the upper end of the same, a metal screw cap on the upper end of the cylindrical body having a central square hole, a piston rod of square cross section guided in said square hole of the metal cap, a part of smaller cross section at the point of said piston rod which corresponds with the one end of the stroke of the piston and a part of smaller cross section at the point of said piston rod which corresponds with the other end of the stroke of the piston, arranged so that said parts of the piston rod are situated in the plane of said metal cap at each of the piston strokes and so that the piston may be rotated to bring said groove from one to the other hole to communicate alternately with the suction tube and with the force tube, and a metal cap closing the other end of said cylindrical body.

1,499,663. LOCK FOR VALVES. WILLIAM O. KAISER, Oakland, Calif. Filed May 31, 1922. Serial No. 564,833. 3 Claims. (Cl. 251—164.)



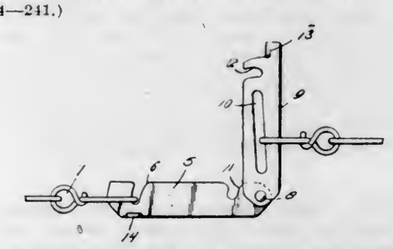
1. In combination with a valve comprising a body and a plug a handle on said plug, a retractible sleeve surrounding said plug, means on said sleeve whereby the plug may be held in closed position, and a notch in said sleeve cooperating with said handle when said sleeve is retracted whereby the sleeve and plug may rotate together.

1,499,664. FIRE-CONTROL ARRANGEMENT. PAUL KAMINSKI, Berlin-Pankow, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Aug. 25, 1921. Serial No. 495,291. 3 Claims. (Cl. 89—41.)



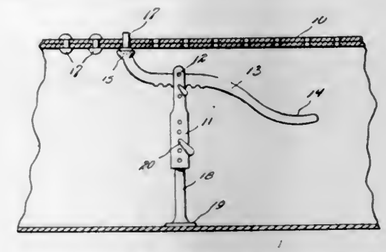
1. In an electrical system for the tele-control of guns, in combination a transmitter for effecting the inclination of the guns, a sighting device, means actuated by the operator for inclining the sighting device in accordance with the direction of the target and for simultaneously setting said transmitter, and additional means mechanically driven by said setting means for automatically imparting a correctional movement to said sighting device corresponding to the delay in gun discharging and the angular velocity of the ship's heeling.

1,499,665. COLLAPSIBLE RUBBISH BURNER. JONAS KAUFMAN, New Castle, Pa. Filed Feb. 9, 1922. Serial No. 535,302. 5 Claims. (Cl. 220—19.)



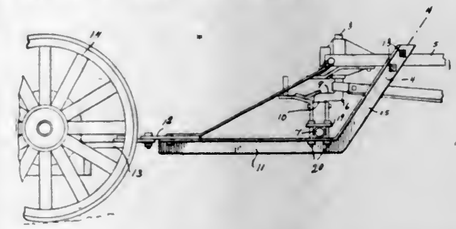
1. A trash burner comprising upstanding walls of open wire construction, foldably connected along their adjacent vertical edges to be foldable flatwise at times, an open lid foldably connected to the top of one wall and adapted to extend across the top of the burner, an open shelf member foldably connected to one wall and spaced a substantial distance above the bottom edges of the upstanding walls and adapted to extend across to the opposite walls, means to hold the shelf member in its extended position, said shelf member being of an area substantially equal to the cross sectional area of the burner at the level of the shelf's location whereby when said shelf member is in the operative position it will restrain the upstanding walls against folding together, said shelf member and said lid adapted to fold flatwise against the wall to which they are foldably connected when said walls are folded flatwise for shipping and storing purposes.

1,499,666. AUTOMATIC STOP FOR SOUND-REPRODUCING MACHINES. JOHN J. KENNEDY, Chicago, Ill. Filed Nov. 27, 1922. Serial No. 603,415. 18 Claims. (Cl. 192—118.)



1. In a sound reproducing machine comprising a record disc and means for rotating it, a stylus mounted for movement thereacross, a stop disc mounted for rotation in unison with the record disc, a plurality of stop members mounted thereupon, a stop finger, and means responsive to the movement of the stylus for moving it across said stop disc in a path normally out of contact with said stop elements, and means operative upon cessation of the movement of the stylus for causing the path of the stop finger to intersect one of said stop members.

1,499,667. COMBINED TIRE-CHAIN TIGHTENER AND FASTENER. FRED C. KIES, Moscow, Mich. Filed Mar. 21, 1924. Serial No. 700,868. 1 Claim. (Cl. 24—241.)



In a combined tightener and fastener for the side chain of an anti-skid chain structure, a blade formed at its forward end and at its upper edge with a curved notch for the detachable receptacle of one end link of said side chain, a lever of substantial U-shape in cross section overlapping the other end of said blade and being pivotally secured thereto, the side walls of said lever being formed with a longitudinally extending registering and slightly inclined slot for the reception of the other end link of said side chain, said last mentioned end link adapted to move toward the rear end of said registering slot when the lever is moved to a closed position with respect to the blade due to the inclination of said slots, the upper edge of the blade at a point adjacent the pivotal connection to the lever being formed with a notch for the reception of the side chain end link when said lever is moved to a closed position over the blade, said lever being formed at its front end with side wall slots for the reception of the other end link of the side chain disposed within the forward notch of the blade, means for facilitating the movement of the lever to a closed position, and means formed upon the blade for engagement by the lever for limiting the engagement of the lever over the blade whereby a binding of the upper edge of the blade between the joined edges of the lever side walls is prevented.

1,499,668. RIVET-SETTING TOOL. FRANK KOTOWSKI, Ensley, Ala. Filed July 6, 1922. Serial No. 573,185. 2 Claims. (Cl. 78—53.5.)

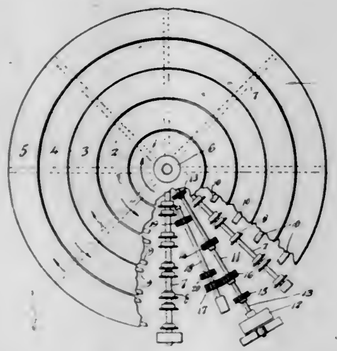
1. A rivet setting tool of the character described comprising a body, the upper end of said body terminating with spaced apertured ears, a lever pivoted intermediately of its ends within said ears, said lever having a handle at one end and a concaved head provided at its opposite end for the reception of the head of a rivet therein, a detachably secured apertured arm terminating with an enlarged portion at its lower end to provide a suitable supporting foot, said arm being telescopically received within the body and held in place through the medium of suitable pins passing therethrough.

1,499,669. TRACTOR HITCH. AUGUST H. KRUEGER, Luray, Kans. Filed Mar. 19, 1923. Serial No. 626,081. 7 Claims. (Cl. 280—33.44.)

1. As an article of manufacture, a hitch for connecting a tractor of the type stated to the forward end of an agricultural machine of the character shown, wherein said machine embodies a frame and wherein a depending member is supported from the forward end of the frame, including a tongue provided with means at its forward end for connection with the draw bar of a tractor, said tongue embodying a forward portion adapted to assume a substantially horizontal position when in use and an upwardly extending rear portion, with the rear end of the horizontal portion disposed to receive said depending

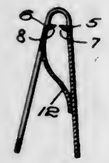
member thereon, means detachably rigidly securing the upper end of the rear portion of the tongue to the machine frame rearwardly of its forward end, and means detachably and rigidly fastening said depending member to the horizontal portion of the tongue.

1,499,670. FRYING PAN. SHICHIGORO KUNO, Denver, Colo. Filed Nov. 12, 1923. Serial No. 674,373. 1 Claim. (Cl. 53—7.)



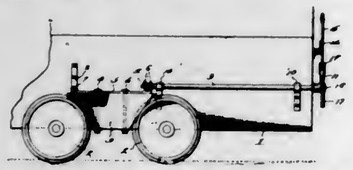
In combination with a frying pan having a handle projecting from one side and adapted to rest on the top of a stove, an integral hollow shield and guard both containing insulating material, the guard extending the entire distance from the handle to the stove top and being of sufficient width to protect the hand of the user from hot gases coming from under the pan.

1,499,671. METHOD OF TREATING TREES. FRANK L. LANPHERE, Salina, Kans. Filed June 17, 1922. Serial No. 568,944. 3 Claims. (Cl. 47—8.)



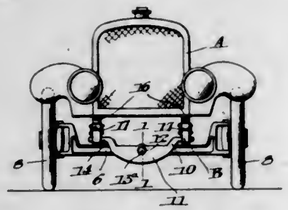
2. A method of treating tree wounds consisting in driving wedges into the base and sides of the wound to compress the fibers for closing the pores.

1,499,672. AMUSEMENT DEVICE. ERASTUS A. LEZERT, Cincinnati, Ohio. Filed July 15, 1922. Serial No. 575,216. 7 Claims. (Cl. 46—27.)



1. In an amusement device, a platform, said platform comprising a plurality of contiguous annular concentric sections, means whereby the alternate sections may be rotated in opposite directions, and a carriage adapted to ride on said platform, said carriage comprising a body and pivotally mounted wheels arranged to support the same.

1,499,673. NAIL CLIPPER. FREDERICK LOBL, Middleboro, Mass. Filed Mar. 22, 1922. Serial No. 545,835. 5 Claims. (Cl. 30—23.)

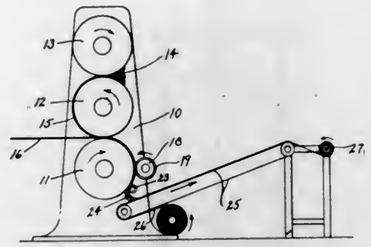


1. A nail clipper comprising a pair of wings having one common edge, a portion of the common edge being recessed and provided with cutting sections between but out of alignment with the connecting portions of the wings.

1,499,674. MINE-CAR BRAKE. JOHN MCCOOL, Lilly, Pa. Filed Apr. 9, 1923. Serial No. 630,899. 3 Claims. (Cl. 188—57.)

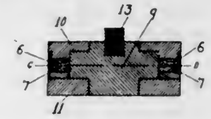
1. The combination in a brake, of spaced car wheels, a car body, and a vertically swingable wedge-shaped block interposed between and movable vertically relative to the treads of the wheels, the said block being pivotally connected adjacent to one of its ends, and being associated at its opposite end with means for swinging the block vertically on the said pivot.

1,499,675. AUTOMOBILE SUSPENSION. DONALD JOSEPH MCDOUGAL, Ottawa, Ontario, Canada. Filed Nov. 28, 1921. Serial No. 518,410. 3 Claims. (Cl. 280—112.)



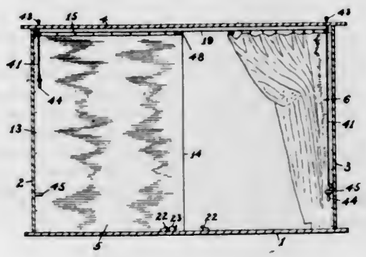
1. Automobile suspension means of the character described comprising balancing and supporting castings formed with central apertures therein, one of said castings being pivotally mounted on the front axle, the others of said castings being similarly mounted at right angles to the front axle casting and on each side of the chassis above the rear axle, and spring means between the latter castings and the vehicle body.

1,499,676. BIAS-CUTTING MACHINE. MELVON A. MARQUETTE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 30, 1923. Serial No. 635,467. 3 Claims. (Cl. 91—48.)



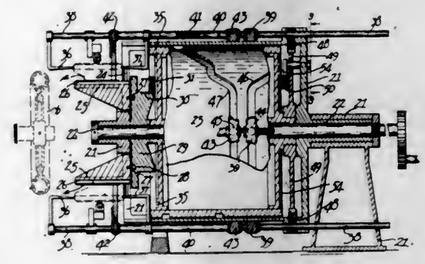
1. A rubber coating and cutting apparatus comprising a fabric rubberizing calender having a plurality of rolls, and a cylinder coacting with one of said rolls having at least one helical electrically heated rib thereon, whereby the rubberized fabric web is severed into a series of bias strips.

2. A bias cutting apparatus comprising a roll, a cylinder coacting therewith having at least one helical electrically heated rib thereon, whereby the web to be severed will be burned into a plurality of bias strips.



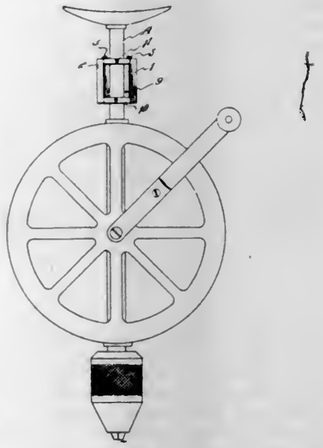
3. A rubber coating and cutting apparatus comprising an electrically heated diagonally ribbed roll contacting with the web, whereby said web is severed into a series of bias strips.

1,499,677. PISTON FOR USE IN CYLINDRICAL VALVE CHAMBERS AND CYLINDERS. JOHN MERRILEES MASON, North Williamstown, Victoria, Australia. Filed Jan. 27, 1923. Serial No. 615,287. 2 Claims. (Cl. 74—108.)



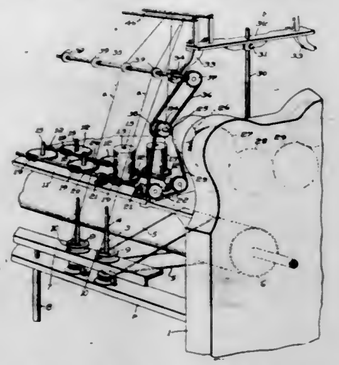
1. A piston for use in cylindrical valve chambers and cylinders, consisting of the combination with a circular body member, of a circular steel liner, which is spaced apart from said body member, the space between the wall of the liner and the body member being packed by means of caulking with some compressible material, such as lead, as and for the purpose described.

1,499,678. FOLDING PARTITION. HERMAN W. MAUER, Cleveland, Ohio. Filed July 9, 1921. Serial No. 483,540. 10 Claims. (Cl. 20—20.)



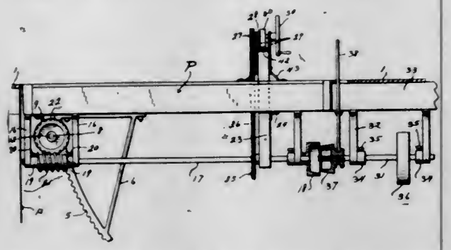
1. In a folding partition, the combination of a pair of sides of flexible material, a support, the sides being arranged in spaced relation and having their outer edges attached to said support, a strip of flexible material connecting the inner edges of said sides, means for supporting the upper edges of said sides, a board, the board being arranged between the lower edges of said sides, the lower edges of said sides being attached to said board, the board being hinged at its outer end to a fixed support and means for swinging said board upwardly to fold the partition, substantially as described.

1,499,679. MACHINE FOR APPLYING ENDLESS BANDS TO RING CORES. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Feb. 4, 1922. Serial No. 534,131. 7 Claims. (Cl. 154—10.)



1. A device for applying endless bands to cores in the manufacture of tire casings, which comprises two opposed series of L-shaped fingers adapted to support a band, means for rotating the fingers slightly about their individual axes for expanding and contracting the band, devices interposed between certain of said fingers for holding the band upon the core, and means for operating the holding devices by the motion of the fingers.

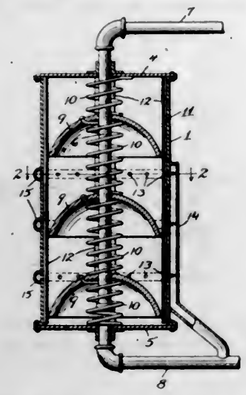
1,499,680. DRILL ATTACHMENT. JAMES F. MOREHEAD, Wytheville, Va. Filed May 14, 1923. Serial No. 638,959. 1 Claim. (Cl. 33—207.)



A device of the class described comprising a pair of the casings connected together at their inner sides at right angles one to the other, each casing having a slot in its top with an indicating mark adjacent said slot, a weighted finger pivoted in each casing and having one end passing through the slot and adapted to register with said mark, straps connecting the outer sides of the casings together and set screws carried by the straps for engaging a drill.

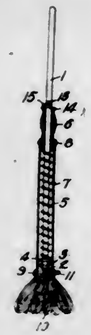
1,499,681. WINDING MACHINE. FRANK A. MORIN, Lewiston, Me., assignor, by mesne assignments, to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 5, 1922. Serial No. 605,019. 6 Claims. (Cl. 242—18.)

1. In a machine for winding yarn without twisting upon a yarn receiver from a wound yarn package, the combination of a support for a wound yarn package, a yarn receiver to which the yarn is to be delivered without additional twist being imparted thereto, means for rotating the yarn receiver at a predetermined speed, a fixed guide at the side of and for directing the yarn to the rotating yarn receiver without twist, means for rotating the wound yarn package at a slower rate of speed than that of the yarn receiver, and a yarn guide for the wound yarn package for causing the yarn to be drawn endwise from the wound yarn package as it is slowly rotated for delivery through the fixed yarn guide at the side of the more rapidly rotating yarn receiver.



1,499,682. DUMPING MECHANISM. BERTRAND P. MURPHY, Donnybrook, N. Dak. Filed Apr. 21, 1923. Serial No. 633,687. 1 Claim. (Cl. 214—49.)

The combination with a scale platform, track timbers pivotally supported thereby, means carried by the platform for moving said track timbers about their pivots, manually operated means carried by said platform for operating said first named means, and power driven means supported independently of the platform for operating said first named means.

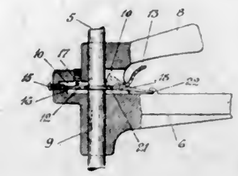


1,499,683. MUFFLER. AXEL NASHLUND, Marquette, Mich., assignor of one-half to Harvey B. Hatch, Marquette, Mich. Filed May 23, 1921. Serial No. 471,860. 3 Claims. (Cl. 137—160.)

1. An exhaust muffler comprising an expansion chamber, an exhaust pipe extending through one end of said chamber to a point adjacent the opposite end thereof, a series of spaced cup-shaped members slidably mounted on said pipe, a main outlet pipe opening in the opposite end of the expansion chamber adjacent the discharge end of the exhaust pipe, auxiliary outlet openings disposed

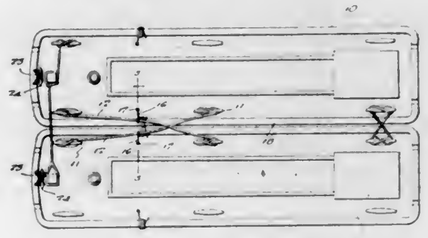
in spaced series in the wall of said chamber, and a common means for connecting said auxiliary openings with the main outlet pipe.

1,499,684. MOP. WILFRID NOLET, Montreal, Quebec, Canada. Filed Nov. 17, 1922, Serial No. 601,474. Renewed May 19, 1924. 2 Claims. (Cl. 15—120.)



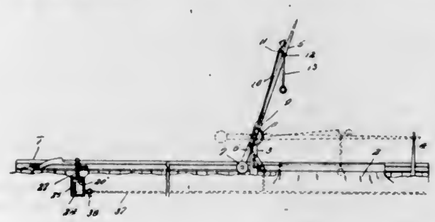
1. An article of manufacture of the character described comprising a rod having at one end a U-shaped iron suitably secured thereto, a disc mounted on said rod adjacent said U-shaped iron, a slidable member mounted on said rod, a tubular member suitably secured to said slidable member, a mop, the outer ends of which are suitably secured to one end of said tubular member, said mop being secured intermediate of its length in said U-shaped iron on said rod, and a spiral spring located within said tubular member and said handle in opposite directions, substantially as described.

1,499,685. FRICTION LOCK FOR MEAT HOLDERS IN MEAT-SLICING MACHINES. JOSEF AUGUST NORDIN, Stockholm, Sweden, assignor to Aktiebolaget Stille-Werner, Stockholm, Sweden, a Corporation of Sweden. Filed May 5, 1923. Serial No. 636,907. 4 Claims. (Cl. 146—217.)



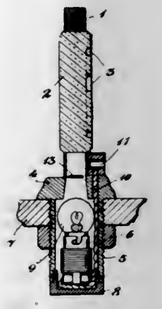
1. In a meat slicing machine the combination with a table, uprights on the table and a yoke slidably mounted on the uprights, of a friction lock mounted on the yoke for cooperating with one of said uprights including a manually operated spring controlled plate having an opening

which is arranged about one of the uprights, and an eccentric member cooperating with the said upright and normally arranged in slight frictional engagement with



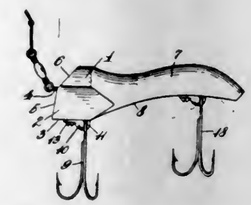
the upright so that the yoke may be shifted only towards the table and can be only moved or shifted in the opposite direction upon the manual operation of the plate.

1,499,686. TOWLINE TAKE-UP. WILLIAM NORTHRUP, Middleport, N. Y. Filed Aug. 15, 1923. Serial No. 657,637. 2 Claims. (Cl. 114—235.)



1. The combination with a plurality of barges lashed together by tow lines, of a take up cable secured to each of said barges and having a portion passed downwardly through an opening therein, said cable being passed over the adjacent tow line, and a weight suspended from said cable, whereby the latter is used to take up slack in the tow line for the purpose specified.

1,499,687. PNEUMATICALLY-OPERATED RAILROAD GATE. PATRICK P. O'CONNELL, St. James, Minn. Filed Sept. 1, 1923. Serial No. 660,489. 2 Claims. (Cl. 246—272.)



1. In train controlled pneumatic gate mechanism for highway crossings, the combination with a gate mounted for swinging movement from open position to closed position and vice versa, of an air motor connected to said gate for actuating the latter to closed position, a compressor in advance of the approach to the crossing, a pipe line connecting said compressor to said motor and train operated means for actuating said compressor to force air in the said motor to actuate the latter to lower the gate, a train operated release valve beyond the crossing for releasing the air from said motor, a treadle arm pivoted at one end for swinging movement alongside of the track and adapted to be depressed under the action of the wheels of the train, a connection between the other end of said treadle arm and said release valve, whereby the latter may be opened upon the passage of a train over said treadle arm, said connection comprising an actuating arm connected to said treadle arm, a crank arm connected to said valve, a pin and slot connection between the actuating arm and said crank arm and a dash pot connected to said treadle arm.

1,499,688. LUMINOUS REFLECTION SIGN. GUILLERMO DOUGLAS PALMER and JOSÉ FERNÁNDEZ CASTILLO, Buenos Aires, Argentina. Filed Oct. 30, 1923. Serial No. 671,703. 2 Claims. (Cl. 40—130.)

1. A luminous reflection sign comprising a glass, a frame supporting the latter at its edges, a base for the frame having a light passage extending therethrough to the edge of the glass, a tubular extension below the base forming a pocket for an electric lamp, and means on the extension co-operating with the base for clamping the latter to a support.

1,499,689. ARTIFICIAL BAIT. CHARLES T. PFLUEGER and WALTER L. ADAMS, Akron, Ohio, assignors to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 7, 1919. Serial No. 315,870. 7 Claims. (Cl. 43—46.)

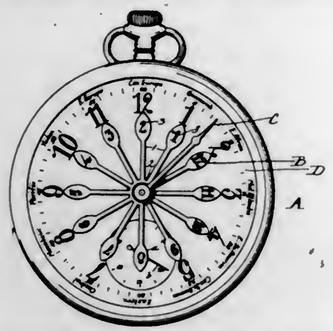
1. A bait, comprising a body portion having a keel portion provided with straight longitudinally extending downwardly converging inclined side surfaces, and a rearwardly extending tail portion, said keel portion depending below the tail portion.

1,499,690. PUMPING EQUIPMENT FOR WELLS. WILLIAM B. PINE and IRA V. MARTIN, Okmulgee, Okla. Filed Nov. 16, 1923. Serial No. 675,164. 7 Claims. (Cl. 103—179.)

1. A pumping equipment comprising a housing, a packing box arranged within the housing and having slots establishing communication between the interior of the

box and the interior of the housing, a plunger movable through the packing box, a barrel receiving said plunger,

a packing carried by the box and surrounding the plunger, and a sand deflector mounted on the packing and directing settling sand through said slots.

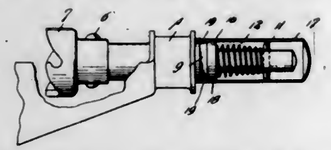


1,499,691. PUMP FOR WELLS. JENNINGS BRYAN REBOLD, Slick, Okla. Filed Sept. 25, 1923. Serial No. 664,725. 10 Claims. (Cl. 103—179.)

1. A pump comprising a working barrel, a scraping barrel receiving the working barrel and having scraping contact with the outer wall thereof, a plunger movable into the barrel and having ribs, and slips pivotally carried by the scraping barrel and having means to engage said ribs whereby the scraping barrel is detachably connected to and is movable with said plunger.

1,499,692. WATCH. WILLIS ARTHUR REED, Dinuba, Calif. Filed Sept. 20, 1921. Serial No. 501,922. 5 Claims. (Cl. 58—43.)

1. A time-piece, including the usual dial having the usual hour and minute indications thereon, meridian indications on said dial opposite said hour indications, an hour hand member including twelve arms numbered con-



secutively counter-clockwise from 1 to 12, and a minute hand adapted to play over said dial and hour hand member.

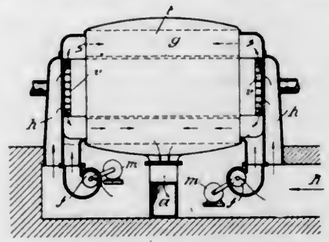
1,499,693. ELECTRICAL-HEATER RESISTANCE ELEMENT. ROBERT WOOLRIDGE REYNOLDS, Darlinghurst, near Sydney, New South Wales, Australia. Filed Jan. 17, 1923. Serial No. 613,287. 1 Claim. (Cl. 219—76.)

The herein described improvement in the manufacture of electrical resistance films composed of precipitated siliceous material, graphite, and an alkaline silicate, which consists in washing said films after they are set on their supports with a dilute solution of sulphuric acid or hydrochloric acid and subsequently washing them with water.

1,499,694. REMOVABLE END CRANK FOR AUTOMOBILES. MORRISE E. ROGERS, Norwood, La. Filed Mar. 5, 1923. Serial No. 622,742. 1 Claim. (Cl. 74—33.)

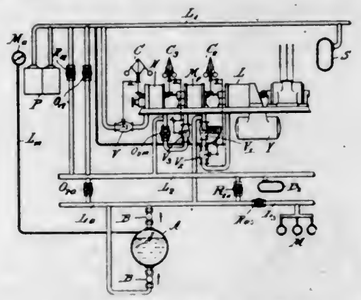
In combination with a shaft journaled in a bearing, a collar loosely mounted upon the shaft and bearing at one face against the shaft bearing, spring means confined at one end upon the shaft and bearing at its opposite end against the collar to hold the same in contact with the bearing shaft, said collar being provided with a circumferentially located annular groove, a cap adapted to receive the end portion of the shaft and the said spring means, and adapted to snugly fit about the periphery of the collar and bear at one end against the shaft bearing, and resilient arms cut and formed up from the material of the cap and disposed at spaced intervals around the cap, each of said arms having an inwardly disposed bend formed therein and in the vicinity of the free end thereof to provide heads which are frictionally received in the groove of the collar.

1,499,695. ELECTRIC MACHINE. REINHOLD RÜDENBERG, Berlin-Charlottenburg, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed June 1, 1921. Serial No. 474,206. 4 Claims. (Cl. 171—206.)



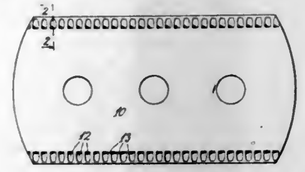
1. An armature having a slotted core and conductors embedded in said slots and subdivided into a plurality of partial conductors insulated from each other and disposed above each other with respect to the height of the slot,

said partial conductors being displaced outside the slot in such manner that each conductor consecutively assumes each one of all the positions in the slot regarding the height thereof, each of said partial conductors being



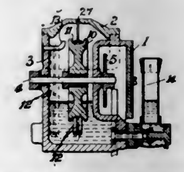
cyclically displaced relatively to the others in similar geometrical configuration at the same displacement pitch, permitting the use of the same form of end connections for all displaced conductors.

1,499,696. COOLING ELECTRIC MACHINERY. REINHOLD RÜDENBERG, Berlin-Grunewald, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed June 21, 1921. Serial No. 479,275. 1 Claim. (Cl. 171—252.)



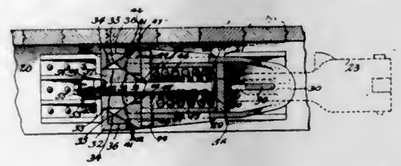
In combination with a dynamo electric machine a ventilating arrangement having ventilating ducts and comprising a self-ventilator and an external ventilator, the delivery side of said external ventilator being connected immediately at the delivery side of said self-ventilator.

1,499,697. STEAM-ACCUMULATOR APPARATUS FOR STEAM PLANTS. JOHANNES KARL RUTHS, Djursholm, Sweden, assignor to Aktiebolaget Vaporackumulator, Stockholm, Sweden, a Corporation. Filed Nov. 1, 1919. Serial No. 335,113. 11 Claims. (Cl. 60—94.)



2. A steam plant comprising in combination a steam generator, a steam conduit connected therewith, a steam motor comprising a high pressure unit connected with the conduit, and a low pressure unit receiving steam from the high pressure unit, a steam accumulator receiving steam from the high pressure unit, means actuated by the pressure in the conduit from which the high pressure unit is supplied and operating to throttle the steam supply to the low pressure unit upon an increase of pressure in the supply conduit above a predetermined value, and means for increasing the supply of steam to the high pressure unit when the supply to the low pressure unit is throttled.

1,499,698. SAFETY-RAZOR BLADE. CARL SCHOENERT, Newark, N. J. Filed Mar. 9, 1922. Serial No. 542,331. 3 Claims. (Cl. 30—12.)



1. A razor blade having a series of permanently fixed corrugations in such close proximity to the cutting edge as to cause a relative transverse movement between the skin and the cutting edge as the blade is drawn over the skin.

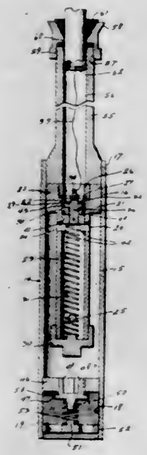
1,499,699. APPARATUS FOR THE COATING OF THREAD WITH LIQUID. HANS SCHWEITER, Horgen, Zurich, Switzerland. Filed Mar. 7, 1922. Serial No. 541,835. 4 Claims. (Cl. 91—51.)

1. In an apparatus employed in connection with winding and similar textile machinery for coating textile threads with liquid, a positively rotated disc in combination with coating rings resting on and rotated by the surface of said disc and adapted to receive the thread between them.

1,499,700. DRAFT GEAR. CLIFTON W. SHERMAN and EDWARD C. MCDOWELL, Hamilton, Ontario, Canada; said McDowell assignor to said Sherman. Filed July 8, 1921. Serial No. 483,335. 8 Claims. (Cl. 213—26.)

1. In a railway draft gear, a yoke adapted to engage a rear stop on the car frame and adapted to be connected with a coupler and having a rear follower provided with an inclined friction face, a front follower mounted on the yoke and adapted to engage a front stop on the car frame, a spring, a movable abutment which receives the thrust of said front follower and one end of said spring, a longitudinally movable block having an inclined friction face and connected with the other end of said spring, and a laterally movable block sliding transversely on said movable abutment and provided with oppositely inclined friction faces which engage with the corresponding faces of said longitudinally movable block and said rear follower.

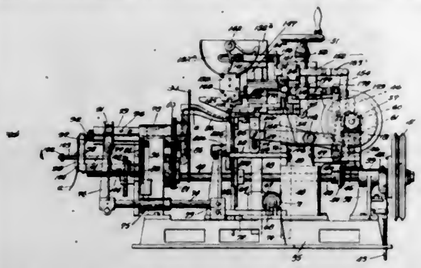
1,499,701. STUD DRIVER. LEWIS SKEEL, Meadville, Pa., assignor to McCrosky Tool Corporation, Meadville, Pa., a Corporation of Pennsylvania. Filed June 20, 1923. Serial No. 646,629. 11 Claims. (Cl. 81—53.)



1. A stud setter comprising a friction drive member having a socket provided with flat inclined driving faces, and jaws received in said socket and having flat inclined

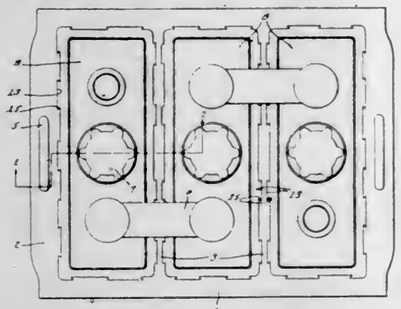
faces adapted for flatly contacting with the driving faces, whereby a direct driving connection is established be-

tween the driving member and the jaws, said jaws being formed with threads for engagement by the threads of a stud.



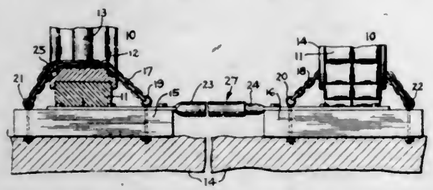
1,499,702. BACK-PRESSURE VALVE FOR OIL AND ARTESIAN WELLS. ABNER L. SMITH, Goose Creek, Tex. Filed Oct. 14, 1922. Serial No. 594,480. 7 Claims. (Cl. 166—5.)

1. In combination with a well screen, a valve structure engaged with the lower end of the well screen including a valve opening in response to pressure interiorly of the screen, means for automatically reseating said valve when open, said valve including a cage having a bore, the walls of the bore having openings therethrough, a valve piston slidably fitting the bore and having a seat, said valve being provided with a shearing edge adapted to engage said seat and to have wiping engagement with the bore of the cage.



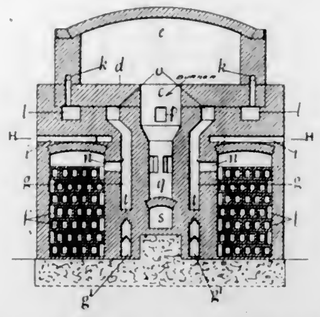
1,499,703. MACHINE FOR PACKAGING ARTICLES. WILLIAM M. SPRY, Revere, Mass., assignor of one-half to George Barnaby, Revere, Mass. Filed Mar. 7, 1921. Serial No. 450,451. 44 Claims. (Cl. 100—31.)

1. A packaging machine having two members provided with surfaces for engaging opposite sides of a group of articles, one of said members being movable relatively to the other, to compress a group of articles between said surfaces, means for wrapping string around the group and overlapping portions of the string under tension



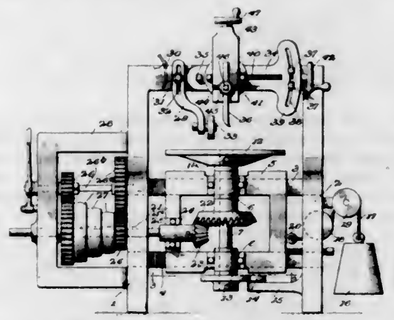
while the articles are under pressure, and means for applying a fastening to the overlapped portions of the string while the latter is under tension.

1,499,704. BATTERY BOX. GEORGE C. STEBBINS, Ashtabula, Ohio, assignor to Silurium Manufacturing Company, Cleveland, Ohio, a Corporation of Delaware. Filed Aug. 24, 1922. Serial No. 584,061. 2 Claims. (Cl. 204—29.)



2. A battery box, having side and end walls and cross partitions forming a plurality of cell chambers, said side and end walls and partitions being provided around their upper edges with channels having dovetail portions, a cover for each cell chamber, and fusible sealing material filling said dovetail grooves and holding the covers in place and preventing the escape of acid.

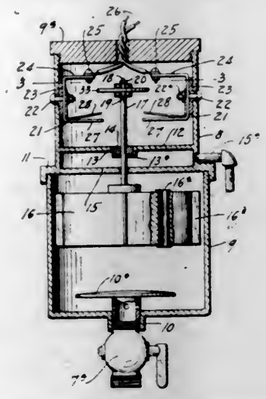
1,499,705. ATTACHMENT FOR VEHICLE WHEELS. HENRY J. STRAUSS, Stratford, Conn. Filed Sept. 30, 1922. Serial No. 591,570. 14 Claims. (Cl. 152—2.)



9. An attachment for vehicle wheels for the purpose described, comprising a pair of blocks, flexible means whereby the blocks may be secured to the circumference of a pair of wheels respectively, and separable means connecting said blocks, said means comprising a hollow cylindrical member secured to one of said blocks and another member secured to the other block, said first mentioned member adapted to receive the second mentioned member to form an extensible joint.

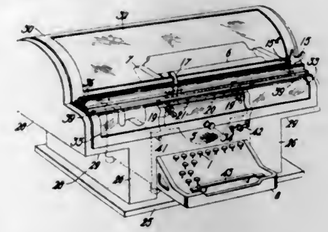
1,499,706. CRUCIBLE AND LIKE FURNACE. THEODOR TEISEN, Birmingham, England. Filed Dec. 20, 1922. Serial No. 608,083. 10 Claims. (Cl. 263—15.)

1. An improved crucible furnace comprising a heating chamber, a vertical gas burner, a regenerator or recuperator, horizontal air cooling channels arranged over the recuperator between it and the heating chamber, an air pocket situated at the side of the recuperator between it and the burner, and an air outlet communicating between the recuperator and air pocket, substantially as described.



1,499,707. LATHE. WALTER CALEB THATCHER, Govans, Baltimore, Md. Filed May 16, 1923. Serial No. 639,369. 9 Claims. (Cl. 82—19.)

2. In a lathe, a frame provided with tracks, a drive shaft mounted on the frame, a table slidably mounted on the tracks, a driven shaft mounted on the table, a work holder on one end of the shaft, an eccentric or pattern cam on the other end of the shaft, a gear having a slidable connection with the drive shaft and mounted on the table, a gear mounted on the driven shaft and in mesh with the first mentioned gear, a cutting tool adjustably mounted in operative relation with the work holder, and means engageable with the pattern cam for causing shifting of the table, and means for maintaining the pattern cam in engagement with the last mentioned means.

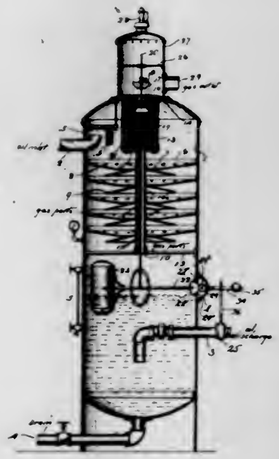


1,499,708. SIGNAL DEVICE AND CIRCUIT CLOSER THEREFOR. LAURENCE ROBERT TUTEN, Columbia, S. C. Filed June 12, 1922. Serial No. 567,804. 1 Claim. (Cl. 200—84.)

In a circuit closer structure, an open topped casing constituting a float chamber and provided at its bottom with a liquid inlet, an open topped casing member detachably secured upon the top of the first named casing and provided with a removable cap, said second named casing member having its bottom closed by a wall and being provided with a transverse partition spaced above said wall and cooperating therewith to define a moisture collecting compartment between the float chamber and the interior of the second named casing, a drain pipe leading from said compartment, a float operating within the first named casing and carrying a rod slidable through

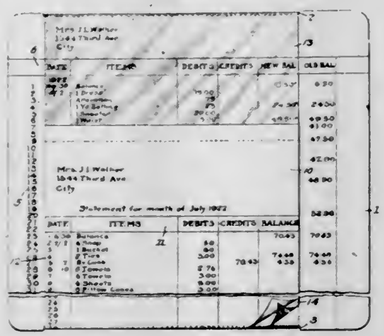
said bottom wall and partition and extending into the second named casing, contacts within and insulated from said second named casing, and a metallic member carried by the rod and engageable with said contacts when the float drops.

1,499,709. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 13, 1920. Serial No. 423,848. 33 Claims. (Cl. 197—186.)



1. The combination of a sound-deadening casing and a typewriting machine therein comprising a carriage, a combined line-space and carriage-return member on the carriage and having an upwardly-extending finger-piece at the front of the carriage and at one end thereof, and a combined carriage-release and carriage-return member on said carriage and having an upwardly-pojecting finger-piece at the front of the carriage and at the other end thereof, said casing comprising a body-portion surrounding said machine and a cover hinged at its rear on said body-portion and provided in its front portion with a slot to receive said finger-pieces when the cover is swung down to closed position, said slot being parallel to the direction of carriage travel and of a length greater than that of the carriage travel, to permit the carriage to be moved to its limiting positions.

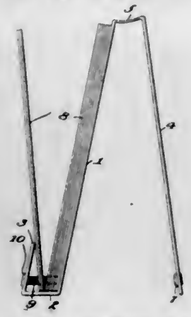
1,499,710. GAS AND OIL SEPARATOR. EDWIN C. WEISGERBER, Long Beach, Calif. Filed Feb. 13, 1924. Serial No. 692,476. 5 Claims. (Cl. 183—39.)



1. A gas and oil separator comprising a chamber, an oil and a gas inlet on said chamber and a gas outlet in the top of said chamber, a splash and wear plate disposed in the path of discharge of the oil and gas, a plurality of

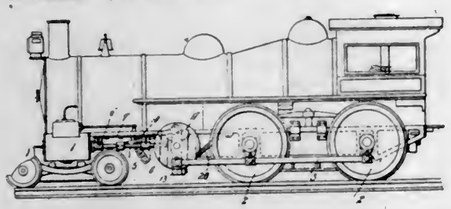
dished baffles below said splash plate, each having a central opening, a plurality of inverted dished baffles co-operating with said first-named baffles to cause the oil to flow in a zig-zag course to the bottom of the chamber, a central hollow support for said dished baffles, an overflow pipe near the bottom of said chamber, a valve in said

pipe, a lever connected to said valve and having a float for maintaining the level of the oil in said chamber, a stem connected with said float lever and having thereon adjustable valves for opening or closing the outlet in the top of said chamber, and a means to arrest entrained oil particles.



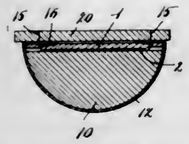
1,499,711. COLLATED WORK SHEET. JOHN A. WHERRY, New Orleans, La. Filed Aug. 14, 1922. Serial No. 581,669. 14 Claims. (Cl. 282—12.)

1. The combination of a main work sheet, and a supplementary work sheet comprising a record receiving section and a transparent section in longitudinal alignment, the two sections enclosing the main work sheet and adjustable longitudinally thereof.



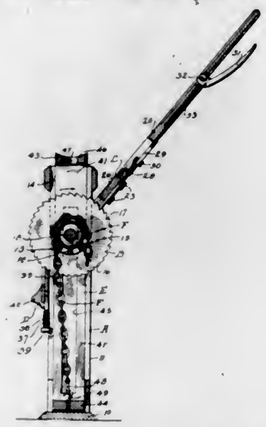
1,499,712. DISK-RECORD FOLIO. WILLIAM WILBURGER, Brooklyn, N. Y. Filed Apr. 4, 1923. Serial No. 629,786. 4 Claims. (Cl. 129—1.)

1. A record folio of the character described having back and base portions, a strip extending upwardly from the front edge of said base portion, and a front portion flexibly hinged to the upper edge of said back portion,



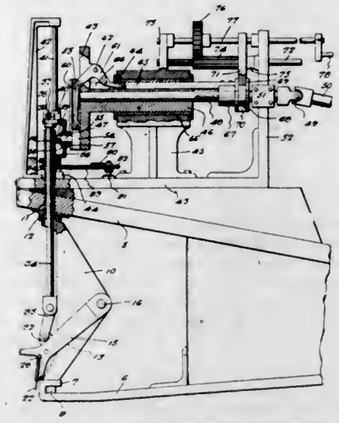
separable fastening means for securing said front portion to said strip, and record envelopes loosely bound in said holder between the back portion and strip.

1,499,713. TWIN GEAR LOCOMOTIVE DRIVE. LOZELLA A. WILLIAMSON and GEORGE PINTO, Hammonton, N. J. Filed Mar. 1, 1923. Serial No. 622,050. 4 Claims. (Cl. 105—120.)



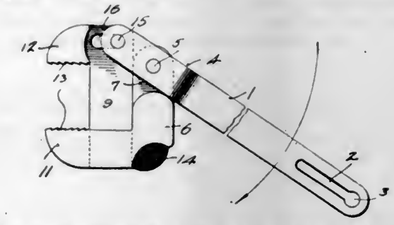
1. In a locomotive, the combination with the main frame, drive wheels, connecting rods on said wheels, cylinders, pistons movable in said cylinders, and rods on the pistons; of hanger guides connected to the main frame and receiving said rods, a transverse pendent frame on the main frame and having journal boxes, twin-crank rotors mounted in said boxes and having their outer cranks connected to said connecting rods, pitman rods connected to the piston rods and connected to the inner cranks of the rotors at diametrically opposite points to the connections of the connecting rods, and inclined braces interposed between the main frame and the lower corner portions of the pendent frame.

1,499,714. INSOLE. SIDNEY C. WILSON, Rochester, N. Y., assignor to Wilson Process, Incorporated, Rochester, N. Y., a Corporation of New York. Filed Aug. 14, 1919. Serial No. 317,456. 2 Claims. (Cl. 36—22.)



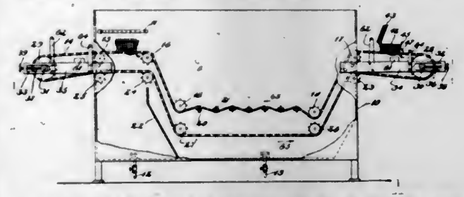
2. An insole of the kind described having a channel flap formed on the marginal portion of the grain side cut inwardly from the marginal edge, and a second channel lip around the forepart and shank formed on the opposite surface of the insole, said lip being cut from the center line of the insole outwardly toward the marginal edge, and both flap and lip being adapted to be laid substantially flush with their respective sides in the completed shoe.

1,499,715. PULLING AND LIFTING DEVICE. EVIA L. WISHON, Picher, Okla. Filed June 19, 1922. Serial No. 569,450. 3 Claims. (Cl. 254—148.)



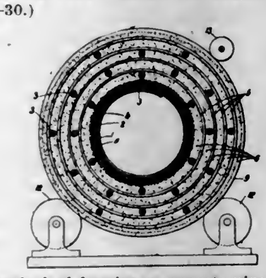
3. In a lifting and pulling device, a frame open at its upper end and including a base plate and standards having the inner faces thereof grooved to provide channel ways, a sliding member passing into the frame and having spaced arms fitting into the channel ways and having longitudinally extending slots, a shaft rotatably carried by the standards of the frame and extending through the slots formed in the arms of the lifting standard, a drum carried by the shaft, ratchet discs connected with the drum and extending downwardly between the standards of the frame, a lifting head connecting the outer ends of the arms of the lifting member, a hook carried by the lower end of the lifting member, a chain passed about the drum and having a hook provided at its free end and adapted to engage said hook, a dog slidably carried by the frame arranged to engage the ratchet discs to prevent retrograde movement thereof, a lever rockably mounted upon the shaft, and a dog slidably carried by the lever for engaging the ratchet discs.

1,499,716. PROPELLING MECHANISM FOR SHIPS. JAMES WORCESTER, Waltham, Mass. Filed Mar. 27, 1922. Serial No. 547,062. 19 Claims. (Cl. 115—29.)



1. In combination, an oscillatable propeller frame, an operating member connected therewith and movable in a circular path, and means for adjusting said member with respect to a fixed center to vary the stroke or angle of oscillation of the frame.

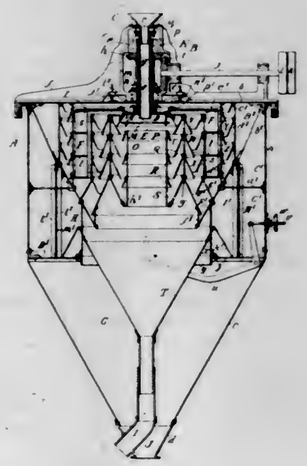
1,499,717. WRENCH. LEE O. WRIGHT, Betsy Layne, Ky. Filed June 17, 1922. Serial No. 569,182. 1 Claim. (Cl. 81—126.)



A wrench comprising a pair of L-shaped jaws including oppositely disposed work engaging faces and inwardly extending shanks, the inner faces of the shanks being disposed in parallel abutting relation, one of the jaws having a slot therein receiving the shank of the other jaw, an operating handle having the inner end thereof bifurcated, the inner end of one shank being reduced in thickness and fitted in the bifurcated portion, means for pivotally connecting the reduced inner end of said shank in the bifurcated portion of the handle, the outer end of the bifurcated portion of the handle receiving the shank of the other jaw adjacent to the jaw face thereof, said last mentioned shank being provided with a slot, and a pivot pin carried by the bifurcated portion of the handle fitted in said last mentioned slot.

1,499,718. DISHWASHING MACHINE. JOHN ZYKIN, New York, N. Y. Filed Dec. 6, 1922. Serial No. 605,214. 3 Claims. (Cl. 141—9.)

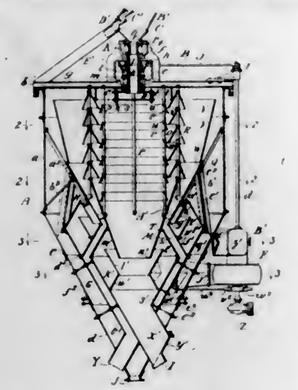
1. A dish washing machine comprising an endless conveyer, means for guiding said conveyer through a vat filled with a cleaning medium, means for imparting to said conveyer a wave like motion while it is guided through the vat, outer baskets on said conveyer, inner baskets in said outer baskets for the reception of the articles to be washed, means for automatically opening said outer baskets to allow an exchange of the articles therein, means for closing said outer baskets, means for raising said inner baskets in said outer baskets, and means for regulating the tension of said conveyer.



1,499,719. METHOD OF AND APPARATUS FOR USE IN THE MANUFACTURE OF PIPES, TUBES, AND THE LIKE. LÉON BILLÉ, Nogent-sur-Marne, France. Filed Apr. 24, 1922. Serial No. 556,281. 8 Claims. (Cl. 25—30.)

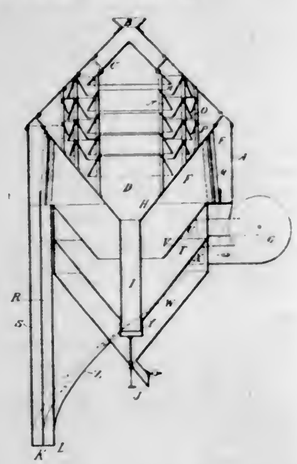
1. The method of forming a concrete pipe consisting of applying a layer of asphalt about the core, arranging a metallic reinforcement about the layer, embedding min-

eral aggregate between the reinforcement and into the layer, wrapping a wire about the aggregate and reinforcement to retain the same, then dipping the product in a cementitious solution to bind the wrapping reinforcement mineral aggregate and layer, and finally applying a layer of solid cementitious material about the binding.



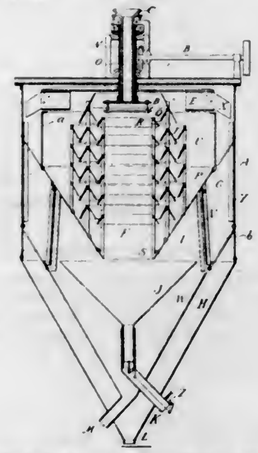
1,499,720. SEPARATOR. GEORGE HOLT FRASER, Brooklyn, N. Y. Original application filed Aug. 28, 1914, Serial No. 859,004. Divided and this application filed June 28, 1919, Serial No. 307,417. Renewed Apr. 3, 1924. 7 Claims. (Cl. 83—40.)

1. In combination, a casing enclosing a chamber, a receptacle in said chamber having upper and lower openings communicating with said chamber, means for passing pulverulent material to be separated into said receptacle, means affording a way through said receptacle for the heavier particles of such material, means affording an endless current passage through and around said receptacle, means for circulating a fluid medium through said passage to carry off into said chamber the lighter particles of such material, and annular substantially vertically disposed foraminous filtering means across such passage and surrounding said way for intercepting particles carried by such medium, said filtering means being constructed and arranged to conduct the intercepted particles across and below the path of the medium and affording inwardly extending current passages for such medium.



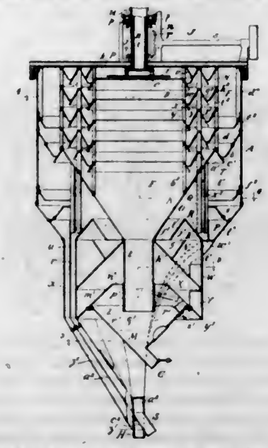
1,499,721. SEPARATOR. GEORGE HOLT FRASER, Brooklyn, N. Y. Continuation of application filed Aug. 27, 1914, Serial No. 858,797. This application filed July 12, 1919. Serial No. 310,329. Renewed Jan. 24, 1924. 8 Claims. (Cl. 83—40.)

1. In combination, a casing enclosing a chamber, a receptacle in said chamber having upper and lower openings communicating with said chamber, means for passing pulverulent material to be separated into said receptacle, means affording a way through said receptacle for the heavier particles of such material, means affording an endless current passage through and around said receptacle, means for circulating a fluid medium through said passage to carry off into said chamber the lighter particles of such material, and substantially annular substantially vertically disposed foraminous filtering means across such passage and surrounding said receptacle for intercepting particles carried by such medium, said filtering means being constructed and arranged to conduct the



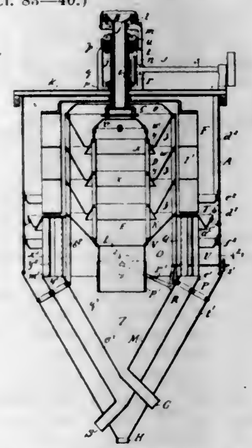
intercepted particles across and below the path of the medium and affording inwardly extending current passages for such medium.

1,499,722. AIR SEPARATOR. GEORGE HOLT FRASER, Brooklyn, N. Y. Continuation of application Serial No. 69,025, filed Dec. 28, 1915. This application filed Aug. 24, 1921, Serial No. 495,036. Renewed Nov. 24, 1923. 15 Claims. (Cl. 83—40.)



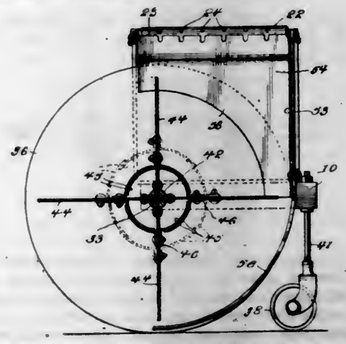
1. In combination, a casing having a conical top, means for causing material to descend therein in an annular downward path and affording a horizontally outwardly extending current passage across said path, annular selecting means surrounding said path for intercepting coarse particles floating through such passage, an annular precipitation chamber surrounding and in communication with said passage and affording a current outlet horizontally outwardly of said passage, means affording an annular wall or partition extending outwardly of and surrounding said path below said current passage for receiving particles precipitated therein inwardly of said outlet and outwardly of said selecting means affording a lower outlet for such particles, and a blower for causing a fluid current to flow outwardly across said path horizontally toward said current outlet and through the latter into said chamber in communication at its suction side with said chamber.

1,499,723. AIR SEPARATOR. GEORGE HOLT FRASER, Brooklyn, N. Y. Continuation of application Serial No. 69,024, filed Dec. 28, 1915. This application filed Sept. 26, 1921, Serial No. 503,159. Renewed Nov. 27, 1923. 16 Claims. (Cl. 83—40.)



1. In combination, a casing, means for causing material to descend therein in a downward path and affording a current passage across said path, current regulating means in advance of said path, means adjacent to said path affording a sinuous current passage successive to and receiving current from said first passage and affording an outlet for precipitated material below said sinuous passage, means successive to said sinuous passage affording an upward current passage receiving and directing upwardly current from said sinuous passage having an upper current outlet above said sinuous passage and a lower precipitate outlet, means affording a settling chamber successive to and receiving current from said upper outlet, and a blower disposed above said upward passage for causing a fluid current to flow across said path through said upward passage through said upper outlet and into said settling chamber.

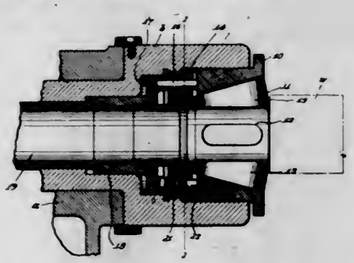
1,499,724. FLUID-CURRENT SEPARATOR. GEORGE HOLT FRASER, Brooklyn, N. Y. Continuation of application Serial No. 29,705, filed May 21, 1915. This application filed Oct. 26, 1921. Serial No. 510,585. Renewed Dec. 4, 1923. 40 Claims. (Cl. 83—40.)



5. In combination, a casing, means for distributing material therein, means for causing a fluid current to flow therein through such material, means affording a chamber beyond said distributing means, means affording a chamber beyond said chamber, means between said chambers for causing dust settling in the former chamber to flow in a wide thin stream through an intermediate part of the latter chamber, and means for causing said current to again traverse said material in the latter chamber.

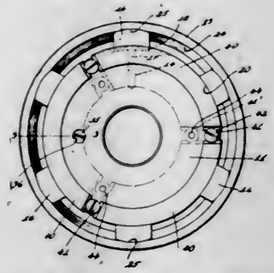
1,499,725. FLUID-CURRENT SEPARATOR. GEORGE HOLT FRASER, Brooklyn, N. Y. Original application filed May 21, 1915, Serial No. 29,705. Divided and this application filed Oct. 14, 1922. Serial No. 594,516. 34 Claims. (Cl. 83—40.)

1. In combination, a casing, means for distributing material therein, means therein for generating a fluid current, means for causing such current to traverse such material, means affording a precipitation chamber for receiving such current, means affording a return current passage from said chamber, an extractor between said chamber and said passage for extracting floating material from the current flowing from said chamber comprising a foraminous partition constituting a wall of said chamber, an outer wall for said chamber, two spaced walls below said extractor spaced apart from said outer wall, terminating at their upper edges below and affording a way above them for said current passage, and affording a conduit between them out of the path of said current for precipitate from said extractor, means affording a coarse outlet below said distributor, and means affording a precipitate outlet below said chamber.



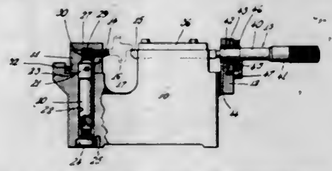
1,499,726. GRAIN SHOCKER. JOHN LUNSFORD GILMORE, Holdredge, Nebr. Filed Oct. 21, 1922. Serial No. 596,070. 7 Claims. (Cl. 56—402.)

1. In a grain shocker, a pair of spaced rotary disks, a rotary element including radial blades, a shaft for



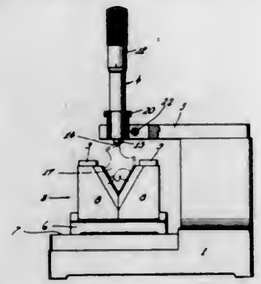
mounting the disks and rotary element, the latter being intermediate of the disks, and stationary means completing side and front walls of compartments formed respectively above and below one of the blades when the latter is in a horizontal position.

1,499,727. COLLET MECHANISM. BENGT M. W. HANSON, Hartford, Conn. Filed Aug. 20, 1921. Serial No. 493,781. 5 Claims. (Cl. 279—57.)



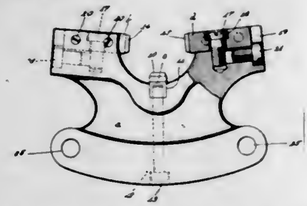
1. In a device of the character described, a spindle, a cage mounted therein, a member connecting the rear end of said cage to said spindle, jaws in said cage, a sleeve about said cage and jaws, and means for positively moving said sleeve in a direction to force said jaws together, said means including a part slidably carried by said connecting member.

1,499,728. CHUCK. BENGT M. W. HANSON, Hartford, Conn. Filed Feb. 10, 1922. Serial No. 535,659. 5 Claims. (Cl. 279—57.)



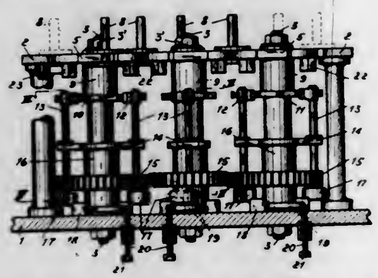
1. In a device of the character described, a spindle having a jaw supporting part, gripping members mounted thereon for radial movement, supplemental jaws, and screws for securing said jaws to said part, said screws being positioned between and having their heads overlapping the adjacent ends of said jaws.

1,499,729. SCREW-THREAD-GAUGE DEVICE. BENGT M. W. HANSON, Hartford, Conn. Filed May 21, 1923. Serial No. 640,349. 16 Claims. (Cl. 33—199.)



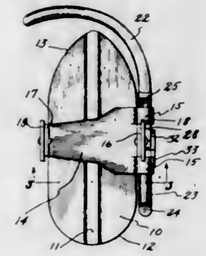
1. A gauge device comprising, in combination, a base or frame, a pair of gauge members having opposed serrated faces, one of said gauge members being angularly adjustable about an axis generally parallel to the serrations, and one of said gauge members being movable towards and away from the other gauge member.

1,499,730. GAUGE INSTRUMENT. BENGT M. W. HANSON, Hartford, Conn. Filed May 21, 1923. Serial No. 640,350. 7 Claims. (Cl. 33—199.)



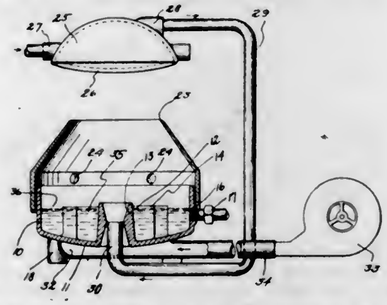
1. A measuring instrument comprising, in combination, a base, a pair of angularly disposed serrated gauge members adapted to receive a threaded member therebetween, and a micrometer adjustably supported by said base and adapted to contact with a side of the threaded member.

1,499,731. TOLERANCE GAUGE FOR TAPERED THREADS. BENGT M. W. HANSON, Hartford, Conn. Filed May 5, 1923. Serial No. 637,002. 8 Claims. (Cl. 33—199.)



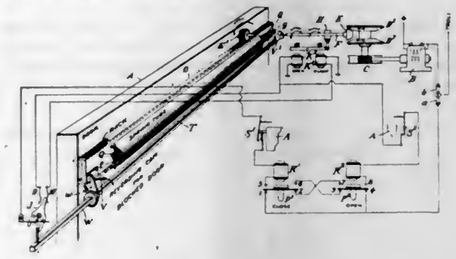
1. In a gauge, a body, a rest thereon, and a pair of gauge members, one on either side of and spaced from said rest member and provided with converging serrated faces to receive a tapered thread.

1,499,732. PLAITING AND BRAIDING MACHINE. CARL HAUSBERG, Brugg, Switzerland, assignor of one-half to "Ferrum" Giesserei & Maschinenfabrik, A. G., Rapperswil, Switzerland. Filed Sept. 9, 1922. Serial No. 587,213. 5 Claims. (Cl. 96—11.)



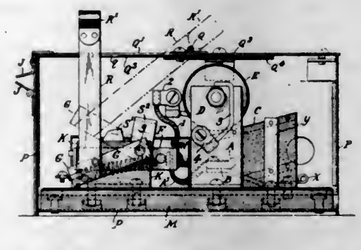
1. In a machine of the character set forth including a jacquard mechanism, in combination with a series of interdependently operable driving units including for each unit a continuously rotatable drive shaft, driving discs presenting peripheral recesses and normally loose on said shafts, racers positively guided in said discs for transfer from one disc to the next adjacent disc, coupling means interposed between said driving units and said discs, and means operable from the jacquard mechanism for selectively actuating said coupling means, said coupling means comprising for each unit a bridge member loose on said driving shaft, a ratchet wheel in rigid connection with said driving disc, rock shafts rotatably journaled in said bridge member, and pawls fixed to said shafts and adapted for cooperation with said ratchet wheel, said bridge member adapted to partake of the rotary movement of said driving shaft, and means operable from the jacquard mechanism for controlling the rocking movement of said rock shafts for respectively coupling and uncoupling said bridge member and said ratchet wheel at predeterminable periods.

1,499,733. CLIMBING SHOE. PAUL HEGEMANN, Geneva, N. Y. Filed Jan. 23, 1923. Serial No. 614,401. 2 Claims. (Cl. 227—8.)



1. A climbing shoe comprising an elongated foot plate, a cross brace intermediate the length of the foot plate, spaced apart hinge sleeves on said brace at one edge of the foot plate, a curved hook member rotatable in said sleeves, a tongue projecting from the hook between the hinge sleeves and rotatable with the hook, a pike and prongs on said hook, adapted to grip the periphery of a pole, a triangular dog above said tongue, and means engaging said dog for locking the hook member in climbing position.

1,499,734. OIL BURNER. JOSEPH HEINZEL, Grantwood, N. J. Filed Mar. 9, 1923. Serial No. 623,836. 3 Claims. (Cl. 158—92.)

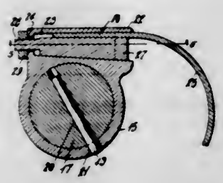


3. A device of the class described comprising a main hollow annular body, legs on said body, ridges on the upper end of said legs, said ridges being separated from the wall of said body by channels, a conical shaped hood adapted to be seated in said channels, said hood having a relatively large opening at its upper end, said main body being adapted to receive fuel oil, a concentric funnel projecting upwardly from the bottom of said body having a divergently tapered opening therein, a water head mounted above said hood, the flames of said oil being adapted to vaporize the water contents of said head, a pipe connecting said water head with the funnel, said pipe being adapted to convey the water vapor to a position above the surface of the burning oil, semi-circular channels formed in the main body forming air jets, a casing beneath said main body communicating with said jets, an air blower connected to said casing adapted to force air thru said jets to the region above the oil, said air and water vapor being adapted to atomize the burning oil, and means for using said air and water vapor independently or simultaneously.

1,499,735. CAR-DOOR-OPERATING MECHANISM. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Feb. 21, 1919. Serial No. 278,555. 12 Claims. (Cl. 268—7.)

2. The combination with a door and a non-reversing motor therefor, of a non-reversing member driven by the motor, a reversible shaft operatively engaging the door and having a free end movable for selective engagement with said non-reversing member, a shifter for the free end of said shaft, a controller for said shifter, and retaining means for maintaining said shaft in acting position throughout the run of the door.

1,499,736. SAFETY SWITCH. LEE P. HYNES and PERCY M. GRIFFIN, Albany, N. Y., assignors to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Mar. 19, 1920. Serial No. 367,256. 6 Claims. (Cl. 200—50.)

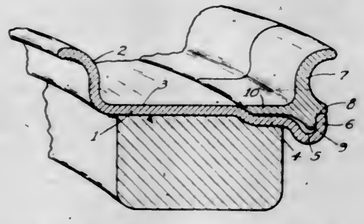


2. The combination with an electric switch having a handle and members capable of movement independently of the handle, an enclosing box for the switch provided with a movable cover, said switch handle and said cover having complemental means for preventing opening of the cover when circuit through the switch is closed, and means actuated by movement of the handle to engage one of said switch members when the handle is moved to open position.

1,499,737. TIMING DEVICE FOR INTERNAL-COMBUSTION ENGINES. ORVILLE E. KEY, Little York, Ill. Filed Apr. 17, 1922. Serial No. 553,314. 2 Claims. (Cl. 200—26.)

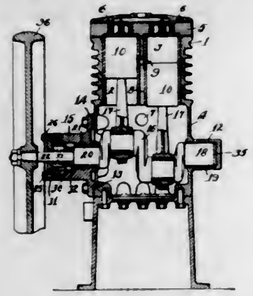
1. The combination with a timer casing and a shaft projecting into the same of a carrying member keyed to said shaft and adapted to operate within said timer casing, an offset on said carrying member provided with a

tapering recess extending at right-angles to the extent of said shaft, a brush member having a portion curved in substantially the arc of a circle, a reduced portion on



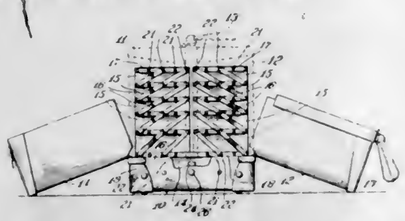
said brush adapted to enter said recess, a tapering locking member in said recess, and means to adjust said locking member to secure said brush member in place substantially described.

1,499,738. CHAIN HOOK. FRANK B. KING, Wakefield, Mass. Filed May 22, 1923. Serial No. 640,642. 3 Claims. (Cl. 24—232.)



1. A securing device for anti-skid chains, comprising two elongated members, and a coupling member detachably connecting the elongated members, the ends of the elongated members being formed to constitute when connected two divisible eyes arranged in planes substantially at right angles to each other and adapted to respectively engage a link of an anchoring chain and a link of an anti-skid chain, the members of each divisible eye being separable only when the coupling member is detached.

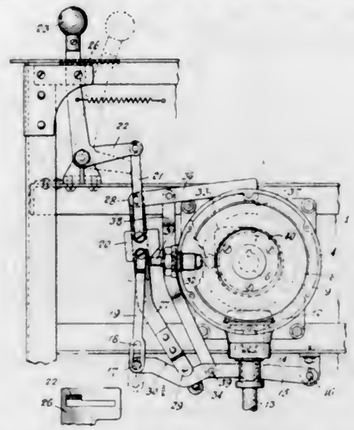
1,499,739. AUTOMOBILE WHEEL RIM. FRED R. KLAUS and HARRY W. KRANZ, Cleveland, Ohio, assignors to The Hydraulic Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 23, 1921. Serial No. 447,136. 1 Claim. (Cl. 152—21.)



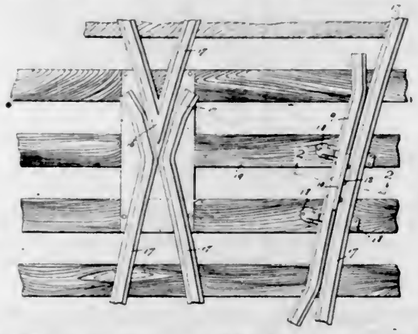
In a wheel, a tire retaining rim having a fixed section, comprising a circumferential tire retaining flange and a base portion integral therewith having a portion forming a seat for a portion of the base of the tire, said base portion being offset to a smaller diameter on the side thereof opposite said integral flange, said offset portion at its outer edge bent inwardly and flanged outwardly to form a relatively narrow peripheral groove therein, and a removable tire retaining ring having a circumferential tire retaining flange, an intermediate lip projecting inwardly from the base thereof engaging said peripheral groove and forming with the outer portion of the base therof a shoulder engaging the edge of the flange at the outer side of the groove and an inwardly projecting flange extending across said offset portion, the top thereof being alined with the base portion of the fixed section and completing the seat for the tire base.

1,499,740. COMPRESSOR FOR REFRIGERATING MACHINERY. FREDERICK H. KOLBE, Detroit, Mich., assignor to Kelvinator Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 17, 1919. Serial No. 283,044. 5 Claims. (Cl. 286—11.)

5. In refrigerating apparatus, a casing having a bearing and a cavity into which said bearing opens, a shaft journaled in said bearing and having a shoulder, a collar surrounding said shaft and facing said shoulder, a spring interposed between said collar and a part of said casing and tending to move said collar toward said shoulder, and a longitudinally-expansible, cylindrical sheath located inside said cavity and hermetically joined to said collar and casing.



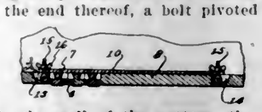
1,499,741. SAMPLE CASE. HARRY H. LABADIE, BURTON B. BEERS, and WILLIAM MACDONALD BRAND, Chicago, Ill.; said Beers and Brand assignors of their entire interest to Knickerbocker Case Company, Chicago, Ill., a Corporation of Illinois. Filed June 29, 1922. Serial No. 571,638. 5 Claims. (Cl. 190—17.)



1. In combination, a tray, bars connected across the ends of the tray, spacing strips interposed between the bars and the tray, and links pivotally connected with said bars by means of rivets, the heads on the inner ends of which are provided with clearance by the use of said spacing strips.

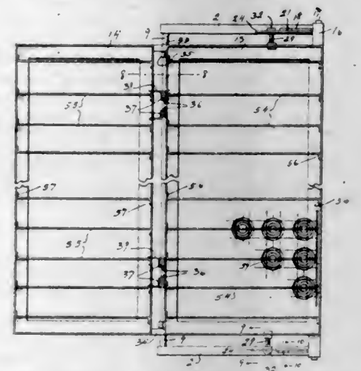
1,499,742. POSITIVELY-ACTUATED CLUTCH FOR WASHING MACHINES. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 6, 1920. Serial No. 415,185. 10 Claims. (Cl. 192—148.)

1. In a washing machine, a revolvable shaft, a source of power for driving said shaft, a separable clutch between said shaft and said source of power fo connecting said shaft operatively to said source, an actuator engaging said clutch for moving the same to open and closed position, a revolvable cam driven by said shaft and projecting radially therefrom and a member adapted to be moved by said cam so as to cause said actuator to open said clutch, manually actuated means for positively moving said member into and out of position to be moved by said cam co-operating stops acting when engaged to stop the shaft in a predetermined angular position, and connections with the clutch actuating means for bringing the stops into operative relation upon opening the clutch.



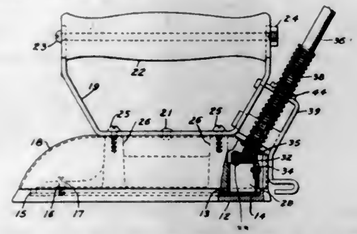
1,499,743. RAILWAY-GUARD-RAIL SUPPLEMENT. MATTHEW J. MCNAMARA, Scranton, Pa., assignor of one-half to James R. Fleming, Scranton, Pa. Filed June 12, 1923. Serial No. 644,966. 6 Claims. (Cl. 238—17.)

1. The combination of a railway frog, a guard rail for said frog disposed in service opposite said frog; and a supplement member therefor removably attached thereto in service transversely alined with said frog and adapted for shifting the wheels of a train in a direction away from said frog, said member having a chamfered surface extending from a thin upper edge juxtaposed in service to said guard rail over which the wheels of a train slide when resting thereon.



1,499,744. PATTERN CONSTRUCTION FOR THE NUMBERING OF CASTINGS. JOHN MANU, Detroit, Mich. Filed June 11, 1921. Serial No. 476,668. 1 Claim. (Cl. 22—158.)

A numbering means for castings comprising a pattern having a slot formed in the wall thereof, the slot having oppositely inclined side walls and of less width at the surface than the interior, a series of blocks bearing numbers in the outer face adapted to make a mold impression and provided with inclined walls fitting the inclined walls of the slot, each of said blocks having recesses formed in the opposite remaining walls permitting insertion of the fingers of the operator to insert or withdraw the same, a locking bar provided at each end with a slot opening through the end thereof, a bolt pivoted at each end



of the slot in the wall of the pattern, the said pattern wall being recessed to permit each bolt to be swung outwardly to allow the locking bar to be positioned, and a nut for engaging the locking bar at each end when the bolt has been positioned in the respective slot of the locking bar.

1,499,745. FOLDING COUCH. HARRY H. MEGARY and CHARLES T. MEGARY, New York, N. Y. Filed Aug. 23, 1922. Serial No. 583,832. 4 Claims. (Cl. 5—27.)

1. In a couch bed, a main supporting frame, a longitudinally extending rod mounted upon said frame, a couch section including a rectangular frame having sleeves loosely embracing said rod whereby said couch section may be turned from a horizontal position to a vertical position and vice versa, a plurality of pairs of coiled springs mounted upon the rod and operatively engaging the frame of the couch section, the springs of each pair being oppositely coiled with relation to each other, one spring acting to resist movement of the couch section from a vertical plane to a horizontal plane in one direction and the other spring of each pair yieldingly opposing movement of the couch section from a vertical position to a horizontal position in the opposite direction.

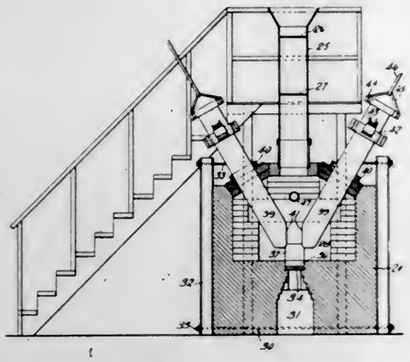
1,499,746. ELECTRIC IRON. DAVID MICHIE, Irwin, Pa. Filed Dec. 15, 1922. Serial No. 607,206. 12 Claims. (Cl. 219—25.)

1. In an iron, in combination, a body portion, a cover, a handle strap secured to said cover, and a three-point supporting member for said iron secured to said handle strap only by integral portions extending therethrough and bent thereover.

1,499,747. END BUCKLE. JOHN C. NICHOLS, Sheboygan, Wis. Filed July 28, 1923. Serial No. 654,399. 1 Claim. (Cl. 24—183.)

A harness connector comprising a body portion having parallel side bars, a hook extending upwardly and turned back and directed inwardly and located adjacent the forward end of said connector, a pair of transverse strap guide bars joining the upper portion of said parallel side bars, one of such transverse bars being located closely adjacent said hook, but spaced longitudinally therefrom, and the other of said bars being located at the rearmost end of said body portion, a pair of lower transverse bars arranged in spaced relative relation and located between and below said first mentioned bars, and a forwardly and upwardly directed prong integrally formed with the rearmost of said last mentioned transverse bars and pointing towards said hook, whereby all of said bars are spaced apart longitudinally of the device.

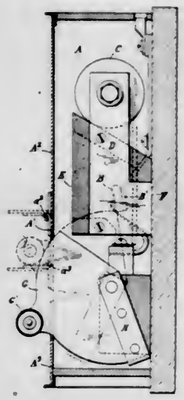
1,499,748. GAME APPARATUS. CHRIST PAPOUCHIS, Far Rockaway, N. Y. Filed May 31, 1922. Serial No. 564,685. 17 Claims. (Cl. 235—127.)



1. In a bowling game apparatus, the combination of a scoring mechanism, several devices in different positions adapted to be actuated by the balls, a single means actuated by all of said devices to initiate movement of the scoring mechanism, and other means actuated by certain of said devices to limit in different degree the movement of the scoring mechanism.

1,499,749. COMPOSITION FOR TONING PHOTOGRAPHIC SILVER IMAGES. PAUL REHLÄNDER, Berlin-Charlottenburg, Germany. Filed May 22, 1922. Serial No. 562,811. 2 Claims. (Cl. 95—88.)

1. Toning agents for photographic silver images consisting of solid selenosulphates of alkali metals and sulphites of alkali metals.

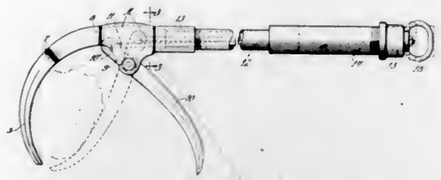


1,499,750. PROCESS OF PRODUCING GAS. JAMES HENRY REID, Readsboro, Vt., assignor to International Nitrogen Co., Cleveland, Ohio, a Corporation of Delaware. Filed Feb. 13, 1920. Serial No. 358,456. 16 Claims. (Cl. 204—62.)

10. In the process of producing gas and a metallic carbide, mixing substantially equal parts by weight of a finely divided metal oxycompound and a coke-producing compound and heating the said mixture in a retort closed

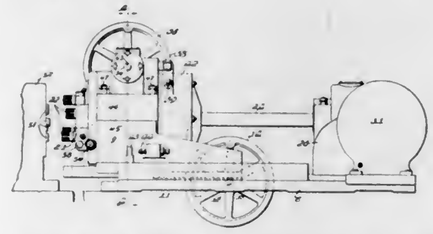
to the admission of air or oxygen thereto thereby to coke the said compound.

1,499,751. SAFETY SWITCH. ROBERT S. RHODES, Brooklyn, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Jan. 25, 1921. Serial No. 439,812. 5 Claims. (Cl. 200—50.)



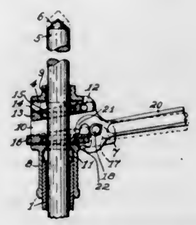
1. A safety switch comprising a casing provided with a hinged cover having a slot therein open at one end contiguous to the hinged portion of the cover, a switch handle extending through and normally filling said slot, and means on said handle co-operating with a portion of the cover contiguous to the closed end of the slot to prevent movement of the latter until the handle is moved to a predetermined position.

1,499,752. SPLICING OF PNEUMATIC TUBES, ETC. WILLIAM FRASER RUSSELL and MAURICE KENNARD STEVENS, Norwalk, Conn., assignors to The Norwalk Tire & Rubber Company, Norwalk, Conn., a Corporation of Connecticut. Filed June 23, 1923. Serial No. 647,372. 28 Claims. (Cl. 154—42.)



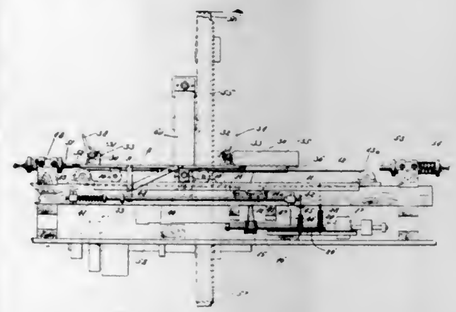
22. An improved process of uniting rubber surfaces which comprises coating one surface with a rubber cement containing sulfur, coating the other surface with an ultra accelerator, then closing the union and heating it in hot water or its equivalent.

1,499,753. CLINKER TONGS. CARL F. SKOOG, South Bend, Ind. Filed July 12, 1922. Serial No. 574,563. 2 Claims. (Cl. 294—11.)



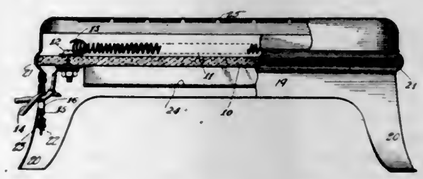
1. In a clinker tongs of the character described, a hollow head having a solid neck and hook shaped forked end extending laterally from one end thereof and ears depending from an open side of the head with a threaded socket at the other end, a tubular handle extending from and threaded into the socket of the head, a laterally positioned finger extending between said ears into the head and pivoted to said ears, a rod extending through said handle ending in the hollow head and pivotally connected to the finger inside the head, and an operating handle for said rod.

1,499,754. MILLING MACHINE. WILLIAM C. SPROUL, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Mar. 22, 1920. Serial No. 367,951. 12 Claims. (Cl. 90—15.)



1. In a milling machine, the combination of a spindle-carrying drum, a plurality of spindles carried thereby and equipped with cutters, means for oscillating said drum to bring the spindle cutters into operative relation with the work, and means for adjusting said drum and the spindles carried thereby longitudinally to regulate the depth of cut.

1,499,755. ADJUSTABLE POST. JAMES H. STEBBINS, Waterloo, Iowa. Filed Oct. 25, 1923. Serial No. 670,722. 5 Claims. (Cl. 254—106.)

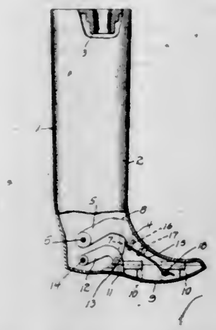


5. In combination, a housing member having both longitudinal and lateral openings at opposite places, an elongated element mounted to slide through one pair of said openings loosely, a clutch-element terminally pivoted in said housing to swing vertically to be loose upon said elongated element in one position and to engage and clutch same releasably in another position, another clutch-element within said housing mounted to swing vertically to be loose upon said element in one position and having oppositely positioned pointed detents to engage and clutch same releasably in another position, and a lever fulcrumed on said housing and having a terminal fork whose prongs are above and below the adjacent end of the last-mentioned clutch-plate to engage same alternately when the lever is swung reversely to releasably clutch said plate and lift said elongated element and release it by a step by step actuation thereon.

1,499,756. SAWMILL. LOUIS H. STREET, Olean, N. Y. Filed Mar. 18, 1922. Serial No. 544,717. 2 Claims. (Cl. 143—106.)

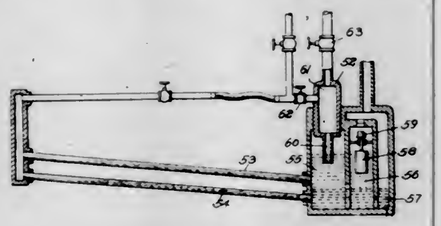
1. In a saw mill, the combination with a carriage, and a friction mechanism for driving the carriage in opposite directions, of a pedal device for reversing the friction driving mechanism, a tripping mechanism for holding the pedal depressed, and a tappet device operated by the movement of the carriage at the end of its forward stroke for releasing the tripping mechanism.

1,499,757. ELECTRIC TOASTER AND HEATER. ANDREW WYZENBEEK, Chicago, Ill., assignor to Frank L. Kobihase, Chicago, Ill. Filed Apr. 6, 1923. Serial No. 630,260. 9 Claims. (Cl. 219—37.)



1. A support for an electrical heating element for use in electrical heating apparatus, said support consisting of an asbestos board provided on the surface thereof with a covering consisting of aluminum bronze and silicate of soda.

1,499,758. COLLAPSIBLE LAST. PEARL D. BABCOCK, Milford, Conn., assignor to L. Candee & Company, a Corporation of Connecticut. Filed Sept. 17, 1921. Serial No. 501,374. 14 Claims. (Cl. 18—46.)

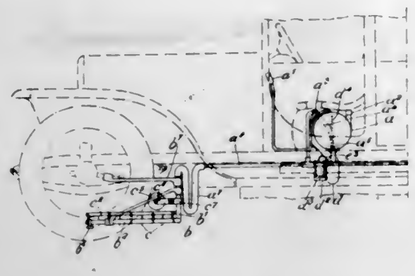


14. A hollow collapsible boot tree comprising a hollow leg and heel section, a hollow toe section including upper and lower portions slidably united by a dove-tail connection, said sections having circularly curved con-

tacting faces, an arm extending from said upper portion and pivotally connected to the leg and heel section, a curved link pivotally connected at one end to the lower

toe portion and at its other end to the leg and heel section, and means for yieldingly maintaining the parts in closed or lasting position.

1,499,77[illegible] 'UGE. HERMAN BACHARACH, Pittsburgh, Pa., assi[illegible]o, to Bacharach Industrial Instrument Company, a Cor[illegible]ation of Pennsylvania. Filed Mar. 14, 1921. Serial No. 452,278. 13 Claims. (Cl. 73—31.)

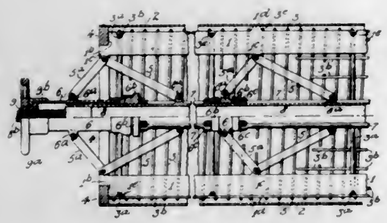


1. In combination in a gauge for measuring fluid pressure, a fluid pressure-responsive means, means to receive the same including a plurality of pressure legs of different cross sectional area bearing a definite relation to each other and having communication with the fluid of said means, connections for applying one of two fluid pressures, whose difference is to be measured, to a certain group of said legs, means whereby the application of such fluid pressures may be shifted so as to apply to certain legs of said group selectively, thus varying the range of said responsive means per unit of pressure, and connections for applying the other of the two said pressures to said responsive means through another of said legs outside of said group.

3. In combination in a gauge for measuring fluid pressures, liquid indicating means, a transparent tube carrying said liquid indicating means, a chamber containing a liquid in communication with the liquid of said indicating means, a pressure leg of cross section different from that of said chamber extending through the top of the chamber and adjustable vertically therein so that its lower end may be either above the surface of the liquid of the chamber or below the surface thereof, and means for applying fluid pressure through said pressure leg.

1,499,760. DUST-LAYING DEVICE FOR MOTOR VEHICLES. ALPHONSE BANDELIER, Lausanne, Switzerland. Filed Feb. 10, 1923. Serial No. 618,187. 2 Claims. (Cl. 180—84.)

1. Dust laying apparatus for motor vehicles, comprising a water reservoir carried by the vehicle, tubular sprinklers connected to said reservoir and having outlet nozzles adapted to sprinkle water on the ground immediately

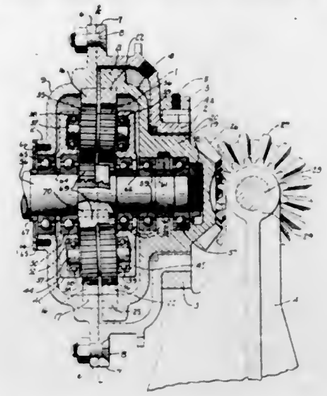


about each wheel of the vehicle, and reciprocatory means operated by the wheels of the vehicle for maintaining the nozzles of said sprinklers free from choking.

1,499,761. PRODUCTION OF M-AMINO-BENZALDEHYDE. DON W. BISSELL, Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 29, 1920. Serial No. 377,545. 14 Claims. (Cl. 260—130.5.)

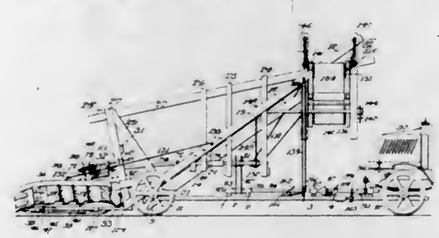
1. The method of reducing the bisulfite compound of meta-nitrobenzaldehyde, which comprises subjecting the same in aqueous solution to the action of iron and an amount of acid sufficient to combine with about 1% to 2% of the iron.

1,499,762. CENTRIFUGAL MANUFACTURE OF REENFORCED-CONCRETE PIPES AND THE LIKE. HARRY CONRAD, Toorak, Australia. Filed Jan. 15, 1924. Serial No. 686,279. 5 Claims. (Cl. 25—30.)



1. In the manufacture of reenforced concrete articles, holding a reinforcing cage concentrically in a mould by pressure of longitudinal adjustable members of bar type of a core, forming a concrete shell within the mould by centrifugal motion so that the shell maintains the cage in the said position, retracting the core members, adding concrete, and applying centrifugal motion, thereby embedding the cage to the extent required.

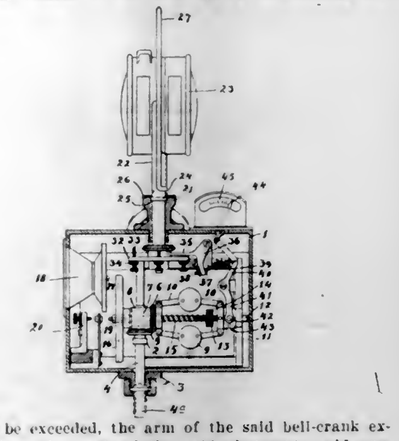
1,499,763. POWER-TRANSMITTING AND SPEED-REDUCING MECHANISM. KENNETH DAVIS, St. Benedict, Pa., assignor to Rembrandt Peale, St. Benedict, Pa. Filed Apr. 15, 1922. Serial No. 553,251. 11 Claims. (Cl. 74—34.)



1. A gearing mechanism including in combination two pinions of the same pitch diameter but different di-

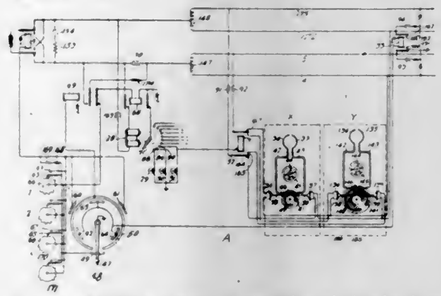
ametral pitch and fixed to rotate together, and two gears varying very slightly in their pitch diameters and having

the same diametral pitch as the two pinions, respectively, the gears and pinions of the same diametral pitch being in mesh with each other.



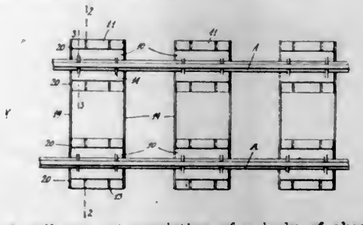
1,499,764. DIGGING AND LOADING MACHINE. PIERPONT E. DUTCHER, Upper Montclair, N. J. Filed Oct. 6, 1922. Serial No. 592,819. 28 Claims. (Cl. 37—192.)

1. An apparatus of the character described comprising, a movable support, elongated digging arms carried thereby in V formation, digging and carrying elements mounted in the arms, and means for actuating the digging elements along the surface of the arms.



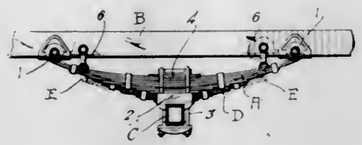
1,499,765. SPEED-CONTROLLING APPARATUS FOR AUTOMOBILES AND THE LIKE. JOHAN KRISTIAN BJARNE FALCK, Larvik, Norway. Filed Aug. 2, 1922. Serial No. 579,202. 3 Claims. (Cl. 175—355.)

3. In a speed indicating apparatus for motor-driven vehicles, the combination with a closed casing, of a shaft rotatably journalled therein and adapted to be rotated from the wheel-axle of the vehicle, a ball-governor operated by the said shaft, an axially movable spindle adapted to be displaced by the said governor in the direction of its axis, means carried by the said spindle for operating a signalling device on a predetermined speed of the governor being exceeded, an adjustable speed controlling spring connected with the said governor, a second shaft, rotatably journalled in the said casing, a lantern having variously colored glasses being carried by the said shaft, manually operated means for turning the said second shaft thereby changing the angular position of the said lantern to indicate a certain speed, a disk carried by the said second shaft within the said casing, adjustments adjustably mounted on the said disk, a pivoted bell-crank having one arm extending into the path of the said abutments and adapted to cooperate therewith, a two-arm lever pivoted to said casing and connected to the said ball-governor, and an adjustable spring connecting the said two-arm lever with the other arm of the said bell-crank, the tension of the said spring determining the



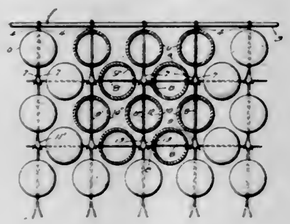
speed to be exceeded, the arm of the said bell-crank extending into the path of the said abutments said arm being upwardly curved.

1,499,766. SWITCHING SYSTEM. JOSEPH C. FIELD, Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 5, 1919. Serial No. 308,759. 23 Claims. (Cl. 177—386.)



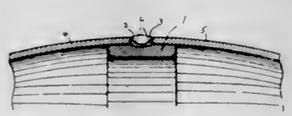
9. In a switching system, a plurality of circuits interconnecting a plurality of selectable stations, selectors and selectable devices at each station, means for operating said selectors to select a device over one of said circuits and means operative for transmitting over another of the circuits a series of impulses to selectively set a selector to prepare it for subsequent operation by said operating means.

1,499,767. RAILWAY-TRACK CONSTRUCTION. CHESTER F. GAILOR, Brooklyn, N. Y., and CHARLES H. CLARK, Cleveland, Ohio. Filed Nov. 19, 1921. Serial No. 516,287. 12 Claims. (Cl. 238—7.)



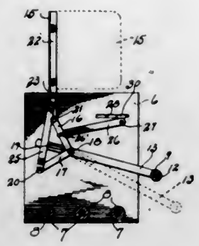
8. A rail support consisting of a body of sheet metal formed with a central member and side members diverging from said central member and forming a channel therewith, and projections extending from said support into said channel.

1,499,768. VEHICLE SPRING. GEORGE A. GEMMER, Newark, N. J. Filed July 17, 1922. Serial No. 575,470. 2 Claims. (Cl. 267—45.)



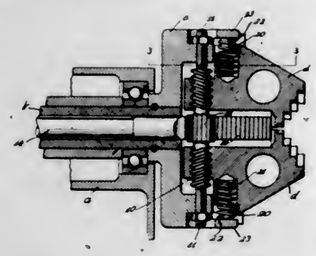
1. In a spring construction, the combination of a pair of members one of which is movable toward and from the other, a main leaf spring connected at its ends to one of said members and substantially centrally of its length to the other to yieldingly hold said members in spaced relation, and an auxiliary leaf spring connected at its ends to said first-mentioned member and substantially centrally of its length to said second-mentioned member and tending to draw said members together against the influence of said main spring, said auxiliary spring gradually decreasing its said influence on said members for a portion of the movement of either toward the other and then cooperating with said main spring to yieldingly resist further movement of either of said members toward the other.

1,499,769. FABRICATED BEADWORK. MARCEL GODEFROY, New York, N. Y. Filed Dec. 7, 1922. Serial No. 605,532. 3 Claims. (Cl. 63—2.)



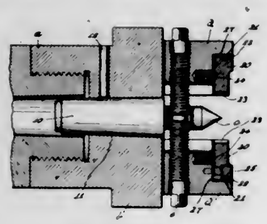
1. A fabricated material composed of beads carried on a flexible frame consisting of lengths of wire shaped to form open end loops, the extremities of each of said loops being interlocked with adjacent loops, certain of the beads holding the adjacent loops together to continue the fabric laterally.

1,499,770. ELECTRIC-ARC WELDING. EMIL GRUENFELDT, Cleveland, Ohio. Filed Sept. 1, 1921. Serial No. 497,586. 5 Claims. (Cl. 219—10.)



1. A joint produced by electric arc welding comprising a backing bar, a pair of sheet metal members on one face of the bar with their edges spaced, the edges of said sheet metal parts being secured to said bar by fusion of said edges and of spacing projections on the bar between the said edges and electrode metal filling the channel formed by the face of the bar and the edges of said sheet metal parts.

1,499,771. AUTOMATIC MAIL-BOX SIGNAL. HENRY W. GUY, Kansas City, Mo. Filed Sept. 6, 1923. Serial No. 661,203. 6 Claims. (Cl. 232—35.)

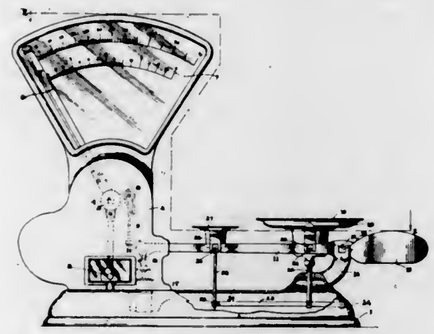


1. An automatic mail box signal, comprising in combination with the door of a mail box a slotted support, an indicator, toggle-link actuating means and means for returning said indicator to a set position connecting one of said toggle links and the slot in said support.

1,499,772. CHUCK. BENGT M. W. HANSON, Hartford, Conn. Filed Aug. 20, 1921. Serial No. 493,829. 3 Claims. (Cl. 279—112.)

1. In a device of the character described, radially movable jaws, means for positively and bodily moving said jaws towards each other, and automatically operating means for counteracting the centrifugal force of said jaws.

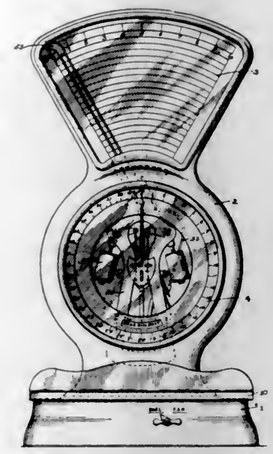
1,499,773. WORK DRIVER FOR LATHES. BENGT M. W. HANSON, Hartford, Conn. Filed Jan. 25, 1922. Serial No. 531,551. 1 Claim. (Cl. 82—40.)



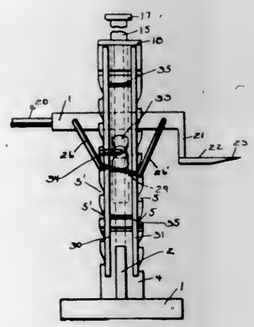
In a device of the character described, a rotatable head, an axial work center carried thereby and adapted to engage the end of the work, jaw blocks mounted for radial movement on said head, means for moving said jaw blocks towards each other, and jaw members fulcrumed on said blocks forwardly of the active faces of said jaw members whereby, when said jaw members engage the work, they swing about their fulcrums and thus force the work towards and hold the work against said work center.

1,499,774. PROCESS OF MAKING HEAT-INSULATING COVERINGS FOR PIPES OR SIMILAR ARTICLES AND COVERING MADE THEREBY. FRANK A. HEADSON, Milwaukee, Wis., assignor to Johns-Manville, Incorporated, a Corporation of New York. Filed Aug. 26, 1922. Serial No. 584,534. 14 Claims. (Cl. 154—28.)

3. A process of making heat insulating coverings having separable inner and outer sections, which comprises winding heat insulating sheet material around a rotary support, thereby forming an inner section having a plurality of connected layers of sheet material, then wrapping around said inner section an intermediate separating layer of sheet material having a dry surface to separate said inner section from an outer section to be wound thereon, and then winding heat insulating sheet material upon and around said intermediate layer and around said inner section by rotating said inner section, thereby forming an outer section having a plurality of connected layers of sheet material surrounding said intermediate separating layer and said inner section and separated from said inner section by said intermediate separating layer.



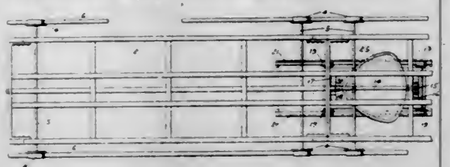
1,499,775. WEIGHING SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Jan. 26, 1920. Serial No. 354,141. 9 Claims. (Cl. 265—61.)



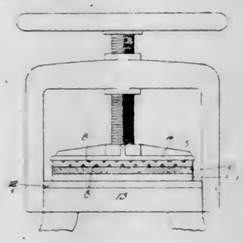
1. In a weighing scale, in combination, a lever fulcrumed adjacent one end, load-offsetting mechanism, a connection from the other end of said lever to said load-offsetting mechanism, and a plurality of commodity-receivers connected to said lever intermediate its fulcrum and the connection to said load-offsetting mechanism.

1,499,776. FAN AND DIAL PENDULUM SCALE. HALVOR O. HEM, Toledo, Ohio, a Corporation of New Jersey. Filed Jan. 26, 1920. Serial No. 354,144. 14 Claims. (Cl. 265—53.)

1. In a scale, in combination, a commodity-receiver, motion multiplying weighing mechanism, means for changing the multiplication of said mechanism, a plurality of independent indicators connected with said mechanism, one of said indicators indicating the load upon the commodity-receiver in each multiplication of said mechanism, means for designating the indicator upon which the load is indicated in the particular multiplication employed and means for operatively connecting said multiplication changing and said indicator designating means.



1,499,777. JACK. JAMES L. HICKEY, Milwaukee, Wis. Filed Dec. 11, 1922. Serial No. 606,326. 3 Claims. (Cl. 254—110.)



1. A jack comprising a base and two opposed substantially vertical uprights, parallel vertical guides on the inner faces of said uprights, each of said uprights having ratchet teeth projecting from its opposite edges, a supporting bar slidable on the guideways of said uprights, a lever pivotally connected to said bar, pawls pivoted to said lever and depending therefrom on each side of the pivotal connection thereof, springs urging said pawls into engagement with said ratchet teeth, a pair of vertical bars slidably mounted on the outer face of one of said uprights for horizontal bodily movements towards and away from each other, and manually operable means for spreading said bars to disengage the pawls from said ratchet teeth.

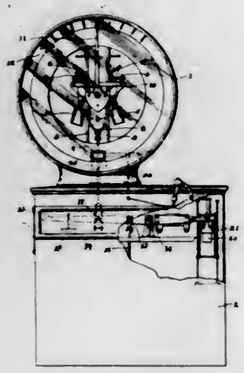
1,499,778. CONVEYING APPARATUS. HOWARD R. LOUGHRIDGE, Pittsburgh, Pa., assignor of one-tenth to W. B. McCrory, Pittsburgh, Pa.; two-tenths to C. J. Herzog, Wilkinsburg, Pa.; two-tenths to L. W. Herzog, Troy, N. Y.; two-tenths to C. H. Loughridge, Cleveland, Ohio; and one-tenth to N. F. Loughridge, Pittsburgh, Pa. Filed Nov. 13, 1922. Serial No. 600,622. 8 Claims. (Cl. 104—147.)

3. In apparatus of the kind disclosed, a supporting truck provided with upwardly extending guiding pins and surrounding cushioning springs, an upper removable frame having portions engaging said pins and springs, and means for shifting said truck and frame intermittently.

1,499,779. PLATEN FOR STEREOTYPE DRYING TABLES. WALKER W. MCCARROLL, New Haven, Conn. Filed Jan. 5, 1923. Serial No. 610,955. 3 Claims. (Cl. 34—16.)

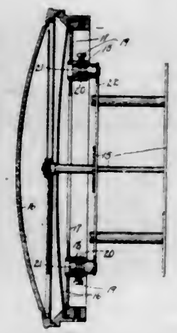
3. A platen for stereotype drying tables, comprising a metal plate formed in one face with a series of parallel channels and on its opposite face with two series of grooves arranged at right angles to each other, one series of grooves intersecting the said channels, whereby a series of openings is formed through the plate.

1,499,780. METHOD FOR COFFEE ROASTING. SARIN OPREAN, New York, N. Y. Filed July 13, 1923. Serial No. 651,427. 3 Claims. (Cl. 34—24.)



1. The process of roasting coffee which consists in a partial roasting operation, followed by subjection of the heated coffee to cold water for a short period and final completion of the roasting operation.

1,499,781. PIPE COVERING AND METHOD OF MAKING SAME. FREDERIC L. PILLIOD, Plainfield, N. J., assignor to Johns-Manville Incorporated, a Corporation of New York. Filed Nov. 6, 1922. Serial No. 599,180. 8 Claims. (Cl. 154—28.)



5. As an article of manufacture, a sectional pipe covering comprising two nested longitudinally slitted tubes each composed of a superposed layer of non-heat conducting material cemented together and a layer of smooth-faced material located between the adjacent surfaces of two tubes so formed and cemented to one of these only whereby the two tubes when applied to a pipe as a covering therefor can be slid one upon the other both circumferentially and longitudinally for the purpose of breaking joints.

1,499,782. WEIGHING MECHANISM. ELMER C. POOL, New Castle, Pa., assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 26, 1919. Serial No. 347,434. 13 Claims. (Cl. 265—48.)

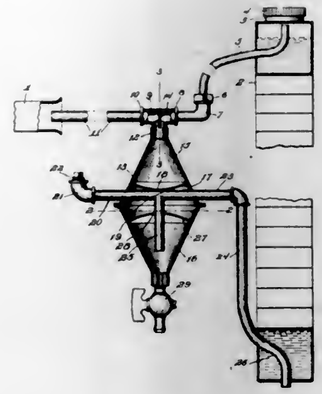
1. In a weighing scale, load-offsetting means comprising, in combination, a beam, a plurality of unit weights, means for supporting said unit weights in echelon above and transversely of said beam, and means for lowering said supporting means and thereby successively depositing said weights in a transverse row upon said beam.

1,499,783. CLOCK. WILSON E. PORTER, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Oct. 16, 1923. Serial No. 668,811. 1 Claim. (Cl. 58—127.)

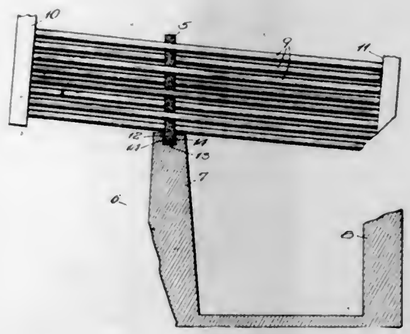
In a clock, the combination with a movement-unit, of a sash-unit, coupling-sleeves applied to one of the said units, coupling-studs applied to the other of the said units in position to register with the said sleeves when the units are brought together and formed with V-shaped grooves, and set-screws radially mounted in the said coupling-sleeves and adapted to fit into the grooves of the studs, so as to engage with the opposite walls thereof, whereby, by entering the studs into the sleeves and engaging the screws with the grooves in the studs, the units are rigidly united and all play taken up.

1,499,784. LIP-STICK HOLDER. ADOLPH C. RECKER, Oakville, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed Aug. 10, 1923. Serial No. 656,640. 1 Claim. (Cl. 206—56.)

In a lip-stick holder, the combination with a tubular cosmetic-container having its lower end contracted to form a concentric bearing-opening, of a feed-screw located in the said container and having its lower end threaded and extended downward through the said bearing-opening, a follower located within the container and operated by the said feed-screw, a nut applied to the said projecting lower end of the feed-screw, its upper face being abutted against the outer face of the lower end of the said container so as to close the concentric bearing-opening thereof, a bearing-shoulder located upon the said screw between the inner and projecting ends thereof and fitting within the said bearing-opening, and a collar located upon the screw adjacent to the said bearing-shoulder in position to engage with the inner face of the lower end of the container for preventing the screw from downward displacement with respect thereto.



1,499,785. LEATHER AND RUBBER ARTICLE. MATHIAS REGULA, New York, N. Y. Filed Oct. 31, 1922. Serial No. 598,065. 4 Claims. (Cl. 18—59.)

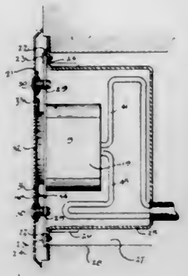


1. A sheet of material made up of rubber and small particles of leather embedded in said rubber, the particles of leather being more closely spaced toward the inner face of the sheet.

1,499,786. FUEL ECONOMIZER AND CARBON REDUCER. GROVER C. RUHMANN and ELO E. PARKER, Kenedy, Tex. Filed Sept. 19, 1922. Serial No. 589,273. 7 Claims. (Cl. 183—111.)

1. In a vaporizer for internal combustion engines, a water and steam separator comprising a casing having an upper water and vapor receiving chamber and a lower water containing chamber, admission and discharge passages communicating with the inlet of the upper chamber, a baffle plate disposed between said passages and extending downwardly into said inlet, a perforate baffle plate in the upper chamber of the casing, a perforate baffle plate in the lower chamber of the casing, and means for discharging water from said lower chamber.

1,499,787. WALL CONSTRUCTION. WILLIAM A. L. SCHAEFER, Chicago, Ill., assignor to Jointless Firebrick Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 11, 1922. Serial No. 606,182. 11 Claims. (Cl. 25—157.)



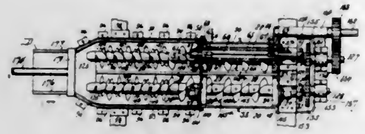
1. The method of constructing a wall which comprises making all points of support for one surface of the wall temporary to temporarily anchor the wall until self-supporting and when self-supporting freeing the entire surface of the wall anchored by said temporary anchoring means.

1,499,788. SCREW-PLUG FLUSH RECEPTACLE. IRA R. SELTZER, Waterbury, Conn., assignor to The Gordon Electric Mfg. Co., Waterville, Conn., a Corporation. Filed June 21, 1920. Serial No. 390,395. 4 Claims. (Cl. 247—20.)

1. The combination with a mounting-bridge having an opening, of a receptacle-plate located in front of the said

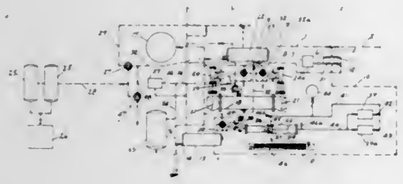
bridge in spaced relation thereto, and a receptacle-base installed in the said opening of the bridge and adapted

at its forward end to extend laterally into the space between the bridge and plate, whereby it is held against endwise displacement.



1,499,789. BANDAGE. DANA O. SEWALL, Walpole, Mass., assignor to Lewis Manufacturing Company, Walpole, Mass., a Corporation of Massachusetts. Filed July 2, 1919. Serial No. 308,388. 1 Claim. (Cl. 128—296.)

A bandage of the character described, formed of a narrow strip of gauze, a series of pads of absorbent material arranged on one face of said gauze, the gauze being folded inwardly over one edge of said pads and upon the face of the pads and then outwardly again, the gauze at the opposite edge of said pads being folded over the previous folds and then folded downwardly and inwardly again over said previous folds and then outwardly, the raw edges of the gauze being enclosed in the folded strip and unexposed.

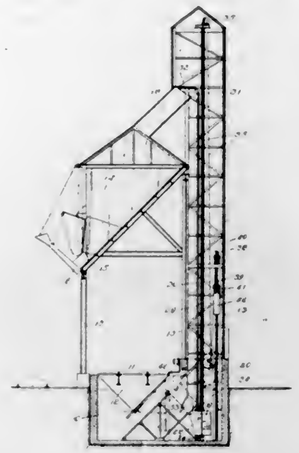


1,499,790. KNEADING MACHINE. ALBERT SHARP and GEORGE SHARP, Bayonne, N. J. Filed Oct. 11, 1921. Serial No. 507,107. 5 Claims. (Cl. 259—110.)

1. In a machine of the character described the combination of a pair of chambers connected at their lower portions, side walls for the first chamber that connect with semi-circular bottom walls forming a longitudinal apex at their juncture, the said bottom walls with their apex extending to form the bottom and side walls of the second chamber, a rear wall for the first chamber, a front wall for the first chamber, said front wall having semi-circular openings at its bottom end, which at their juncture form an apex, the apex of said front wall over the other apex

forming a port between them, a cover for the second chamber having semi-circular walls forming at their juncture a longitudinal apex, the latter apex vanishing in the vicinity of the ends of the cover forming pockets in said second chamber at the ends thereof and means to knead and blend a material in said chambers and to force the same therethrough.

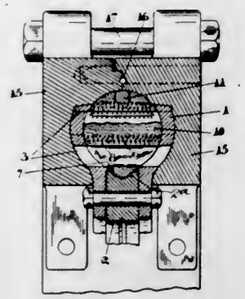
1,499,791. PRESERVATIVE TREATMENT FOR TIMBERS. GRANT B. SHIPLEY, Pittsburgh, Pa. Filed Dec. 19, 1923. Serial No. 681,533. 20 Claims. (Cl. 99—12.)



1. The process of treating timbers preservatively which consists in subjecting the timbers to a preservative bath under a pressure in excess of two hundred and fifty pounds per square inch.

20. The process of treating timbers preservatively which consists in subjecting the timbers to a preservative bath for a period of time not in excess of five minutes, forcing the fluid of the bath into the body of the timbers under a high pressure produced by the stroke of a fluid pressure ram, regulating the pressure produced by the stroke of such ram in accordance with the nature of the wood undergoing treatment, releasing such pressure, and immediately withdrawing surplus preservative from the timbers by subjecting the same to the effect of a partial vacuum.

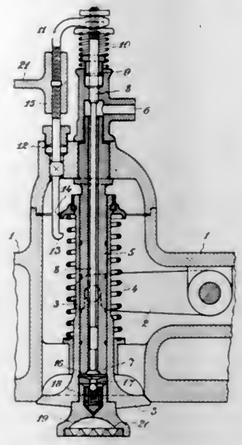
1,499,792. MATERIAL-ELEVATING APPARATUS. BARTON S. SNOW, Batavia, Ill., assignor to T. W. Snow Construction Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1922. Serial No. 548,365. 37 Claims. (Cl. 214—125.)



11. In material-elevating apparatus, the combination of a hopper for the material to be elevated, a bucket for elevating the material, hoisting means for said bucket, a counterweight for said bucket, a bodily movable receptacle which, when in lower position, receives material from said hopper, and, when in raised position, is positioned for discharge into said bucket, and means actuated by said counterweight in descending, for moving said receptacle

to raised position, said receptacle being provided with means controlling the discharge of the material from

said receptacle, operative to open position by the downward movement of said bucket and operative to closed position by the upward movement of said bucket.

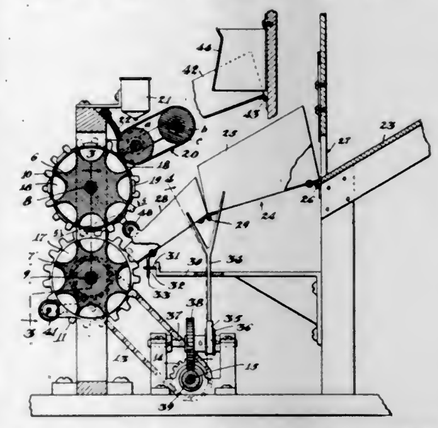


1,499,793. MOLD FOR THE MANUFACTURE OF RESILIENT TIRES. ELI J. TAYLOR, Toronto, Ontario, Canada. Filed Mar. 17, 1923. Serial No. 625,873. 4 Claims. (Cl. 18—42.)

1. A mold for forming tires such as herein described comprising a ring, two side wall half molds adapted to be secured to the ring, said half molds having a series of holes therein for the passage of transverse metal cores; shims between the outer sides of the ring and the half molds removable to allow of the contraction of the mold; and a divided outer mold adapted to enclose the aforesaid half molds and to shape up the tread of the tire.

1,499,794. COMBINED AIR VALVE AND FUEL PUMP FOR INTERNAL-COMBUSTION ENGINES. ARTHUR OSKAR LEONARD WENNERBY, Halmstad, Sweden. Filed Mar. 29, 1923. Serial No. 628,509. 6 Claims. (Cl. 123—33.)

1. Combined air valve and fuel pump arrangement for internal combustion engines having a hollow cylinder cover forming a chamber for compressed air, comprising for each cylinder of the engine a fuel inlet pipe fixed within the hollow cylinder cover, a sleeve shaped air valve arranged coaxially around said fuel pipe slidably lengthwise in relation thereto and thereby acting as a fuel pump, means for opening and closing said air valve in correct timing with regard to the strokes of the engine, a fuel valve provided at the inner end of the fuel inlet



pipe facing the engine cylinder and controlling means interposed between the fuel valve and the air valve so that the former is controlled in correct timing in relation to the latter.

1,499,795. PROCESS FOR PREPARING EXCHANGE SILICATES FOR INDUSTRIAL PURPOSES. JAMES B. WHERRY, Ardmore, S. Dak. Filed June 12, 1922. Serial No. 567,825. 6 Claims. (Cl. 23—13.)

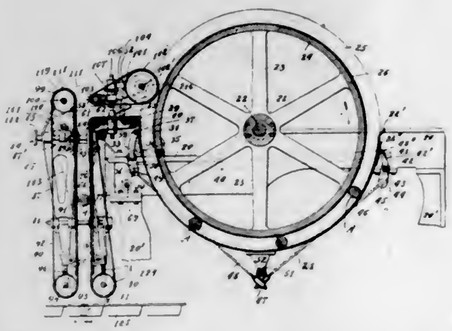
1. The method of producing granulated zeolite from natural clay which comprises first producing a slurry from the clay then alkalizing the slurry to correct the quantity of bases present, then reducing the mass to dry particles by heating to a temperature sufficiently high to completely dehydrate the same and subsequently rehydrating the dried particles.

1,499,796. IMPRINTING MACHINE. HARRIS C. WILKINSON, Los Angeles, Calif. Filed Jan. 18, 1922. Serial No. 530,208. 5 Claims. (Cl. 101—37.)

1. In a printing device, a printing roller formed with a series of peripheral recesses, a tensioned yieldable member spanning the recesses, and yieldable type on said member opposite the recesses.

1,499,797. METHOD OF MAKING TWIST DRILLS. NORMAN E. WOODS, Paterson, N. J. Original application filed Sept. 30, 1919, Serial No. 327,541. Patent No. 1,384,738, dated July 12, 1921. Divided and this application filed July 11, 1921. Serial No. 483,886. 8 Claims. (Cl. 76—108.)

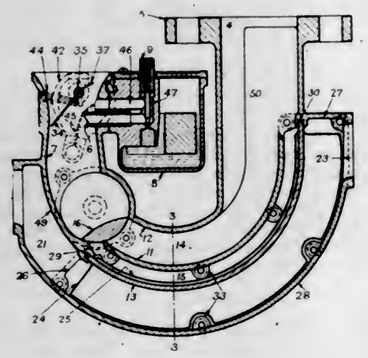
1. The method of making a twist drill which consists in providing a drill blank having grooves of a predetermined substantially circular cross-sectional form extending lengthwise of its blades and intersecting the cutting lips thereof, and then twisting the blank to impart the desired spiral form to the blades and to simultaneously distort the walls of the grooves so as to produce grooves which are comparatively shallow at their sides nearer to the center of the drill and increase gradually and progressively in width toward their sides farther fom the center of the drill.



1,499,798. PROCESS FOR OXIDIZING ORGANIC SUBSTANCES IN ALKALINE LIQUORS. JEAN D'ANS, Berlin, Germany. Filed Oct. 10, 1922. Serial No. 593,632. 9 Claims. (Cl. 23—22.)

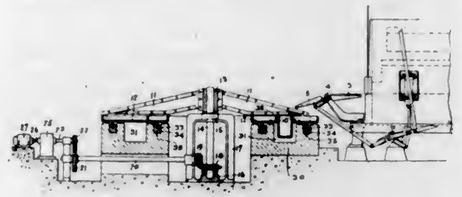
1. Process for oxidizing organic substances in alkaline lyes, which consists in heating an alkaline lye together with an oxidizing agent under pressure in the presence of a catalyzer.

1,499,799. CONVEYER FOR PLASTIC BODIES. ROBERT ELMER BAKER, Bronxville, and LAURENCE SEYMOUR HARBER, Katonah, N. Y., assignors to Joseph Baker Sons & Perkins Company, Inc., White Plains, N. Y., a Corporation of New York. Filed Sept. 21, 1920. Serial No. 411,749. 17 Claims. (Cl. 107—9.)



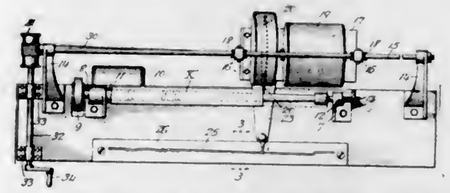
1. In apparatus for feeding materials, a rotary drum, a pressure-plate located adjacent to a portion of the periphery of said drum and adjustable toward and from the same, a conveyer leading away from the drum at the discharge end of said pressure plate, a bridging member overlapping the supporting portion of said conveyer adjacent to the drum and guided to move toward and from said drum, in a direction parallel to said supporting portion, the discharge end of said pressure-plate being in sliding engagement with said bridging member, and means for effecting the adjustment of said pressure-plate and bridging member.

15. In apparatus for feeding materials, a conveyer having a supporting run and a depending run at one end of said supporting run, a rotary drum for supplying the material to the other end of said supporting run, a pressure-plate located adjacent to a potion of the periphery of said drum and terminating adjacent to said other end of said supporting run, driving mechanism for said conveyer, a carrier on which said depending run is mounted, said carrier being adjustable to vary the angle which the path of said depending run forms with the path of the supporting run, another conveying means



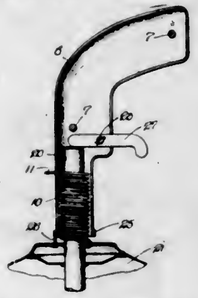
mounted on said carrier and having an operative run parallel to said depending run and projecting above the upper end of said run so as to be in the path of the material fed by the supporting run, flexible driving means connecting said conveying means with said driving mechanism, and tension means for maintaining said flexible means in proper driving condition during the adjustment of the carrier.

1,499,800. CARBURETOR. BRYANT BANNISTER, Pittsburgh, Pa., assignor to Bannister Motor Appliance Company, a Corporation of Pennsylvania. Filed Nov. 12, 1921. Serial No. 514,571. 11 Claims. (Cl. 123—122.)



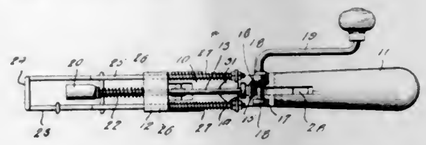
1. In a combustible mixture forming device for internal combustion engines, means dividing the mixture traversing the device into two streams of different densities, means for heating the denser of said streams to a higher temperature than the other steam and means for allocating the mixture to said streams.

1,499,801. CASE-HARDENING PROCESS. FRANK A. BOND, Pittsburgh, Pa., assignor to United States Chain & Forging Company, a Corporation of Delaware. Filed July 18, 1921. Serial No. 485,699. 9 Claims. (Cl. 148—19.)



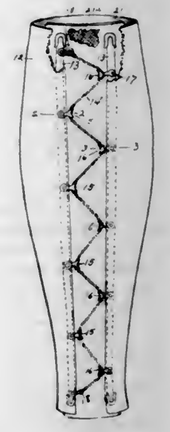
1. The process of hardening iron and steel that comprises preheating the metal to be hardened to at least its upper critical point and then immersing the preheated metal in a fused bath containing a cyanide.

1,499,802. WOOD-TURNING MACHINE. LESLIE H. BUELIN, Chicago, Ill. Filed Oct. 20, 1921. Serial No. 509,173. 4 Claims. (Cl. 142—37.)



1. A wood turning machine comprising a bed, work spindles disposed on said bed, a curved support disposed at each end of the bed and having their upper ends connected with a rail, a platform suspended from said rail, movably along said rail and oscillating transversely of said rail, said platform having mounted thereon a wood cutting saw whose diameter greatly exceeds that of the work and means for rotating said saw, the axis of the said saw being inclined to the horizontal and the cutting edge of the saw being inclined to the axis of the work, an arm projecting from said platform having a downwardly projecting lug, means disposed on the bed cooperating with said lug for guiding the cutter longitudinally and transversely.

1,499,803. TOY SPINNER. EDWARD L. CAYO, Buchanan, Mich. Filed June 29, 1922. Serial No. 571,626. 1 Claim. (Cl. 46—32.)

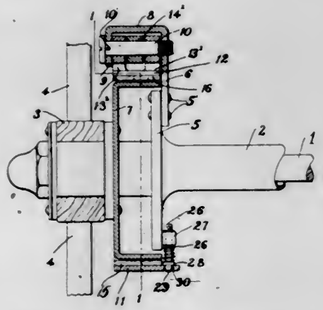


A device for spinning a top comprising a pistol grip stock having a hollow barrel; a coiled spring within the barrel having its inner end connected to the barrel and its free end formed into a hook; a fixed stop projecting from the end of the barrel to engage a top when the stem thereof is inserted into the spring and a trigger extending transversely into said stock and pivoted thereto, its inner end in a plane above the axis of the spring, whereby to disconnect the top and stock directly by pull on the trigger.

1,499,804. WRENCH. SANDY CHAMPION, Hot Springs, Ark. Filed May 15, 1922. Serial No. 561,052. 1 Claim. (Cl. 81—56.)

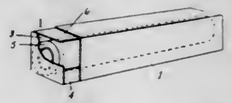
A wrench tool comprising a stock, a shaft rotatably mounted in said stock, a socket wrench jaw slidably mounted at one end of said shaft, a spring to normally hold said jaw in its forwardmost position, means including a handle to rotate said shaft and jaw, a fixed clamping jaw carried by said stock in advance of said wrench jaw, a movable clamping jaw carried by said stock and mounted to slide on said fixed clamping jaw, means to normally hold said movable clamping jaw in its inwardmost position in spaced rotations to said fixed clamping jaw, a lever pivotally mounted on said stock, and means operatively connecting said lever and said movable jaw whereby upon proper movement of said lever said movable jaw may be carried to move toward said fixed clamping jaw.

1,499,805. ELASTIC BANDAGE. HARRY B. CHATTERTON, West Somerville, Mass. Filed Aug. 29, 1921. Serial No. 496,211. 4 Claims. (Cl. 128—165.)



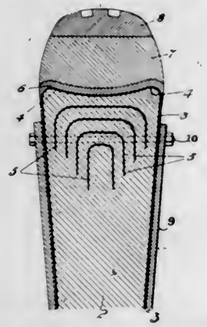
1. An elastic bandage comprising a flexible body section having spaced apart longitudinal edges and coupling members adjacent to said edges, an intermediate flexible filling section overlapped by the longitudinal edges of the body section, and adapted to cover a portion of a limb between said edges, and an elongated resilient contractile connection engaged with said coupling members and adapted to yieldingly contract the body section, said connection bearing on the outer surface of the filling section and exerting a distributed yielding inward pressure thereon, means being provided for releasing the normal tension of the resilient connection to permit the opening of the bandage.

1,499,806. POWER-DRIVEN SLEIGH. MARCEL DEMANGEON, Amisk, Alberta, Canada. Filed June 12, 1923. Serial No. 644,834. 4 Claims. (Cl. 180—4.)



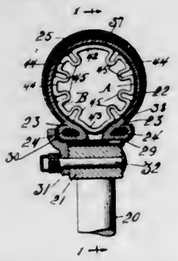
1. In a sleigh, a power device, a series of kicker arms resting freely at their rear ends on the surface on which the sleigh is traveling, eccentrics to which the forward ends of said kicker arms are connected, and means forming an operative connection between said eccentrics and the said power device, and members projected longitudinally of the said kicker arms and adapted to project below the latter during their rearward movement only, and cam elements for operating the said members.

1,499,807. AUTOMOBILE BRAKE. EDSON EUGENE DEWEY, Lee, Mass. Filed June 15, 1922. Serial No. 568,395. 3 Claims. (Cl. 188—77.)



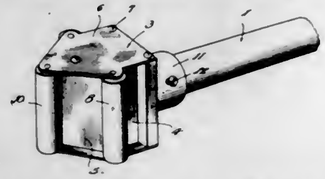
1. In a brake construction, the combination, with a pair of external band sections, means for pivotally connecting the same together, and for supporting the sections on the axle housing, and means for retaining the band sections in place to prevent lateral displacement, said means comprising a spring actuated pin on the housing engaging an opening in one of said band sections.

1,499,808. PACKAGE FOR ROLL PAPER. EDWARD H. DISTIN, Kalamazoo, Mich., assignor to Kalamazoo Paper Box Company, Kalamazoo, Mich. Filed Mar. 12, 1923. Serial No. 624,600. 8 Claims. (Cl. 206—52.)



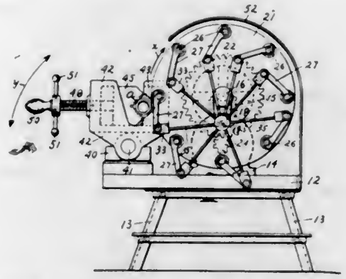
1. A package for a roll of paper comprising a box body member open at the top and a cover member telescoping within said body member with the edges of its end and one side wall resting on the bottom thereof, its other side wall being cut away permitting the paper being passed under and upwardly at the side of the same, and a plate of sheet metal disposed within the body member at the side of said cutaway wall of said cover, said plate being of such dimensions as to rest within the body member with its upper edge projecting above the top thereof providing a cutting blade, said plate being freely removable.

1,499,809. DISK WHEEL FOR MOTOR AND OTHER ROAD VEHICLES. HAROLD HILL DUKE, Rockdale, Sydney, New South Wales, Australia. Filed Dec. 6, 1923. Serial No. 679,035. 6 Claims. (Cl. 301—63.)



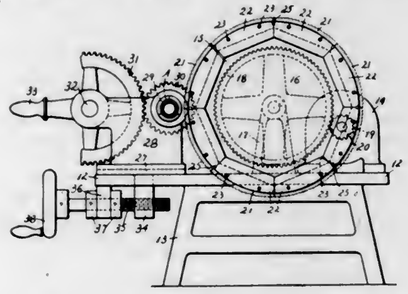
1. An improved solid disk wheel comprising a circular core composed of finely granulated cork and rubber, a plurality of reinforcing fabric bands within said core, a tread integral with said core and rubber side walls encasing said circular core.

1,499,810. NONPNEUMATIC TIRE. ANDREW EGG, New York, N. Y. Filed Oct. 17, 1921. Serial No. 508,342. 2 Claims. (Cl. 152—8.)



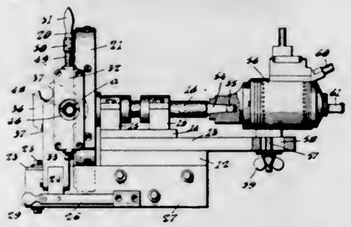
2. In a tire of the character described the combination of a shoe, a plurality of helical springs in the shoe, each winding of the springs consisting of a circumferential crown portion, a circumferential base portion, circumferential side portions and depending U shaped portions connecting the circumferential portions.

1,499,811. IMPLEMENT FOR FOLDING HOSE. JOHN R. ELDER, Fort Edward, N. Y. Filed Apr. 18, 1922. Serial No. 555,512. 4 Claims. (Cl. 81—3.)



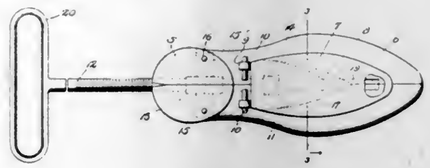
1. A hand implement for use in folding hose comprising a handle member, and a hose-engaging head carried by one end of the handle and having a triangular nose projecting from its forward side, said nose having flat sides converging toward the axis of the handle to form a bight-supporting edge at that end of the head more remote from the handle.

1,499,812. PIPE CUTTING OR SAWING MACHINE. FREDERIC W. ERICKSON, Pelham Manor, N. Y. Filed June 28, 1921. Serial No. 480,982. 12 Claims. (Cl. 29—67.)



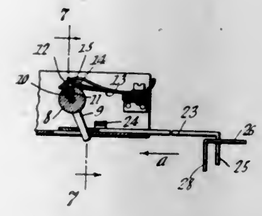
1. A metal cutting machine having a series of saw blades continuously movable in a rotary path following one another, and means for causing each blade to shift its position to present its teeth to the work at a fixed distance from the axis of rotation of the series.

1,499,813. METHOD AND MACHINE FOR SAWING METAL ARTICLES. FREDERIC W. ERICKSON, Pelham Manor, N. Y. Filed Aug. 18, 1921. Serial No. 493,305. 10 Claims. (Cl. 29—69.)



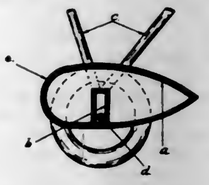
1. The method of cutting metal pipes, consisting in subjecting the pipe to a continuous sawing operation and manually rotating the pipe during said operation, the final cutting operation being effected in a direction approximating a chord of the inner surface of the pipe.

1,499,814. MACHINE FOR SAWING METAL ARTICLES. FREDERIC W. ERICKSON, Larchmont, N. Y. Filed June 23, 1922. Serial No. 570,458. 8 Claims. (Cl. 29—67.)



1. A sawing machine comprising a rotary circular series of straight-edge saw blades, and means for rotatively supporting a pipe extending transversely of the axis of rotation of the saw blades.

1,499,815. SHOE STRETCHER. JOHN G. FLORESTA and JOSEPH ZANGHI, Tyrone, Pa. Filed July 12, 1923. Serial No. 651,055. 2 Claims. (Cl. 12—128.3.)

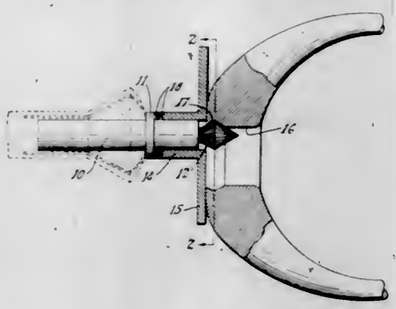


1. A shoe stretcher including a shoe form engageable with the interior of the shoe and expansible to stretch the shoe upper laterally on and outwardly from the shoe sole, a portion of the form being reversible into an inoperative position on the form to permit lateral stretching only of the shoe upper.

1,499,816. ELECTRIC TOY. EDWARD FODERARO, Scranton, Pa. Filed Mar. 18, 1924. Serial No. 700,122. 4 Claims. (Cl. 104—151.)

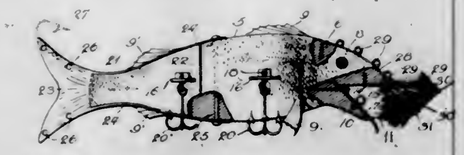
1. The combination with an electric locomotive and a car coupled thereto and mounted for movement relative to the locomotive, of means for directing a current to the motor of the locomotive, and means operated by the relative movement of the locomotive and car for reversing the current through the motor.

1,499,817. ARRANGEMENT AND DISPOSITION OF FUEL TANKS IN FLYING MACHINES. ANTHONY HERMAN GERARD FOKKER, 84 Rokin, Amsterdam, Netherlands. Filed Dec. 9, 1920. Serial No. 429,558. 4 Claims. (Cl. 244—31.)



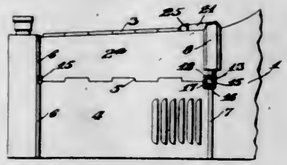
1. In a flying machine, an undercarriage axle, a fuel tank receiving the undercarriage axle and means for allowing movement of the said axle independently of the fuel tank.

1,499,818. GEM-SEAT-GROOVING TOOL. AUGUST FRANCONETTI, Washington, D. C. Filed Sept. 27, 1922. Serial No. 590,912. 4 Claims. (Cl. 90—18.)



1. In a device for forming grooves in the walls of gem receiving openings of jewelry comprising a rotatable

shaft, a burr carried by the end of the shaft, and a flange carried by the shaft and adapted for engagement by it

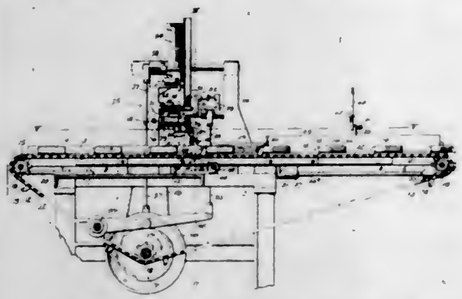


of jewelry in which the grooves are to be formed, said flange being adjustable longitudinally of the shaft.

1,499,819. ARTIFICIAL FISH BAIT. BERT G. GOBLE, Tulsa, Okla. Filed Feb. 6, 1923. Serial No. 617,408. 9 Claims. (Cl. 43—16.)

3. In an artificial bait, a floatable main body, a freely swinging tail section attached to the rear end of the body, said body having an open mouth, and a plate rigidly secured in the open mouth of the body on the upper surface of the lower jaw of said body, the plate including a projecting forward end adapted to be flexed vertically for regulating the course of the bait when retrieved.

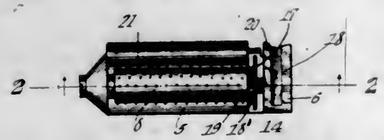
1,499,820. HOOD ATTACHMENT FOR AUTOMOBILES. ROBERT J. GRIESEDIECK, St. Louis, Mo. Filed Nov. 21, 1919. Serial No. 339,635. 6 Claims. (Cl. 180—69.)



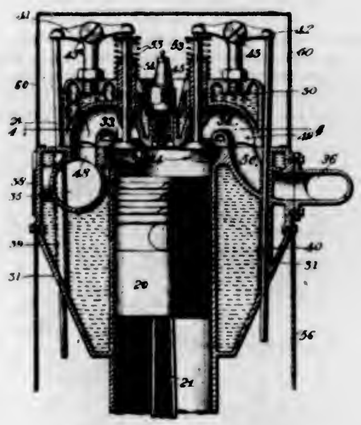
1. A weather-strip having provision at its ends for attachment to the hood of an automobile, said strip having a marginal rib engageable throughout its length in sealing contact with the hood, said strip overhanging the margin of the hood and having a bead at the margin of its overhanging portion engageable throughout its length in sealing contact with the cowl of the automobile.

1,499,821. FASTENING MEANS FOR SECURING FABRIC TO A BASE OF WOODWORK OR OTHER MATERIAL. DAVID RHYS GRIFFITHS, Langside, Glasgow, Scotland. Filed Nov. 27, 1922. Serial No. 603,425. 5 Claims. (Cl. 156—25.)

2. Fastening means of the type specified for securing fabric to a rigid base comprising, in combination, a rigid base having an open-sided slot substantially rectangular in cross section with one side wall slightly hollowed out to form a shoulder near the open side of the slot, a locking strip substantially square in cross section, and spring means located about diagonally opposite said shoulder and adapted to tilt said strip beneath said shoulder.

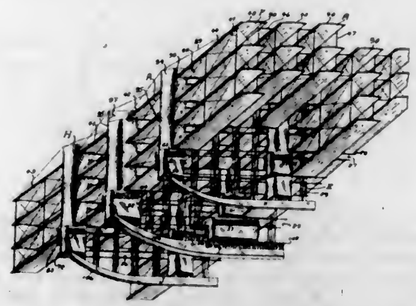


1,499,822. STAMP OR LABEL APPLYING MACHINE. GEORGE W. GWINN, Brooklyn, and JAMES W. LEARY, Hollis, N. Y., assignors to American Machine & Foundry Company, a Corporation of New Jersey. Filed Sept. 25, 1920. Serial No. 412,658. 25 Claims. (Cl. 216—52.)



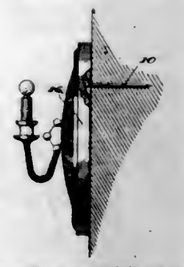
1. In a machine of the character specified, the combination of means for applying paste to one face of a stamp; means for temporarily holding the pasted stamp in an extended position upon a fixed support and out of the path of the package to which it is to be applied; package presenting means; and means for bodily transferring the pasted stamp from its temporarily supported position into the path of the package advanced by the presenting means.

1,499,823. THREAD CUTTER. FRANK D. HERRING, Cuero, Tex., assignor of one-half to John W. Herring, Cuero, Tex. Filed Feb. 6, 1920. Serial No. 356,709. 1 Claim. (Cl. 139—302.)



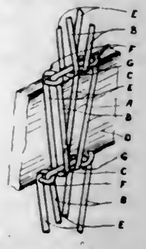
In a device of the class described, a frame, a roller rotatably mounted within the frame and having openings disposed in one end thereof, a stationary member having a cut out portion extending from one edge thereof, one of the walls of the cut out portion being beveled to provide a cutting edge, a rotary cutting member, having pins adapted to be positioned in the openings of the roller, to removably secure the rotary cutting member to the roller, said rotary cutting member having a plurality of notches adapted to pick up the threads of the selvage of cloth and carry the threads to the stationary cutting blades, and means for normally urging the stationary cutting blades into close engagement with the rotary cutting blades.

1,499,824. INTERNAL-COMBUSTION ENGINE. CLARENCE E. HULL, Santa Barbara, Calif. Filed Sept. 18, 1919. Serial No. 324,481. 4 Claims. (Cl. 123—173.)



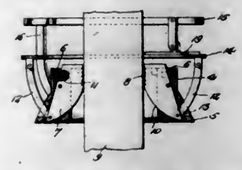
1. An internal combustion engine including a multiple cylinder body having a water jacket, a tubular intake manifold lying wholly within the water jacket and having a port communicating with the exterior of the body and a plurality of ports communicating with the top thereof, exhaust passages located within the water jacket of the body at the side thereof opposite the intake manifold, said exhaust ports communicating with the exterior of the body and also with the top thereof, and a detachable valve carrying head having intake and exhaust passages registering with the ports of the intake manifold and also with the ports of the exhaust passages in the top of the said cylinder body.

1,499,825. AERIAL TRAIN. WAYNE E. IKERMAN, Long Beach, Miss., assignor of forty one-hundredths to Bernhard Reinike and five one-hundredths to Frederick Ikerman, both of Long Beach, Miss. Filed Oct. 7, 1922. Serial No. 593,005. 26 Claims. (Cl. 244—12.)



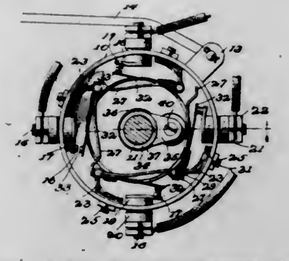
1. In an airship, a longitudinally extending frame, a plurality of vertical compression struts connected with the frame arranged in longitudinal alignment, a plurality of longitudinally spaced aerofoils connected with the frame and spaced at their points of connection with the frame defining a longitudinally extending air space, and means disposed in said air space for dividing and directing the air stream under the aerofoils.

1,499,826. NAIL. CHARLES HENRY KASSABAUM, Atchison, Kans. Filed Nov. 3, 1923. Serial No. 672,604. 1 Claim. (Cl. 40—145.1.)



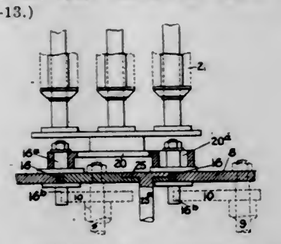
In combination with an article to be mounted having a recess, of a nail adapted to form a concealed fastening for such article, said nail having a head at one end in the form of an angularly projecting and relatively short tapering tang adapted to extend into the recess of the said article to be mounted and terminating in a sharpened extremity adapted to penetrate the wall of said recess as and for the purpose set forth.

1,499,827. LATH BLIND. WALTER GRANT KING and FARNHAM EDWARD MAYNARD, Brisbane, Queensland, Australia. Filed May 10, 1924. Serial No. 712,370. 1 Claim. (Cl. 156—16.)



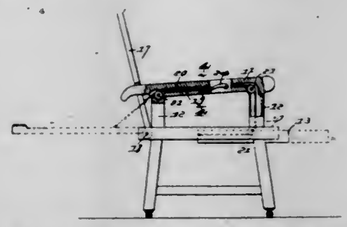
In a device of the character described, a plurality of laths and a plurality of links engaging the laths and interengaged with each other, each of said links being formed from a single strand of wire and including an intermediate portion, converging loops continuing therefrom and embracing a lath and also loosely engaged with the intermediate portion of the adjacent link and anchoring eyelets at the terminals of the wire encircling the portions of the loops adjoining the intermediate portion so as to maintain the latter slightly spaced from the top edge of the engaged lath to permit of the laths being readily rolled into a compact roll when desired.

1,499,828. PIPE CLAMP. AL. KINSEY, Longfellow, Tex., assignor of one-half to O. E. Schupbach, Sanderson, Tex. Filed Jan. 31, 1923. Serial No. 616,223. 4 Claims. (Cl. 24—249.)



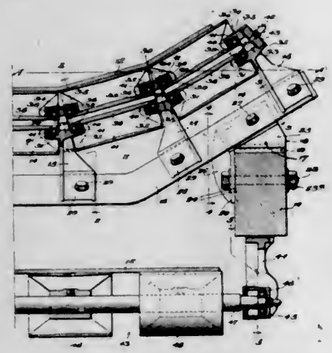
1. A pipe clamp including a frame equipped with dogs normally engaging a pipe passing through the frame, an annulus operatively connected to said dogs to release the latter when the annulus is depressed, and means carried by said frame and engageable with said annulus to depress the latter.

1,499,829. COMMUTATOR. GEORGE A. KREUTZER and KENNETH L. LONG, Lincoln, Nebr.; Natalie C. Long executrix of said Kenneth L. Long, deceased; said Kreutzer assignor to Natalie C. Long. Filed Mar. 2, 1920, Serial No. 362,662. Renewed Apr. 16, 1924. 6 Claims. (Cl. 200—27.)



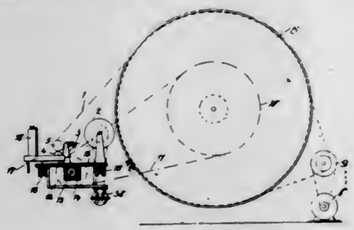
1. A device of the character described including a shell, contacts carried thereby but insulated with respect to the shell, fixed hinge plates secured to the shell, pivoted cam actuated hinge plates carried by the fixed plates, the next adjacent fixed plate providing a stop for each pivoted plate, yieldable means normally holding the pivoted plates in engagement with the fixed plates, and contacts carried by the movable plates to cooperate with the first contacts.

1,499,830. BRAIDING MACHINE. MAX KRISSIEP, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Oct. 20, 1923. Serial No. 669,648. 6 Claims. (Cl. 96—13.)



4. In a braiding machine comprising carrier drive discs, and a race-way having intersecting race-circles; a bobbin carrier base plate having two shuttle portions with drive projections therefrom spaced apart to correspond with the spacing of the drive gear horns, said plate forming a carrier supporting bridge between adjacent drive gear horns.

1,499,831. COUCH ARMCHAIR. PETER E. KURSICK, San Francisco, Calif. Filed July 9, 1923. Serial No. 650,413. 1 Claim. (Cl. 155—111.)

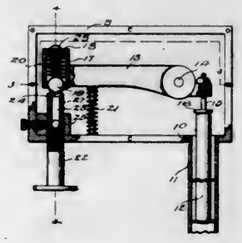


A chair comprising a seat, a leg rest slidably connected with the seat for disposition in horizontal extension thereof, a back pivotally connected with the seat, arm rests mounted on the seat, idler rolls housed within the arm rests, flexible runners connecting the leg rest and the back and housed within are arm rests and traversing the idler rolls, angularly movable cams housed within the arm rests for clamping engagement with the runners, and exteriorly exposed operating means for the cams.

1,499,832. CONVEYING APPARATUS. EUGENE E. LANDAHL, Oak Park, and CORWIN S. JONES, Maywood, Ill., assignors to The Webster Manufacturing Company, Chicago, Ill., a Corporation of Ohio. Filed Sept. 2, 1921. Serial No. 497,952. 21 Claims. (Cl. 198—192.)

1. Conveying apparatus comprising the combination with a belt, of a troughing-roll unit mounted in a plane transverse to said belt for troughing and guiding said belt, said unit comprising a substantially central horizontal roll and upwardly inclined lateral rolls and adjustable supporting and positioning means whereby said central roll may be bodily moved forwardly relative to said lateral rolls in the direction of travel of said belt to adjustably position said central roll in advance of said lateral rolls.

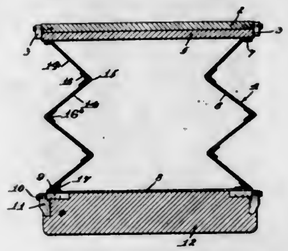
1,499,833. METHOD OF AND DEVICE FOR APPLYING A PROTECTIVE LAYER TO FILMS. HEINRICH LICHTE, Berlin, Germany, assignor to Dura Film Protector Co., New York, N. Y., a Corporation of New York. Filed Dec. 24, 1921. Serial No. 524,640. 9 Claims. (Cl. 91—55.)



1. Apparatus for applying a protective layer to films, comprising, in combination, an applying device; a plain-surfaced rotary drum adapted to receive the film coming from said device; gearing adapted to displace said applying device laterally relatively to said drum and including a threaded spindle; and means for rotating said spindle at such a speed that the applying device is displaced during one revolution of the drum along a path which is longer than the breadth of the film, thereby to dispose the adjacent edges of the successive convolutions of the film in spaced, non-contacting relation upon said drum, substantially as described.

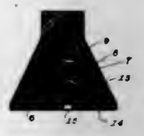
5. Apparatus for applying a semi-liquid protective layer to films, comprising, in combination, an applying device; a receptacle adapted to receive the semi-liquid

protective mass; a supply vessel adapted to receive supplementary mass; a pipe extending from the top of said vessel down into the said receptacle and having at least one notch at its lower end; another pipe extending from the bottom of the said vessel into the said receptacle; and means to close said latter pipe.



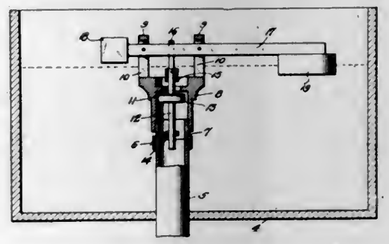
8. A method of treating continuous photographic films, comprising the steps of continuously feeding the film to a coating device to apply a transparent protective coating to the picture-bearing face of the film and solely in the space between the marginal perforations in the film; and winding the film, as coated, upon a support, with the adjacent edges of the successive windings of the film in spaced, non-contacting relation.

1,499,834. THERMOSTAT FOR TYPECASTING MACHINES. HENRY A. LUX, Brooklyn, N. Y. Filed Nov. 1, 1922. Serial No. 598,376. 1 Claim. (Cl. 236—102.)



In a heat regulating device, a casing, an expansible element supported thereby, a movable member in said casing actuated by said expansible element and provided on one end thereof with a transversely arranged open ended sleeve, one end of which is contracted to form a seat, a removable plug closing the other end of said sleeve, a ball valve in said sleeve engageable with said seat, a resilient member interposed between said ball valve and plug to yieldably maintain said valve in engagement with said seat, and an adjusting device supported by said casing and cooperating with said valve and through which a combustible fluid is permitted to flow into said casing, said device forming a seat for said valve and being adjustable to vary the movement thereof to its closing position when said movable member is actuated in one direction.

1,499,835. AUTOMOBILE WHEEL. WILLIAM W. MCLAREN, Birmingham, Ala. Filed July 8, 1922. Serial No. 573,519. 1 Claim. (Cl. 152—33.)

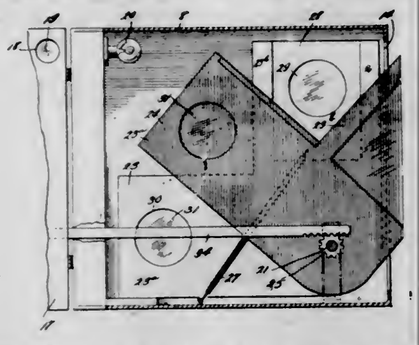


A vehicle tire comprising an outer member and flexible metallic side strips formed integrally with the outer member, the side strips being folded circumferentially to define pronounced internal and external angles in the side strips, and to form angles at the places of juncture between the side strips and the outer member, angular reinforcing strips in all of said angles and located, alternately, within and without the tire, and a base whereunto the side strips are connected, the side strips forming the sole connections between the outer member and the base.

1,499,836. RAIL JOINT. ALEXANDER METTRAS, De Beque, Colo. Filed Feb. 14, 1924. Serial No. 692,813. 2 Claims. (Cl. 238—188.)

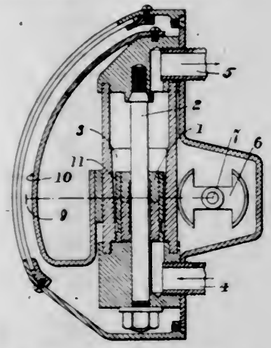
1. A rail joint comprising a plurality of rail sections with the ends thereof in abutment; holes formed in the webs of said rail sections; a connector formed to fit against one side of said rail sections; projecting lugs secured to said connector having notches formed therein and extending through said holes; a coacting connector formed to fit the other side of said rail sections; and depressions in said coacting connector having surfaces adapted to fit into said notches to effect locking of said connectors against said rails; said notches having surfaces cut in angular relation with respect to the upper surface of the bases of said rail sections in a manner to compel tilting of said coacting connector to effect the assembly and the disconnection of the parts of said joint.

1,499,837. FLOAT VALVE. HENRY MITTEL, Sonora, Tex. Filed Feb. 9, 1923, Serial No. 618,004. Renewed May 21, 1924. 2 Claims. (Cl. 137—104.)



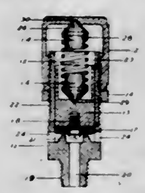
1. A float valve for liquid receptacles, in combination with a receptacle and liquid supply pipe discharging into the latter, valve means associated with said pipe to close communication through the latter, and mechanism operable by the rise and fall of liquid in the receptacle to control operation of said means, said mechanism being reversible to adapt the same for use on a supply pipe entering the receptacle from either the top or bottom of the latter.

1,499,838. CLASSIFICATION BOX. RICHARD A. MURRAY and LOGAN H. HOOPER, Muskogee, Okla. Filed Aug. 17, 1922. Serial No. 582,454. 9 Claims. (Cl. 116—30.)



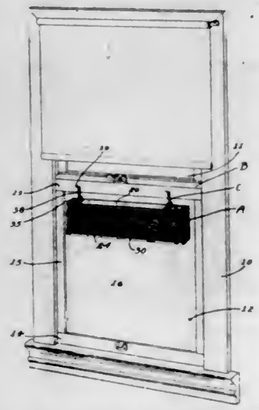
7. A signalling device comprising an illuminated casing having a slot and an opening in a wall thereof, a flag movably associated with the casing and adapted to be normally arranged inside thereof and being projectable

through the said slot, and said flag having an angularly disposed portion equipped with a colored transparent ele-



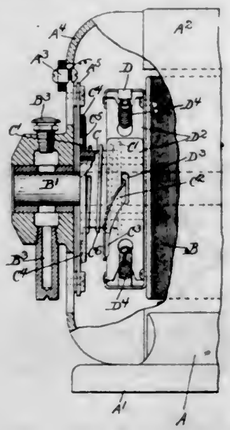
ment adapted to be brought in alignment with the opening in the casing when the flag is projected through said slot.

1,499,839. FLOW METER. VICTOR RALPH NICHOLSON, Colchester, England. Filed Oct. 6, 1923. Serial No. 666,961. 3 Claims. (Cl. 73—167.)



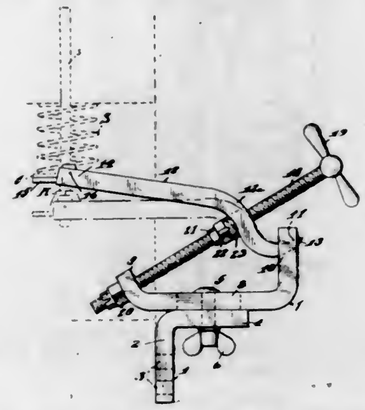
1. In an instrument for indicating the rate of flow of liquid, a cylinder, a piston operative in the cylinder under the pressure of liquid and comprising a permanent magnet, and an indicator influenced in the movement of said piston magnet, the piston passage in the cylinder being of variable cross sectional area between the limits of movement of the piston magnet.

1,499,840. SAFETY OR RELIEF VALVE. GEORGE A. PARKER, Utica, N. Y., assignor to Brunner Manufacturing Company, Utica, N. Y., a Corporation. Filed May 27, 1922. Serial No. 564,190. 2 Claims. (Cl. 137—53.)



1. A safety or relief valve comprising a body having a long externally-threaded hollow cylindrical portion forming a smooth parallel sided valve chamber, said body having an inlet port with a raised valve seat thereabout and having outlet ports through the chamber near the valve seat, a relatively long plunger sliding in said chamber and adapted to fit upon said seat or to slide therefrom, a cap internally screw-threaded to fit the chambered part of the valve body, a tension spring interposed between said cap and said plunger and adjusted to desired tension by rotation of said cap and spring centering blocks interposed between the ends of the spring and the cap and plunger.

1,499,841. INSECT TRAP. WILLIAM A. PEPPER, Tulsa, Okla. Filed Mar. 11, 1922. Serial No. 542,957. 5 Claims. (Cl. 43—119.)

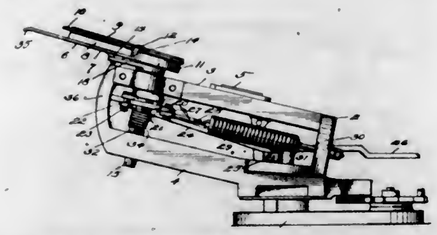


3. An insect trap consisting of an elongated body having foraminous front and rear walls and having a lower wall provided with an entrance slot, transversely extending balls carried by the upper wall of the body, and loops slidably carried by the balls and adapted to engage supporting members and slidably mount the trap for movement into an operative position.

1,499,842. MOTOR STARTING SWITCH. LAWRENCE M. PERSONS, Quincy, Ill., assignor, by mesne assignments, to H. B. Sherman Manufacturing Co., Battle Creek, Mich., a Corporation of Michigan. Filed Oct. 7, 1919. Serial No. 328,955. 20 Claims. (Cl. 200—80.)

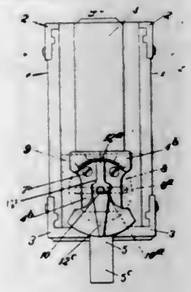
1. In a starting switch for motors, a rotor, a plurality of starting circuit contacts, means for connecting said contacts when the motor is at rest, comprising an axially movable sleeve concentric with the rotor, a ring rotatably and axially movable thereon, and adapted to connect said contacts, yielding means mounted upon said sleeve adapted to hold said ring at the end of the sleeve adjacent said contacts, and centrifugal means rotated by the rotor for withdrawing said sleeve and ring from said contacts.

1,499,843. VALVE-SPRING LIFTER. HERBERT A. R. PETERSON, Mankato, Minn. Filed Sept. 25, 1922. Serial No. 590,484. 2 Claims. (Cl. 29—86.3.)



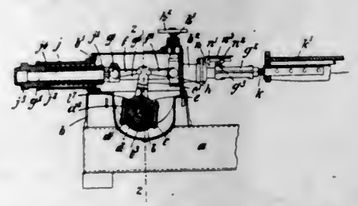
1. A valve spring lifter of the class described comprising a body having an attaching bracket adjustably connected therewith and provided with means for securing it to a motor, a lifter arm fulcrumed at one end on said body, an operating screw passing obliquely through said arm and said body and connected to raise or lower the arm, and a spring engaging saddle pivotally mounted on said arm.

1,499,844. PROCESS FOR PRODUCING COPYING FOILS. EUGEN SEYFFERTH, Berlin, Germany. Filed Nov. 14, 1921. Serial No. 515,117. 1 Claim. (Cl. 41—46.)



An improved process for the production of copying foils of cellon, comprising, treating the surface of plates of transparent cellon (acetyl-cellulose) with a mixture of glacial acetic acid and acetone, allowing the plates to dry, whereby to effect equal reception of printing-ink by the thus treated cellon, mechanically printing on the thus prepared surface, and then applying illustrations on thin foils of cellon, for their photomechanical transfer purposes.

1,499,845. TARGET TRAP. WILLIAM I. SPANGLER, Tarlton, Ohio. Filed Aug. 7, 1922. Serial No. 579,991. 3 Claims. (Cl. 124—6.)

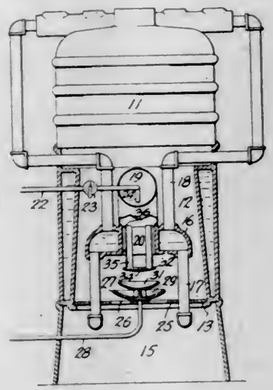


1. In a target trap, a base, a frame rotatably mounted thereon, a shaft pivotally connected with the frame, a carrier connected with the shaft, a plate pivotally mounted on the shaft, a spring yieldably connecting the shaft and plate, said plate being adapted to have one end engage the frame during the forward swinging movement of the carrier to permit the spring to yieldably limit the movement thereof when said plate engages the frame, and means for rotating the shaft to swing the carrier forwardly.

1,499,846. AUTOMATIC MACHINE GUN. GEORGE H. TANSLEY and CHRISTIAN PFEIFFER, Hartford, Conn., assignors to Colt's Patent Fire Arms Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 24, 1923. Serial No. 664,465. 16 Claims. (Cl. 89—3.)

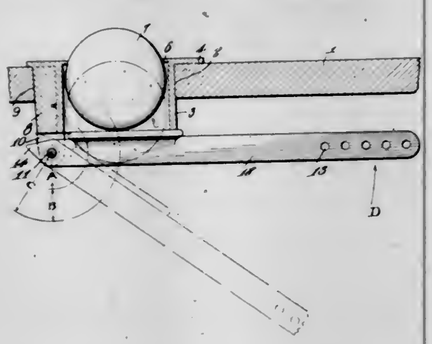
1. A machine gun comprising a breech casing having a rear plate, a rotatably adjustable member resting against said rear plate, a shaft for adjusting said member mounted in said rear plate and means for indicating the amount of the adjustment associated with said shaft.

1,499,847. ORE-CONCENTRATING MACHINE. CHARLES JOHN WILLIAMS, Croydon, England. Filed Jan. 22, 1921. Serial No. 439,106. 1 Claim. (Cl. 80—88.)



In ore concentrating and screening mechanism the combination with a reciprocatory table and a thrust bar connected to and arranged in direct line with said table, of a driving shaft arranged below the thrust-bar, an eccentric sheave provided with an interior slot about said shaft, a circumferentially adjustable sleeve on said shaft and within said slot, said sleeve and sheave being provided with co-operating projections arranged so that such adjustment of said sleeve will correspondingly vary the throw of the eccentric sheave, a pitman mounted on said eccentric sheave, a yoke fixed on said thrust-bar, toggles connecting said pitman with said yoke, a stroke-adjusting block, and toggles connecting said pitman with said stroke-adjusting block, and a spring acting on said thrust-bar to return said table.

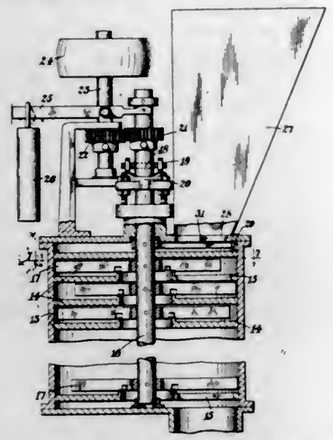
1,499,848. OIL BURNER. JOSEPH A. BELAIR and RUSSELL M. SCOTT, Montreal, Quebec, Canada; said Scott assignor to JOHN DARCY, Montreal, Canada. Filed Oct. 18, 1922. Serial No. 595,332. 10 Claims. (Cl. 158—91.)



9. In a device of the class described in combination with a furnace having a doorway, a plate substantially closing the bottom of the furnace and having a central air inlet, a combustion cup disposed above the air inlet,

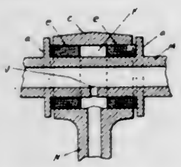
a drip cup disposed between the combustion cup and air inlet and serving to direct air from the inlet laterally of the combustion cup, a hollow annular flame deflecting means above the cup, a fuel conduit terminating above the cup, a deflecting plate interposed between the end of the fuel conduit and the cup having an opening for pas-

sage of unconfined fuel, which opening is too small for the passage of flame, said plate serving also to exclude flame from the central opening of the annular deflecting means, an air conduit leading from the furnace doorway to the central opening of said annulus, and means for circulating water through said hollow annular deflecting means.



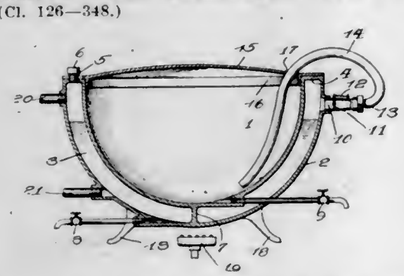
1,499,849. ACCELERATOR MECHANISM. EDGAR J. BLOOM, Tiffin, Ohio. Filed Nov. 2, 1923. Serial No. 672,432. 20 Claims. (Cl. 74—81.)

20. The combination with an accelerator lever, of a push member supported by the lever and means for guiding said member to impart a varying leverage to the lever during the actuation of the member.



1,499,850. RETORT AND FURNACE. LEONARD HUGH BONNARD, London, England. Filed Dec. 1, 1922. Serial No. 604,413. 8 Claims. (Cl. 263—26.)

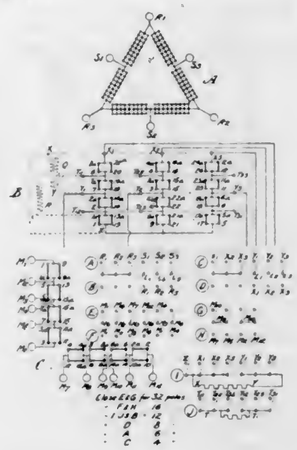
1. In a mechanical furnace the combination of a series of superposed horizontal trays having transfer openings for passage of mobile material from tray to tray, blades overlying the trays, means for moving the blades over the surfaces of the trays to feed forward the material and means for raising and lowering the blades in relation to the trays so that they act alternately while moving



in the direction to feed forward the material to spread the latter over the tray surfaces and to transfer it toward and through the transfer openings.

1,499,851. SWIVEL JOINT FOR PIPES. JOHN WILSON BROWN, Jr., Philadelphia, Pa. Filed June 24, 1921. Serial No. 479,985. 4 Claims. (Cl. 285—107.)

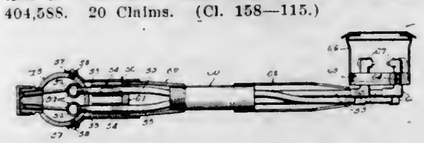
1. The combination of a pipe, a tubular chamber connected to said pipe, bushings adapted to slide in said tubular chamber, a second pipe adapted to rotate in said bushings, flanges on said second pipe against which the ends of said bushings are forced by the pressure of the fluid in the tubular chamber and an opening through the wall of the second pipe.



1,499,852. APPARATUS FOR FOOD PREPARATION. PETER V. CERINI, Monroe, Wash. Filed Dec. 1, 1922. Serial No. 604,446. Renewed Mar. 22, 1924. 1 Claim. (Cl. 126—348.)

A cooker, including a double boiler, an outlet from the space between the walls of the boiler, a valve controlling the outlet adapted to open under predetermined pressure, a removable cover for the inner boiler having an opening

formed therein near one side, and a flexible hose secured to the outlet and extending through the opening in the cover into the inner boiler, whereby the valve controls the steam passing into the inner boiler, and the cover serves to remove the hose from the inner boiler therewith.

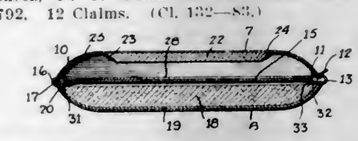


1,499,853. MULTISPEED DYNAMO-ELECTRIC MACHINE. FREDERICK CREEDY, Yorkshire, England. Filed Feb. 17, 1920. Serial No. 359,311. 21 Claims. (Cl. 172—274.)

1. An alternating current dynamo electric machine of variable pole number comprising a stator and rotor, a winding on one member to be connected to a polyphase suppply to produce a field of a particular pole number and adapted to act as a secondary in a field of another pole number, a winding on the other member to be connected to a polyphase supply to produce a field of that other pole number and adapted to act as a secondary in the field produced by the winding on the first mentioned member.

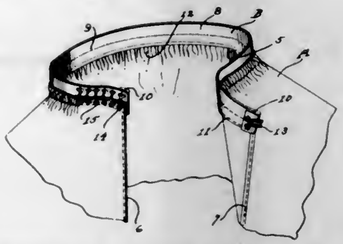
4. An alternating current dynamo electric machine of variable pole number comprising a stator and rotor, a winding on one of said members to be connected to a polyphase supply to produce a field of a particular pole number and adapted to act as a secondary in a plurality of fields of different pole numbers, a winding on the other member to be connected to a polyphase supply to produce a plurality of fields of said different pole numbers and adapted to act as a secondary in the field produced by the winding on the first mentioned member.

1,499,854. IGNITION DEVICE FOR GAS BURNERS. EMIL L. CLAUS, Milwaukee, Wis., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 19, 1920. Serial No. 404,588. 20 Claims. (Cl. 158—115.)



2. An igniter device comprising the combination with a plurality of burners and a main supply pipe therefor, of a pair of torch supply pipes extending along the main supply pipe, a plurality of valves having their intake nipples secured in the main supply pipe between the torch-supply pipes and engaging said torch-supply pipes, connections between said valves and the burners, main supply ports in said valves communicating with the main supply pipe, torch-supply ports in said valves each communicating with one of the torch-supply pipes, a torch-head provided with a plurality of jets, and connections between the torch-supply pipes and corresponding jets of the torch-head.

1,499,855. VANITY CASE. CHARLES NEWTON CORYELL, Mamaroneck, N. Y. Filed Aug. 8, 1923. Serial No. 656,392. 13 Claims. (Cl. 132—83.)



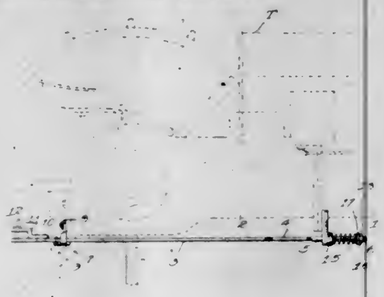
1. A vanity case having hinged shallow dish shaped base and cover members meeting along their rims in a thin edge formed by an inturned curled bead defining the periphery of one of said members and a peripheral spring flange defining the rim of the other member and adapted to seat within the curled bead, whereby there is provided a flat close fitting case tapered off to thin edges and a compact held within and substantially filling the beaded member, said compact having a substantially flat exposed face extending to the rim of the member and a convex back conforming to the dish shape of said member, the flange of the other member substantially overlying the edge portion of said compact.

1,499,856. VANITY CASE. CHARLES N. CORYELL, Mamaroneck, N. Y. Filed Dec. 20, 1923. Serial No. 681,792. 12 Claims. (Cl. 132—83.)

8. In a vanity case, cooperating case sections, one having a pair of hinge buckles connected in spaced relation by an integral extension and the other having a bead receiving said hinge knuckles, a pintle wire engaged within the bead and extending across the recess through said connected hinge knuckles and an intermediate section having a knuckle engaged on the pintle wire in the space between the connected hinge knuckles, said integral extension bridging across the knuckle of the intermediate section and holding the spaced hinge knuckles properly positioned at opposite sides of the same.

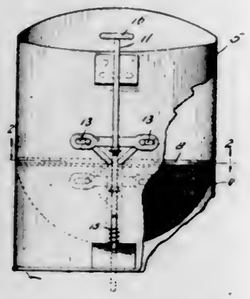
1,499,857. BARBER'S HAIRCLOTH. WILLIAM J. DAVID, Farwell, Nebr. Filed Feb. 11, 1922. Serial No. 535,877. 1 Claim. (Cl. 2—50.)

A barber's hair cloth comprising a flexible body open at the back and having an upper edge forming a neck encircling portion, a neck band of elastic material extending along the upper edge portion of the body in over-



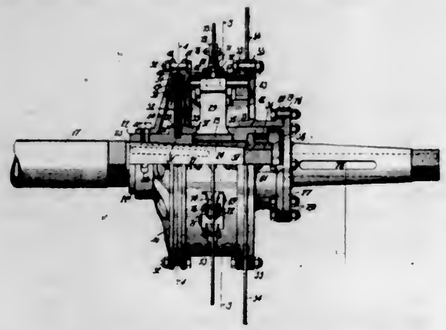
lapping relation thereto and stitched to said body, said band having its intermediate portion stretched before being stitched to the body and its end portions stitched to the body while unstretched to cause even gathering of the body between the unstretched end portions of said band, a plurality of fastener elements secured in spaced relation longitudinally of one of the unstretched end portions of the band and each being in the form of an eye member disposed transvesely of the neck band and having its upper end secured to the neck band and its lower end secured to the upper edge portion of the body, and a co-operating fastener hook carried by the other unstretched end portion of the band for engagement with a selected one of the eye members when the garment is in place.

1,499,858. FISHHOOK HOLDER. WILLIAM R. DAVIS, Wallace, Idaho. Filed Jan. 27, 1922. Serial No. 532,191. 8 Claims. (Cl. 43—32.)



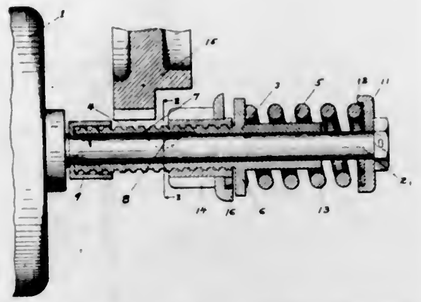
1. A fishing hook holder comprising a frame constructed of resilient wire and including a curved rod and arms at the ends of the rod arranged to overlie the rod, said frame having attaching means comprising penetrating prongs integral with and depending from said arms and provided with angularly extended pointed ends and a rack for the fishing hooks, fishing flies or the like carried by the frame and comprising a coil of resilient wire mounted on the frame, the curved rod of the frame extending through the opening of the coil and coacting with the convolutions of the coil for retaining the fishing hooks, fishing flies or the like in position, the terminals of the coil being extended laterally and provided with eyes embracing the arms of the frame.

1,499,859. DRAFT CONNECTION. CLARENCE O. DREMS, San Antonio, Tex. Filed Nov. 18, 1922. Serial No. 601,843. 4 Claims. (Cl. 280—33.9.)



1. A draft connection for a tractor, comprising a longitudinally disposed draft bar positioned beneath and in proximity to the transmission and motor crank casings of the tractor, a coupling plate adapted to be connected to a portion of the crank case, cupped extensions formed integral with one side of said coupling plate having concentrically located openings in their respective bottom portions, the inner end of said draft bar being bifurcated and having the extremities thereof formed cylindrical and slidably engaged through the openings in the bottoms of the cupped extensions, spring means received in said cupped extensions and receiving the outer portions of the cylindrical extremities of the bifurcated inner end of the draft bar therein having connection with the same at their outer ends.

1,499,860. FLOUR SIFTER. ARTHUR R. DE LONG, Peoria, Ill., assignor to Edward H. Brink, Cincinnati, Ohio. Filed June 14, 1923. Serial No. 645,229. 2 Claims. (Cl. 83—60.)

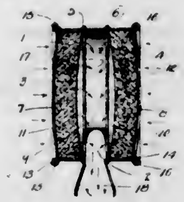


1. The combination with a flour sifter having a cylindrical body, a foraminous bottom therein, and a handle on the outside of the body, of a pair of oppositely movable agitator bars mounted for rocking movement in the body for co-operation with the bottom, one end of each bar extending through the body at the handle portion and formed beyond said body with off-set end portions forming crank arms, an operating bar slidable in the handle on the body having a transversely extending portion formed with slots to receive the off-set ends of the agitator bars for relative sliding movement therein, and resilient means for moving the operating bar in one direction, whereby said operating bar may be moved manually in the opposite direction for operating said agitator bars in relative opposite directions to co-operate with said bottom.

1,499,861. MEASURING INSTRUMENT. WILLIAM N. EATON, Washington, D. C. Filed Oct. 29, 1920. Serial No. 420,529. 23 Claims. (Cl. 265—4.)

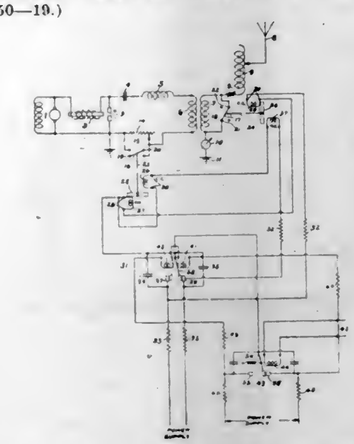
1. In a transmitting dynamometer, in combination, a member capable of a plurality of movements, means for indicating said movements, said means including movable discs rotatable with said dynamometer and capable of longitudinal displacement and restraining members associated with said last named parts for transmitting the torque and thrust of said plurality of movements, each of said movements being an independent function of the dynamometer.

1,499,862. DRIVING MECHANISM. WILLIAM J. EICHENBERG, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed July 22, 1918. Serial No. 246,135. 4 Claims. (Cl. 74—7.)



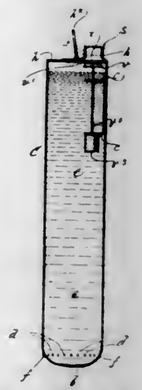
1. A starting mechanism for internal combustion engines, comprising in combination, a gear operatively connected to an engine; a starter shaft; a sleeve mounted on said shaft so as to have axial movement only relative to the shaft, said sleeve having a threaded portion and a smooth portion, and an integral annular flange between the threaded and smooth portions; a washer on the shaft; a spring inserted on said shaft intermediate the washer and said flange; and a pinion having threaded engagement with the threaded portion of the sleeve and adapted to make automatic engagement and disengagement with said gear, said smooth sleeve portion being adapted to form a position driving connection to the starter shaft.

1,499,863. SEPARATOR FOR STORAGE BATTERIES. FREDERICK W. FRAHM, Los Angeles, Calif. Filed Dec. 1, 1922. Serial No. 604,426. 5 Claims. (Cl. 204—29.)



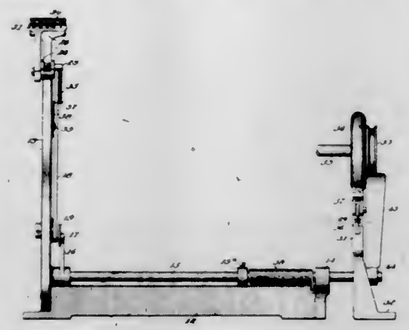
1. A separator for storage batteries comprising rubber, asbestos and sawdust.

1,499,864. AIR CLEANER. JOHN A. GORDON, Kansas City, Mo. Filed Dec. 30, 1922. Serial No. 610,072. 2 Claims. (Cl. 183—44.)



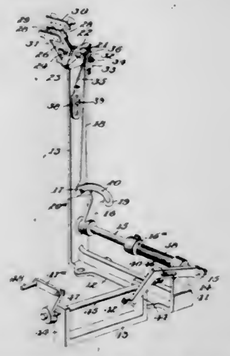
1. An air cleaner for hydrocarbon engines comprising a casing consisting of a band having open ends, spaced concavo-convex, end walls in the band to complete the casing, the convex portions of the end walls being disposed outwardly, spaced open partitions in the casing between the end walls, the partitions and the end walls providing filter bed spaces of varying cross section, the greatest cross section being in the center, the partitions being spaced apart to provide a central clean air chamber discharging through an outlet through the wall of the band and vibrating filter beds in the spaces between the partitions and the end walls so that air drawn through the end walls into the central chamber will pass through the filter beds; the filter beds, consisting of flexible material of concavo-convex form, the convex sides of the filter beds being toward the concave faces of the end walls, so that the convex sides of the filter beds normally lie against the concave faces of the end walls.

1,499,865. HIGH-SPEED SIGNALING SYSTEM. HENRY E. HALLBORG, Washington, D. C. Filed Sept. 1, 1923. Serial No. 660,637. 10 Claims. (Cl. 250—19.)



1. A high speed signaling system, comprising a plurality of separate sets of keys, an armature for actuating each of said keys, a plurality of opening coils and a plurality of closing coils arranged to actuate each of said armatures, a circuit including all of said coils in series, a resistance connected in said circuit, and means for energizing said coils, the energy being supplied to said coils by way of said resistance.

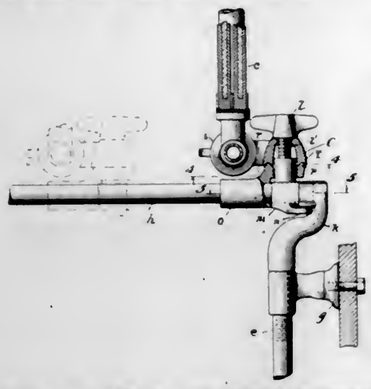
1,499,866. FIRE EXTINGUISHER. GEORGE E. MCDONALD and THOMAS E. TRAYNOR, Jersey City, N. J. Filed Nov. 28, 1921, Serial No. 518,215. Renewed Mar. 21, 1924. 1 Claim. (Cl. 169—26.)



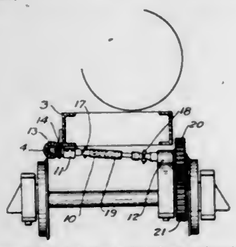
A fire extinguishing device of the character designated, comprising a liquid container formed with discharge apertures in its lower extremity, fusible sealing material normally closing said discharge apertures, an inlet and vent aperture in the upper portion of said container, a filling neck coincident with said inlet and vent aperture, a closure for said filling neck, and a float valve arranged to close said inlet and vent aperture by means of hydrostatic pressure exerted by the liquid contents of the container and free to gravitate away from said vent when said fusible material melts to balance atmospheric pressure both above and below the column of liquid in said container, and a guide for the stem of said valve arranged to limit the downward movement thereof, substantially in the manner and for the purpose described.

1,499,867. STOP-MOTION DEVICE. WILLIAM S. MILLS and HECTOR E. BISAILLON, Bridgeport, Conn. Filed June 20, 1922. Serial No. 569,646. 4 Claims. (Cl. 112—219.)

1. In a stop-motion device, the combination with a power shaft and a machine to be driven from said shaft, of a spring-actuated rock-shaft having an arm provided with a curved slot, a latch-lever having a pin entering said slot, the walls of said curved slot, in co-operation with said pin, positively moving and controlling said latch lever, holding means engaging said latch lever, and tripping means comprising a tripping arm operable to release said holding means from said latch lever; whereby, when said latch-lever is released the stored-up power in the spring which actuates said rock-shaft may be utilized to stop the machine driven from said power shaft.



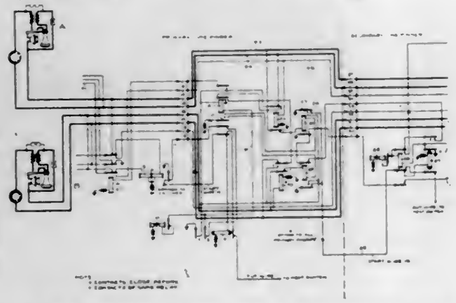
1,499,868. STOP-MOTION DEVICE. WILLIAM S. MILLS and HECTOR E. BISAILLON, Bridgeport, Conn. Filed July 21, 1922. Serial No. 576,484. 3 Claims. (Cl. 112—219.)



1. The combination with the driving shaft of a thread-using machine, of a stop-motion device for said shaft, and tripping means for controlling said stop-motion device to stop the machine when a thread or needle breaks, as also when a knot or lump occurs in the thread, said tripping means comprising a slotted tripping arm and a member controlled by tension on the thread and operatively connected with said tripping arm.

1,499,869. WINDSHIELD FOR AUTOMOBILES. ALONSON D. PERKINS, New York, N. Y. Filed Oct. 8, 1921. Serial No. 506,240. 1 Claim. (Cl. 296—85.)

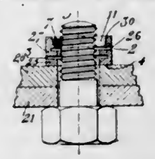
In a wind shield for automobiles and other vehicles a combination clutch adapted to slide on a suitable rod and to control the adjustment of said wind shield in different positions and which consists of a slide-piece forked at its engaging end, and having a pin rising therefrom, a lower clutch member removably mounted on said slide piece,—and an upper clutch-member revolubly hung on said pin and adapted to engage said lower member as occasion requires.



1,499,870. DRIVING MECHANISM FOR GEARED LOCOMOTIVES. SAMUEL PICKERING, Bellevue, Wash. Filed Jan. 18, 1923. Serial No. 613,397. 5 Claims. (Cl. 105—99.)

1. In a locomotive having driving wheels journaled in swinging trucks; driving means for said wheels comprising a gear mounted on the axle meshing with another gear above it and a flexible connection between the upper gear and a pair of bevel gears, one of which is on the main shaft which is mounted on the main frame.

1,499,871. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 24, 1921. Serial No. 472,088. 10 Claims. (Cl. 179—18.)

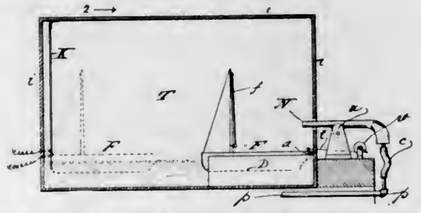


1. In a telephone system, pairs of telephone lines, a plurality of non-numerical switches, a pair of trunks for each of said switches, means for allotting non-numerical switches for use, means for simultaneously extending the trunks of a non-numerical switch to a pair of lines.

1,499,872. TREATMENT OF COAL. FREDERICK GLYN PRICE, London, England, assignor to Minerals Separation North American Corporation, New York, N. Y. Filed Apr. 27, 1922. Serial No. 557,018. 9 Claims. (Cl. 83—85.)

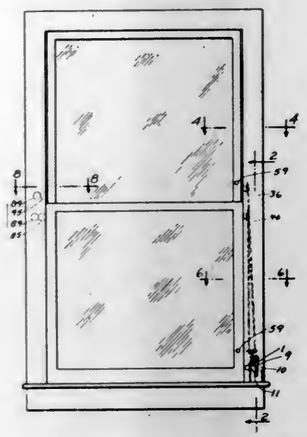
1. A process for obtaining good coking coal from heterogeneous coal containing it, which consists in agitating a pulp of the suitably ground coal to effect froth-flotation of good coking ingredients thereof in the presence of a protective colloid which inhibits the flotation of other normally flotable coal, and separating the froth.

1,499,873. LOCK NUT. LÉOPOLD RAVIER, Paris, France. Original application filed Dec. 15, 1920, Serial No. 430,813. Divided and this application filed Oct. 6, 1921. Serial No. 505,897. 4 Claims. (Cl. 151—21.)



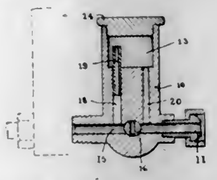
1. In a lock-nut device, the combination with the screw-bolt and the parts to be held together thereby, of a bored ring loosely placed on the stem of the said screw-bolt and abutting against the said parts to be held together thereby, resilient tongues provided in the said ring by transverse saw cuts therein, so as to flex simultaneously in approaching each other thus acting as a spring on coming into engagement with one of the said parts to be held together, and an extensible conical ring adapted to be placed on the stem of the said screw-bolt and to engage a conical mortise provided in the said resilient ring, the latter constantly forcing the said conical ring into engagement with the said screw-bolt.

1,499,874. PAPER-HANGER'S STRAIGHTEDGE. JOHN REINHART, Chicago, Ill. Filed Feb. 7, 1923. Serial No. 617,441. 3 Claims. (Cl. 20—89.)



1. A straight edge comprising a long narrow central three-ply wooden panel in which the grain in one ply extends transverse to the grain in the other two plies, the middle ply being narrower so as to produce a groove in each long edge of the panel, and facing strips extending along said edges of the said panel and having tongues fitting into said grooves.

1,499,875. RACE-GAME APPARATUS. JOSEPH ROSENHEIM, Coney Island, N. Y. Filed Oct. 15, 1923. Serial No. 668,477. 9 Claims. (Cl. 46—56.)

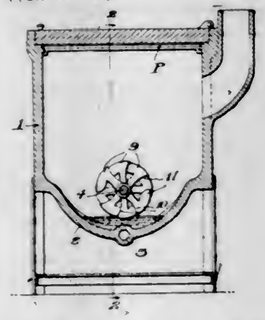


1. Race game apparatus of the character designated, comprising a plurality of individual race-way water tanks, each tank containing a dirigible float, each tank being formed with a fixed start-location at one end and a signal device at the other, and with means adapted to be controlled by a player for directing air under pressure against said dirigible float, substantially in the manner and for the purpose set forth.

1,499,876. WINDOW-SASH OPENER. WILLIAM F. ROTERMUND, Seattle, Wash. Filed July 5, 1921. Serial No. 482,429. 2 Claims. (Cl. 268—4.)

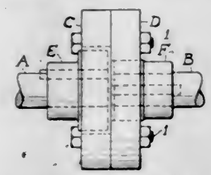
1. A device of the class described comprising a pair of gears mounted in the lower side of a window frame; a smaller gear meshing with one of the former gears and mounted on a shaft projecting through an opening in the frame; a handle on the outer end of the shaft; other smaller gears on substantially vertical shafts meshing with the former pair of gears; means for shifting the latter smaller gears out of engagement with the larger gears; worm gears at the upper ends of the vertical spindles; smaller gears mounted in a frame which mesh with the worm gears and also with racks on the side of the window sash; other gears meshing with a rack on the opposite side of the window; springs on the gears which wind up as the sash moves downward; a smaller gear also meshing in the rack; and levers for mounting the smaller gear arranged in such a manner that they will lock the gears operated by the spring when the sash is open; said window being provided with a suitable metal frame, and said sash having metal edges in which the racks may be placed, one of which edges is provided with notches which may fit over projections on a sliding section of the frame to form a hinge.

1,499,877. GASOLINE RESERVE SUPPLY. JOSEPH L. SCHMIDLING, Milwaukee, Wis. Filed July 14, 1922. Serial No. 574,976. 3 Claims. (Cl. 158—46.5.)



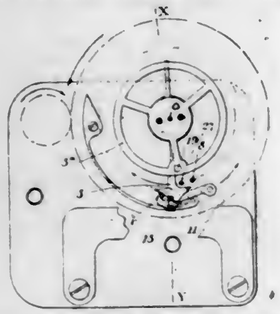
1. The combination with an automobile gasoline supply tank and pipe of a reserve supply device comprising a casing, said casing being formed with a recess adjacent its upper end and above the bottom of said supply tank, said casing being formed with a conduit adjacent its lower end and in alignment with said gasoline and supply tank, a valve in said passageway, said casing being formed with a pair of passageways arranged on either side of said valve and communicating with said first mentioned passageway and said recess, whereby when said valve is closed the gasoline will be caused to travel through said recess.

1,499,878. COMBINING TUBE FOR EJECTORS. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1920. Serial No. 375,550. 10 Claims. (Cl. 162—1.)



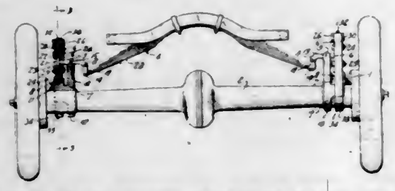
1. An ejector combining tube including a movable wall member, said member being so designed and secured to the combining tube that one end thereof may move outwardly only in a path substantially normal to the axis of the tube and that the other end thereof may freely swing outwardly.

1,499,879. ETCHING APPARATUS. CHARLES O. SCHMITT and WALTER F. FEHLBERG, Sioux Falls, S. Dak. Filed May 26, 1923. Serial No. 641,783. 4 Claims. ((Cl. 41—9.)



1. In an etching apparatus, a tank having a concave bottom, a shaft extending lengthwise of the tank, and a series of dippers arranged in pairs and carried by the shaft, each pair of dippers having a hub and spokes connecting the dippers to the hub, each dipper having a flared mouth, a tapered closed rear end and a curved peripheral wall formed with a series of outlets disposed adjacent to the apex of the tapered rear end, the distance from the center of the hub to the front of the mouth being greater than the distance from the center of the hub to the apex of the tapered rear end.

1,499,880. FLEXIBLE COUPLING. ROBERT W. SCHUETTE, Munhall Borough, Pa. Filed Aug. 12, 1922. Serial No. 581,393. 6 Claims. (Cl. 64—91.)

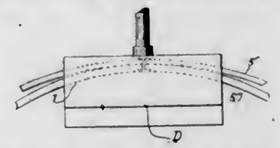


1. In combination with a pair of shaft ends each provided with a pair of parallel flat bearing surfaces, a pair of loose flanges each provided with a diametrically disposed opening having a pair of parallel flat bearing surfaces, one of said flanges being associated with each shaft end and the bearing surfaces of the shaft end mating in flat surface contact with the bearing surfaces of the flange, and said flanges being connected together with their bearing surfaces disposed at right angles to each other.

1,499,881. APPARATUS FOR MEASURING SPEED. AUGUSTIN SEGUIN, Paris, France. Filed May 31, 1921. Serial No. 473,822. 11 Claims. (Cl. 264—21.)

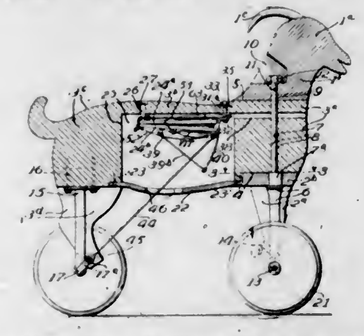
1. An apparatus for the measurement of speed, comprising in combination: a driving member operable at a speed proportional to the speed to be measured, an antagonistic movable member frictionally mounted on its axle, a striker loosely mounted on said axle, means whereby said striker may drive said antagonistic member and reciprocally, means for rotating said antagonistic member and said striker in the opposite direction to that of the speed to be measured, indicating means adapted to be operated by said driving member and by said striker respectively, means for rotating said striker and said antagonistic member in the direction of the speed to be measured, means for disengaging said striker from the driving member, means adapted to couple said driving member with the indicating means, means including said striker for disengaging the indicating means from the driving member.

1,499,882. SHOCK ABSORBER FOR AUTOMOBILES. SIDNEY B. SEGURA, Houston, Tex., assignor to Crown Shock Absorber Company, Houston, Tex., a Corporation of Texas. Continuation of application Serial No. 546,764, filed Mar. 25, 1922. This application filed Nov. 22, 1922. Serial No. 602,574. 5 Claims. (Cl. 267—17.)



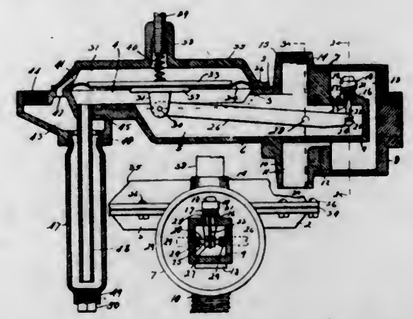
1. In a shock absorber, an axle, a hanger mounted thereon, superimposed cushions supported on said hanger, a vehicle body supporting spring, a member mounted upon the hanger for oscillatory movements having one end connected to the vehicle body supporting spring and its other end operatively engaging with and between said cushions, and means straddling the cushions and connected to the axle, thereby holding the cushions in place and slightly under compression, said means comprising a U-shaped saddle, the arms of which engage on opposite sides of the cushions and have their lower extremities extending beyond the lower face of the axle, to receive said securing means.

1,499,883. RIVETING DEVICE FOR AUTOMOBILE BRAKE BANDS. HOWARD SILVERNAIL, Binghamton, N. Y. Filed May 19, 1923. Serial No. 640,137. 1 Claim. (Cl. 218—19.)



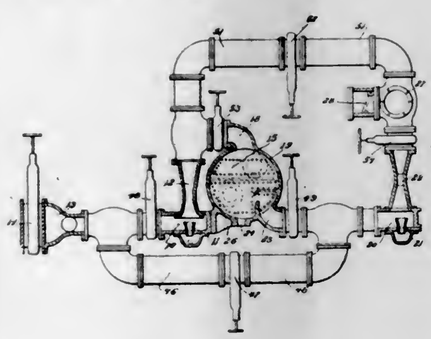
A device for riveting automobile brake bands comprising a riveting tool having a body portion, provided with a setting die, and a yielding band surrounding said die

and normally extending beyond the same to form a recess in which the head of a rivet is adapted to be inserted, and an anvil having a segmental band receiving and



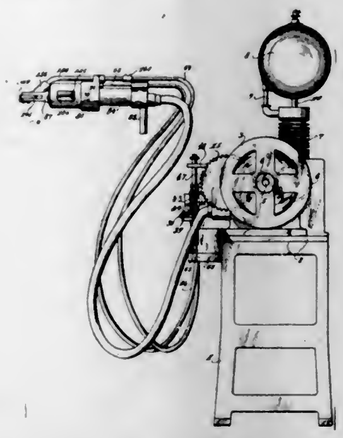
supporting surface, upwardly projecting guide ribs on each side of said band receiving and supporting surface, and a shank projecting from the under side of said anvil adapted to be held in the jaws of a vise.

1,499,884. FIGURE VELOCIPEDE. MAX SINGER, Newark, N. J. Filed July 27, 1923. Serial No. 654,191. 14 Claims. (Cl. 208—42.)



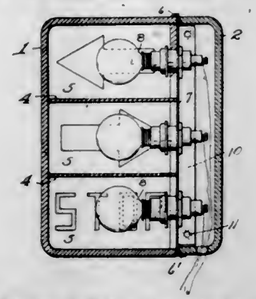
1. In a velocipede, the combination of an animal figure frame, a wheeled running gear supporting the frame, a horn, an air blower for sounding said horn, an operative connection between the running gear and the blower whereby the blower is operated when the velocipede is in motion, and adjustable means for rendering the said operative connection between the running gear and the blower ineffective.

1,499,885. GAS GOVERNOR. FRED P. SMITH, Glassboro, N. J. Filed Jan. 31, 1923. Serial No. 616,059. 6 Claims. (Cl. 50—26.)



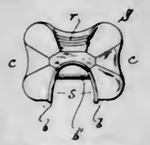
1. A gas governor including a housing or casing having an inlet and outlet, a removable cap on the housing constituting a valve enclosure, a diaphragm within the housing, a lever connected to the diaphragm, a valve located outside of the housing and within the cap so as to be accessible upon removal of said cap and means connecting the valve and lever.

1,499,886. AIR EJECTOR. JOHN H. SMITH, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 1, 1922. Serial No. 533,288. 20 Claims. (Cl. 230—13.)



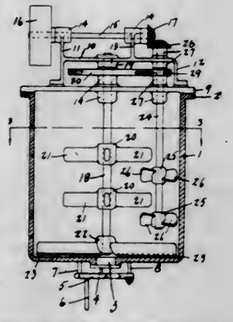
1. In a multistage air ejector organization, in combination, a plurality of elements, each element comprising a first stage ejector, a second stage ejector and an intercooler between said first and second stage ejectors, means connecting the elements to form the assembled ejector organization and means supplying cooling fluid to said intercoolers.

1,499,887. SCREW-DRIVING MACHINE. FLOYD C. SNYDER, JAMES C. STEEN, and GREGORY F. MCNULTY, Massillon, Ohio, assignors to The Reynolds Machine Company, Massillon, Ohio, a Corporation of Ohio. Filed Aug. 25, 1919. Serial No. 319,784. 3 Claims. (Cl. 144—32.)



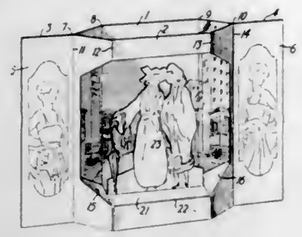
1. A screw driving machine including a power mechanism and a magazine for containing screws, a screw driving head comprising a casing and a screw holding chuck reciprocally mounted within the casing, a flexible shaft operatively connecting the power mechanism and the driving head, a flexible tube connecting the magazine and the driving head, an escapement mechanism for feeding the screws one at a time through the flexible tube to the driving head, and a flexible wire operatively connecting the driving head and the escapement mechanism for actuating the escapement mechanism by the telescoping of the casing over the chuck.

1,499,888. DIRECTION INDICATOR. DANIEL B. SPATZ, Reading, Pa. Filed Dec. 4, 1922. Serial No. 604,702. 2 Claims. (Cl. 177—329.)



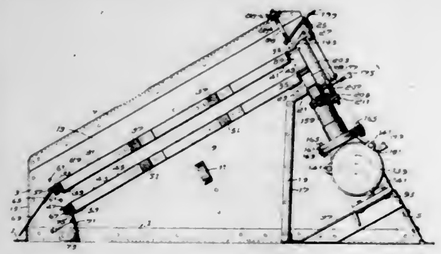
1. In a direction indicator for vehicles provided with a source of electrical energy, a rectangular casing, a removable vertical hood member adapted to form a closure for one end of the casing, a series of horizontal partitions formed within the casing, dividing the interior thereof into a plurality of compartments, a plate interposed between the hood member and the casing, said plate having a right-angled upper end resting on the top of the casing and a right-angled lower end bearing against the under side of the hood, a series of electric lamps, carried by said plate, one located normally in each of the compartments, and transparencies forming the front and rear sides of each compartment, whereon direction indications appear only when the lamp within the compartment is lighted.

1,499,889. DENTAL APPLIANCE. NAUM SPIEGELGLAS, New York, N. Y. Filed Mar. 5, 1924. Serial No. 697,032. 4 Claims. (Cl. 32—16.)



1. As an article of manufacture, a dental appliance of the character designated, comprising a shield formed with a medial open operative area with the surrounding walls flared outwardly, for the purpose and substantially in the manner set forth.

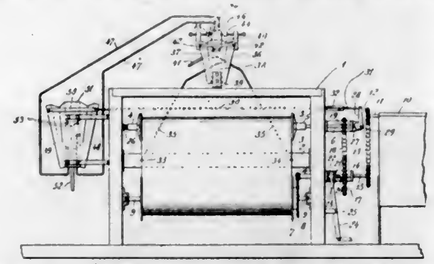
1,499,890. MIXING MACHINE. WILLIAM N. STEVENS, New York, N. Y., assignor to Stevens-Aylsworth Company, New York, N. Y., a Corporation of New York. Filed Feb. 15, 1921. Serial No. 445,136. 9 Claims. (Cl. 259—102.)



1. In a mixing machine, a chamber adapted to hold the materials to be mixed, a shaft extending downwardly through said chamber, outwardly extending arms secured to said shaft for giving the materials a rotary motion around said shaft only, a propeller shaft extending downwardly through said chamber and a propeller secured to said propeller shaft for giving said materials a vertical motion longitudinally of said propeller shaft only.

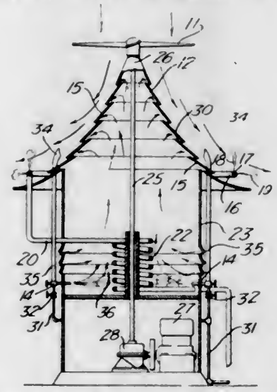
1,499,891. DISPLAY DEVICE. SIDNEY A. STORER, New York, N. Y. Filed July 14, 1923. Serial No. 651,534. 4 Claims. (Cl. 40—149.)

1. A collapsible display device in the form of a miniature stage setting comprising two sheets of cardboard or the like placed one on the other and united at their lateral edges to form two stiffened wings, the unattached central portions of said sheets being scored at a plurality of points so as to fold away from each other and to overlie said wing portions on opposite sides thereof when said device is collapsed.



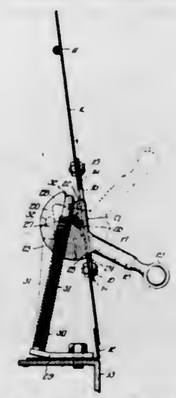
1,499,892. SEPARATOR. THOMAS J. STURTEVANT, Wellesley, and EDWARD A. SAWYER, Swampscott, Mass., assignors to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 5, 1923. Serial No. 630,038. 26 Claims. (Cl. 83—56.)

1. A separator for grading materials comprising, in combination, a screen, a casing beneath the screen, a shaft mounted in said casing, an eccentric on said shaft having minute eccentricity, a member reciprocated by the eccentric and extending upward to the screen and adapted to vibrate the screen, the latter being unattached to said member that it may have sympathetic vibrations independent of said member, and pins adapted to be struck by the vibrated screen, thereby further to contribute to the vibration of the screen.



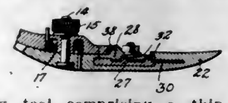
1,499,893. TRACKING DEVICE FOR MUSIC SHEETS AND THE LIKE. STERLING W. WARNER, Westfield, N. J., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Oct. 9, 1920, Serial No. 415,847. Renewed May 6, 1924. 4 Claims. (Cl. 84—140.)

1. The combination in a tracking device of two control-ports appurtenant to the tracker-bar arranged respectively to have their pneumatic conditions oppositely varied by wandering of the sheet; interconnected balanced pneumatics, both operative on suction and several connected with the two control-ports; additional control-port and valve means operated by said balanced pneumatics; and pneumatic motor means adapted to be con-



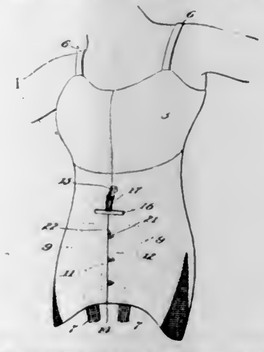
nected direct to the atmosphere through said additional control-port means to be governed thereby and operatively arranged to correct the wandering of the sheet.

1,499,894. AIR CIRCULATOR AND HEATER. WALDO D. WATERMAN, Los Angeles, Calif. Filed July 17, 1922. Serial No. 575,653. 28 Claims. (Cl. 126—59.5.)



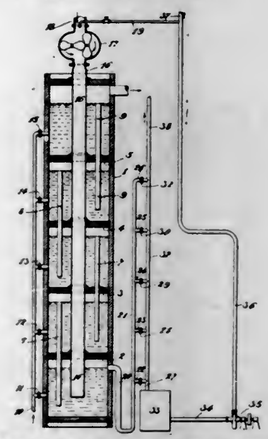
1. In a temperature moderator for distributing air over an area, the combination of: means for delivering a flow of air normal to said area; and means for deflecting said air outwardly in flat blanket form over said area.

1,499,895. HOOD LATCH. JOHN F. WHITE, Chicago, Ill., assignor to White Products Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 27, 1921. Serial No. 464,882. 17 Claims. (Cl. 292—247.)



1. In a hood latch, a hooking member projecting exteriorly of the hood, a fulcrum adapted to cooperate with said member, a keeper carried by the stationary structure interiorly of the hood, and means functioning when the hooking member in engagement with the keeper has reached the fastened position of the latch for securing the member in said position.

1,499,896. CUTTING IMPLEMENT. HOMER A. WHITEHORN, Port Washington, N. Y. Filed Apr. 14, 1922. Serial No. 552,755. 5 Claims. (Cl. 30—11.)



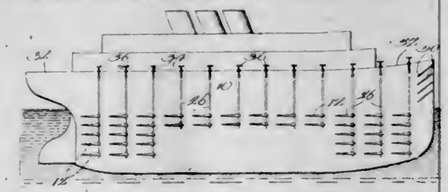
1. A cutting tool comprising a thin blade having parallel cutting edges, relatively movable plates, said blade being carried by one of said plates, and an abutment carried by the other of said plates closely adjacent the path of movement of said blade.

1,499,897. COMBINED CORSET AND BRASSIÈRE. DAISY K. WOLF, Louisville, Ky. Filed Oct. 16, 1922. Serial No. 594,756. 4 Claims. (Cl. 2—42.)

2. A corset brassière having a boned area extending over a portion only of the lower front part thereof, the portions of the garment surrounding said boned area being unstiffened, a cleft extending from the lower limit of the garment upwardly through the boned area only, dividing said boned area into two sections, said sections being limited with substantially rigid inter-attaching closure means.

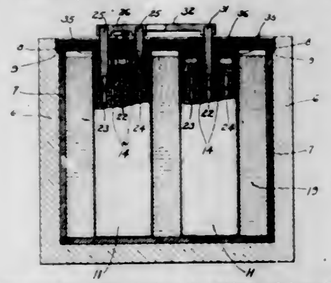
1,499,898. METHOD OF AND APPARATUS FOR ABSORBING GASES IN LIQUIDS. ROBERT B. WOLF, New York, N. Y. Filed Oct. 28, 1920. Serial No. 420,183. 13 Claims. (Cl. 23—13.)

1. An apparatus for the absorption of gases by liquids comprising a tower having a series of compartments



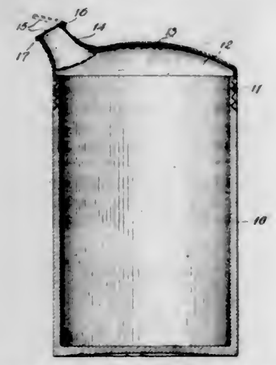
therein, means for permitting the liquid to flow from each compartment to the next lower compartment and for causing the gases to pass upwardly through the liquid in the compartments, means for introducing the liquid into any of said compartments whereby the liquid may be maintained in a part only or in all of said compartments, and an outlet conduit from the lower compartment with means for maintaining therein a variable head of liquid sufficient to prevent escape of gas therethrough, whereby the liquid is permitted to flow from the apparatus with maintenance of the required pressure therein and prevention of escape of gases through the outlet conduit.

1,499,899. SURGICAL SYRINGE. ALLAN SCOTT WOLFE, Washington, D. C. Filed Aug. 25, 1921. Serial No. 495,340. 5 Claims. (Cl. 128—221.)



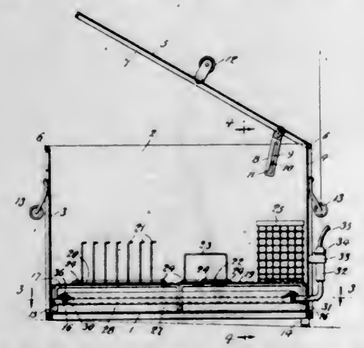
1. In a surgical syringe, a point adapted to be inserted into osseous tissue, said point being formed of a highly refractory metal integrally reinforced with an alloy of a precious metal.

1,499,900. MEANS FOR STEADYING SHIPS. GOTTLIEB F. ZUCKER, Chicago, Ill. Filed Mar. 21, 1922. Serial No. 545,398. 3 Claims. (Cl. 114—126.)



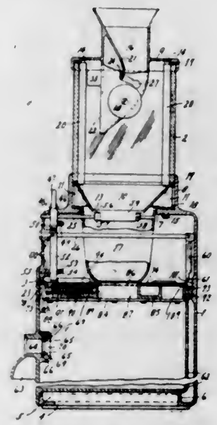
1. The combination with a ship hull adapted to travel through water, of a plurality of fins each pivotally carried on the sides of the hull for angular adjustment with respect to the axis of the hull, said fins being arranged in series vertically of the hull, a common means for simultaneously and harmoniously adjusting the fins of each series, said means comprising a guide-way secured to the side of the hull, a rod slidable in the guide-way having pivotal connections with corresponding ends of the fins of the related series, and means for sliding said rods.

1,499,901. STORAGE-BATTERY CELL. ROBERT JAMES ANDERSON, Minneapolis, Minn., assignor to Charles Henry Washburn, Minneapolis, Minn. Filed June 5, 1922. Serial No. 565,816. 6 Claims. (Cl. 204—29.)



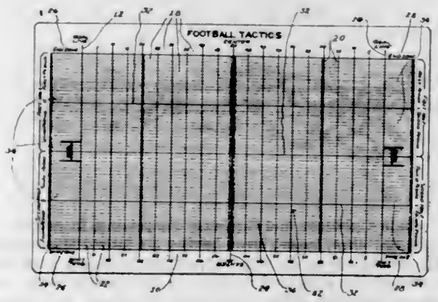
1. A secondary cell having a casing of insulating material adapted to contain a liquid electrolyte, a cover therefor, partitioning means of insulating material extending from the casing base to the cover to separate the casing into covered compartments, said partitioning means being pervious to permit circulation of the electrolyte, positive material in one compartment and negative material in the other compartment whereby the two materials are insulated from each other and the electrolyte may freely circulate therebetween, the positive material being in loosely divided form whereby a relatively large surface is presented to the electrolyte, a grid means extending into each compartment in engagement with the contained material, and a cell terminal provided by each grid means.

1,499,902. SUGAR HOLDER. JOSE MARTINEZ BARDERA, New York, N. Y. Filed June 18, 1920. Serial No. 389,936. 1 Claim. (Cl. 215—43.)



A sugar dispenser comprising a cylindrical receptacle of material having threads on the exterior surface thereof adjacent its free opening, a cover securely mounted thereon to normally form a complete closure for said receptacle, said cover comprising a unitary curved top portion with a spout formed near its outer edge integral therewith and angularly projecting outwardly and upwardly thereof beyond the side of the receptacle, a cylindrical ring member integral with said top portion having the interior surface thereof threaded to fit the threaded end of the receptacle, the juncture of the outer edge of said spout with said cylindrical ring member being in line with the outer surface of the cylindrical receptacle, and a cap hinged to an edge of the spout opening normally in position to close the latter, said spout having an outlet in a plane normally at an angle with the horizontal, said cap arranged to swing open when the dispenser is tilted less than 90° from its normal vertical upright position, and to simultaneously swing back to its effective closure position when the dispenser thereafter is returned to its initial position.

1,499,903. DISH DRIER. ADOLPH BECK, Brooklyn, N. Y. Filed Feb. 4, 1922. Serial No. 534,026. 10 Claims. (Cl. 34—19.)

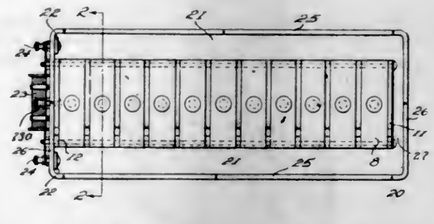


6. In a device of the character described, a casing, a drain stand comprising a wire frame having legs adapted to engage the base of said casing and a wire mesh stretched over said frame and secured thereto, a wire rack adapted for holding dishes and detachably secured to said wire mesh, a wire basket for holding silverware and detachably secured to said wire mesh, a heater support detachably held to said casing beneath said wire mesh and an insulated heater on said support adapted to be connected with a source of current supply.

1,499,904. FARE BOX. SAMUEL J. BELL and FREDERICK H. BULLARD, Springfield, and ROBERT E. COSGROVE, Longmeadow, Mass., assignors, by mesne assignments, to Bell Register Corporation, Springfield, Mass., a Corporation of Delaware. Filed Oct. 14, 1922. Serial No. 594,609. 47 Claims. (Cl. 232—7.)

10. The combination, in a fare box, with a case, a superimposed receptacle, an inspection plate mounted beneath said receptacle, means normally to retain said plate in closed position relative to said receptacle, such means consisting in part of a rocking member, and a drawer in said case adapted to receive fares from said plate when the latter is opened, said drawer being provided with a closure, of oscillatory means requiring the opening of said plate before said drawer can be withdrawn from said case, said oscillatory means being interposed between said rocking member and said drawer.

1,499,905. GAME APPARATUS. GEORGE W. BISHOP, New York, N. Y. Filed Apr. 17, 1922. Serial No. 553,637. 9 Claims. (Cl. 46—63.)

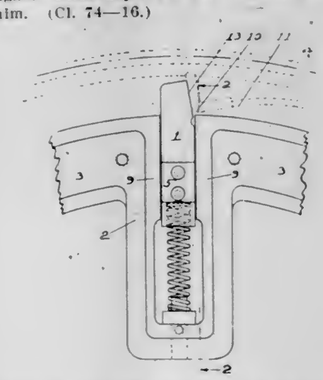


2. A game apparatus which comprises a field of play having lines spaced in one direction to represent distances between goals and lines transverse to said lines and spaced to represent play intervals, and a marker adapted to be placed on said field to indicate the progress of the game as to time and distance.

1,499,906. TRAFFIC-SIGNALING APPARATUS FOR STREET CROSSINGS. JOSEPH W. BRENKERT, San Diego, Calif. Filed Dec. 17, 1923. Serial No. 681,137. 8 Claims. (Cl. 116—63.)

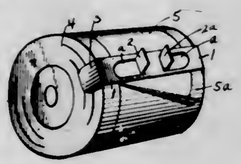
6. A traffic signaling apparatus, including a base member, a support rotatably mounted thereon, traffic signaling members pivotally mounted at a right angle to each other on said support, latch means in connection with said support and said signaling members for securing the latter in signaling and in certain downwardly shifted positions, means for rotating said support, and stop means in connection with said base member for limiting the rotation of said support.

1,499,907. STORAGE BATTERY. SAMUEL H. BROWN, Cleveland, Ohio. Filed Aug. 28, 1922. Serial No. 584,635. 10 Claims. (Cl. 204—29.)



7. In a storage battery of the character described, the combination of a series of spaced apart electrode plates, spacing means in the nature of a jar engaging the perimeter of adjacent plates, whereby an electric current may flow from one plate to another when the jar is filled with an electrolytic solution, there being an exteriorly disposed plate closing the open side of the jar, a casing surrounding the jar and electrodes with an intervening space between a wall of the casing and the exteriorly disposed plate, anodes secured to a wall of the casing and disposed within said space, rectifier resistance coils secured to the exterior of the casing and connected to the anodes, whereby a rectified current may flow from an alternating service line connected with the anodes through an electrically conductive solution in said space to said exteriorly disposed plate and thereafter to an adjacent electrode through an electrolytic solution contained by the jar.

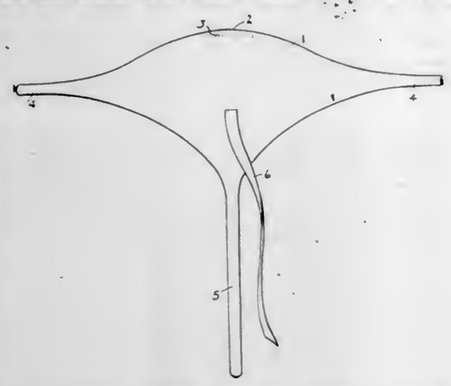
1,499,908. PROCESS OF ACTIVATING CARBON. NEWCOMB K. CHANEY, Kew Gardens, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Apr. 22, 1922. Serial No. 556,079. 7 Claims. (Cl. 252—3.)



1. Process of making a highly adsorptive carbon, comprising subjecting a primary carbon consisting essentially of a complex of active carbon and adsorbed hydrocarbons, to treatment with a gaseous substance capable of forming removable compounds with such adsorbed hydrocarbons and incapable of materially oxidizing such active carbon, and introducing a fluid to eliminate the removable compounds.

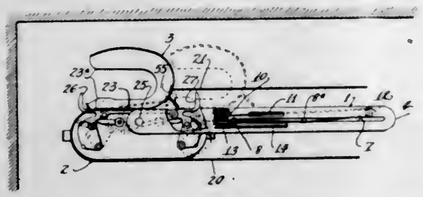
1,499,909. LATCH. EDGAR D. CHURCH and JACKSON W. VAN BRUNT, Saginaw, Mich., assignors to Jackson & Church Company, Saginaw, Mich., a Corporation of Michigan. Filed Sept. 24, 1923. Serial No. 664,616. 1 Claim. (Cl. 74—16.)

In a latch of the class described, a spring-pressed longitudinally disposed bolt, a removable stop member secured to a face of said bolt, a removable cover for said latch, a bumper of softer material than the said stop member removably secured to the inner face of said cover and adapted to receive the impact of said stop-member for the purposes set forth.



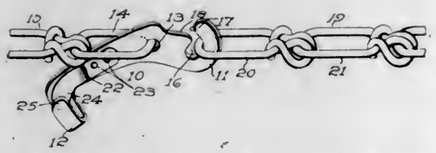
1,499,910. FASTENER FOR BOLTS OF CLOTH, RIBBON, AND THE LIKE. LON F. COX, Mertens, Tex. Filed Mar. 16, 1923. Serial No. 625,491. 2 Claims. (Cl. 206—55.)

1. A device for holding the free ends of cloth, ribbon and the like on a bolt without damage thereto, comprising a substantially flat strip of spring material, the ends of which are bent downwardly over the ends of the bolt, and segments adjacent to the center of the strip cut out and bent upwardly, then at a point midway of their length bent back upon themselves to form a suitable means for releasing said ends from the bolt, substantially as described.



1,499,911. PROTECTOR FOR BOBBED HAIR. EARLINE DALZELL, Houston, Tex. Filed Feb. 4, 1924. Serial No. 690,344. 3 Claims. (Cl. 132—46.)

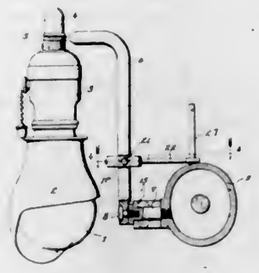
1. A hair protector comprising an approximately triangular strip of fabric, opposite side ribbons connected therewith, a forwardly extending ribbon midway between said side ribbons, a top ribbon connected with said strip



and extending forwardly over said forward ribbon and means to conform the rear of said strip to the head of the wearer.

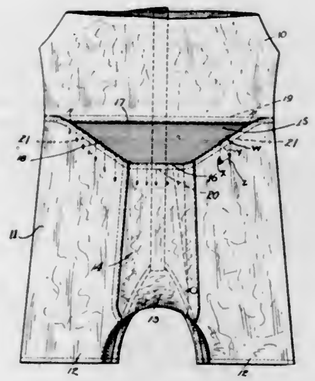
1,499,912. APPARATUS FOR HANDLING ORE AND THE LIKE. CHARLES E. DAVIS, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1922. Serial No. 534,324. 7 Claims. (Cl. 37—115.)

1. In an apparatus of the class described, in combination with a reciprocable draft-operated scraper, a frame having lateral supporting means, an elongated turning member having pivotal connection intermediate its ends with said frame, and adapted to afford bearing at one side thereof for said scraper, said pivotal connection being eccentric of the lateral sides of said turning member, and nearer the bearing side thereof.



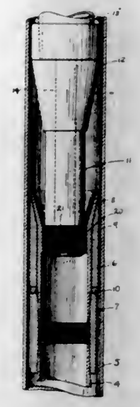
1,499,913. RIM-CHAIN CONNECTER. JOSEPH J. DEMERS, East Watertown, Mass., assignor to The Columbus McKinnon Chain Co., Columbus, Ohio, a Corporation of Ohio. Filed Dec. 27, 1921. Serial No. 524,820. 1 Claim. (Cl. 24—69.)

A chain tightener and fastener, comprising, in combination, a flat sheet metal lever having an intermediate portion pivotally secured to a link of the chain, a head at one end of the lever and having a deep arcuate notch extending inwardly from one side of the head to form a hook engageable with the end link of a chain, guiding surfaces adjacent the entrance to said notch to guide a link of a chain into the notch, a laterally disposed hook at the other end of said lever adapted to engage a side



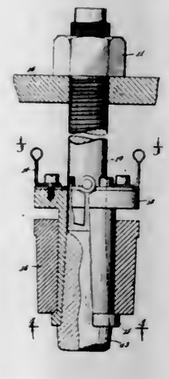
portion of a chain link to hold the lever in the chain fastening position, and with the hook formed by said arcuate notch extending into the link that is pivotally secured to the lever thereby to close the entrance to said notch.

1,499,914. SEWING-MACHINE LIGHTING FIXTURE. FREDERICK DIEHL, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Aug. 5, 1921. Serial No. 490,051. 6 Claims. (Cl. 240—2.)



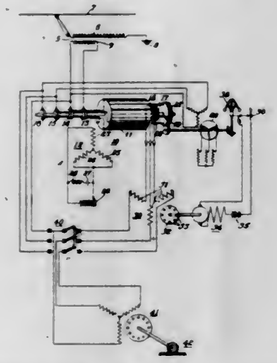
1. A lighting fixture for sewing machines comprising, a lighting arm adapted to be secured to a sewing machine bracket-arm, an anchor-rod having an eye at one end adapted to embrace the usual sewing machine spool-pin, and adjustable clamping means for securing said rod in angular relation to said lighting arm, said means permitting the anchor-rod to be adjusted endwise of itself or swung about the lighting arm as a center.

1,499,915. UNDERGARMENT. HERMAN B. FERGUSON, New Rochelle, N. Y.. Filed Sept. 10, 1919. Serial No. 323,002. 1 Claim. (Cl. 2—144.)



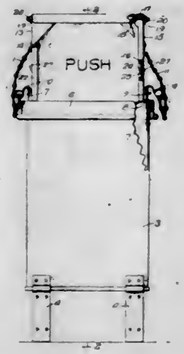
A union undergarment comprising a shirt portion and a drawers portion having a rear crotch gore, said drawers portions having at the rear thereof sloping sides extending from the sides of the waist line to the top of said crotch gore, and an insert of elastic webbing of substantially inverted trapezoidal shape having a substantially straight longer side secured to the shirt portion along the waist line and having substantially straight sloping sides secured to said sloping sides of said drawers portions and the shorter base thereof substantially parallel to the longer side of said insert and secured to said crotch gore along the whole width thereof.

1,499,916. WELL PACKER. HAROLD W. FLETCHER, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Oct. 22, 1921. Serial No. 509,645. 7 Claims. (Cl. 166—10.)



1. In combination with a well packer comprising a coupling, a sleeve of ductile metal thereon, the upper end of which is flared outwardly, a packing sleeve of compressible material outside said metal sleeve; a mandrel for setting and expanding said packer comprising a lower tubular cylindrical end, a frusto-conical expanding head at the upper end and means on the said lower end to engage said packer and releasable therefrom by the rotation of said mandrel.

1,499,917. VALVE-SEAT-REMOVING MECHANISM. HUGH FOLEY, Sour Lake, Tex. Filed Oct. 4, 1921. Serial No. 505,439. 3 Claims. (Cl. 29—86.3.)



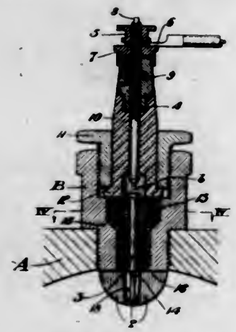
1. In apparatus for removing valve seats, a tapered rod adapted to be inserted through the orifice of a valve seat, said rod having an annular shoulder on its end portion of enlarged diameter, means slidable upon said rod formed to pass through the orifice of the valve seat when in position on the portion of the rod of restricted diameter and to engage said valve seat when in position on the portion of the rod of relatively greater diameter, and means for applying force to the rod, whereby said annular shoulder will engage said means to remove the valve seat.

1,499,918. COMBINED PHASE CONVERTER AND FREQUENCY CHANGER. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 5, 1921. Serial No. 442,761. 3 Claims. (Cl. 172—281.)

3. A combined phase converter and frequency changer, comprising a dynamo-electric machine having polyphase primary windings, a commutator cylinder connected to said primary windings, slip rings also connected to said primary windings for deriving both single-phase currents and polyphase currents, a secondary member including a good damper winding, and a rotatable brush system cooperating with said commutator cylinder.

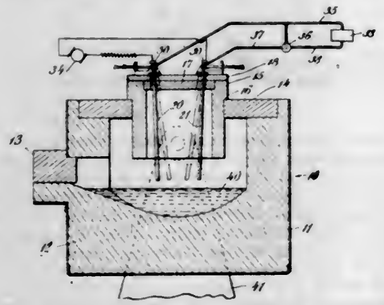
1,499,919. CAN. THOMAS S. FRIEND, Chicago, Ill. Filed Sept. 26, 1922. Serial No. 590,574. 6 Claims. (Cl. 220—24.)

1. A receptacle of the character set forth having a removable cover with an inlet housing extending upwardly from the cover said housing having triangular ends, both of the upwardly extending sides of the triangles being pitched backwardly in the same direction from a vertical plane whereby the roof and the front portion of the housing will be sloped in the same direction, said front portion having an inlet opening and a self-closing door in said housing for covering said opening, the arrangement being such that the door when in normally closed position will be at an acute angle to the perpendicular.



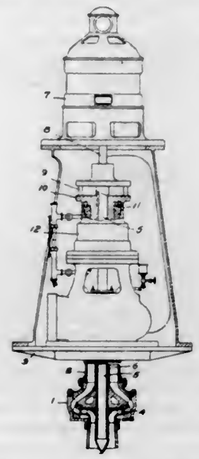
1,499,920. CONVEYER. HARRY M. GODDEN, Jamaica Plain, Mass., assignor to Norfolk Iron Company, Norfolk Downs, Mass., a Corporation of Massachusetts. Filed Jan. 17, 1923. Serial No. 613,130. 2 Claims. (Cl. 193—37.)

1. A conveyer roll consisting of a piece of cold drawn seamless tube formed with a shouldered recess in its end concentric with the outer surface theeof and of a diameter greater than the inside diameter of the tube, and a circular roll head having its peripheral portion of one thickness, laterally extended at right angles to the axis



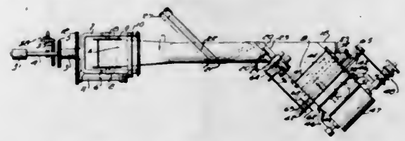
of the roll and fitting tightly and received within the recess, said roll head being securely maintained in the recess by a spun flange of the reduced portion of the tube beyond the head extending inwardly and engaging the outer suface of the head to secure the latter in place.

1,499,921. SPARK PLUG. LEO R. GOETZ, Wexford, Pa. Filed Oct. 27, 1919. Serial No. 333,532. 1 Claim. (Cl. 123—169.)



A spark plug comprising a metal body having a central chamber therein, a plurality of integral radially disposed electrodes formed at the bottom of the metal body, and presenting shoulders at the inner end of the chamber, a central electrode in the body, a plurality o transversely disposed mica disks in the chamber through which the central electrode passes and by means of which it is supported, a clamping nut having a threaded engagement with the upper end of the body, said disks being confined between said shoulders of the radial electrodes and the clamping nut, and a top member extending through the nut and having a flange at its lower end interposed between the nut and the mica, said top member having a central conductor therein.

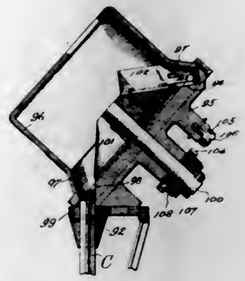
1,499,922. ELECTRIC-ARC FURNACE. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed Dec. 10, 1921. Serial No. 521,333. 24 Claims. (Cl. 204—64.)



1. An electric arc device comprising electrodes composed of an oxide of magnesia.

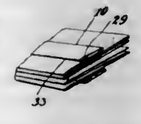
1,499,923. CLUTCH DEVICE FOR PUMPS. SAMUEL N. HALL, Los Angeles, Calif., assignor to Mahlon E. Layne, Los Angeles, Calif. Filed Sept. 8, 1920. Serial No. 408,942. 5 Claims. (Cl. 188—81.)

1. The combination with a vertical driven shaft, of a clutch disc or plate secured to the shaft so as to rotate therewith and having passages extending from its lower horizontal face upward, a fixed clutch member with its upper face in opposition to the lower face of said plate and provided on such face with grooves of increasing depth in opposition to said passages, and wedging members lying partly in the passages and partly in the grooves and preventing backward movement of said plate and the shaft, but adapted to be moved up into said passages so as to clear the fixed member when said plate is moved forwardly and to be held in such upper position by centrifugal force.



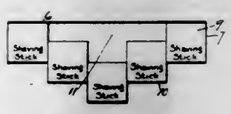
1,499,924. MACHINE FOR CUTTING TUBULAR STOCK INTO CONTINUOUS STRIPS. EMIL M. HAUSHEER, Schenectady, N. Y., assignor to Mica Insulator Company, New York, N. Y., a Corporation of New Jersey. Filed July 20, 1923. Serial No. 652,676. 19 Claims. (Cl. 164—65.)

1. In a machine of the type involving the simultaneous movement of tubular stock along and around a mandrel and a cutter arranged to cut the stock on the bias while on the mandrel, a spirally disposed traveling advancing means arranged about said mandrel in front of said cutter and adapted to engage said stock at a plurality of points on a helical curve about the mandrel for spirally advancing the tubular stock to the cutter.



1,499,925. BOBBIN-WINDING MACHINE. PARK A. HERR, Hillside, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed July 29, 1918. Serial No. 247,103. 7 Claims. (Cl. 242—20.)

1. In a device for feeding bobbins, a chute, a hopper comprising a stationary cylindrical receptacle supported with its axis inclined to the vertical and having at its bottom a groove defined by opposed conical side walls spaced apart a distance approximately equal to the axial length of the bobbins to be fed, and a conical bottom wall

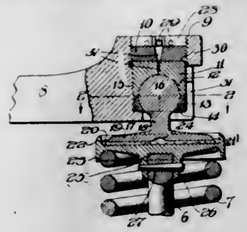


the lowermost portion of which is apertured to communicate with said chute, and an agitator disposed within said hopper and extending into the space between said conical side walls.

1,499,926. SHEET OF FOLDED MATERIAL. JOHN O. HUNT, Brooklyn, N. Y., assignor, by mesne assignments, to Independent Paper Mills Inc., a Corporation of New York. Filed Sept. 14, 1923. Serial No. 662,615. 8 Claims. (Cl. 206—57.)

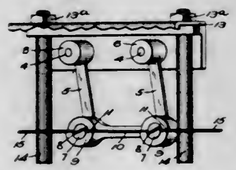
1. A sheet of material folded into a plurality of substantially coextensive sections, and an outermost section folded on itself into a plurality of parts each of which is non-coextensive with the said sections.

1,499,927. ADVERTISING-DISPLAY DEVICE. GEORGE S. HURST, Glastonbury, Conn., assignor to The J. B. Williams Company, Glastonbury, Conn., a Corporation of Connecticut. Filed Feb. 1, 1923. Serial No. 616,228. 6 Claims. (Cl. 40—126.)



1. A display device comprising a back support, and a number of empty foldable containers permanently secured to said support and arranged to present a solid front with a space between said containers and said back support and said containers being adapted for folding into flat engagement with the back support.

1,499,928. VALVE-STEM SILENCER. ALBERT E. HUTT, Ardmore, Pa. Filed July 5, 1923. Serial No. 649,466. 7 Claims. (Cl. 123—90.)

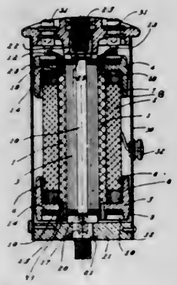


1. In a silent valve operating mechanism, a rocker arm, a valve, a stem for said valve, a disc shaped member attached to and movable with said rocker arm, a joint common to said rocker arm and its disc, a second disc shaped member attached to said valve stem, the juxtaposed substantially contiguous areas of each disc

being greater than the area of said valve stem, and a film of silencing medium interposed between and con-

tacting with said juxtaposed areas, which latter are in contact with each other, except for the intervention of said silencing medium.

1,499,929. THREAD CLEARER. SAMUEL HYSLOP, Newton, Mass. Filed July 9, 1923. Serial No. 650,336. 11 Claims. (Cl. 28—64.)

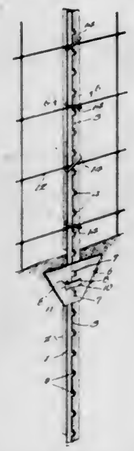


2. A thread clearer comprising a base, a plurality of thread carrying slotted arms pivoted thereon, a link connecting the arms and having a slot registering with the arm slots and constructed and arranged to swing the link slot out of registering position when the arms are turned.

1,499,930. PHOTOGRAPHIC PROCESS. FREDERIC EUGENE IVES, Philadelphia, Pa. Filed Oct. 25, 1923. Serial No. 670,658. 4 Claims. (Cl. 95—88.)

1. The conversion of a photographic silver print in a colloid layer containing also silver bromide to a pigment blue print and silver bromide by treatment in a bath containing in combination the necessary ingredients for producing the blue image, and a bromide.

1,499,931. INDUCTION OR IGNITION COIL. EDWARD B. JACOBSON, Pittsfield, Mass. Filed Apr. 15, 1922. Serial No. 553,230. 6 Claims. (Cl. 175—360.)

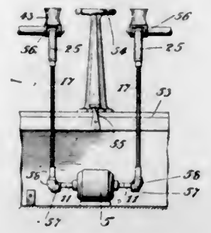


1. In an induction coil, the combination, a core, primary and secondary coils thereon, clamping members therefor, said members being formed with recesses on their inner surfaces to receive the ends of the coils, and tubular projections communicating with the recesses to receive the terminals of the primary winding and other recesses formed and located on the outer ends of the members, metallic members located on the said other recesses for distributing the magnetic flux from the core, a tie rod and means thereon for drawing the clamping members toward each other.

1,499,932. ANTISKIDDING DEVICE. SIDNEY DATTNER JACOBSON, New York, N. Y. Filed Mar. 2, 1921. Serial No. 449,053. 1 Claim. (Cl. 24—236.)

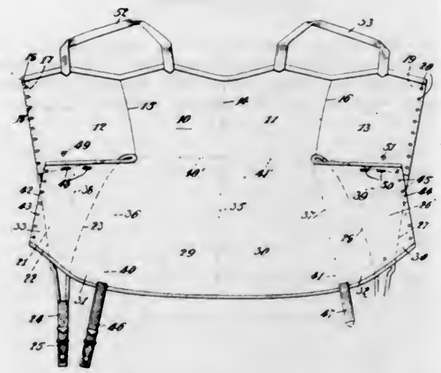
In a device of the character described, the combination with a pair of side chains and a cross-chain, of a member adapted for detachably engaging the cross-chains and the side chains comprising a piece of wire bent into a U-shape, the free ends of the wire being bent upwardly and rearwardly, the said free ends having recesses therein, a keeper having side portions secured to the legs of the U-shaped member and a portion provided with shoulders arranged to engage the said recesses of the ends of the U-shaped member, the said shouldered portion having a tongue projecting from it and arranged between the legs of the U-shaped member and curved upwardly to prevent the displacement of the said keeper sidewise.

1,499,933. METALLIC FENCEPOST. HAROLD C. JONES, Chicago, Ill., assignor to Inland Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 16, 1922. Serial No. 529,404. 19 Claims. (Cl. 189—29.)



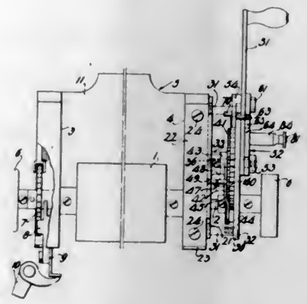
1. A rolled metal bar for fence post purposes, said bar having its front face substantially flat, studs formed on the face of the bar in a row extending lengthwise of the bar, said studs being spaced apart at distances greater than the extent of the studs lengthwise of the bar.

1,499,934. POWER-TRANSMISSION DEVICE. BENJAMIN W. KLEIN, Mount Vernon, N. Y. Filed Mar. 3, 1922. Serial No. 540,923. 1 Claim. (Cl. 74—101.)



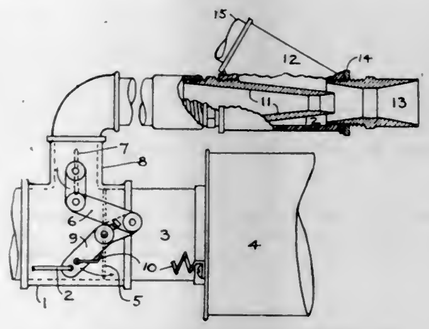
In combination with a motor having a shaft extension, a flexible tool operating shaft, an end bearing for said flexible shaft, a bearing part loosely mounted for axial rotation on the motor shaft extension, each of said bearing parts having arms located at opposite sides of the axial

center of the bearing and unequally spaced therefrom, one of the arms being provided with a pivot stud and the other arm having an opening to receive the pivot stud of the other bearing part whereby the bearing part for the flexible shaft may be connected to or disconnected from the bearing part on the motor shaft by a relative shifting



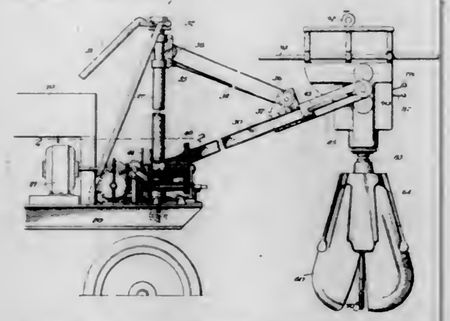
movement, and intermeshing gear elements detachably connected to the ends of the motor shaft and the flexible shaft to continuously drive the latter in its angular movement with respect to the motor shaft and said gear elements coacting with the respective bearing parts and constituting stops to prevent shifting movement of said parts in one direction upon the respective shafts.

1,499,935. APPAREL GARMENT. WALDEMAR KOPS, New York, N. Y., assignor to Kops Brothers, New York, N. Y. Filed Oct. 5, 1922. Serial No. 592,471. 4 Claims. (Cl. 2—43.)



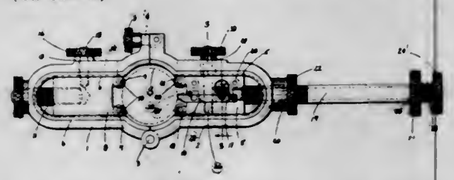
4. An apparel garment adapted for use as a combined under vest, corset and brassière and to completely cover the body from substantially the bust to the thighs, comprising a one piece body member having a back section, bust sections and hip, thigh and abdominal sections, the bust section in each front portion of the garment being separated from the hip, thigh and abdominal section in the corresponding front portion of the garment along a line of division which extends from the front edges of the said sections to substantially the axillar portions of the garment, the upper edges of the hip, thigh and abdominal sections being adapted to overlie the lower edges of the bust sections in the front portions of the garment, means for connecting the edges of the said bust section and the hip, thigh and abdominal sections at the front of the garment, means for connecting the overlapping front portions of the hip, thigh and abdominal sections to the underlying portions of the said bust sections, extensions depending from the said bust sections and underlying the said hip, thigh and abdominal sections, and hose supporters connected at the extremities of the said extensions.

1,499,936. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 19, 1921. Serial No. 453,616. 18 Claims. (Cl. 197—117.)



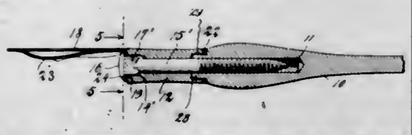
1. In a typewriting machine having a revoluble platen, line-space mechanism for advancing the platen by steps of definite extent, a platen-sweeping handle and rotation-multiplying connections between the handle and the platen, in combination, a pivotally-mounted stop for limiting the travel of the handle to control the extent of the platen-sweeping movement, and means for adjusting the stop to any one of a large number of positions, comprising a plate having a plurality of rows of holes so arranged that the travel of the handle can be varied by steps of line-space extent, and a latch slidingly mounted on the stop for movement along the stop toward and from the pivot of the stop into position to enter any one of said holes to detain the stop in the adjusted positions determined by the holes.

1,499,937. VACUUM CLEANER FOR INCLOSED PASSENGER VEHICLES. WARD LEATHERS, Haworth, N. J. Filed Aug. 31, 1922. Serial No. 585,565. 2 Claims. (Cl. 230—13.)



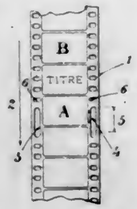
1. In a closed passenger automotive vehicle, a permanently installed vacuum cleaner system comprising a source of motive fluid under pressure, a motive fluid connection, a valve, a jet ejector, a vacuum cleaner suction tube line, a vacuum cleaner hose socket, said socket being associated with said suction tube line, said valve being located on said motive fluid connection and adapted to admit motive fluid to said jet ejector, said jet ejector being adapted to eject air from said suction tube line and hose socket, said hose socket being accessible inside the closed compartment of said vehicle and adapted to receive the end of a vacuum cleaner hose.

1,499,938. EARTH-BORING MACHINE. RANDOLPH LEEDOM, Clifton, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Aug. 8, 1922. Serial No. 580,410. 10 Claims. (Cl. 255—19.)



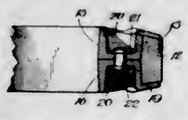
1. An earth boring machine comprising a vehicle, a derrick having a mast rotatably supported upon the vehicle, a boom pivotally carried thereby and a hoisting drum having a cable connected to the boom, and a boring unit pivotally mounted on the outer end of the boom to swing in any vertical plane and comprising a rotary auger and a driving motor operatively connected to the auger.

1,499,939. SHAFT-TURNING TOOL. WILLIAM Z. LINDERS, St. Louis, Mo., assignor to Northwestern Machine Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 4, 1920. Serial No. 428,246. 10 Claims. (Cl. 82—4.)



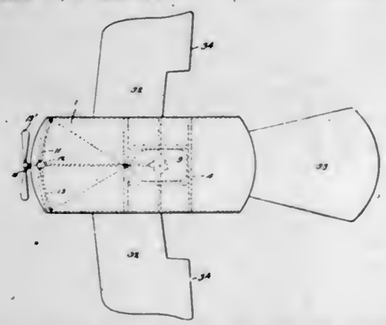
1. A shaft-turning tool provided with a frame consisting of hinged separable members, means pivotally arranged on one of said members for locking said members together, a pair of bearing blocks slidably mounted in said frame, means for clamping one of said bearing blocks in the frame, a cutter positioned in the other bearing block, means for clamping the cutter therein, and means for feeding said cutter block.

1,499,940. PENHOLDER. JOHN J. MCCOMISH, New York, N. Y., assignor of one-third to Frank J. Reinecke, Hoboken, N. J. Filed Oct. 25, 1922. Serial No. 596,759. 8 Claims. (Cl. 120—113.)



8. In combination with a pen nib and a spoon, each having a forked base, a stem and a gripping portion located at the end of the stem, said gripping portion and stem having aligned bores, the bore of the stem being screw threaded, a screw positioned in the bores of the grip and the stem screwed into the bore of the stem and keyed to the grip, and a head on the end of the screw adapted to clamp the forked base portions of the pen nib and spoon against the end of the grip.

1,499,941. CINEMATOGRAPHIC BAND. JACQUES MARETTE, Vincennes, France, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Filed Feb. 1, 1922. Serial No. 533,412. 1 Claim. (Cl. 88—19.5.)

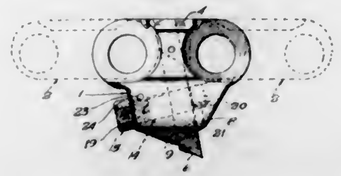


A motion picture film strip adapted for use in a motion picture projection apparatus provided with feeding claws for driving the film, in which the material of the film is suppressed on both sides of the film between the feeding perforations of each of determined images intended for stationary projection so as to form elongated apertures corresponding respectively to each of said images and the length whereof is greater than that of the claws' stroke.

1,499,942. FILLER BLOCK FOR DRAFT-GEAR YOKES. GEORGE C. MURRAY, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 442,938. 6 Claims. (Cl. 213—67.)

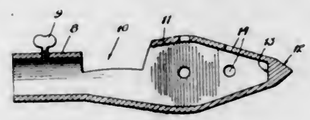
3. The combination with a yoke, having a rear wall provided with lateral tapered surfaces, of a filler block formed in two parts each having a flange adapted to coact with one of said tapered surfaces.

1,499,943. AEROPLANE. JOHN F. PENN, Baltimore, Md. Filed Mar. 14, 1924. Serial No. 699,160. 5 Claims. (Cl. 244—29.)



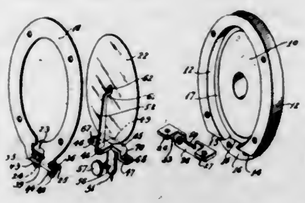
1. An aeroplane including main and side sustaining planes, parallel banking planes at the sides of the main plane, and a car pivotally connected to and suspended from between the banking planes.

1,499,944. CUTTER CHAIN. THOMAS E. PRAY, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 16, 1923. Serial No. 645,763. 2 Claims. (Cl. 262—33.)



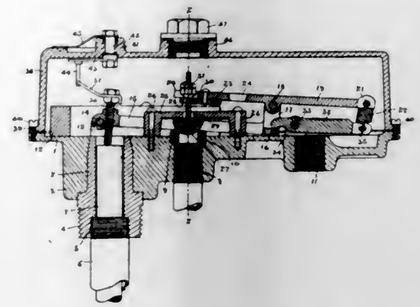
1. In combination with a cutter chain block for mining machines having a bit receiving aperture therein, a bit, a clamping member arranged transversely of said

bit receiving aperture and having means adjustable from the rear end of said block for drawing said clamping member rearwardly to secure the bit in bearing engagement in said bit receiving aperture, and a bit gripping



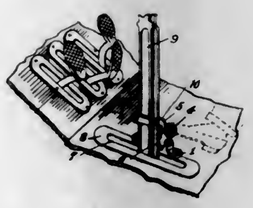
device comprising a plug formed of cylindrical stock, said plug being seated transversely in said clamping member and provided with a plurality of toothed projections formed along one side thereof in position to engage the bit.

1,499,945. SOLDERING INSTRUMENT. GEORGE A. RENSTROM, Bremerton, Wash., assignor of one-fourth to Dea Guy Lowe, one-fourth to Robert Linn Totten, and one-fourth to Edward W. Bonneau, all of county of Kitsap, Wash. Filed Feb. 17, 1923. Serial No. 619,753. 1 Claim. (Cl. 158—27.)



A soldering point for use with blow torches, comprising an integral hollow body including a sleeve terminal to slidably engage the vaporizing pipe of the blow torch, a set screw to secure the point to said pipe, the body in advance of the sleeve terminal being enlarged and formed with a soldering point, said body immediately in advance of the sleeve terminal being formed with an air admission opening, the wall of the body in advance of the opening and adjacent the soldering point being formed with a plurality of small openings.

1,499,946. SOUND BOX. THEODORE C. ROBERTS, New York, N. Y., and FRANK C. HINCKLEY, Stratford, Conn., assignors, by mesne assignments, to Columbia Phonograph Company, Inc., a Corporation of New York. Filed Aug. 18, 1921. Serial No. 493,218. 2 Claims. (Cl. 274—35.)

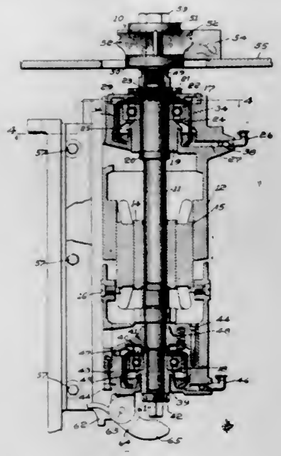


1. A sound-box comprising a body member having laterally disposed spaced portions providing a gap between them, bearing members removably mounted on the portions and being fixed and non-adjustable with relation to each other when mounted on said portions and when removed therefrom, a stylus lever, a cross-bar carried by the stylus lever and pivotally bearing upon the bearing members at its ends, and means adapted to maintain the cross-bar in engagement with the bearing members.

1,499,947. THERMOSTATIC CONTROLLER FOR GAS WATER HEATERS. BERNARD RYAN, New York, N. Y. Filed Nov. 29, 1920. Serial No. 427,257. 6 Claims. (Cl. 236—48.)

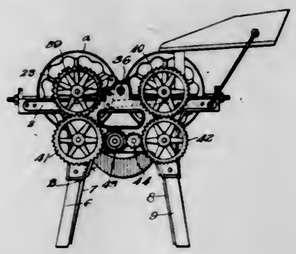
1. In a thermostatic controller for gas water heaters, an elongated casing, a thermostat connected at one end of said casing, a gas outlet arranged closely adjacent to said thermostat, a valve controlling the outlet, and a plurality of levers extending past said outlet operated by said thermostat and controlling said outlet valve.

1,499,948. AUTO BRAKE SAFETY CATCH. HERBERT SACHS, Bronx, N. Y. Filed Nov. 28, 1923. Serial No. 677,406. 4 Claims. (Cl. 74—39.)



1. A safety catch for a brake-lever, comprising a block having a base for attachment to the floor and trunnion portions to form a bearing, an angle lever pivoted in said trunnions with one arm extending out over the floor, a spring between said arm and the base tending to move the arm upwardly, the angle lever other arm projecting upwardly with a lug portion extending laterally towards the path of the brake-lever, said lug having one face inclined whereby the brake-lever engaging such face will swing the elbow lever back to pass beyond the lug and thereby compress said spring, whereby the elbow lever will be returned to former position, said lug also having an abutment face arranged to engage the brake-lever on its return, to prevent further return of the brake-lever until the elbow lever is swung by the said base arm.

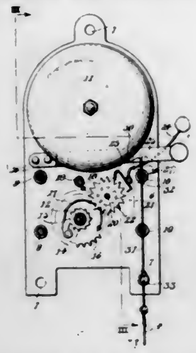
1,499,949. SPINDLE-LUBRICATING MEANS. WILLARD N. SAWYER, Winchendon, Mass., assignor to Baxter D. Whitney & Son, Inc., Winchendon, Mass., a Corporation of Massachusetts. Filed June 8, 1923. Serial No. 644,186. 9 Claims. (Cl. 64—56.)



1. In combination with a wood shaper having a vertical spindle for operating a cutter head, an antifriction bearing for the spindle mounted in a closed casing, and lubricating means for the bearing including, an oil receptacle below the bearing, an oil slinger within the

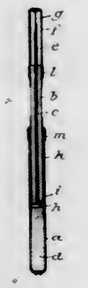
casing and secured to the spindle above the bearing for rotation by the spindle, and a wick extending upwardly from the oil receptacle into contact with the slinger and

adapted to convey oil to the slinger to be thrown outwardly by the latter in the form of an oily mist that lubricates the bearing.



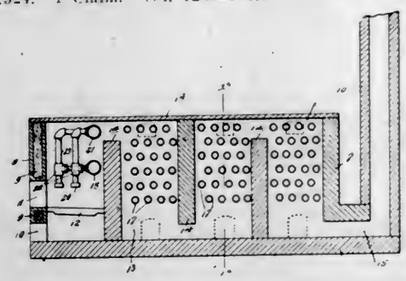
1,499,950. POTATO-CUTTING MACHINE. HENRY J. SMITH, Minneapolis, Minn. Filed Oct. 28, 1922. Serial No. 597,691. 5 Claims. (Cl. 146—164.)

1. A potato cutting machine, consisting of a frame supported by supporting legs, cutting knives stretched through the central or inner portion of said frame, means for drawing these knives to the desired tension, means for holding revolving and swinging feeding rolls among the cutting knives and means for imparting a positive revolving motion to said feeding rolls.



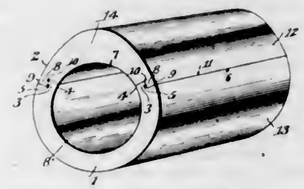
1,499,951. BURGLAR ALARM. JOHN SOSOKA, Cleveland, Ohio. Filed Oct. 15, 1923. Serial No. 668,702. 1 Claim. (Cl. 116—92.)

In an alarm device including a frame supporting a bell, a hammer arm pivoted on the frame adjacent the bell, and means to oscillate the hammer arm; a latch mechanism to hold the hammer arm against oscillation and comprising a horizontally disposed spring arm having one end secured to the frame remote from said hammer arm and its other end provided with a laterally extending pin movable into and out of the path of the hammer arm, the resiliency of the spring arm tending to move the pin out of said path, a second spring arm at right angles to the first having one end fixed to the frame in front of the free end of the first spring arm and being provided with an angularly bent portion constituting a latch for the first mentioned arm to hold it



releasably flexed and the pin in the path of the hammer arm, and pull means attached to the free end of the second spring arm.

1,499,952. AMPUL SYRINGE. HENRY SPAHLINGER, Carouge-Geneve, Switzerland. Filed Mar. 1, 1920. Serial No. 362,462. 7 Claims. (Cl. 128—220.)

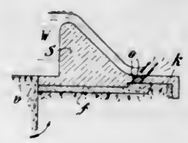


2. In an ampul-syringe an ampul, a telescoping member of non-uniform diameter and having a loose or leaky fit therewith, and a plastic sealing substance between the telescoping surfaces acting as a lubricant during use of the syringe.

1,499,953. FURNACE. JOSEPH LEROY SPURGEON and THOMAS JEFFERSON FARLEY, Bloomfield, Iowa. Filed June 25, 1923, Serial No. 647,497. Renewed Apr. 10, 1924. 1 Claim. (Cl. 126—101.)

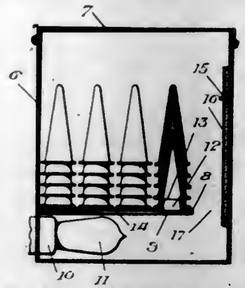
A furnace including outer side walls and inner side walls spaced apart to provide air spaces therebetween, a grate disposed between the inner side walls, and transverse air heating tubes carried by and connecting the inner side walls and communicating with said air spaces at their ends, said tubes being arranged in vertical rows inclined in opposite directions, and water heating means above the grate, said water heating means comprising superimposed inlet and outlet headers having forwardly extending pipes provided with down turned ends, the ends of the pipes of the inlet header being arranged within the lower ends of the downturned ends of the pipes carried by the outlet header, and caps closing the lower ends of the pipes of the outlet header.

1,499,954. DRAIN PIPE. CLIFTON STILES, Calhoun, Ky., assignor of one-half to A. B. Stiles, Calhoun, Ky. Filed Nov. 21, 1922. Serial No. 602,382. 2 Claims. (Cl. 61—10.)



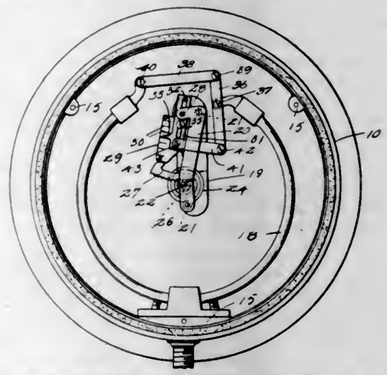
1. A drainage pipe comprising a hollow cylindrical body formed of a base section and a removable lid section, said base section of a size greater than half a cylinder, said lid section of a size less than half a cylinder and having its outer face of substantially semi-oval contour and its inner face of semi-circular contour whereby the body portion of said lid section increases in thickness from each side terminal thereof to its longitudinal center.

1,499,955. IDENTIFICATION TAG AND METHOD OF MAKING SAME. CHARLES JUDSON STODDARD, Washington, D. C. Filed Oct. 3, 1919. Serial No. 328,121. 8 Claims. (Cl. 40—2.)



1. The herein described method which consists in applying a plurality of data units to one side of a plate, also applying a plurality of other data units to the opposite side of the said plate and in register with the first mentioned units, and severing from the plate the individual plate portions carrying the registered data units.

1,499,956. PROTECTION OF BUILDINGS OR WEIRS AGAINST HOLLOWING OUT OR WASHING AWAY. KARL TERZAGHI, Vienna, Austria. Filed July 17, 1923. Serial No. 652,175. 6 Claims. (Cl. 61—30.)



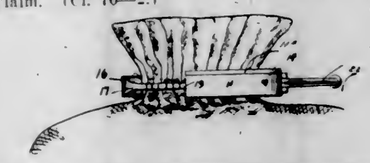
1. In means for preventing washing out of dam footing, a water retaining dam like structure, and a water permeable filter bed extending at the lower part of said structure and formed of gravel like material, a substantial part of said filter bed being on the side opposite that on which the retained water presses.

1,499,957. OVEN OR DISPLAY DEVICE. CHARLES GAINER TURNER, Atlanta, Ga. Filed Aug. 18, 1920. Serial No. 404,345. 18 Claims. (Cl. 34—21.)

18. A combined oven and display device comprising a casing having a window or transparent portion for displaying the contents, a source of heat and light within the casing, and a shelf within the casing for supporting stacks of nested ice cream cones or other cup pastry, said shelf being constructed and arranged for retaining such stacks in predetermined positions spaced from one another against horizontal displacement for the effective illumination and display of the cones or pastry and for the upward flow of air around the stacks.

1,499,958. GAUGE. JESSE W. WEISIGER, Rocky Mount, N. C. Filed Dec. 19, 1921. Serial No. 523,510. 4 Claims. (Cl. 73—109.)

1. A gauge having an indicating mechanism provided with a dial and a cooperating indicator, justifying mechanism for the indicator within the gauge, said dial having an opening therethrough to permit access to the justifying mechanism for actuation, a shuter movable over and from said opening, said dial having an elongated slot therein, and an actuating means for the shutter extending through said slot and engageable with walls at opposite ends thereof to limit its movement in opposite directions.

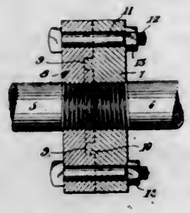


1,499,959. PLATE LIFTER. FREDERICK C. WERNET, Albrightsville, Pa. Filed Apr. 3, 1923. Serial No. 629,609. 3 Claims. (Cl. 294—33.)

1. A plate lifter comprising a pair of connected complementary arms held normally apart under spring tension, said arms having their free ends curved inwardly,

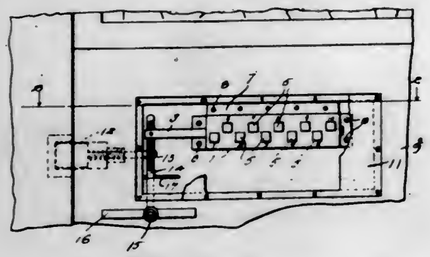
fingers carried by the said curved portions, each of said fingers depending from the said curved portions and bent intermediate its ends to provide a groove, and a clip slidably movable on the said arms.

1,499,960. LOCK. JOSE M. ALMEDIA, Rock Springs, Wyo. Filed May 14, 1921. Serial No. 469,464. 1 Claim. (Cl. 70—2.)



A lock having a substantially rigid arcuate body adapted to receive an article for fastening, one end of said body having a portion integral with the body and of channel form, a plate on said portion to provide a hollow housing in combination therewith, the housing being open at the free end, a latch member in said housing, said portion having spaced inner and outer substantially longitudinally extending walls, the inner wall terminating short of the outer wall whereby the outer wall may be initially engaged by the tongue for effective guidance into the housing and into cooperative relation with the latch member, said latch member being pivoted to the body intermediate said walls and relatively close to the outer wall, the outer end of the latch being free and normally spaced from the outer wall, both ends of the latch being relatively close to the outer wall whereby the ends of the latch will coact with the outer wall to prevent undue movement of the latch to either fastening or releasing position, spring means for the latch carried by said portion at its closed end, said outer wall having a key slot therethrough substantially in line with said spring control means, whereby the pressure against the same will be direct on the part of the key, a tongue to enter said open end of the housing and engage said latch at said free end, and a link means pivoted to the tongue and to the other end of said body to form an articulate connection adapted to dually function to compress an article in the confines of said body and to facilitate insertion of the tongue into said housing through its open end.

1,499,961. SHIELD FOR VEHICLE HEADLIGHTS. WILLIAM AUCHSTETTER, Ida Grove, Iowa. Filed July 12, 1923. Serial No. 651,045. 5 Claims. (Cl. 240—45.4.)

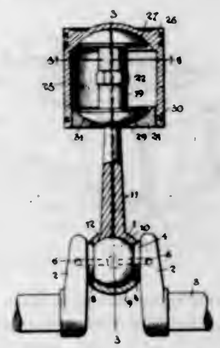


1. In a vehicle headlight of the type described, a lamp casing carrying a front lens, a curtain within the casing adjacent the lens and extending from the upper end thereof downwardly to a point adjacent the lower end leaving a portion of the casing exposed for the projection of light rays, means for holding the curtain in a taut condition, and means for raising the curtain, said curtain holding means including a circular frame, said curtain embodying a circular pocket edge enclosing a portion of the frame and a chordal lower edge.

1,499,962. PIPE JOINT. JOHN BARNER, Manistique, Mich. Filed Feb. 16, 1922. Serial No. 537,014. 1 Claim. (Cl. 285—175.)

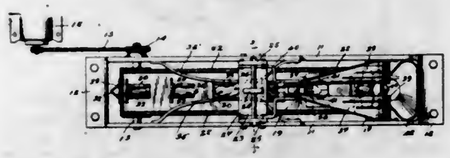
In a pipe joint of the class described, male and female members having axial internally threaded registering bores, the contacting face of the female member having a circular series of spaced arcuate depressions therein defining spaced ribs, and each rib having a portion thereof undercut at corresponding ends communicating with the depression and roughened on the inner face thereof, the contacting face of the male member being provided with a circular series of spaced lugs, an arcuate extension carried by the outer end of each lug projecting in the same direction and in directions opposite to the spaced ribs, and adapted to be received in the depressions of the female member with the extensions projecting into the undercut portions beneath the ribs and engaging the same with the faces of the male and female members flatly engaging each other, the interlocking connections between the members being confined within the external configuration thereof, and means for preventing relative rotary movement of the members.

1,499,963. COMBINATION LOCK FOR SEDANS AND COUPÉS. OSWALD E. BECKMAN, Mediapolis, Iowa. Filed Sept. 6, 1923. Serial No. 661,200. 4 Claims. (Cl. 70—54.)



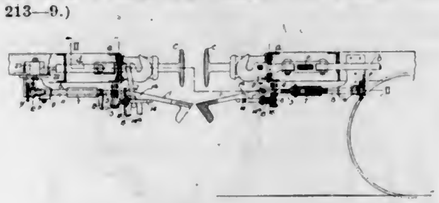
1. In combination with a part having a recess in a side thereof, a permutation lock secured within the outer portion of the recess to admit of ready access to the front and rear sides of the lock for manipulation of the tumblers to secure or release the lock bolt as required, and a covering plate disposed at the front side of the recess and having an opening therein to expose the front side of the lock and admit of the hand being introduced into the recess to manipulate the tumblers of the lock from the inner or rear side, each of said tumblers extending through the front and rear sides of the casing.

1,499,964. PISTON UNIT. WILLIAM CRAWFORD BELL, Baltimore, Md. Filed June 19, 1923. Serial No. 646,398. 12 Claims. (Cl. 74—108.)



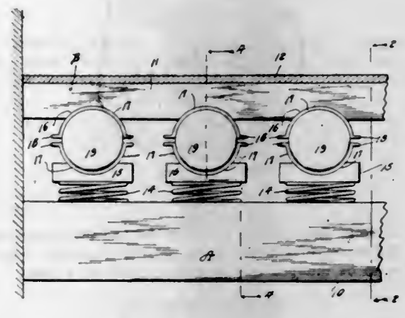
1. A piston unit comprising a piston body having means to provide therein at each end thereof a semi-spherical socket, said sockets being oppositely disposed,

a connecting rod extending through one of said sockets and into said piston body, and a sleeve secured to that



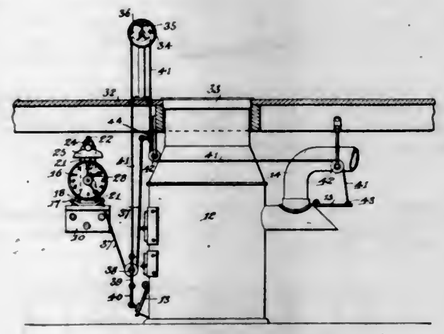
end of the connecting rod within the piston body and provided at each end with a semi-spherical enlargement constituting a bearing seated in one of said sockets.

1,499,965. AUTOMATIC OYSTER SHUCKER. GOTTLOB W. BEYERLE, Denver, Colo. Filed Oct. 3, 1923. Serial No. 666,266. 8 Claims. (Cl. 17—9.)



1. A shucking machine for bivalves comprising an endless conveyor, a penetrating knife fixed close thereto, shell carriers on the conveyor adapted to center shells with respect to the knife and transmit force from the conveyor to push the shells against the knife for penetration, shell-spreading means associated with the knife, and means to separate oysters from their shells.

1,499,966. AUTOMATIC COUPLING FOR RAILWAY AND LIKE VEHICLES. WILHELM GOERT BOONZAIER, New Wandsworth, London, England; Irene Kathleen Holland and Gregorio John Boonzaier executors of said Wilhelm Goert Boonzaier, deceased. Filed Oct. 22, 1919. Serial No. 332,505. 3 Claims. (Cl. 213—9.)

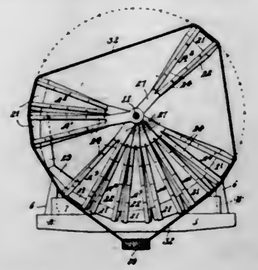


1. An automatic coupling for railway and like vehicles comprising a hook-link coupling member hinged horizontally to a longitudinally movable horizontal member, an inclined surface on the under side of the coupling member, a spring to take up the tensile strain on the coupling, and a transverse crank shaft upon which the inclined surface on the underside of the coupling member is adapted to rest.

1,499,967. VIBRATORY PLATFORM. EDWARD BOWENS, Paducah, Ky. Filed Nov. 17, 1923. Serial No. 675,327. 5 Claims. (Cl. 20—6.)

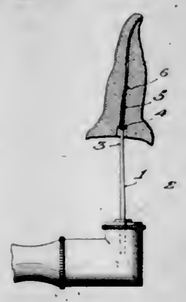
1. A platform of the class described having a movable floor section supported by horizontally spaced pairs of yieldable supporting means, each pair having one of its members superimposed on the other and engaging the floor section.

1,499,968. TIME-CONTROLLED APPARATUS. BRUNO BRAULT, Two Rivers, Wis. Filed Apr. 6, 1923. Serial No. 630,295. 2 Claims. (Cl. 161—8.)



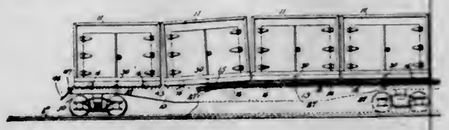
1. The combination with a furnace including a draft door, and a check valve, of an indicator device, a main cable connecting the draft door, the check valve, and the indicator, a timing device, a guide pulley at the end of the portion of the main cable between the indicator and the draft door, and a secondary cable coupled at one end to the portion of the main cable between the check valve and the indicator and leading around the guide pulley and connected at the other end to the timing device.

1,499,969. DUMPING WAGON. ROY R. BROWN, Glens Falls, N. Y. Filed July 31, 1923. Serial No. 654,956. 4 Claims. (Cl. 298—1.)



1. The combination with a vehicle running gear of end posts carried by said gear, longitudinally extending shafts carried by said posts, and a semi-cylindrically-

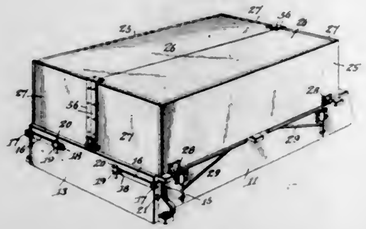
shaped body carried by said shafts, said body consisting of a multiplicity of segments adapted to be consecutively



swung from one side of the body to the other for causing the center of gravity to be shifted laterally to cause a load to be dumped a fragmentary part at a time.

1,499,970. PILOT REAMER. CLARENCE BUSH, Chicago, Ill. Filed Oct. 30, 1922. Serial No. 597,956. 2 Claims. (Cl. 32—31.)

1. A dental reamer including a body having a flexible tip constituting a pilot adapted to follow the natural tooth canal, and a reamer burr formed on the body at the rear of the flexible tip.

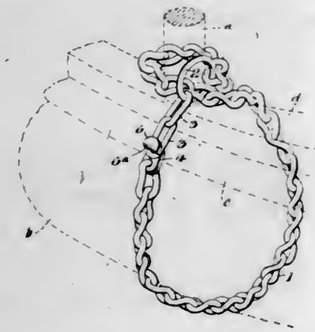


1,499,971. COUPLING DEVICE. ABNER F. CALLISON, Philadelphia, Pa. Filed July 25, 1923. Serial No. 653,743. 10 Claims. (Cl. 214—38.)

1. In a device of the character described, the combination of a vehicle having a platform with fixed upstanding projections, a removable unit container normally resting on the platform and having sockets receiving said projections to prevent relative horizontal movement of said container, and a member optionally projectable vertically above each fixed projection to maintain the connection between the vehicle and the container as the latter is raised from the platform.

1,499,972. CAMPING OUTFIT. BENJAMIN E. CANFIELD, Holton, Kans. Filed Apr. 20, 1923. Serial No. 633,493. 7 Claims. (Cl. 135—1.)

1. A device of the class described comprising a body including a floor member, side portions each comprising longitudinal members at right angles to each other and oblong end members connected to the longitudinal members, one of said longitudinal members of each side portion being hingedly united to the body and said side por-

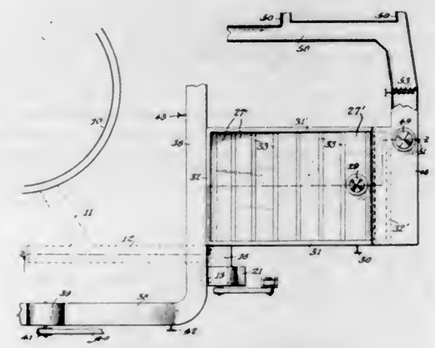


tions being foldable upon the top member of the body, and means for supporting said side portions in open position.

1,499,973. DENTAL TRAY ATTACHMENT. SAMUEL E. DOUGLASS, Raleigh, N. C. Filed Mar. 6, 1923. Serial No. 623,230. 4 Claims. (Cl. 32—6.)

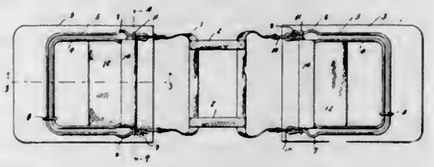
1. A dental tray having a plate detachably fitted to an end thereof to receive and support the material at a point beyond the range of the tray when taking an impression of the mouth, said plate having projections pressed laterally therefrom whereby to facilitate the reassembling of the cast should the same become broken and detached when removing the same from the mouth.

1,499,974. EMERGENCY TRACTION OR ANTISKID CHAIN. EDGAR P. ELZEY, Parkersburg, W. Va. Filed Mar. 20, 1923. Serial No. 626,325. 5 Claims. (Cl. 152—14.)



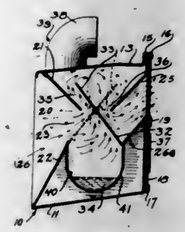
1. An anti-skid or traction device consisting of a single chain length at one end provided with a coupling member in longitudinal continuation thereof, an enlarged loop directly coupled into the other end of said chain length, and a coupling link directly coupled into said loop to receive said member in securing the chain ends together.

1,499,975. ARTIFICIAL BAIT. JAMES EMANUEL FOAD, Green Bay, Wis. Filed Apr. 17, 1922, Serial No. 553,799. Renewed Dec. 3, 1923. 2 Claims. (Cl. 43—46.)



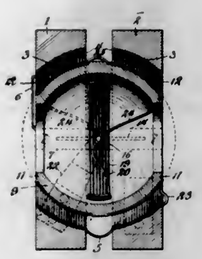
1. An artificial bait, comprising a body of buoyant material, having a weight in its bottom intermediate the ends thereof, flexible fins and tail pieces carried by the body, said body having vertical and angular passages therethrough in the vertical central plane of the same, and a colored coating on the body.

1,499,976. HEATING SYSTEM. PETER C. C. FRIDERICHSEN, Independence, Mo. Filed July 26, 1922. Serial No. 577,583. 5 Claims. (Cl. 34—19.)



1. In a system of the class described, the combination with a kiln, of a drier located exteriorly of said kiln, a bank of vertically disposed metallic tubes arranged in said drier at one end thereof, and power operated means for drawing hot gases from the fire boxes of the kiln and passing the same indirectly through the drier by passage upwardly through said bank, said means being also operable for the drawing of air through the hot kiln and the fire boxes thereof after the drawing of the fire from the latter and passing the heated air directly through said drier.

1,499,977. GAME RACK AND SHELL POUCH. JOSHUA GIBBS and CLIFTON M. INGHAM, Porter, Okla. Filed Jan. 25, 1923. Serial No. 614,903. 3 Claims. (Cl. 224—5.)

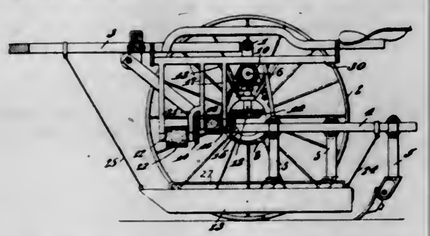


3. A game rack comprising inner and outer substantially U-shaped frames having enlargements adjacent their upper ends, said frames being spaced apart from one enlargement to the other to retain game applicable through the enlargements, said frames having loops above the enlargements, suspending means attached to the loops, said loops being constricted adjacent the enlargements, a crosstie spanning the loops and fastened thereto at the constrictions, and a pouch carried by said crosstie.

1,499,978. AUTOMATIC VENTILATOR. ALFRED A. GILMORE, Preston, Ontario, Canada. Filed July 9, 1923. Serial No. 650,294. 15 Claims. (Cl. 98—31.)

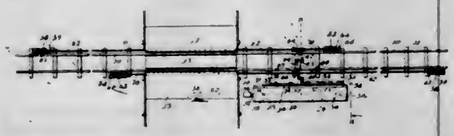
1. In a ventilator, the combination of a casing having a passageway therethrough, a damper in said passageway normally held by gravity in position to permit a maximum circulation of air, but operable by a current of air through the passageway in either direction to progressively close the passageway as the velocity of the current increases, said damper when swung to the limit of its movement in either direction engaging the lower wall of the casing to close the passageway beneath the damper, but always leaving a restricted passageway above the damper in all positions of the latter.

1,499,979. TUNING DEVICE FOR WIRELESS RECEIVING CIRCUITS. COLEMAN MULFORD GRAY, Del Mar, Calif. Filed Aug. 15, 1921. Serial No. 492,385. 12 Claims. (Cl. 171—242.)



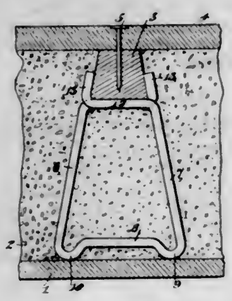
1. A device of the character described comprising a fixed coil, a second coil mounted for rotation and arranged in inductive relation to the fixed coil, and a third coil mounted for rotation and having relatively few turns as compared to the second coil, said third coil being arranged in series with the second coil and in inductive relation to it.

1,499,980. FRAMEWORK FOR AIRCRAFT AND OTHER STRUCTURES. FREDERICK MICHAEL GREEN, Coventry, England, assignor to Armstrong Siddeley Motors Limited, Park Side, Coventry, England. Filed Nov. 21, 1923. Serial No. 676,146. 3 Claims. (Cl. 244—31.)



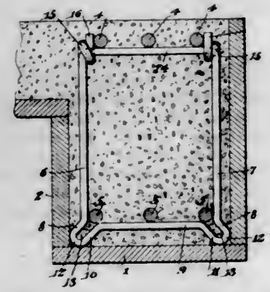
1. In framework, an edge member of open channel section, a rib, a head on said rib lying in said channel, and means for pinching together the edges of the channel on each side of the rib.

1,499,981. BOLL-WEEVIL COLLECTOR. JOSEPH H. HANCOCK, Scottsboro, Ala. Filed Sept. 26, 1922. Serial No. 590,694. 2 Claims. (Cl. 43—142.)



1. A machine of the class described including spaced pans, means for supporting the same, separate brushes supported above the space between the pans and rotatable about parallel superposed axes, one of said brushes being in advance of the other, and means for simultaneously rotating the brushes in different directions respectively.

1,499,982. AUTOMATIC RAILROAD SIGNAL. ALLEN B. HARPER, Tipton, Ind. Filed Apr. 5, 1924. Serial No. 704,480. 7 Claims. (Cl. 246—293.)

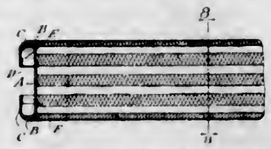


2. In an apparatus of the class described, a support including a guide track having seats at the ends, a traveller movable on said track and adapted to be alternately engaged in said seats, a signal device associated with said traveller, reversely operating compression springs connected to said traveller, an operating member adapted to alternately transfer said traveller to opposite ends of said track and to alternately compress said springs prior to said transfer and releasing the springs when the transfer is completed to cause the reaction of the spring to move the traveller over the track and alternately project and withdraw the signal.

1,499,983. SLEEPER SUPPORT. STEPHEN L. HEIDRICH, Brooklyn, N. Y. Filed Jan. 29, 1923. Serial No. 615,758. 12 Claims. (Cl. 72—122.)

1. A device for the purpose set forth comprising a pair of oppositely extending supporting elements, a combined coupling and supporting bar connecting said elements together at the top thereof, and each of said elements provided at its top with a combined supporting and locking bar for a sleeper.

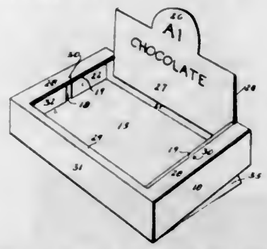
1,499,984. SUPPORT. STEPHEN L. HEIDRICH, Brooklyn, N. Y. Filed Jan. 29, 1923. Serial No. 615,759. 6 Claims. (Cl. 72—122.)



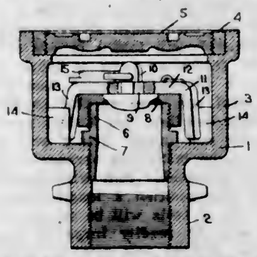
1. A support for the purpose set forth comprising a pair of supporting elements, a coupling bar connecting the upper portions of said elements together, and each of said elements extended around said coupling bar to provide a vertically disposed stop, and each of said elements being substantially rectangular in contour and having each lower corner thereof extended outwardly at an inclination and with its base positioned above said extended corners.

1,499,985. SHEET-STEEL ARTICLE AND METHOD OF MAKING SAME. CHARLES W. KIRSCH, Sturgis, Mich., assignor to Kirsch Manufacturing Company, Sturgis, Mich., a Corporation of Michigan. Filed Feb. 4, 1924. Serial No. 690,518. 28 Claims. (Cl. 29—180.)

1. A sheet-steel article such as a channeled strip or the like made from a blank normally too resilient to be adapted for forming into said articles to adapt the latter to maintain their shapes under loads or stresses for which they are intended, said blank being bodily distorted to present minutely pitted and puckered surfaces and possessing suitably reduced resiliency and thereby adapted for shaping as aforesaid, to produce said articles.

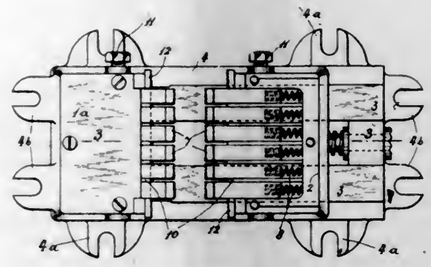


1,499,986. CHANNELED STRIP SUCH AS CURTAIN RODS OR THE LIKE. CHARLES W. KIRSCH, Sturgis, Mich., assignor to Kirsch Manufacturing Company, Sturgis, Mich., a Corporation of Michigan. Filed Feb. 4, 1924. Serial No. 690,519. 9 Claims. (Cl. 156—19.)



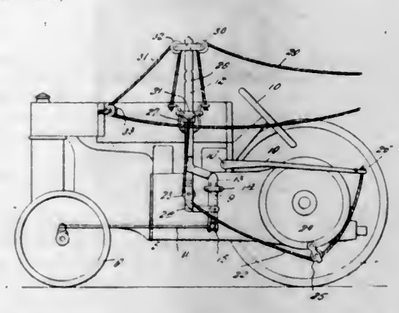
5. A channeled structure, such as a curtain rod, formed of sheet metal normally soft to facilitate bending but insufficiently rigid for ultimate purposes, hardened in spaced but closely associated areas to afford the strength required, the hardened areas, also serving in creating surface ornamentation.

1,499,987. DISPLAY BOX. FRANK L. ROE, Chicago, Ill. Filed Nov. 21, 1921. Serial No. 516,713. 12 Claims. (Cl. 206—44.)



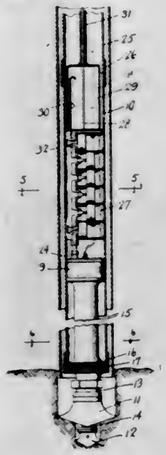
1. A display box stamped from a single blank of paper, including means for supporting said box at a proper display angle; a display panel extending upwards from one edge of said box; a side ledge on the upper face of said box; and means bearing on and extending beyond said ledge for retaining said panel in position.

1,499,988. LOCKING CLOSURE FOR CONTAINERS. MARK A. LAWTON, Newton, Mass. Filed Jan. 12, 1923. Serial No. 612,286. 4 Claims. (Cl. 220—39.)



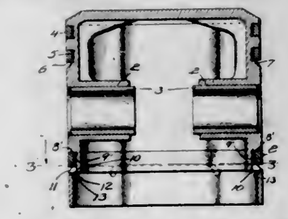
1. A locking closure for a container having an opening, comprising a housing surrounding the opening, a removable top for the housing, a removable cap for the opening, a stationary abutment within the housing, and means carried by the cap and angularly adjustable thereon for engagement with said abutment and locking the cap against removal.

1,499,989. VISE FOR USE WITH MACHINE TOOLS. FRANZ LEHMANN, Altstetten, Switzerland. Filed Apr. 20, 1923. Serial No. 633,504. 4 Claims. (Cl. 90—60.)



1. In the herein-described vise for use with machine-tools, the combination, with a base-plate adapted to be secured to the carrier plate of the machine-tool and provided with a slide-rest, of two housings with detachable covers mounted opposite each other on said slide-rest, means to permit of a sliding movement of at least one of the housings in relation to the other, a series of spring-controlled clamping jaws located in and guided by each of the said housings and projecting through the inner and open end thereof, and means to fix the clamping jaws in position.

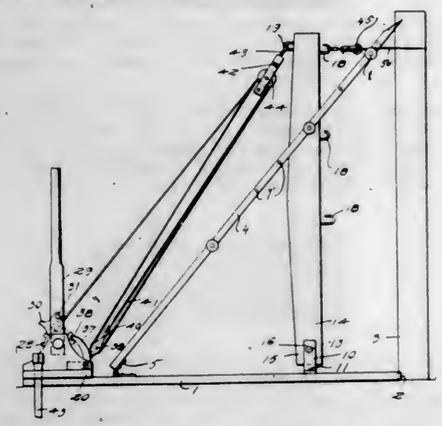
1,499,990. DISTANCE-CONTROL MECHANISM FOR TRACTORS. EVERETT LITTON, Woodhull, Ill. Filed July 31, 1923. Serial No. 654,832. 1 Claim. (Cl. 180—77.)



A tractor control attachment including a lever having its lower end provided with means for attaching the same rigidly to the longitudinal swinging depending operating arm of the tractor steering mechanism, a slide movable longitudinally of said lever, means to operatively connect said slide to the clutch pedal of the tractor whereby upward movement of the slide will cause depression of said clutch pedal for throwing the tractor out of gear, and means associated with the lever and with the slide for selectively swinging the lever in either direction, said last-named means being simultaneously operable for raising the slide to operate the clutch pedal without swinging said lever, the connection between the slide and the clutch pedal including rigidly connected long and short arms, the short arm being flexibly connected to the clutch pedal, and the long arm being flexibly connected to the slide.

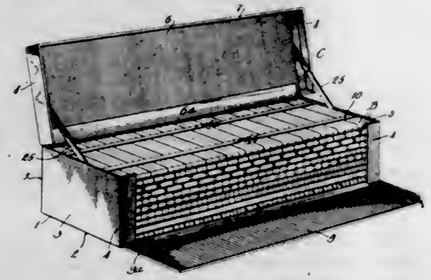
1,499,991. DRILL. HENRY W. LOUDEN, Jr., Beaumont, Tex. Filed Apr. 18, 1922. Serial No. 554,465. 2 Claims. (Cl. 255—4.)

1. A drill of the character described comprising a jacket, a pair of superposed drills, spindles supporting the drills and arranged one within the other, a tubular bearing for the outermost spindle, said bearing being arranged within and connected to said jacket, a gear on each of said spindles, a pinion arranged between and meshing with said gears, a motor for rotating said pinion whereby the drills and spindles are rapidly rotated in opposite directions.



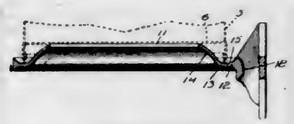
1,499,992. EXPLOSION-ENGINE PISTON. GILBERT W. LYNCH, Morgantown, W. Va. Filed Oct. 23, 1922. Serial No. 596,307. 2 Claims. (Cl. 74—109.)

1. A piston having its body portion formed with a peripheral piston ring receiving groove, said groove having an upper, an inner vertical and a lower wall, said lower wall having its inner portion parallel to said upper wall and its outer portion bevelled and with its outer terminus spaced a greater distance from the upper wall than the inner terminus thereof, said lower wall having a plurality of radially disposed passages cut from the outer terminus of the bevelled portion inward to a point parallel with the said vertical wall, and communicating with the interior of the piston body, and said body portion having its inner face below said groove formed with semi-circular channels extending upwardly and outwardly and communicating with said passages.



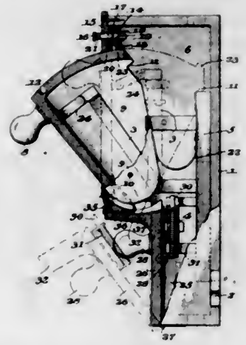
1,499,993. WIRE STRETCHER. JAMES M. MARTIN, Hartley, Ark., assignor of one-half to William S. Capeheart, Vandervoort, Ark. Filed Mar. 5, 1923. Serial No. 622,887. 5 Claims. (Cl. 254—103.)

5. A wire fence stretcher including a base, a stretcher bar pivotally mounted on said base at one end thereof, spaced hooks on the inner longitudinal side of said stretcher bar, a brace pivoted to said base, said brace having a longitudinal slot for receiving said stretcher bar, fence wire supporting members spacedly mounted on said edges of said brace, fence wire clamping means associated with the hooks on said stretcher bar, a plate on the opposite end of said base, a windlass supported on said plate, a pulley wheel swivelly mounted on said plate,



a second pulley carried by the upper end of the stretcher bar, a cable secured to the first mentioned pulley and associated with the two pulleys and secured at its opposite end to the windlass for operating the stretcher bar and wire fence clamping means, and anchoring means associated with the plate for holding the wire stretcher in a stationary position.

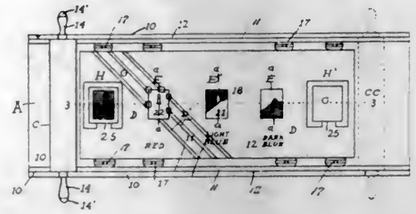
1,499,994. SPECIAL TEXTILE-FABRIC PACKAGE. LAURENCE MARX, New Rochelle, N. Y., assignor to Cohn-Hall-Marx Co., New York, N. Y., a Corporation of New York. Filed Dec. 18, 1922. Serial No. 607,732. 5 Claims. (Cl. 206—44.)



1. A textile fabric package comprising a plurality of lengths of fabric each much shorter than the conventional bolt, each length folded into a rectangular bolt of fabric, the respective bolts of fabric differing from one another to provide a varied assortment and the bolts being piled one upon another to form a package of a size easily handled, and a dust proof casing normally enclosing and snugly fitting around the pile of bolts in which the latter are arranged lengthwise, said casing having a movable wall whereby when the same is moved to open position a longitudinal edge of each bolt of the pile of bolts will be exposed so that all of the fabrics may be readily inspected and a selection made and the selected bolt removed without removing the other bolts of the pile and whereby said movable wall may then be moved to closed position to protect the remaining bolts.

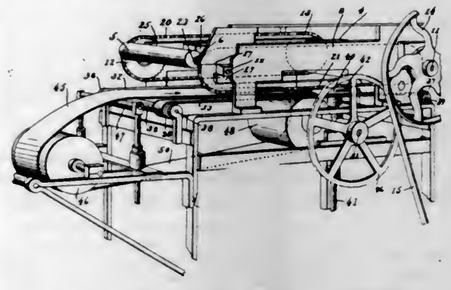
1,499,995. QUILL-CAN SUPPORT. CHARLES W. MERRITT, Walhalla, S. C., assignor to J. R. Earle, Jr., Walhalla, S. C. Filed Oct. 7, 1922. Serial No. 593,039. 1 Claim. (Cl. 248—20.)

A quill can support comprising a body portion provided with an opening, said body portion being curved in cross section to provide a pocket surrounding said opening and further having the inner part thereof extending above the outer part, the wall of said pocket being shaped to form a continuous seat for supporting the bottom edges of the body of quill cans of varying sizes, the upper terminus of the inner part of said body portion forming a support for the bottom of the quill can, and means for securing said body portion in position to support a quill can relative to the bobbins of a loom to receive the seconds and wastes from the bobbins.



1,499,996. SAFETY SWITCH BOX. FELIX REID OBERLANDER, Salt Lake City, Utah. Filed Mar. 7, 1921. Serial No. 450,457. 6 Claims. (Cl. 200—50.)

2. In a safety switch box, the combination with a movable closure adapted for actuating and for affording access to the switch, of another closure affording access to the fuses for the switch, and interlocking devices whereby the opening and closing of the second closure is controlled by the position of the first closure, said box being adapted to be applied to a previously installed switch and its fuses and, together with said closures, and interlocking means, constituting a self-contained unitary combined safety and operating appliance therefor.

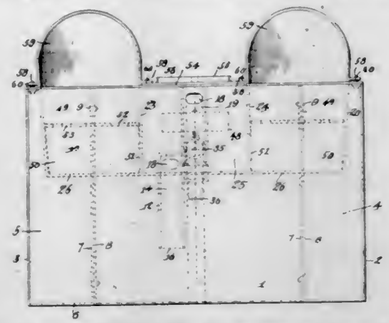


1,499,997. METHOD AND APPARATUS FOR PRINTING MULTICOLOR OPTICAL SLIDES. JOHN JOSEPH ORMOND, Mattapan, Boston, Mass., assignor to John Joseph Ormond, Joseph J. Callahan, and Herbert A. Gillman, as trustees of the Ormond Multicolor Printing Company, a Common Law Trust of Massachusetts. Filed Aug. 29, 1921, Serial No. 497,705. Renewed May 13, 1924. 3 Claims. (Cl. 101—252.)

1. In a process of printing a multicolor design on a sheet or plate in which a transfer printing roller having a relatively soft surface is caused to roll over a series of printing plates each having a printing surface adapted to print a particular portion only of the design, to take up ink therefrom, said printing plates being suitably spaced apart, regulating the rotation of the

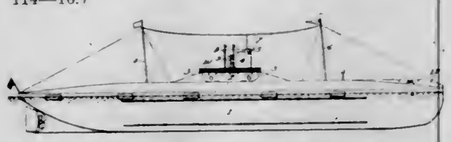
transfer printing roller by contact of its relatively soft surface with a guide surface of relatively hard material extending longitudinally of the series of printing plates.

1,499,998. METHOD OF AND MACHINE FOR PRINTING BY TRANSFER. JOHN JOSEPH ORMOND, Mattapan, Boston, Mass., assignor to John Joseph Ormond, Joseph J. Callahan, and Herbert A. Gillman, as trustees of The Ormond Multicolor Printing Company, a Common Law Trust of Massachusetts. Filed July 25, 1923. Serial No. 653,727. 24 Claims. (Cl. 101—187.)



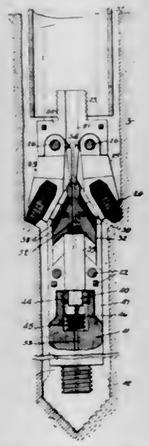
10. In a machine for printing by transfer, a base plate provided on its upper face with parallel longitudinal guide rails, one near each edge, and adapted to support, between the guide rails, printing plates and a holder for an article to be printed, a transfer printing roller adapted to extend across the base plate having its surface of resilient material adapted to take up ink from the inked surface of a printing plate and having portions of its resilient surface in line with and adapted to engage the guide rails to cause and determine the rotation of the roller as it is moved over the base plate, and means for bodily moving the roller over the base plate and returning it to initial position by a continuous movement, said moving means being adapted to permit free rotation of the roller.

1,499,999. STOCK-WATERING DEVICE. THOMAS RITCHIE, Cedar, Iowa, assignor to Robert H. Ritchie, Oskaloosa, Iowa. Filed June 4, 1923. Serial No. 643,378. 3 Claims. (Cl. 119—73.)



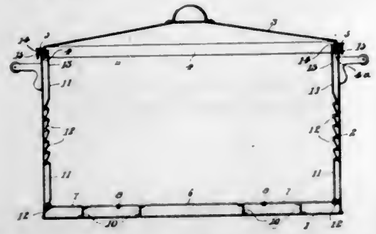
1. A stock watering device comprising a housing, an open top receptacle suspended therein and providing in connection therewith a heating chamber, said receptacle having a pair of integral transversely extending spaced partitions to form a centrally disposed water inlet chamber and a trough at each side of the chamber, said chamber and troughs of the same depth, each of said partitions having the upper portion thereof provided with means to provide for the supplying of water from the chamber to the troughs, a closure for the water chamber, and an angle shaped element mounted in each

trough and including a rear vertically disposed supporting portion terminating at its upper end in a forwardly extending horizontally disposed portion arranged below



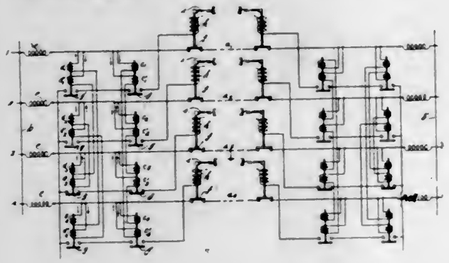
said means and dividing the trough into an upper drinking and a lower dirt collecting chamber, the horizontal portion of said element being lengthwise slotted.

1,500,000. SUBMERSIBLE VESSEL FOR NAVIGATION UNDER ICE. SIMON LAKE, Milford, Conn. Filed Sept. 10, 1920. Serial No. 409,371. 7 Claims. (Cl. 114—16.)



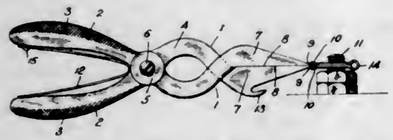
1. In a submersible vessel, a hull, a super-structure mounted thereon and extending above the upper surface thereof, and a plow extending from said superstructure.

1,500,001. WELL-BORING TOOL. WALTER JOHN ROGERS, Houston, Tex. Filed Mar. 30, 1923. Serial No. 628,872. 3 Claims. (Cl. 255—76.)



1. In a well boring tool, a body, reamers movable laterally with respect thereto, a spreader for actuating said reamers, said spreader having opposed inclined surfaces for engagement with said reamers as the same are actuated in one direction, and means secured to said surfaces for regulating the amount of movement of said reamers in said direction.

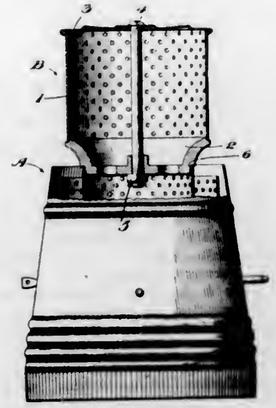
1,500,002. BOILER. ANDRÁS RUSINSKI, Fenton, Mich. Filed Apr. 14, 1923. Serial No. 632,073. 1 Claim. (Cl. 68—30.)



In a device of the class described, a boiler, a false bottom therefor formed of hinged sections carrying angle strips spacing the same from the boiler bottom, and a lifting handle connected to the outer end of each end section of the false bottom, each lifting handle including a rod articulated to the outer end of an end section of the false bottom and having a plurality of bends intermediate its ends forming hooks for engaging the upper edge of the boiler, the upper end of each handle rod being forked and a part thereof bent to extend horizontally and a hand grip extending between the horizontal portions.

1,500,003. ARRANGEMENT FOR LOCALIZING DISTURBED AREAS IN ELECTRIC MAINS. PAUL SCHADE, Hermsdorf, near Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed May 3, 1922. Serial No. 558,224. 6 Claims. (Cl. 175—294.)

1. A system of the class described comprising a bus bar, a plurality of conductors arranged to be interconnected with said bus bar, a plurality of switches each arranged to connect one of said conductors to said bus bar, and means comprising a plurality of closed circuits each arranged to interconnect all of said conductors in different succession for selectively operating said switches to disconnect any conductor in which a fault occurs.

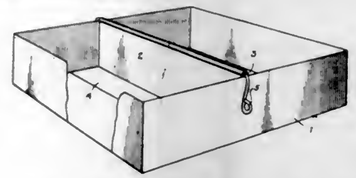


1,500,004. COTTER-PIN EXPANDER AND PULLER. JOSEPH M. SEDIVEC, May, Idaho. Filed Aug. 14, 1923. Serial No. 657,293. 3 Claims. (Cl. 81—3.)

1. A cotter pin expanding device, comprising a pair of sinuously curved levers, which cross each other at two points, handles at one end of the levers, spring means for separating the handles, means for pivoting the levers together at one of the crossing points, and

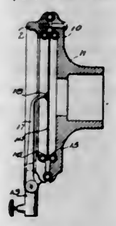
flat tapering jaws provided at the ends of the levers remote from the handles, said jaws having opposed, flat inner faces which are held normally in contact by said spring means, the extremities of the jaws being tapered to an edge extending the full width of the jaws.

1,500,005. BURNER ATTACHMENT. HENRY M. SHEER, Quincy, Ill., assignor to H. M. Sheer Company, Quincy, Ill., a Corporation of Illinois. Filed June 10, 1922. Serial No. 567,451. 2 Claims. (Cl. 158—86.)



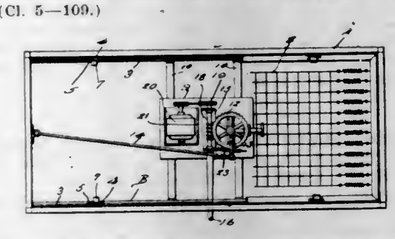
2. A device of the character described including a burner and an extension composed of a flaring base open at the top and having orifices in the bottom, adapted to be removably supported on the burner, an imperforate top, a reticulated cylinder between the base and top, and means for clamping said parts of the extension rigidly together.

1,500,006. WINDOW CLEANER. GEORGE C. SHERMAN, Geneva, N. Y. Filed July 12, 1922. Serial No. 574,576. 3 Claims. (Cl. 15—232.)



1. A window cleaner comprising a flat head having apertures adjacent to its edges and also having stops at the upper portion of its back, a pad arranged against a face of said head and lapped over the edges thereof and attached to the head by means passing through said apertures, a swinging plate pivotally connected to the head at the back thereof and arranged to cooperate with said stops and having a pivot bearing at its upper edges, and a handle journaled in the said pivot bearing and thereby pivotally connected to the said swinging plate; the said handle being resilient.

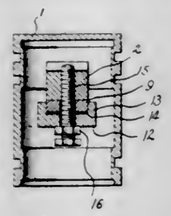
1,500,007. RECEPTACLE. HENRIETTA G. SIBBALD, Duluth, Minn. Filed July 30, 1923. Serial No. 654,538. 1 Claim. (Cl. 220—22.)



A removable division wall for receptacles comprising a piece of sheet metal bent upon itself to form the vertical portion thereof and turned outwardly at right angles to the vertical portion along the line of its base, and a piece of spring wire embedded within the upper extremity of the folded portion, said wire extending beyond the ends of the wall and bent downwardly substantially parallel thereto and sprung inwardly so as to yieldingly engage the side of the receptacle to which the division wall is applied to form holding means for the division wall.

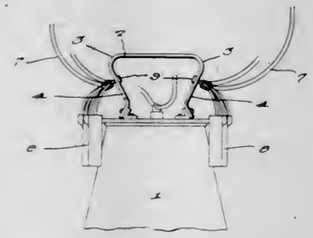
1,500,008. SOUND REPRODUCER. GEORGE W. SLIGHT, Brooklyn, N. Y. Filed July 15, 1922. Serial No. 575,241. 1 Claim. (Cl. 274—35.)

A sound box for recording and reproducing machines, comprising a two-section casing, said sections having circumferential grooves provided in their inner faces and located in alinement near their peripheries, a stylus arm carried by one section of the casing, means formed on the other section of the casing for connecting it to a tone arm, an annular resilient member mounted in the circumferential grooves between the casing sections, means connecting the sections, a pair of annular resilient members mounted in the casing, and a diaphragm positioned between said annular resilient members.



1,500,009. CRIB. POMPILIO SMALDONE, New York, N. Y. Filed May 23, 1923. Serial No. 640,933. 1 Claim. (Cl. 5—109.)

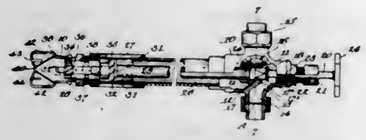
A crib of the class described comprising a lower part including a frame and legs, a track on the frame, an upper part, brackets connected with the upper part, rollers carried by the brackets for engaging the track, pins carried by the brackets and extending under the frame of the lower part, horizontal parts on the brackets for supporting the bed springs, a platform supported by the frame of the lower part, a horizontally arranged gear mounted on the platform and having a crank thereon, a pitman connecting the crank with the upper



part, a motor on the platform, means for transmitting the movement of the motor to the gear, and manually operated means for disconnecting the motor from the gear when desired.

1,500,010. PISTON AND ROD. TRACY M. SMITH and JACOB F. WERHOSEK, Morris, Ill. Filed Feb. 28, 1923. Serial No. 621,908. 1 Claim. (Cl. 74—108.)

A hollow piston for the cylinders of internal combustion engines having oppositely arranged lugs cast with the sides thereof, and a removable bearing for the ball head of a piston rod, said bearing comprising a member having a semi-spherical control portion and lateral arms extending therefrom to underlie the lugs, and a cap which also has its upper portion semi-spherical and provided with an opening for the piston rod, said cap having laterally extended arms provided at their edges with upturned flanges forming pockets for the first mentioned arms, shims in the pockets, means for removably and adjustably securing the arms to the lugs, and said cap comprising two similar sections.

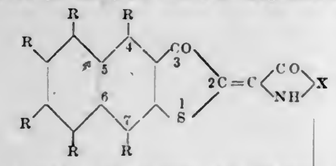


1,500,011. HANDLE. WILLIAM H. SMITH, Lavalle, Wis. Filed Aug. 6, 1923. Serial No. 655,975. 4 Claims. (Cl. 31—70.)

1. The combination with a milk receiving can of a milking apparatus provided with a handle whose sides are inclined inwardly and have downwardly directed keyhole slots therethrough, and teat cups having buttons to be received in the keyhole slots for supporting the teat cups on the handle.

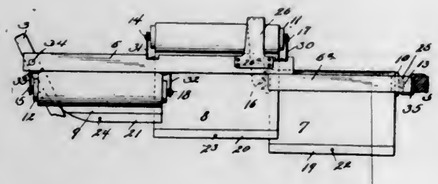
1,500,012. LIQUID-FUEL BURNER. EARLE I. STAPLES, New York, N. Y. Filed Mar. 31, 1923. Serial No. 629,075. 1 Claim. (Cl. 158—75.)

A liquid fuel burner, a cylindrical chamber having an inlet opening at one end adapted to be arranged in communication with a source of steam or air, a tip arranged upon the outer end of the cylindrical chamber and having a plurality of slots therein, a pair of divergent plates arranged in the tip and disposed in the path of a combustible mixture passing through the tubular chamber, the plates having openings therein, a tube arranged in the cylindrical casing and having one end closed and its other end in communication with a source of liquid fuel, and provided with a plurality of outlet openings adjacent its closed end, a circular head carried by the tube intermediate its ends and being of a diameter equal to the diameter of the cylindrical chamber, and provided with a plurality of parallel radial ports in its periphery through which the steam or air passes, an annular element arranged in the cylindrical casing



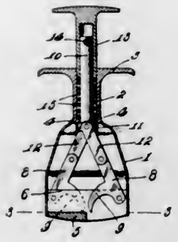
adjacent the tip, and a second head carried by the tube adjacent its closed end and being of a diameter to be received in the bushing and also having radial slots through which the combustible mixture passes to thoroughly mix the latter before it passes into the tip.

1,500,013. INDIGOID VAT DYESTUFF AND PROCESS OF MAKING SAME. KARL THIESS, Lindlingen, near Hochst-on-the-Main, and CARL JOSEF MÜLLER, Hochst-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Bruning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed Apr. 17, 1924. Serial No. 707,284. 2 Claims. (Cl. 260—53.)



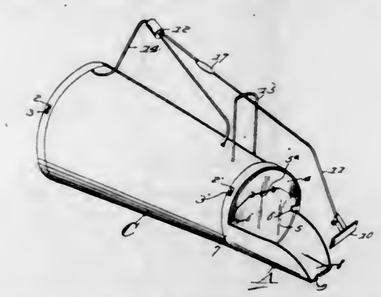
1. The process of preparing indigoid vat-dyestuffs which consists in condensing a halogen substituted 5.6-benzo-3-ketodihydro-1-thionaphthene with the reactive α-derivatives of the naphthisatines which condensation product may be subsequently halogenated.

2. As new products, the bodies of the general formula:



wherein R stands for hydrogen and halogen, at least one R being halogen, and X stands for a naphthalene residue, which may be substituted.

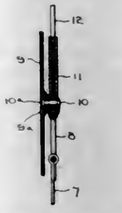
1,500,014. CURTAIN FOR AUTOMOBILES. EDWARD J. THURBER, New Orleans, La. Filed Oct. 4, 1923. Serial No. 666,559. 9 Claims. (Cl. 296—143.)



8. Curtain structure of the character described comprising a set of three roller curtains mounted with their axes of rotation positioned substantially at the three points of a triangle as viewed endwise, the rollers of two of said curtains being relatively displaced vertically and the roller of the third curtain being displaced laterally of the plane occupied by the rollers of said curtains, and one of said rollers being revoluble in a reverse direction relatively to the direction of rotation of the other rollers in unwinding whereby the portions of the peripheries of the rollers from which the curtains unwind lie in substantially the same vertical plane.

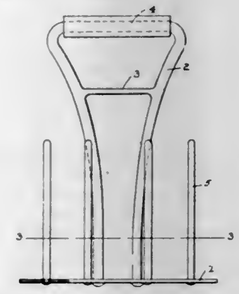
1,500,015. MILK-BOTTLE OPENER. CARLO DI TOSTO, Fairmont, W. Va. Filed Sept. 26, 1923. Serial No. 661,994. 1 Claim. (Cl. 65—47.)

A bottle opener of the character described comprising a hollow body, a hollow stem rising therefrom, diametrically oppositely disposed members extending from said stem to provide a handle, a plate closing the lower end of the body and having diagonally disposed slots formed therein, a rib traversing the inner face of the plate and separating the slots, a plunger slidably mounted in the hollow stem, a bar secured at its upper end to the plunger, a head formed on the lower end of said bar, links connected in pairs and secured to the opposite sides of the head, inwardly curved portions projecting from the lowermost lengths and being movable through the slots and a coil spring arranged between the lower end of the plunger and a portion of the body for the purpose specified.



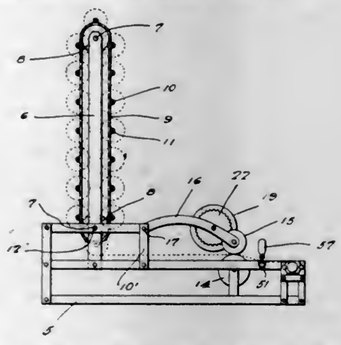
1,500,016. BERRY PICKER. RICHARD C. TRAYHORN, Binghamton, N. Y. Filed Apr. 17, 1922. Serial No. 553,562. 1 Claim. (Cl. 56—331.)

A device of the class described comprising a container provided with an entrance opening, a chute extending outwardly from the container and associated with the entrance opening, an outstanding hand grasp carried by the container, an elongated resilient arm having one end portion anchored to the hand grasp, the opposite end portion of said resilient member overlying the chute, a blade engaged with said second named end portion of the resilient member, and an outsanding guide loop carried by the container through which the resilient member is disposed.



1,500,017. SHIELD FOR SUSPENDERS OF TROUSERS. ROBERT AUGUST OTTO WALTER, Mangawhare, Auckland, New Zealand. Filed June 16, 1922. Serial No. 568,891. 1 Claim. (Cl. 241—12.)

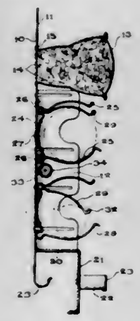
A device of the character described including in combination suspender braces, a webbing arranged thereon having a looped portion, a plurality of tabs, a ring supporting the tabs and engaged in the looped portion of the webbing so as to be maintained in vertical alignment therewith, a circular flexible shield of celluloid having a central depression, the opposite face of which forms a bearing, a fastener serving to rotatably mount the shield on the webbing and for fastening the webbing



to the braces, and a head on the fastener lying within the plane of the outer surface of the shield, substantially as and for the purposes set forth.

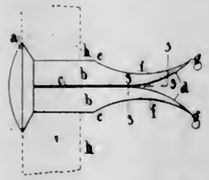
1,500,018. HOLDER. JOHN R. WHITAKER, Norton, Va. Filed Apr. 8, 1922. Serial No. 550,747. 1 Claim. (Cl. 224—48.)

A device of the class described comprising a base, uprights having their lower ends secured thereto, said uprights being adapted to receive nuts and the like, an inverted U-shaped handle having its ends connected with the central part of the base and a cross piece adjacent the upper end of the handle for bracing the handle and for supporting objects.



1,500,019. MEASURING AND CUTTING MACHINE. JOSEPH F. WIESNER, Ellis, Kans. Filed Jan. 24, 1923. Serial No. 614,653. 4 Claims. (Cl. 33—130.)

1. In a machine of the class described, a supporting frame, bearings for supporting the roll of fabric, a cutting mechanism, a hollow slotted winding roll rotatably mounted in said frame, means operable within the hollow winding roll for clamping engagement with the fabric, a spring pressed combined driving and coupling member, means whereby the coupling member may be ro-



tated, an insert member engaged within the end of the winding roll and having a substantially rectangular opening therein, a longitudinally movable combined driving and coupling member detachably mounted upon the frame, means located at one end of said member for removable engagement within the opening of the insert member and means located at the opposite end of the coupling member whereby the latter may be rotated.

1,500,020. SPOOL HOLDER. DAVID C. WILLIAMS, Benton, Ill. Filed Mar. 3, 1923. Serial No. 622,600. 1 Claim. (Cl. 242—134.)

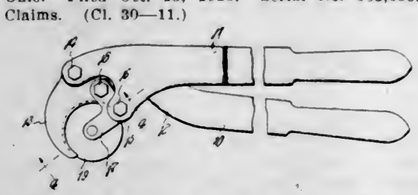
A device of the character described comprising a rear wall and vertical side walls extending therefrom, a split cylindrical member supported between the side walls and adapted to receive a revoluble object therebetween, the split cylindrical member being provided with a longitudinal depression at one side thereof, and a transversely bowed plate arranged within the split cylindrical member, beads formed on one end thereof and loosely received in the depression for pivotal movement, said plate normally resting upon the revoluble object arranged within the cylindrical casing to prevent the same from rotating too freely.

1,500,021. RIVET OR CLIP. WALTER GORDON WILSON, Farningham, England. Filed Feb. 13, 1922. Serial No. 536,293. 1 Claim. (Cl. 85—38.)

A self-securing bifurcated rivet comprising a shank split from one end towards the other, a head at such other end the split end forming a pair of tapered prongs, said prongs having both inside and outside faces curved outwardly at their free ends and the outside faces progressively reduced, whereby an initial directional set is given to the prongs which when driven into the material are embedded therein the prongs spreading apart laterally and upwardly into the material with relatively little downward penetration.

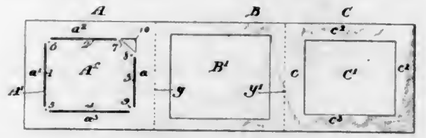
1,500,022. CURTAIN FASTENER. DAVID J. WOODWARD, San Antonio, Tex. Filed Mar. 20, 1922. Serial No. 545,391. 8 Claims. (Cl. 296—138.)

1. In combination with a structure having an opening, retaining devices located to one side of said opening near the top and bottom thereof, respectively, a flexible closure for said opening having an unattached edge portion, and a bar secured to such edge portion of the curtain, said



bar being slidably and pivotally mounted on the upper retaining device and slidably and detachably engaged with the lower retaining device.

1,500,023. GARBAGE RECEPTACLE. CALVIN WURZLOW, Houma, La. Filed June 8, 1922. Serial No. 566,705. 1 Claim. (Cl. 220—41.)

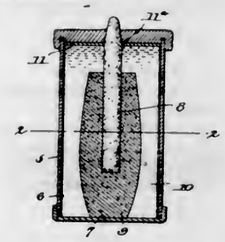


The combination with a receptacle having an open end provided with a groove and a slot through which the cover may be slid, said slot having a notch, of a cover and a cleat connected therewith, and which cleat, when swung in alignment with the notch, will admit of the cover being removed, and, when out of said position, will prevent its being removed.

1,500,024. SHEARS. WILLIAM H. LUTZ, Sugar Grove, Ohio. Filed Oct. 15, 1923. Serial No. 668,658. 3 Claims. (Cl. 30—11.)

1. A pruning shears comprising a pair of pivotally connected handles, a hook like terminal on one handle, a link having pivotal connection with the last mentioned handle at a point adjacent said terminal and also with the other of said handle at a point adjacent their pivotal connection, and a cutting disk carried by said link and cooperating with said hook like terminal for the purpose specified.

1,500,025. LANTERN SLIDE. ALVIN L. MAYER, Long Island City, N. Y. Filed Apr. 9, 1923. Serial No. 631,025. 11 Claims. (Cl. 88—26.)

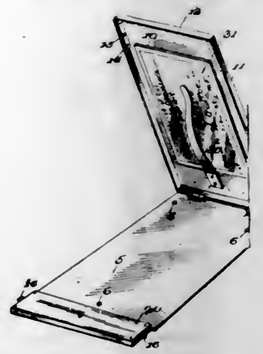


1. A lantern slide comprising three permanently joined sections or layers folded the one upon the other formed from a single piece of material and each having a projection opening in it, the opening in the middle section being of greater area than the openings in the other sections and a transparent member closely fitted in the opening of the middle section and which is overlapped on opposite sides by the marginal parts of the other sections.

1,500,026. METHOD OF TREATING SILK STOCKINGS. EDWARD MENDELSOHN, New York, N. Y., assignor to Lansdale Silk Hosiery Co., Inc., Lansdale, Pa., a Corporation of Pennsylvania. Filed Apr. 4, 1924. Serial No. 704,292. 3 Claims. (Cl. 91—68.)

1. The process of treating silk stockings to render them stronger and more sheer in appearance, which consists in subjecting them to the action of an alum solution and thereafter subjecting them to the action of the soluble soap solution.

3. The herein described method of treating silk fabrics to increase the strength, durability and sheer appearance which consists in subjecting them to the action of relatively strong alum solution and thereafter subjecting them to the action of a relatively weak soluble soap solution, to harden and compact the threads and thereby increase the size of the apertures between the threads.

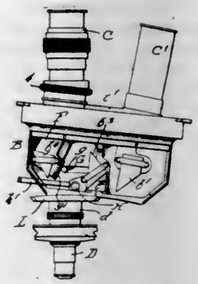


1,500,027. BATTERY. ANTHONY MORCH, Brooklyn, N. Y. Filed June 9, 1922. Serial No. 567,098. 5 Claims. (Cl. 204—29.)

1. The process of manufacturing a galvanic cell, which comprises, compounding an electrolyte mixture comprising a solution of sal ammoniac dissolved in ammonia, and a solution of sal ammoniac, dissolved in yellow dextrin, heating the second named solution to effect gelatinization, introducing the solutions and a depolarizing core into a card board cylinder, closing one end of the cylinder with a zinc cap and closing the opposite end of the cylinder with a cardboard disc and a plastic composition consisting of red lead and rosin.

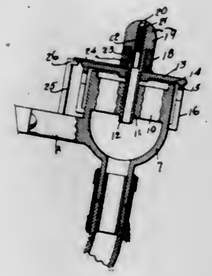
1,500,028. CARD CONTAINER. FRANCIS G. MORRISON, Washington, D. C. Filed Dec. 11, 1922. Serial No. 606,331. 3 Claims. (Cl. 40—15.)

1. A card container for automobiles comprising a flat metallic back plate adapted to be flatly secured to a portion of an auto, a combined cover and card support hinged to one end of the back plate and having side and end flanges to extend over the edges of the back plate for excluding water and for concealing the contents of the container, and a longitudinally curved leaf spring secured to said combined cover and card support for



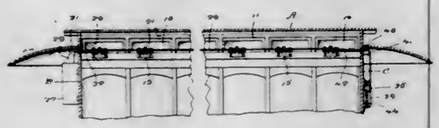
holding the card flatly in engagement with the cover, the intermediate portion of the spring being bowed into engagement with the back plate whereby the spring urges the combined cover and card-support to open position.

1,500,029. HANDLE. HARRY CONRAD OLIVER, Naperville, Ill. Filed Jan. 15, 1923. Serial No. 612,708. 1 Claim. (Cl. 190—57.)



A handle for the purpose specified, the same comprising a substantially rectangular leather body having straps extending centrally from the ends thereof, buckles on said straps, a compressible hollow core arranged centrally in the body, said core being arched longitudinally, and said body being brought over the core and the edges of the body stitched together.

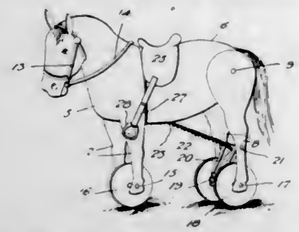
1,500,030. MICROSCOPE. HARVEY N. OTT, Buffalo, N. Y., assignor to Spencer Lens Co., Buffalo, N. Y. Filed July 5, 1923. Serial No. 649,546. 29 Claims. (Cl. 88—39.)



27. A convertible microscope having an objective and a pair of eyepiece tubes, said objective and eyepiece tubes being relatively movable into a position for binocular observation and into another position in which one of said eyepiece tubes is in operative relation to said objective for monocular observation.

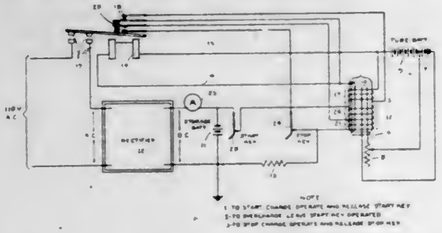
1,500,031. AUXILIARY AIR INTAKE FOR INTERNAL-COMBUSTION ENGINES. JACK PHILLIPS, New York, N. Y. Filed Oct. 18, 1921. Serial No. 508,450. 7 Claims. (Cl. 277—55.)

1. An auxiliary intake for internal combustion engines comprising a cup, a tubular member for connecting said cup with the intake manifold of said engine, said cup having a spider therein formed with a threaded bore, an externally threaded pipe screwed into said bore, said pipe having a clamping head, a spring pressed ball acting as a valve arranged in said pipe whereby the pipe acts as an automatic intake for a small quantity of air, a cap connected with said pipe and rotatable therewith whereby when the pipe is rotated the cap will be rotated and move toward or from the bowl so as to admit more or less air, and a pair of stops associated with said cap and with the bowl for limiting the rotation of said cap, one of said stops being adjustable.



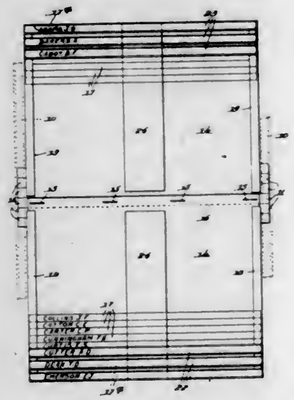
1,500,032. VENTILATING WINDOW. CONRAD POEHNER, Cincinnati, Ohio. Filed Feb. 14, 1922. Serial No. 536,511. 1 Claim. (Cl. 268—18.)

In a ventilating apparatus, a window frame having a plurality of openings, sashes hinged at one end of the openings for covering the same, brackets secured upon the sashes and each being of substantially U-shape including a major portion offset outwardly away from the sash and terminating in attaching feet secured thereto, other brackets secured upon the window frame at each opening, compound curved arms pivoted on said second named brackets and having offset ends carrying rollers engaged with the offset portions of said brackets between the same and the sashes, a rod pivotally connected with all of the arms, and means for moving said rod longitudinally.



1,500,033. TOY HORSE. ARTHUR POLLMAN, New York, N. Y. Substitute for application Serial No. 202,665, filed Nov. 17, 1917. This application filed Jan. 29, 1923. Serial No. 615,679. 3 Claims. (Cl. 208—42.)

1. In a progressing hobby-horse, a hollow body comprising two hinged sections, a roller journaled between the legs at the lower ends thereof of the forward section, a shaft passing through the rear section and connected with the rear legs therefor, spaced rollers journaled on the said rear legs at the outer ends thereof, means for preventing the movement of the rollers in one direction, spring means between the rear legs and the body for normally retaining said legs at a determined angle with



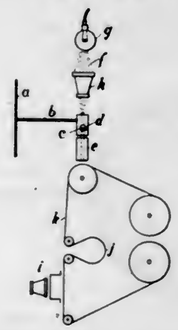
respect to the body, a normally horizontally disposed lever secured to the shaft, and means for limiting the downward swinging movement of such lever.

1,500,034. SYSTEM AND DEVICE FOR BATTERY CHARGING. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 28, 1923. Serial No. 641,884. 7 Claims. (Cl. 171—314.)

1. In a system of the class described, a source of current, an accumulator, a rectifying device interposed between said accumulator and said source of current, and means including a thermionic device for connecting said source of current to said rectifying device.

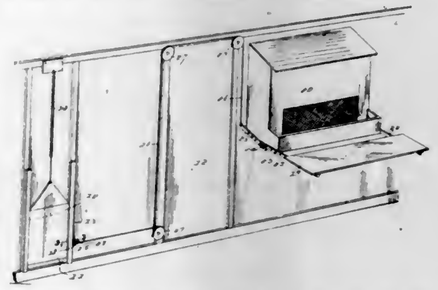
1,500,035. INDEX. JAMES H. RAND, North Tonawanda, N. Y. Filed Feb. 18, 1921. Serial No. 445,953. 10 Claims. (Cl. 129—16.)

1. An index comprising a main frame, a plurality of holders mounted on the main frame in overlapped, spaced relation with their free margins projecting one beyond another, and a series of index elements mounted on each holder, the endmost indexing element being on the projecting margin of the holder and normally exposed to view.



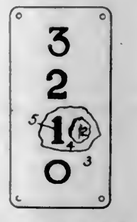
S. A holder for index strips comprising a body, a plurality of index strips arranged side by side on the body, means to hold said index strips at their ends, a pocket at the free edge of the body, and a protective shield extending across the index strips, one edge of the shield being held in said pocket.

1,500,036. DIRIGIBLE HEADLAMP. ALFRED RAY, Spring Valley, Wis. Filed May 18, 1923. Serial No. 639,919. 1 Claim. (Cl. 240—62.)



A headlamp mounting comprising a sectional ball socket member disposed upon the front axle, means for securing said socket member upon the axle, a support stationarily mounted at the forward portion of the vehicle and formed with a ball socket, a post formed of slidably and non-rotatably connected sections, said post terminating at its lower end in a ball head engaged within the first named socket and having its upper portion formed with a ball head engaged within the second named socket, a lamp supporting standard carried by the post, an arm slidably and non-rotatably mounted upon said post and terminating in a ball head, an adjustable rod having a socket connection with said last named ball head and terminating in a socket, and a ball member mounted upon the steering arm connecting rod of the vehicle and connected with said last named socket.

1,500,037. METHOD AND APPARATUS FOR PRODUCING MOVING PICTURES AND SOUND WAVES AT THE SAME TIME. EUGEN REISZ, Zehlendorf-Mitte, Germany. Filed May 25, 1921. Serial No. 472,616. 2 Claims. (Cl. 88—16.2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

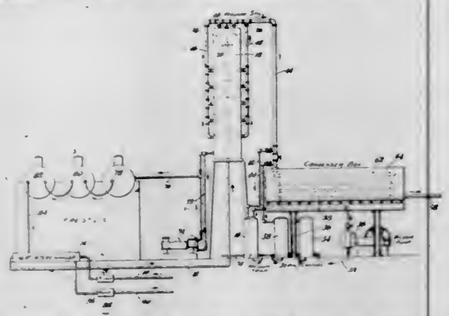


1. The method herein described of producing a film for a moving picture talking machine, consisting in simultaneously taking the pictures and photographically producing sound indicating marks on one edge of a film, placing said film on a chrome gelatine film and subjecting the films to the action of light while in contact with each other, whereby the pictures and marks will be produced in relief on the chrome gelatine film, and then subjecting the film to the action of a coloring solution whereby portions of the film will be rendered opaque.

1,500,038. HENHOUSE POULTRY RELEASE. BANNER J. ROBINSON, Prairieville, Mich. Filed Apr. 11, 1922. Serial No. 551,530. 1 Claim. (Cl. 119—22.)

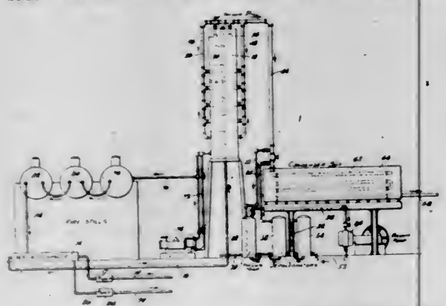
A poultry release for henhouses and the like having a door yieldingly supported normally in its open position, a yieldable locking means for retaining the door in its closed position, a feed box, a perch having arms pivotally mounted on opposite sides of said feed box, one of said arms being counterweighted to counterbalance the weight of the perch, a rocking lever pivotally mounted on the feed box and having a pin and slot connection with the other arm, and flexible connections between the rocking lever and the locking means, whereby depression of the perch may release the locking means for the purpose specified.

1,500,039. INDICATOR PLATE. VICTOR SHUMAN, Philadelphia, Pa., assignor, by mesne assignments, to Louis J. Kolb, trading as Safetee Glass Company, Philadelphia, Pa. Filed Nov. 18, 1920. Serial No. 424,813. 4 Claims. (Cl. 40—135.)



1. A device of the character stated, consisting of two plates of glass united to form a unitary structure by an interposed continuous translucent layer having its opposite surfaces directly attached to the opposing surfaces of the respective glass plates and thereby directly securing them together and hermetically sealing the space between them, and indicator character enclosed between the glass plates and closer to one of them than the other, so as to be clearly seen through it and at the same time hermetically sealed from the atmosphere.

1,500,040. PROCESS OF DISTILLING OIL. JOHN JOSEPH ALLINSON, Bartlesville, Okla., assignor, by mesne assignments, to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed July 17, 1919. Serial No. 311,558. 3 Claims. (Cl. 196—25.)

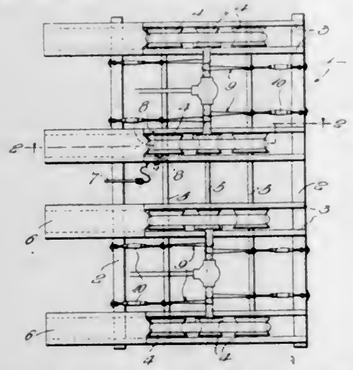


1. In the distillation of crude petroleum the steps comprising heating petroleum oil, passing the heated oil through a series of compartments maintained under

a partial vacuum, finely dividing said oil at the points of its admission to said compartments, vaporizing the lighter portions of the oil enclosed in said compart-

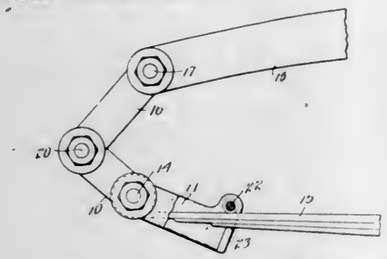
ments by the vacuum in said compartments, separately withdrawing vapors directly from each of said compartments out of contact with the oil in the said chamber and condensing the said vapors.

1,500,041. OIL-DISTILLING APPARATUS. JOHN JOSEPH ALLINSON, Bartlesville, Okla., assignor, by mesne assignments, to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed July 17, 1919. Serial No. 311,559. 5 Claims. (Cl. 196—16.)



1. In an apparatus for continuously distilling oil, a vacuum still having a series of compartments, means for maintaining each of the compartments under partial vacuum, a heat interchanger, means for conducting oil through the said heat interchanger to the said vacuum still, means for finely dividing oil at the entrance to each of said compartments, a continuous fire still, means for withdrawing oil from the said vacuum still and passing the same through the said fire still, means for withdrawing separately vapors from each of the said compartments, and means to conduct heated residuum passing from the fire still through the heat interchanger for preheating the oil.

1,500,042. MOP. CLAUDE K. ARMSTRONG, Princeton, W. Va. Filed May 20, 1922. Serial No. 562,382. 1 Claim. (Cl. 15—177.)

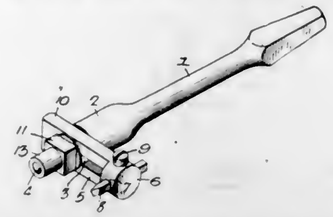


A mop comprising a plurality of strips arranged in parallelism, the opposed sides of each strip being provided with an elongated groove forming a channel between each strip, mop strands distributed between each strip, a pair of coils intermeshed with each other and providing a handle socket, a handle for said socket, the free ends of said coils being formed into two pairs of divergent legs, said strips being arranged between said pairs of divergent legs, and means clamping the strips together and the said legs to the strips.

1,500,043. AUTOMOBILE STARTING DEVICE. ALBERT C. ASPER, Kansas City, Mo. Filed Apr. 24, 1923. Serial No. 634,385. 3 Claims. (Cl. 74—106.)

1. A starting device for stiff automobile motors comprising a support for the rear end of an automobile to be started, said support having a member to engage and rotate the rear wheels of the machine; a second support for the rear end of a second automobile operating under its own power, said second support having a member to engage and be driven by the rear wheels of said second automobile, and positive driving means connecting the first and second named wheel-engaging members to drive one by means of the other.

1,500,044. SHOCK ABSORBER. LEWIS E. ATWELL, JAMES GRANT, and CURTIS E. WHITE, Jacksonville, Fla. Filed Aug. 4, 1923. Serial No. 655,659. 2 Claims. (Cl. 267—19.)

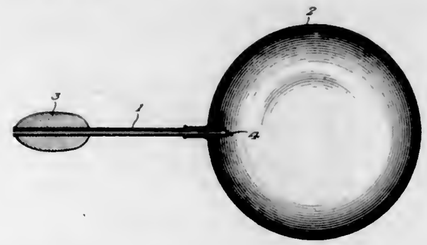


1. In a shock absorber for vehicles, a spring having a bearing at one end, a yoke-like lever embracing an end of the spring and spaced therefrom at the sides, a pivot bolt passing through the lever and the bearing, spaced abutments on the lever engaging the one face of the spring, a bolt connecting said ends adapted to engage the opposite face of the spring, and means to connect the other end of the lever to the vehicle frame, substantially as set forth.

1,500,045. ROTARY CUTTER. ROBERT G. BARTLETT, Pleasantville, N. J. Filed Jan. 10, 1922. Serial No. 528,274. 3 Claims. (Cl. 164—82.)

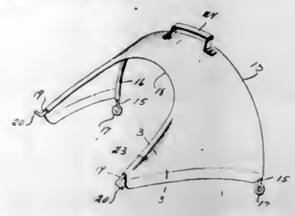
1. In a tool, the combination with a body portion having at one end a flatted tongue, a threaded stem extending from the tongue coaxially with the body, a

tool-carrying element having a slotted portion adapted to receive the said tongue, a nut on said stem adapted to hold the tool-carrying element in place upon the body,



a cylindrical co-axial extension on the nut, and a cylindrical sleeve adapted to be detachably secured to said extension.

1,500,046. MATERIAL HOLDER AND CARRIER FOR DYEING YARN ON CHEESES. WALTER BELL, Hamilton, Ontario, Canada. Filed July 26, 1923. Serial No. 653,996. 1 Claim. (Cl. 8—17.)

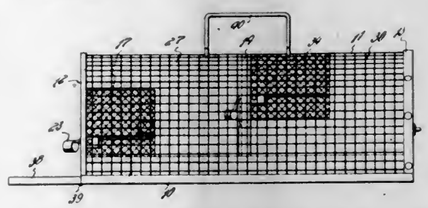


A material holder and carrier of the class described comprising a coil spring, and a sleeve encasing each end thereof, each sleeve provided with a series of helically disposed perforations registering with the interstices between adjacent coils of the spring.

1,500,047. TOY. STANLEY C. BIAS, Harrisburg, Pa. Filed Jan. 13, 1923. Serial No. 612,512. 1 Claim. (Cl. 46—37.)

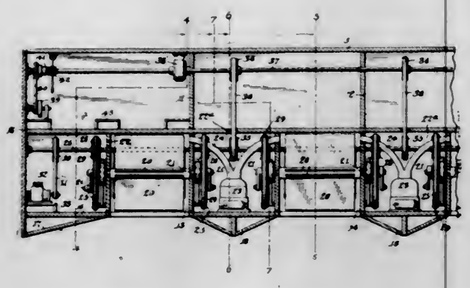
A toy including a tube having a device at one end for creating a sound, an inflatable device enclosing the latter and a masticable device secured to the opposite end of the tube adapted to be held in the mouth while blowing through the tube to expand the inflatable device.

1,500,048. COAL SCUTTLE. JOSEPH J. BIMLER, Michigan, N. Dak. Filed Dec. 16, 1922. Serial No. 607,348. 7 Claims. (Cl. 220—2.)



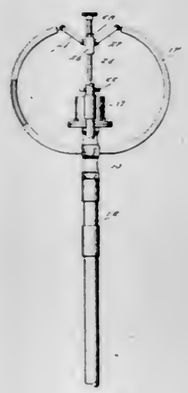
1. In combination with a scuttle having a pouring spout and the usual pivoted bail, a hood therefor pivoted to the scuttle adjacent the pivot of the bail and having a resiliently expanded forward end of greater width than the pouring mouth of the scuttle, openings formed in the side walls of the pouring mouth adjacent the forward ends thereof, and catches rigidly secured to the sides of the forward end of the hood and adapted for engagement in said openings.

1,500,049. CURTAIN HOLDER. JOHN W. BROOKS, Boise, Idaho. Filed Apr. 2, 1921. Serial No. 457,962. 1 Claim. (Cl. 156—19.)



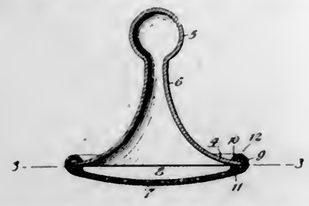
A curtain holder having an extensible bar consisting of telescoping tubular members connected by a contractional spring housed therein, brackets attached to the extremities of said members and consisting of twisted straps terminating in shoes extended in planes transverse to the length of the bar and provided with inwardly facing seats, and yielding frictional cushions fitted in said seats.

1,500,050. TRAP. ORRICE F. BUNN, Bristol, Tenn. Filed Aug. 22, 1923. Serial No. 658,817. 1 Claim. (Cl. 43—69.)



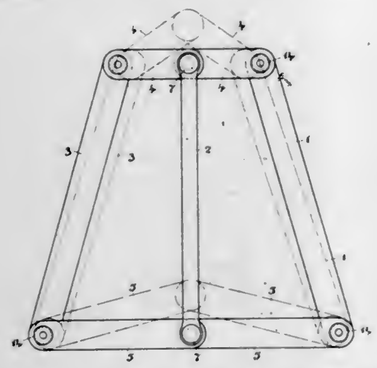
An animal trap embodying a cage having an entrance opening therein, a transverse partition dividing the cage into separate chambers, said partition also having an opening therein, a compartment located within each chamber around the openings, said compartments being closed at their tops, sides and rear, a pivotally mounted automatically closed platform within and providing a bottom for each compartment, offset portions in the side walls of said compartments, said portions defining stop shoulders for the platform, a mirror secured to the rear wall of one chamber and an exit door for the other chamber.

1,500,051. POWER-GENERATING MECHANISM. JOHN C. CALDWELL, Miami, Fla. Filed Nov. 2, 1921. Serial No. 512,370. 2 Claims. (Cl. 170—115.)



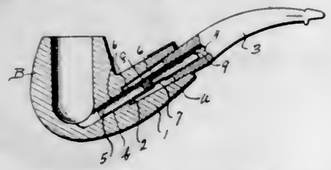
2. In a means for generating power from flowing streams, a single barge having a plurality of parallel longitudinally extending spaced channels formed therein having their lower ends open for permitting the free flow of water therethrough, closed passageways arranged between the channels, a plurality of transversely aligned water wheels mounted in said channels, means for connecting the transversely aligned water wheels together, means for operating a plurality of independent line shafts from the means for connecting the transversely aligned water wheels together, means operatively connecting the water wheels disposed in longitudinal alignment together, means for operating a compressed air motor from the longitudinally aligned water wheels, heaters disposed in said closed passageways between the channels, and oppositely extending heat conveying pipes connected with the heater and arranged to communicate with said channels.

1,500,052. AIR COMPRESSOR. ROBERT J. CAUFFIELD and CARL C. CAUFFIELD, Niles, Ohio. Filed Mar. 24, 1923. Serial No. 627,399. 2 Claims. (Cl. 137—153.)



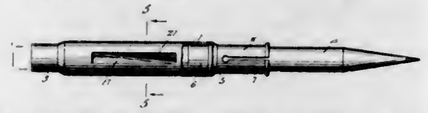
2. A regulator of the character described including a pressure actuated valve, pressure actuated means for limiting the movements of the valve, said means including a hollow coil adapted to be automatically expanded and contracted incident to the increase and decrease of pressure therein, a stem supported by the coil and movable toward and away from the valve incident to the expansion and contraction of the stem being adjustable with relation to the coil to vary the pressure required to actuate the latter.

1,500,053. PROTECTOR FOR COLLAR BUTTONS. MEYER COHN and WILLIAM F. PROBST, Chillicothe, Ohio. Filed Oct. 4, 1923. Serial No. 666,614. 6 Claims. (Cl. 24—101.)



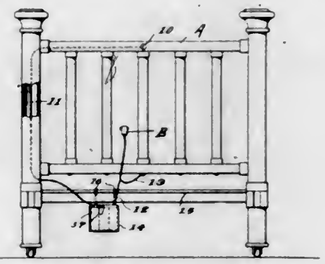
6. A protector for collar buttons having a base, a head and a neck connecting said base and head, comprising a downwardly dished concavo-convex disk provided on its edge with an upwardly and inwardly turned flange and on its upper side adjacent to said flange with an annular upwardly projecting rib, said disk, flange and rib being constructed integrally of soft flexible rubber.

1,500,054. CONSTRUCTION OF RACKET PRESSES. JAMES EDWIN COLTMAN, Ilford, England. Filed Aug. 25, 1922. Serial No. 584,336. 8 Claims. (Cl. 46—24.)



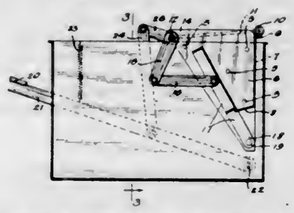
1. A racket press comprising a plurality of pairs of opposed frame bars having aligned apertures in their ends, pins passing through said apertures connecting the opposed frame bars together, means mounted on each of said pins adapted when actuated to move the opposing frame bars toward and from one another, and means for simultaneously actuating said last-named means.

1,500,055. SMOKING PIPE. GEORGE W. CONLEY, Wheaton, Ill. Filed Mar. 23, 1921. Serial No. 454,668. 1 Claim. (Cl. 131—12.)



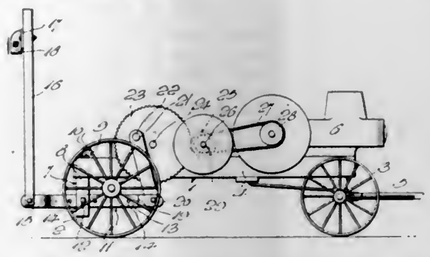
A smoking pipe including a bowl and a stem, the outer portion of the bore of the stem being enlarged, a removable mouthpiece insertible within the outer end of the stem, a sleeve extending through the enlarged portion of the bore of the stem and having its opposite end portions engageable within the inner portion of the bore of the stem and the inserted end portion of the bore of the mouth-piece, the periphery of said sleeve being smooth and unobstructed and a partition intersecting the bore of the sleeve, the wall of said sleeve being provided with openings at opposite sides of the partition, said openings communicating with the enlarged portion of the bore of the stem, said partition being insertible within the sleeve through either end thereof.

1,500,056. PENCIL SHARPENER. CLAUDE A. CONOVER, Newburgh, N. Y. Filed Mar. 16, 1922. Serial No. 544,208. 3 Claims. (Cl. 120—87.)



2. A pencil sharpener comprising a cutting structure formed in two parts, each part being constructed of sheet metal and having a tapering portion arc-shaped in cross section, and a web extending from the edges thereof, and means for securing said webs together, one of said tapering portions being cut off at the small end while the opposite tapering portion having one edge separated from its web and sharpened, said sharpened edge being bent inwardly to produce a cutting knife.

1,500,057. ELECTRIC-LIGHT ATTACHMENT FOR BEDS. ALFRED J. M. CORNS, Quinnimont, W. Va. Filed Apr. 18, 1921. Serial No. 462,128. 2 Claims. (Cl. 240—4.)

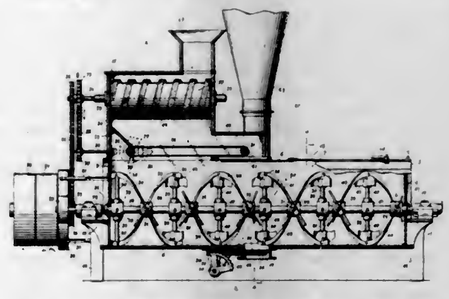


1. In combination with a tubular frame element of a bedstead, of a lighting attachment comprising an elongated lamp supporting body arrangement transversely in said element, and having one end exposed and supported by said element, a securing means carried by said element and supporting the other end of said body within the tubular element, said body at its exposed end being provided with a socket for the reception of a lamp bulb, and means for supplying the lamp socket with electrical energy.

1,500,058. MOP WRINGER. PETER C. COURTEMANCHE, Claremont, N. H. Filed May 16, 1923. Serial No. 639,431. 4 Claims. (Cl. 15—261.)

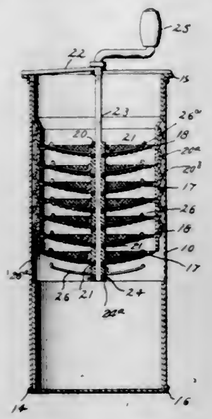
1. In a mop wringer, a receptacle, a fixed presser plate in the receptacle, a pivoted pressure plate, a transverse rock shaft mounted on the receptacle and provided outside and within the receptacle with arms, links connecting the arms of the shaft in the receptacle with the pivoted presser plate, treadle levers pivoted at their ends to the receptacle, and links connecting the treadle levers with the arms of the shaft outside of the receptacle.

1,500,059. PUMP JACK. GEORGE COWETTE, Rogers, Minn., assignor of one-half to Michael Borck, Rogers, Minn. Filed Sept. 6, 1923. Serial No. 661,316. 3 Claims. (Cl. 74—14.)



1. A pump jack comprising an elevated frame having two parallel side beams, a one-piece substantially U-shaped hanger whose arms are disposed between said beams at one end of the frame, the upper ends of said arms being directed horizontally outward and secured to the upper sides of said beams, a horizontal lever whose intermediate portion is received and fulcrumed in the lower end of said hanger, a pitman pivoted to and extending upwardly from one end of the lever for connection with a pump, another pitman connected to the other end of said lever and rising therefrom, and means mounted on the frame for reciprocating said other pitman.

1,500,060. CONTINUOUS CHLORINATION OF LIGNO- AND PECTO-CELLULOSE BY NASCENT CHLORINE FOR THE PURPOSE OF OBTAINING PURE CELLULOSE. ANTOINE REGNOUF DE VAINS, Miribel, Ain, France. Filed Dec. 11, 1922. Serial No. 606,293. 1 Claim. (Cl. 8—2.)



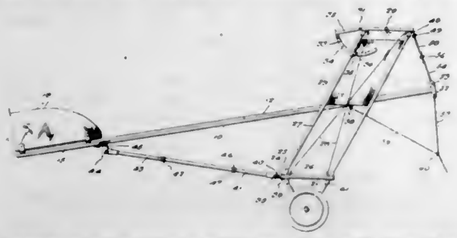
A process for the chlorination of non-cellulosic compounds of a ligneous material consisting in adding a quantity of hydrochloric acid to a pulp and then mixing a solution of an alkali metal hypochlorite with said acidulated pulp.

1,500,061. BATCH MIXER. CHANDOS R. DIMM, Muncy, Pa., assignor to Robinson Manufacturing Company, Muncy, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1922. Serial No. 587,742. 18 Claims. (Cl. 259—9.)

1. A mixing machine having a cylinder with inlet means and a single outlet located at a distance from the cylinder ends, and mixing mechanism comprising radial blades and peripheral ribbon blades in the cylinder having a reverse disposition and operable to uniformly convey the contents of the cylinder towards opposite ends of the latter and also inwardly to said outlet from opposite ends of the cylinder.

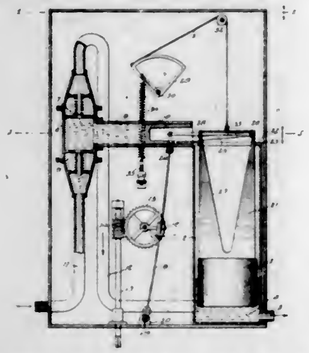
1,500,062. SIFTER. ALICE M. ELGIN, Cabool, Mo. Filed Oct. 27, 1922. Serial No. 597,357. 3 Claims. (Cl. 83—60.)

1. In a flour sifter, an outer receptacle, a shell detachably fitting within one end of the receptacle and having its lower end reduced, a series of detachably telescopically engaged rim members provided with wire screen, rings at the centers of the screens one end of said series being detachably connected upon the reduced end of the shell, a shaft journaled axially of the receptacle and through the rings, a plurality of hubs slidably and nonrotatably mounted upon the shaft between and bearing against the successive center rings, and outwardly extending arms carried by each hub and bearing upon the adjacent screen.



1,500,063. FUEL ECONOMIZER FOR GAS-FIRED STOVES AND THE LIKE. HENRY PERCY EVANS, Abbotsford, near Sydney, and HENRY SNOWDON STANDEN, Waverley, near Sydney, New South Wales, Australia. Filed July 12, 1922. Serial No. 574,588. 6 Claims. (Cl. 26—215.)

1. A fuel economizer for gas-fired stoves and the like consisting of a metal plate, said plate having a central portion adapted to overlie the flame of a fuel burner, spaced arms radiating from said central portion and providing openings between said arms, the outer edges of said central portion extending into said openings between said arms and adapted to deflect flame projected onto said central portion from a gas burner under receptacles placed on said plate over said openings.



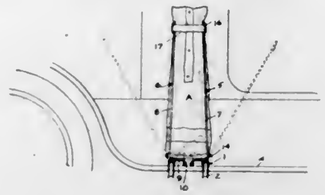
1,500,064. AEROPLANE KITE. ALFRED FELARDO, New York, N. Y. Filed Jan. 26, 1922, Serial No. 531,918. Renewed Dec. 14, 1923. 14 Claims. (Cl. 244—23.)

11. An aero-plane kite comprising a body member formed as an elongated plane having an enlarged head portion, the rear end of said body member being formed to represent an elevator, an upstanding rudder detachably connected with said rear portion of the body member, upper and lower planes disposed above and below said body member respectively, a plurality of uprights detachably connected with said upper and lower planes, a removable pivotal mounting normally connecting the body member with said uprights, a bridle connected with the forward portion of said body member at the underside thereof, and means connected with said body member at the forward and rear ends thereof for adjusting the

angular position thereof with respect to said upper and lower planes, said means consisting of longitudinally adjustable members connected with the forward extremity of the body member and with the forward edge of the upper plane and longitudinally adjustable members connected with the rear edge of the lower plane and with the rear portion of the body member.

1,500,065. INDICATOR. THOMAS T. H. FERGUSON, Bilthoven, Netherlands. Filed June 21, 1922. Serial No. 570,040. 10 Claims. (Cl. 103—38.)

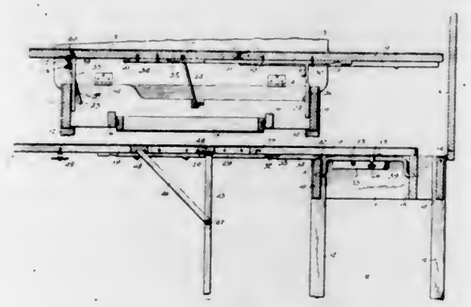
1. In a device of the character described, a tank from which the fuel is supplied to an engine, a pump for feeding the fuel to the tank, means for operating the pump, a float in the tank and means for controlling the operation of the pump from the float by the rise and fall thereof due to the amount of fuel in the tank.



1,500,066. ART OF IMPREGNATING WOOD. HANS FINKELSTEIN, Uerdingen-on-the-Rhine, Germany. Filed Mar. 25, 1922. Serial No. 546,874. 11 Claims. (Cl. 99—12.)

4. In processes of impregnating wood comprising treating wood with solutions of aromatic nitro compounds and water soluble salts of strong inorganic bases in an iron vessel, the step of reducing the corrosive action of the impregnating solutions upon the iron vessel which consists in adding zinc oxid to the impregnating solutions.

11. A composition for the preservation of wood comprising a compound of dinitrophenol and an aromatic amine, a water soluble salt of a strong inorganic base, and a basic insoluble compound of zinc.



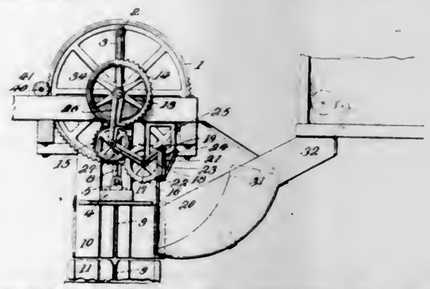
1,500,067. AUTO GOLF-BAG CARRIER. FREDERICK FRISK, San Francisco, Calif., assignor, by direct and mesne assignments, to Frisk Manufacturing Company, San Francisco, Calif., a Corporation of California. Filed Oct. 12, 1922. Serial No. 594,013. 3 Claims. (Cl. 224—29.)

3. A carrier adapted to be secured upon the running board of an automobile comprising a body member having a portion adapted to engage the under side of the running board, upright article supporting members carried on the body portion and movable towards and away from one another, jaws carried by the article supporting members arranged to move towards and clamp upon the running board when said article supporting members are moved

towards one another, means for securing said supporting members in article supporting position, which means comprises a flexible element adapted to surround the article to be supported, loops on said article supporting members through which the flexible element is extended and means for securing the flexible element in position tightly engaged with the article to be supported.

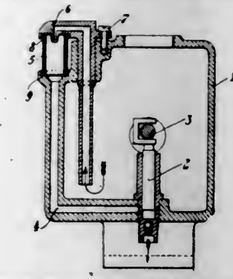
1,500,068. COMBINED TABLE AND IRONING BOARD. MEYER GOODMAN, Brooklyn, N. Y. Filed Feb. 14, 1923. Serial No. 618,937. 2 Claims. (Cl. 68—10.)

1. The combination with a collapsible ironing board including a pair of sections having hinged connection to permit of the arrangement of said sections in parallel relation when folded or in alignment when unfolded, and means provided respectively on said sections for interengagement when unfolded to retain said sections in alignment, and a table having a hinged top and constituting a housing for said ironing board when folded, of a means of connection between the ironing board and table to permit of the swinging of the ironing board to and from a position within the table comprising a pair of swinging yokes, a detachable connection between one of the yokes and the ironing board and a swiveled and sliding connection between the other yoke and the ironing board whereby to permit of the arrangement of the ironing board in alignment with the length of the table or at a right angle to the length of the same.



1,500,069. AUGER. COURTIE ELMORE GOULD, Clay, W. Va. Filed July 9, 1923. Serial No. 650,522. 3 Claims. (Cl. 145—66.)

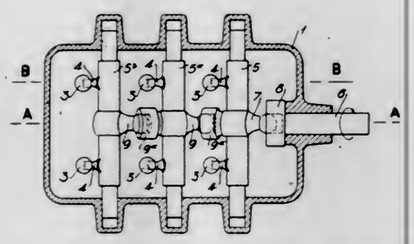
1. A device of the class described comprising a brace having a pair of handles, a breast yoke swiveled to the brace, a shank detachably connected with the brace and consisting of two parts, the adjacent ends of the two parts being forked, a pair of rings clamping the forked ends together so that the members can have rocking movement relative to each other, means for regulating



this movement or entirely preventing it and a drill detachably connected with the shank.

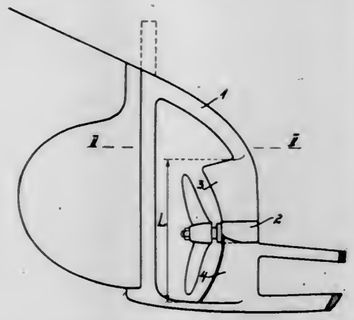
1,500,070. COTTON TRAMPER. THADDEUS S. GRIMES, Columbus, Ga., assignor to Lummus Cotton Gin Company, Columbus, Ga., a Corporation of Georgia. Filed June 12, 1922. Serial No. 567,723. 9 Claims. (Cl. 100—25.)

1. In a cotton tramper, the combination with a press box, a follow block and a lint slide leading to said press box, of a paddle movable in said lint slide, means for swinging said paddle on its active stroke in proximity to and in an arc corresponding to the lower wall of said lint slide, and means for periodically locating and maintaining said paddle in a position to close said slide.



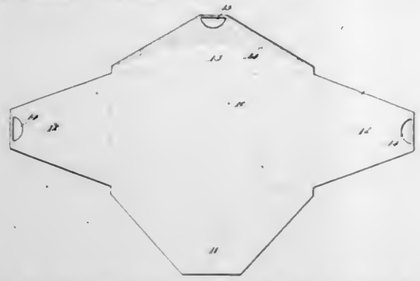
1,500,071. LUBRICATING PUMP WITH SIGHT FEED. OTTO HAJEK, Vienna, Austria. Filed May 3, 1922. Serial No. 558,234. 3 Claims. (Cl. 184—27.)

1. A lubricating pump comprising an oil container, a sight feed glass and a suction lead, said suction lead consisting of a fixed part discharging with one end to the cylinder of the lubricating pump and with the other end to the sight feed glass, a movable part discharging



with one open end into the oil container and with the other end to the sight feed glass, and means for pressing the movable part against the fixed part and at the same time down on the sight feed glass.

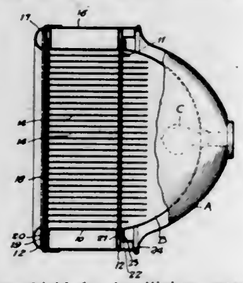
1,500,072. LUBRICATING DEVICE. OTTO HALEK, Vienna, Austria, assignor to the Firm Alex. Friedmann, Vienna, Austria. Filed Sept. 13, 1923. Serial No. 662,572. 8 Claims. (Cl. 184—27.)



8. In a lubricating device, a number of lubricating pumps arranged in parallel rows, pistons for circulating the oil and controlling the oil distribution therein, the said pistons performing a reciprocating movement and an oscillating movement around their axis, driven shafts arranged in parallel to each other allotted to each of said pistons, each of said shafts being capable of performing such a combined movement, means to transmit said combined movement from each of the shafts to its allotted piston, a connection between the parallel shaft, consisting of a crank pin with a ball shaped head inserted into an open recess of the crank pin of its neighbour shaft, said connection being capable of transmitting the combined reciprocating and oscillating movement from one shaft to the other, a driving shaft provided with a driving disk performing a rotary movement in proximity to one of said driven shaft, and means comprising a crank arm connected with said driving disk for deriving a combined reciprocating and oscillating movement from said driving shaft and transmitting it to the driven shaft in proximity thereto.

1,500,073. DEVICE FOR FAVORABLY GUIDING THE PROPELLER WATER OF SHIPS. HANS HASS, Bergedorf, near Hamburg, Germany. Filed May 24, 1923. Serial No. 641,206. 6 Claims. (Cl. 115—34.)

1. A device for favorably guiding the water into the propeller of single screw ships comprising in combination a stern post, a shaft bearing in the same, a single guiding member above the shaft bearing and a single guiding member below the shaft bearing, both of these guiding members being arranged in front of the propeller and being the only guiding members associated with the propeller, said members being curved inversely to the direction of rotation of the propeller and extending laterally essentially within the range of the stern post.



1,500,074. ENVELOPE. GEORGE R. HILL, Michigan City, Ind. Filed Jan. 28, 1922. Serial No. 532,111. 3 Claims. (Cl. 229—79.)

1. An envelope having a front panel to which is secured a plurality of flaps, some of which are provided with apertures, the apertures in one of said flaps adapted to register with only portions of the remaining apertures, thereby leaving uncovered portions of said remaining apertures.

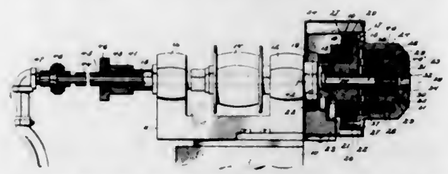
2. An envelope having a front panel to which is secured a plurality of flaps, some of which are provided with openings and two of which are substantially abutting, said openings defining relatively narrow portions with the edges of said flaps, said portions being so arranged as to expose portions of all the flaps through the openings when in closed position.

1,500,075. GLARE SHIELD FOR HEADLIGHTS. CHARLES H. HIPP, Camp Lewis, Wash., and SHERMAN LEO KISER, Hutchinson, Kans. Filed Mar. 31, 1923. Serial No. 629,107. 3 Claims. (Cl. 240—48.4.)

1. In a glare shield for headlights, means associated with said headlight for eliminating the casting of vertical angular reflections while permitting of the casting of horizontal angular reflections and axial reflections, said means comprising a plurality of vertically spaced horizontal vanes projecting forwardly and disposed immediately in advance of the headlight reflecting element, and a support for said vanes consisting of a cylindrical body having inwardly projecting annular flanges at its opposite ends, said flanges formed with aligned notches receiving the side edges of said vanes.

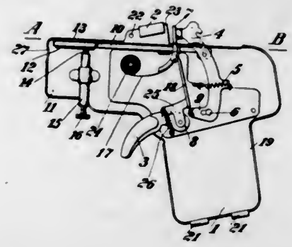
1,500,076. BATTERY PLATE AND PROCESS OF MAKING SAME. WALTER E. HOLLAND, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 1, 1922. Serial No. 533,465. 8 Claims. (Cl. 204—29.)

1. The method which consists in applying absorptive material to the faces of a pasted battery plate and thereafter subjecting said plate to a drying treatment.



1,500,077. CODING DEVICE. SPENCER H. HUNTINGTON, Kerrville, Tex. Filed Dec. 31, 1921. Serial No. 526,240. 4 Claims. (Cl. 35—13.)

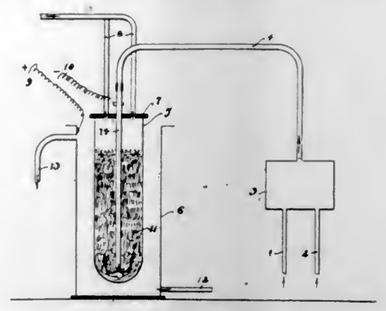
1. A ciphering device comprising a supporting member, a disc rotatably mounted thereon and a circular row of characters on both the disc and supporting member, the characters of one row being reversely arranged



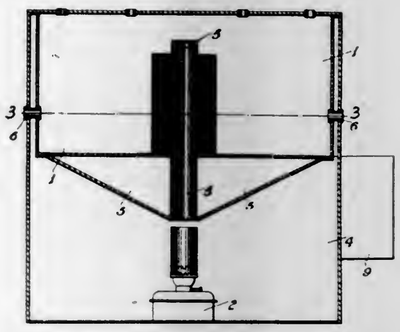
in relation to those on the other, and a blank space in each row.

1,500,078. METHOD OF GRINDING. LE ROY E. JOLLS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed June 20, 1918, Serial No. 241,041. Divided and this application filed Oct. 15, 1920. Serial No. 417,227. 5 Claims. (Cl. 51—278.)

1. The method of finishing the outer cylindrical surface of a roller and its bore with said surfaces concentric and perpendicular to a side of the roller consisting in placing the roller with a side against the flat face of a rotatably mounted electromagnet, said face being of smaller diameter than the roller, centering the roller by means engaging one of the surfaces to be finished, energizing the magnet, removing the centering means rotating the electromagnet, and machining the surfaces by tools movable perpendicularly to said flat faces.



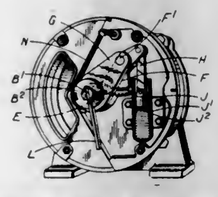
1,500,079. TOY PISTOL. JACQUES KELLERMANN, Berlin, Germany, by Johanna Kellermann, geb. Schmul, conservatrix, Berlin, Germany. Filed Aug. 29, 1921. Serial No. 496,689. 11 Claims. (Cl. 42—57.)



11. A toy comprising a casing in the form of a pistol, a sparking device in the barrel of said pistol casing, a barrel opening in said casing, and transparent material covering said opening.

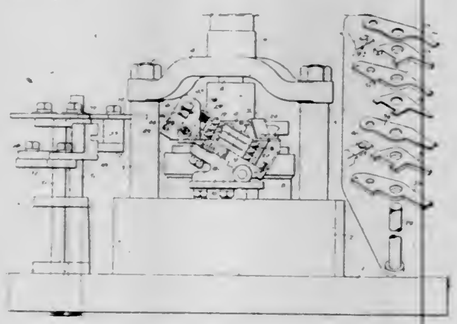
1,500,080. PROCESS AND DEVICE FOR PREPARING ALCOHOLS AND ALDEHYDES FROM HYDROCARBONS. CAROLUS A. KLOPPENBURG, Tjepoe, Dutch East Indies, assignor to Nnamlooze Vennootschap de Bataafsche Petroleum Maatschappij, The Hague, Netherlands. Filed July 26, 1922. Serial No. 577,672. 6 Claims. (Cl. 204—9.)

1. A process for preparing alcohols and aldehydes according to which hydrocarbon containing gases are mixed with oxygen containing gases and are led at suitable temperature over carbonized cocoanuts, dark electric dischargings being applied for accelerating the process.



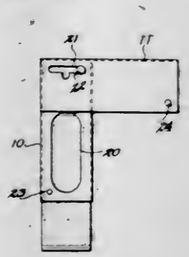
1,500,081. CHICKEN HOVER, BROODER, OR FOSTER MOTHER. FRANK KNIGHT, Cuckfield, England. Filed May 18, 1923. Serial No. 639,937. 2 Claims. (Cl. 119—32.)

1. A chicken brooder comprising a casing, a compartment within and spaced from said casing, a heating element adapted to be placed within said casing below said compartment for supplying warmth to said compartment, a partition extending from the floor of said compartment into said casing providing a closed heat insulating chamber between said compartment and said heating element, and a tubular member extending through said partition and the floor of said compartment to conduct heat from said heating element directly into said compartment.



1,500,082. ELECTRIC-CURRENT REGULATOR. WALTER LANGDON-DAVIES and ALFRED SOAMES, London, England. Filed Feb. 27, 1922. Serial No. 539,568. 3 Claims. (Cl. 171—242.)

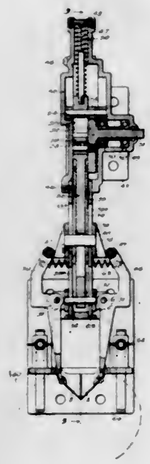
1. In an automatic regulator for alternating current arc welding circuits, in combination, a stationary magnetizable core, a second magnetizable core partially rotatable relative to the fixed core without altering the reluctance of the magnetic circuit, a winding on each core, said windings being in inductive relationship with each



other and connected in the welding circuit, an arm on the rotatable core, an adjustable stop in the path of motion of said arm and means for preventing rapid movement of the arm in the direction of said stop, but allowing it quick return.

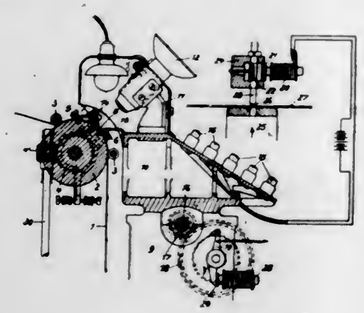
1,500,083. YARN CHANGER. WALTER LARKIN, Philadelphia, Pa., assignor to H. Brinton Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 27, 1919. Serial No. 307,076. 6 Claims. (Cl. 66—12.)

4. The combination with the cylinder and needles of a circular knitting machine of a plurality of superposed thread guides each having two actuating arms extending in different planes; with mechanism for actuating said guides including a cam having a substantially vertical face formed with a transverse slot; and means for moving said cam to any of a number of positions in which one actuating arm of a thread guide lies in a horizontal plane including the slot while the vertical face of said cam is positioned to act on others of said arms.



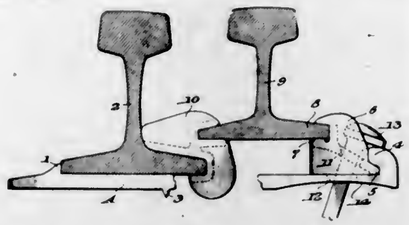
1,500,084. MATCH-BOX HOLDER. WARREN R. LEAS, Wyoming, Pa. Filed Nov. 12, 1923. Serial No. 674,291. 1 Claim. (Cl. 206—31.)

A match box holder comprising an inner box receiving section, an outer section substantially U-shaped in cross section and provided in its opposite sides with substantially T-shaped slots and headed pins extending from the sides of the inner section through said slots to provide a sliding pivotal connection between the sections.



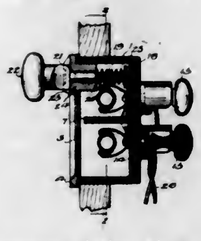
1,500,085. TOMATO CORER. JAMES Q. LEAVITT, Ogden, Utah. Filed Oct. 31, 1923. Serial No. 671,914. 10 Claims. (Cl. 146—52.)

1. Apparatus of the kind described, including a mount carrying a plurality of rockably supported cutting spoons, a stop device against which the object to be treated is to be contacted, said mount and said device being relatively movable towards and from each other, and power means for automatically moving the spoons relatively dur-



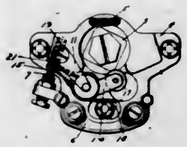
ing a relative movement between said mount and device, said means including a continuously rotating shaft and cam means operated thereby.

1,500,086. MANUFACTURE OF CHENILLE PRELIMINARY FABRICS. GOTTLIEB LIEBENDER, Oelsnitz, Germany. Filed Feb. 14, 1922. Serial No. 536,573. 4 Claims. (Cl. 164—113.)



1. A device for use in the manufacture of chenille preliminary fabric with chenille weft threads dyed in conformity with the pattern for the weaving of Axminster carpets, comprising, in combination, a horizontal roller, a carpet-pattern conducted over the upper part thereof, and means for rotating said roller intermittently as much as corresponds to about the thickness of a chenille-thread; a slide arranged in front of the roller and being adapted to be shifted laterally in steps corresponding to the distribution of the colors on the carpet-pattern, parallelly to the said roller; a pattern reading device arranged on said slide, opposite the roller; a jacquard-card punching device; means provided on the said slide in front of the said reading device and adapted to act on the various punches of said punching device; and means adapted to transmit power from said means on the said slide to said punches.

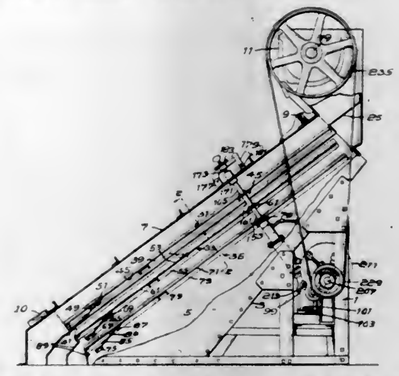
1,500,087. GUARD-RAIL FIXTURE FOR RAILWAY TRACKS. THOMAS MANEY, Louisville, Ky. Filed Feb. 25, 1922. Serial No. 539,242. 10 Claims. (Cl. 238—20.)



1. In a guard rail fixture for railway tracks, a base-plate having a concave portion on the lower surface which is initially wholly removed from the cross-tie.

1,500,088. IGNITION INDICATING AND DETECTING DEVICE. MARTIN J. NEUNER and ALBERT A. HABERMANN, North Bergen, N. J. Filed July 27, 1922. Serial No. 577,836. 1 Claim. (Cl. 175—183.)

An ignition detector device which includes a cup-shaped casing having a dividing wall or partition therein, a pair of spring clips in each section of the casing, a gas-filled tube adapted to be supported between one set of clips, a glass enclosed spark gap to be supported between the other pair of clips, a shunt connected with the clips supporting the gas filled tube, and manually operated means for opening said shunt, said means connected to the front of the casing.

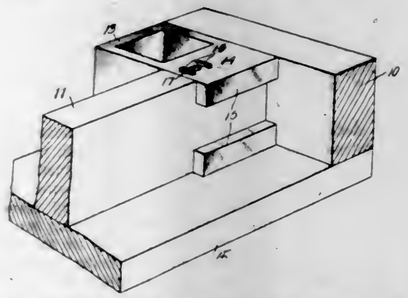


1,500,089. CIRCUIT BREAKER. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Apr. 29, 1919. Serial No. 293,433. 11 Claims. (Cl. 200—30.)

4. In a circuit breaker, a stationary member carrying a contact, a movable member carrying a cooperating contact, said movable member being in two sections pivoted on a common center, one of said sections carrying said cooperating contact and the other a bumper, a cam for acting on said bumper to move the sections carrying it and operative means connecting the two sections so that the actuation of the one by said cam causes the actuation of the other for the purpose described.

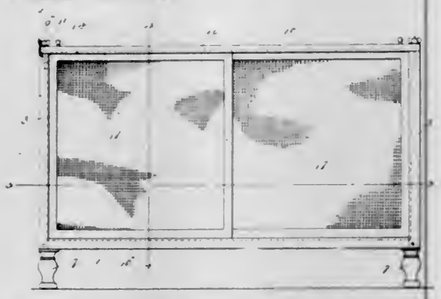
1,500,090. SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 28, 1922. Serial No. 609,460. 13 Claims. (Cl. 83—56.)

1. A separator for grading materials comprising, in combination, a screen, a shaft, an eccentric on the shaft having a follower, an electric motor close to the eccentric for driving the eccentric shaft and having its armature mounted directly on and carried by the eccentric shaft, and a member reciprocated by the eccentric and



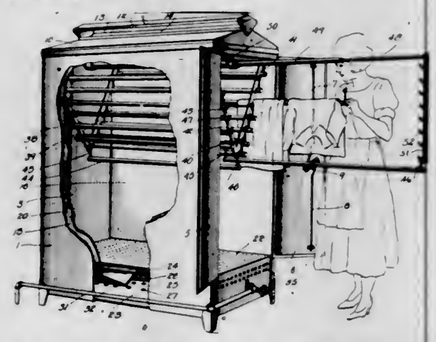
follower for imparting vibration to the screen, said member being unattached to the screen, that the latter may have independent vibrations.

1,500,091. VISOR FOR AUTOMOBILE WINDSHIELDS. WILLIAM C. WEISKE and HARLEY A. DORMAN, Detroit, Mich.; said Weiske assignor to said Dorman. Filed July 26, 1920. Serial No. 399,142. 2 Claims. (Cl. 296—95.)



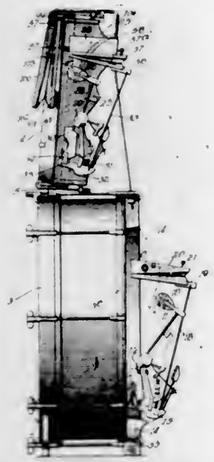
1. A visor for automobile windshields comprising the combination with a three-sided frame member provided with a groove in the inner edges of a substantially rectangular frame of comparatively thin material, an opaque fabric cover therefor, the edges of the cover extending beyond the frame upon three sides and the said three sides being adapted for insertion in the groove with the edges of the fabric cover within the groove and tending to bind the visor member in the said main frame.

1,500,092. CORNER IRON FOR TRUCKS. EMIL DIETZ, Indianapolis, Ind., assignor to Carl V. Dietz, Indianapolis, Ind. Filed June 23, 1923. Serial No. 647,336. 1 Claim. (Cl. 296—30.)



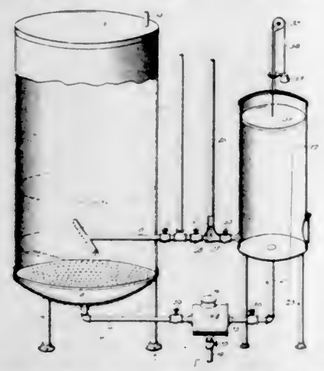
A corner iron for trucks comprising a body having a socket, a pair of horizontal arms extending respectively from the upper and lower ends of said socket at one side thereof adapted to engage over a rail, said arms having their ends inturned to embrace said rail, said corner iron being adapted to be secured against the side and end rails and floor board of a truck to hold the parts securely in position, substantially as set forth.

1,500,093. FRESH-AIR BED. ARTHUR B. COOKE, Macon, Ga. Filed Aug. 1, 1922. Serial No. 578,907. 1 Claim. (Cl. 5—97.)



A bed of the class described including a base frame having legs supporting the frame above a support, and a bed spring carried thereby, uprights removably secured to the corner portions of the said frame, a top frame removably mounted on the upper ends of said upright, the opposed faces of the uprights, the lower face of the top frame, and the upper face of the base frame being formed with grooves extending longitudinally adjacent the end portions, end frames removably mounted in the grooves at the ends of the base frame having a screen member carried thereby, a pair of screened frame members mounted for relative sliding movement in the grooves at each side of the base frame to provide access to the interior of the beds, and a pair of screen sections hinged in the top frame adapted to close said frame and provide access to the bed therethrough, said top frame being adapted to receive curtain supports for suspending curtain rollers therefrom.

1,500,094. CLOTHES DRIER. GREEN T. KEE, Kansas City, Mo. Filed Apr. 13, 1923. Serial No. 631,827. 5 Claims. (Cl. 34—40.)



2. A clothes drier comprising a casing having a perforate bottom, the perforations in the bottom being sufficient to admit air for the support of combustion only, a clothes chamber comprising an inner casing having an imperforate bottom and side walls spaced from the casing, the top of the clothes chamber having an opening aligning with an opening in the top of the casing, the side walls of the clothes chamber being spaced from the side walls of the casing to provide ducts for the passage of the products of combustion, the upper portions of the ducts being constricted to cause the passage of the products of combustion to flow sluggishly, and means for admitting air directly to the clothes chamber.

1,500,095. DRUM. ADOLPH PETER GUSTAFSON, Chicago, Ill., assignor to M. Schulz Company, Chicago, Ill. Filed Feb. 5, 1919. Serial No. 275,082. 11 Claims. (Cl. 84—6.)

7. The combination with a pneumatically operated musical instrument, of a bass drum and a snare drum thereon and completing a unit separate from the musical instrument, piano actions on said drums for bearing the same, pneumatically actuated mechanism manually controlled from the piano for operating the action of said bass drum for a single beat, and pneumatically actuated mechanism manually controlled from the piano for operating the action of said snare drum for a plurality of beats.

1,500,096. CONTINUOUS BRINE PURIFIER. HERBERT D. OXLEY, Chicago, Ill. Filed Feb. 2, 1924. Serial No. 690,146. 11 Claims. (Cl. 23—13.)

1. A purified brine producing apparatus comprising a dissolving tank, a perforated gravel support above the bottom thereof, a bed of gravel on the said support for supporting a bed of the undissolved salt, a purified brine container connected to the bottom of the said tank, a sump chamber disposed in the connection between the tank and the purified brine container and below both of the latter, and a filling of gravel in the sump chamber through which the brine must pass in flowing from the tank to the purified brine container.

Patents Nos. 1,500,097 to 1,501,031.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 324—No. 2. TUESDAY, JULY 8, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Amendment to Trade-Mark Laws.

[PUBLIC—No. 263—68TH CONGRESS.

[S. 3324.]

AN ACT to amend section 5 of the Trade-Mark Act of 1905, as amended, relative to the unauthorized use of portraits.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the fourth proviso of subdivision (*b*) of section 5 of the act entitled "An act to authorize the registration of trade-marks used in commerce with foreign nations or among the several States or with Indian tribes, and to protect the same," approved February 20, 1905, as amended, is amended to read as follows: "*Provided further*, That no portrait of a living individual may be registered as a trade-mark except by the consent of such individual, evidenced by an instrument in writing, nor may the portrait of any deceased President of the United States be registered during the life of his widow, if any, except by the consent of the widow evidenced in such manner."

Approved, June 7, 1924.

Interference Notices.

U. S. PATENT OFFICE, *Washington, June 28, 1924.*

Samuel Block, his assigns or legal representatives, take notice:

An interference having been declared by this Office between Landay Brothers, 311 Sixth Avenue, New York, N. Y., for registration of a trade-mark and trade-mark registered September 28, 1909, No. 75,357, to Samuel Block, 220 Wabash Avenue, Chicago, Ill., and a notice of such declaration sent by registered mail to said Samuel Block at the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless said Samuel Block, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, June 17, 1924.*

Rice Cereal & Milling Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Cumpson-Doelman, Inc., 588 Louisiana Street, Buffalo, N. Y., for registration of a trade-mark and trade-mark registered August 28, 1917, No. 118,331, to Rice Cereal & Milling Co., Fort Wayne, Ind., and a notice of such declaration sent by registered mail to said Rice Cereal & Milling Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Rice Cereal & Milling Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, June 13, 1924.*

Vincent Visconti, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Joseph F. Malatesta, of 162 Commercial Street, Boston, Mass., for registration of a trade-mark and trade-mark registered June 13, 1916, No. 110,793, to Vincent Visconti, 217 Twenty-first Street, Pittsburgh, Pa., and a notice of such declaration sent by registered mail to said Vincent Visconti at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Vincent Visconti, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, June 28, 1924.*

Lucas Thompson & Co., their assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Ireland Bros. Inc., of 102 Franklin Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Lucas Thompson & Co., of 40 Lispenard Street, New York, N. Y., No. 22,068, dated November 29, 1892, and the notice of such proceeding sent by registered mail to the said Lucas Thompson & Co., at the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless said Lucas Thompson & Co., their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

Condition of Applications Under Examination at Close of Business June 27, 1924.

(Total number of applications awaiting action, excluding Trade-Mark Division, 59,709; Trade-Mark Division, 1,861. Oldest new case, Oct. 22, 1923; oldest amended, Oct. 17, 1923. The dates given are 1923 except where * indicates 1924.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

ISOM *v.* DUBBS.

Decided April 12, 1924.

1. INTERFERENCE—ORDER ALLOWING SURREBUTTAL TESTIMONY.

Where the Examiner of Interferences issued an order allowing D. to take surrebuttal testimony, specifically indicating that D.'s testimony was to be allowed as a reply to testimony of I.'s already in the case, *Held* that if the testimony taken by D. in pursuance of the order is not within the permission of the order it must be stricken out.

2. SAME—SAME—SUR-SURREBUTTAL TESTIMONY.

If the testimony taken in pursuance of the order is within the permission given in the order, it can form no basis for additional testimony on behalf of I.

3. SAME — SAME — MOTION TO SUPPRESS SURREBUTTAL TESTIMONY.

I.'s motion to suppress D.'s testimony taken in surrebuttal must be postponed for consideration at final hearing.

4. SAME—SAME—SAME.

Where in his decision denying I.'s motion to suppress D.'s surrebuttal testimony the Examiner of Interferences apparently construes and interprets the counts of the interference, and the things said in that decision on their face were said without a thorough consideration of the thousands of pages of testimony already in the case, the Examiner of Interferences will take up the matter of construing and interpreting the issue de novo at final hearing.

APPEAL on motion.

ON PETITION.

PROCESS OF TREATING OILS.

Messrs. Rector, Hibben, Davis & Macauley and *Messrs. Addington, Ames & Seibold* for Isom.

Mr. Frank L. Belknap and *Mr. William F. Hall* for Dubbs (*Mr. J. T. Newton* of counsel).

FENNING, *Assistant Commissioner:*

Isom appeals and petitions from the ruling of the Examiner of Interferences [dated January 15, 1924], denying his motion to suppress Dubbs's testimony taken in surrebuttal and for leave to take sur-surrebuttal testimony. After vigorously-contested proceedings Dubbs was allowed to take specific testimony. The order allowing the testimony, on request, was more elaborately defined. This makes the cases referred to by Isom here readily distinguishable and inapplicable to the present proceedings.

[1, 2] As pointed out by the Examiner of Interferences the testimony of Dubbs if not within the permission of the order must be stricken out. If it is within the permission given in the order, it can form no basis for additional testimony on behalf of Isom, since the order specifically indicated that Dubbs's testimony was to be allowed as a reply to testimony of Isom's already in the case.

[3] The motion to suppress Dubbs's testimony must properly be postponed for consideration at final hearing, at which time the sole criterion of the admissibility of the Dubbs testimony will be whether it falls within the order under which it was taken.

I find no ground for allowing Isom to take additional testimony.

The matter was presented in elaborate and extensive oral arguments, and the appeal, the petition, and the brief consist of 67 pages of typewritten matter. In none of these is reference made to a specific question or answer or even a portion thereof in the testimony introduced by Dubbs.

[4] Both parties agree that what was said by the Examiner of Interferences in his decision of January 15, 1924, apparently construing and interpreting the counts of the interference, is not the law of this case and should not bind the Examiner of Interferences at final hearing. The things said in that opinion on their face were said not after a thorough consideration of the thousands of pages of testimony already in the case, and it is clear that at final hearing the Examiner of Interferences will take up the matter de novo.

The petition is denied.

The Examiner of Interferences is affirmed.

ADJUDICATED PATENTS.

(D. C. N. Y.) The Gauthier & Rodrigues-Ely patent, No. 874,666, for covering tip for oxy-acetylene torch for cutting metals, claim 1, *Held* valid and infringed. *Davis-Bournonville Co.* v. *Alexander Milburn Co.*, 297 Fed. Rep. 846.

(D. C. N. Y.) The Rodrigues-Ely & Gauthier patent, No. 880,099, for welding torch, *Held* invalid for anticipation. *Davis-Bournonville Co.* v. *Alexander Milburn Co.*, 297 Fed. Rep. 846.

(D. C. N. Y.) The Whitford patent, No. 1,028,410, for supporting head for oxy-acetylene torch, claims 3, 6, and 7 *Held* valid. *Davis-Bournonville Co.* v. *Alexander Milburn Co.*, 297 Fed. Rep. 846.

(C. C. A. Cal.) The Miller & Macowsky design patent, No. 56,450, for a Child's Romper, *Held* not infringed. *Eloesser-Heynemann Co.* v. *Kuh Bros.*, 297 Fed. Rep. 831.

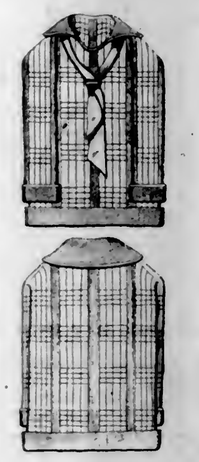
DESIGNS

JULY 8, 1924.

65,094. LACE. CHARLES WILFRED BIRKIN and EDWIN THOMAS SANDS, Nottingham, England, assignors to Birkin and Company, Broadway, Nottingham, England. Filed Feb. 1, 1924. Serial No. 8,503. Term of patent 3½ years.



The ornamental design for lace substantially as shown.

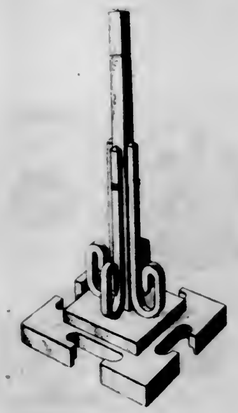
65,095. LACE. CHARLES WILFRED BIRKIN and EDWIN THOMAS SANDS, Nottingham, England, assignors to Birkin and Company, Broadway, Nottingham, England. Filed Feb. 1, 1924. Serial No. 8,504. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

65,096. KNITTED JACKET. MAURICE W. BRANTMAN, Brooklyn, N. Y., assignor to Republic Knitting Mills, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 22, 1924. Serial No. 9,039. Term of patent 3½ years.

The ornamental design for a knitted jacket as shown.

65,097. WALL PAPER. HARRIETT C. BRYANT, New Milford, Conn. Filed May 2, 1924. Serial No. 9,465. Term of patent 7 years.



The ornamental design for wall paper, as shown.

65,098. JAR OR SIMILAR ARTICLE. GUY OTIS BREWSTER, New York, N. Y. Filed Sept. 11, 1922. Serial No. 3,674. Term of patent 3½ years.

The ornamental design for a jar or similar article, as shown.

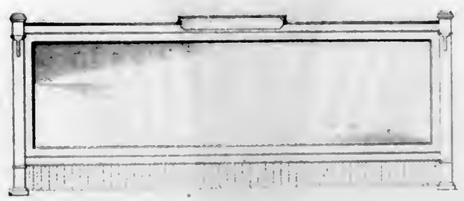
65,099. PEDESTAL FOR MERCHANDISE-DISPLAY FIXTURES. WILLIAM CHARLES CANDLISH, New Rochelle, N. Y., assignor to J. R. Palmenberg's Sons, Inc., New York, N. Y., a Corporation of New York. Filed May 5, 1923. Serial No. 6,085. Term of patent 7 years.

The ornamental design for a pedestal for merchandise-display fixtures as shown.

65,100. CONVENTION BANNER. DIGBY W. CHANDLER, Jr., New York, assignor to Annin & Co., New York, N. Y., a Corporation of New York. Filed Apr. 15, 1924. Serial No. 9,288. Term of patent 3½ years.

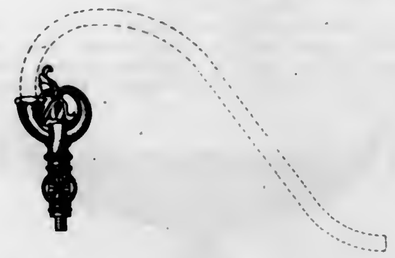
The ornamental design for a convention banner substantially as shown.

65,101. CEILING PLATE FOR A LIGHTING FIXTURE. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1923. Serial No. 6,659. Term of patent 7 years.



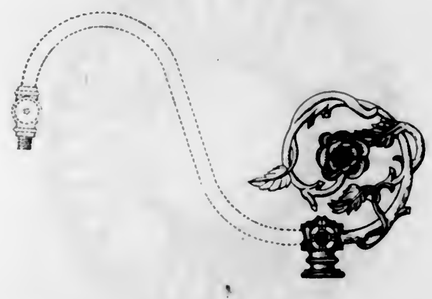
The ornamental design for a ceiling plate for a lighting fixture, as shown.

65,102. CEILING PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1923. Serial No. 6,660. Term of patent 7 years.



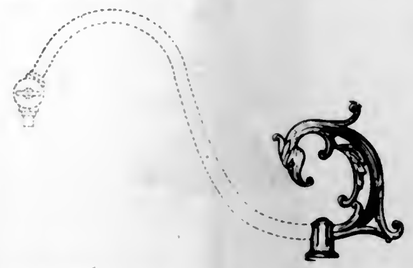
The ornamental design for a ceiling plate for lighting fixtures, as shown.

65,103. SIGN. THOMAS CUSACK, Chicago, Ill., assignor to Thos. Cusack Company, Chicago, Ill., a Corporation of New Jersey. Filed May 9, 1921. Serial No. 468,186. Term of patent 7 years.



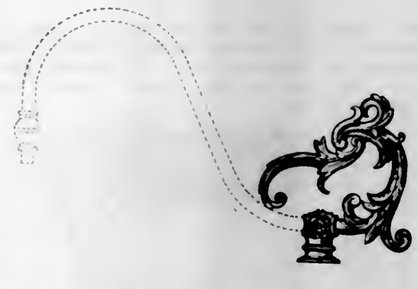
The ornamental design for a sign, as shown.

65,104. LAMP-ARM MOUNTING. ARTHUR L. DEDI, Oak Park, Ill. Filed Feb. 26, 1923. Serial No. 5,292. Term of patent 3½ years.



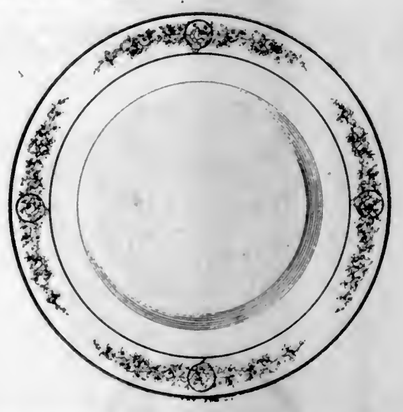
The ornamental design for a lamp arm mounting substantially as shown.

65,105. LAMP-ARM MOUNTING. ARTHUR L. DEDI, Oak Park, Ill. Filed Feb. 26, 1923. Serial No. 5,295. Term of patent 3½ years.



The ornamental design for a lamp arm mounting substantially as shown.

65,106. LAMP-ARM MOUNTING. ARTHUR L. DEDI, Oak Park, Ill. Filed Feb. 26, 1923. Serial No. 5,296. Term of patent 3½ years.



The ornamental design for a lamp arm mounting substantially as shown.

65,107. LAMP-ARM MOUNTING. ARTHUR L. DEDI, Oak Park, Ill. Filed Mar. 24, 1923. Serial No. 5,579. Term of patent 3½ years.

The ornamental design for a lamp arm mounting substantially as shown.

65,108. PLATE OR SIMILAR ARTICLE. WALTER DE VILLE, East Liverpool, Ohio, assignor to Palm, Fechteler & Co., New York, N. Y., a Corporation of New York. Filed May 13, 1924. Serial No. 9,577. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

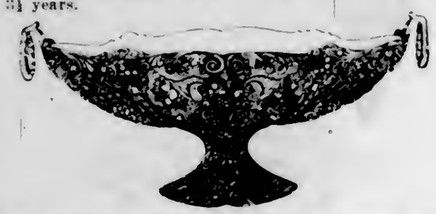
65,109. ARTIFICIAL CHRISTMAS TREE. WILLEM DIEPERINK-LANGEREIS, Warren, Pa. Filed Jan. 29, 1924. Serial No. 8,476. Term of patent 14 years.

The ornamental design for an artificial Christmas tree, as shown.

65,110. BELT-BUCKLE FRAME. WILLIAM DIETERICH, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 30, 1924. Serial No. 9,444. Term of patent 3½ years.

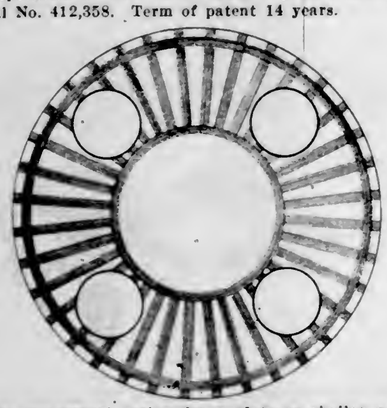
The ornamental design for a belt-buckle frame, as shown.

65,111. BALL. ALBERT J. ELDON, Montclair, N. J. Filed Sept. 27, 1922. Serial No. 3,829. Term of patent 14 years.



The ornamental design for a ball substantially as shown in the drawings hereof.

65,112. VASE OR SIMILAR ARTICLE. WILLIAM GEIB, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Nov. 8, 1923. Serial No. 7,721. Term of patent 3½ years.



The ornamental design for a vase or similar article substantially as shown.

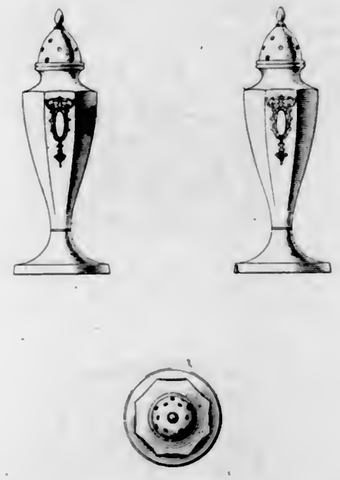
65,113. BOWL OR SIMILAR ARTICLE. WILLIAM GEIB, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Dec. 18, 1923. Serial No. 8,079. Term of patent 3½ years.

The ornamental design for a bowl or similar article as shown.

65,114. PLATE OR SIMILAR ARTICLE. LAZRUS C. GIOMETTI and CHERUBINO J. GIOMETTI, Corning, N. Y., assignors to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Sept. 23, 1920. Serial No. 412,358. Term of patent 14 years.

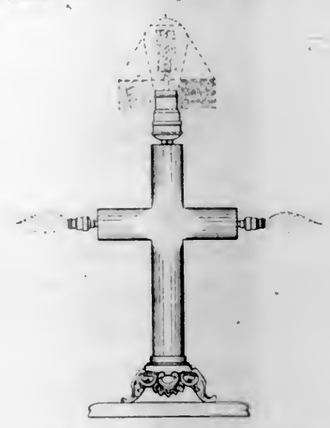
The ornamental design for a plate or similar article, as shown.

65,115. DISH OR SIMILAR ARTICLE. LAZRUS C. GIOMETTI and CHERUBINO J. GIOMETTI, Corning, N. Y., assignors to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Sept. 23, 1920. Serial No. 412,359. Term of patent 14 years.



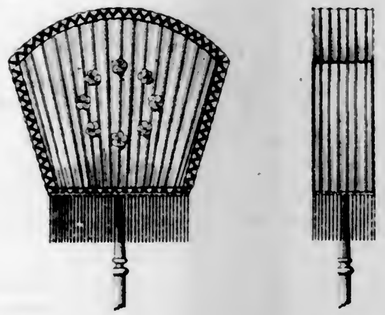
The ornamental design for a dish or similar article as shown.

65,116. TEAPOT. ADOLPH GRAMLICH, New York, N. Y. Filed Apr. 15, 1924. Serial No. 9,282. Term of patent 3½ years.



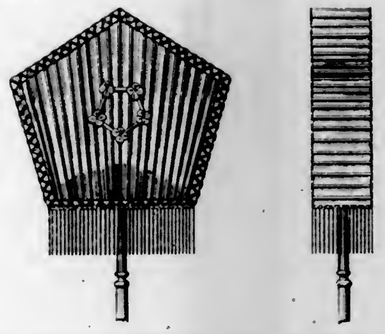
The ornamental design for a teapot as shown.

65,117. SALT AND PEPPER SHAKER. SAMUEL HASLAM, North Attleboro, Mass., assignor to Evans Case Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Apr. 8, 1924. Serial No. 9,206. Term of patent 3½ years.



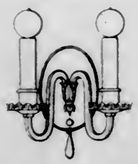
The ornamental design for a salt and a pepper shaker, as shown.

65,118. LAMP. LONZO JOHNSON, Indianapolis, Ind. Filed Mar. 17, 1924. Serial No. 8,957. Term of patent 3½ years.



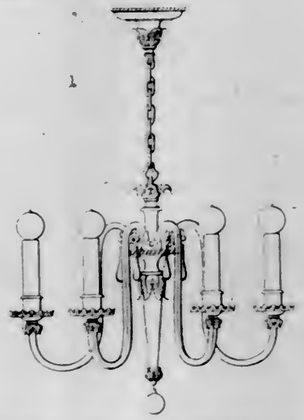
The ornamental design for a lamp, as shown.

65,119. LAMP SHADE. MARIE KIRCHMAN, Cicero, Ill. Filed Apr. 5, 1924. Serial No. 9,180. Term of patent 7 years.



The ornamental design for a lamp shade as shown.

65,120. LAMP SHADE. MARIE KIRCHMAN, Cicero, Ill. Filed Apr. 5, 1924. Serial No. 9,181. Term of patent 7 years.



The ornamental design for a lamp shade as shown.

65,121. LIGHTING-FIXTURE BRACKET. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., a Corporation of New York. Filed Jan. 25, 1924. Serial No. 8,405. Term of patent 7 years.

The ornamental design for a lighting fixture bracket, as shown.

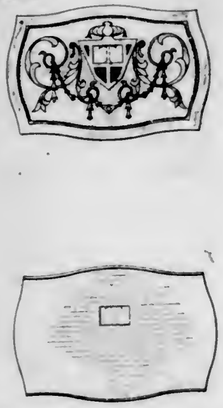
65,122. CHANDELIER. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., a Corporation of New York. Filed Jan. 25, 1924. Serial No. 8,410. Term of patent 7 years.

The ornamental design for a chandelier, as shown.

65,123. SPOON OR SIMILAR ARTICLE. THOMAS B. LASHAR, Fairfield, Conn., assignor to Associated Silver Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 27, 1923. Serial No. 5,982. Term of patent 14 years.

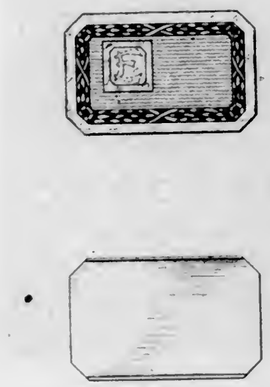
The ornamental design for a spoon or similar article, as shown.

65,124. COOLING AND DISPENSING DEVICE. FRANK L. LOOK, Pasadena, Calif. Filed Apr. 10, 1924. Serial No. 9,215. Term of patent 3½ years.



The ornamental design for a cooling and dispensing device, as shown.

65,125. DOLL. ENICE JEAN LOUBET, New York, N. Y. Filed Mar. 6, 1923. Serial No. 5,379. Term of patent 3½ years.



The ornamental design for a doll, as shown.

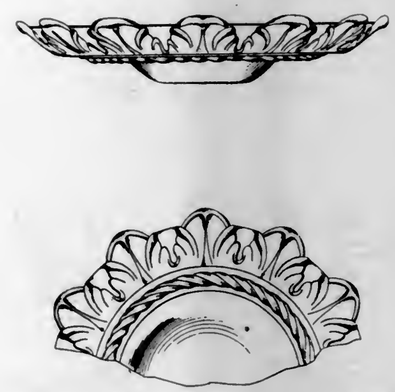
65,126. BELT-BUCKLE FRAME. MERRIL MABON, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 30, 1924. Serial No. 9,448. Term of patent 7 years.

The ornamental design for a belt buckle frame, as shown.

65,127. BELT-BUCKLE FRAME. MERRIL MABON, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 30, 1924. Serial No. 9,449. Term of patent 7 years.

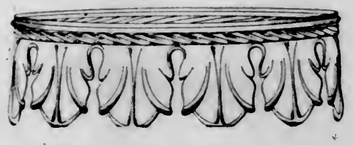
The ornamental design for a belt buckle frame, as shown.

65,128. BELT SLIDE. MERRIL MABON, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 30, 1924. Serial No. 9,450. Term of patent 7 years.



The ornamental design for a belt slide, as shown.

65,129. EDIBLE FOOD PRODUCT. FRANCIS G. MATSON, Washington, D. C. Filed Feb. 23, 1924. Serial No. 8,706. Term of patent 3½ years.

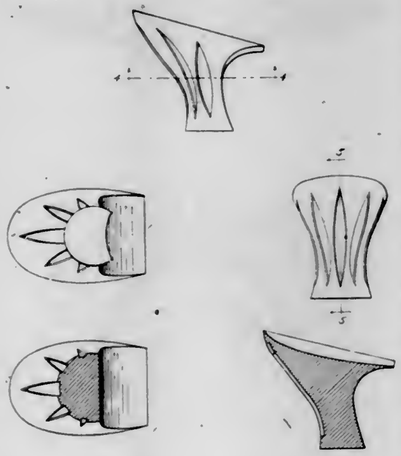


The ornamental design for an edible food product, as shown.

65,130. PLATE FOR LIGHTING FIXTURES. GLENN E. MCFADDEN, Lakewood, Ohio, assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Feb. 6, 1924. Serial No. 8,554. Term of patent 14 years.

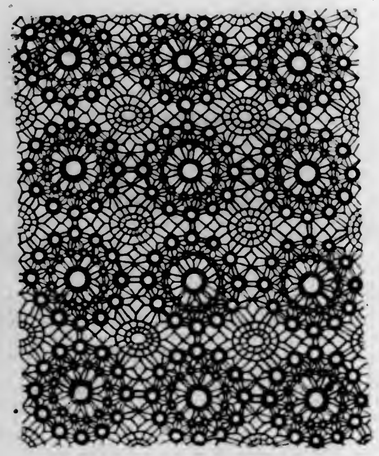
The ornamental design for a plate for lighting fixtures as shown.

65,131. RING FOR LIGHTING FIXTURES. GLENN E. MCFADDEN, Lakewood, Ohio, assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Feb. 6, 1924. Serial No. 8,557. Term of patent 14 years.



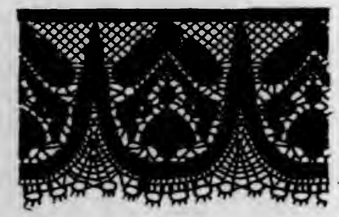
The ornamental design for a ring for lighting fixtures as shown.

65,132. SPINDLE FOR LIGHTING FIXTURES. GLENN E. MCFADDEN, Lakewood, Ohio, assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Feb. 6, 1924. Serial No. 8,560. Term of patent 14 years.



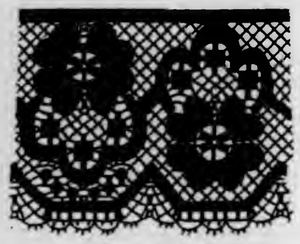
The ornamental design for a spindle for lighting fixtures as shown.

65,133. SHOE HEEL. WILLIAM H. NUTT, Newburyport, Mass. Filed Apr. 28, 1923. Serial No. 5,996. Term of patent 7 years.



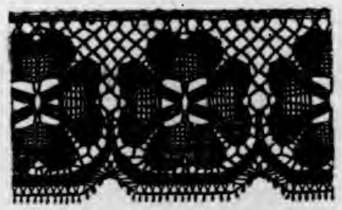
The ornamental design for a shoe heel, as shown.

65,134. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 6, 1924. Serial No. 8,851. Term of patent 3½ years.



The ornamental design for lace substantially as shown.

65,135. LACE. GEORGE RADFORD, Oakland Beach, R. I., assignor to Richmond Lace Works, New York, N. Y., a Corporation of Maine. Filed Apr. 25, 1924. Serial No. 9,399. Term of patent 14 years.



The ornamental design for lace as shown.

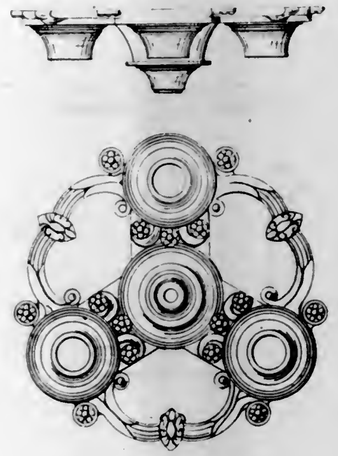
65,136. LACE. GEORGE RADFORD, Oakland Beach, R. I., assignor to Richmond Lace Works, New York, N. Y., a Corporation of Maine. Filed Apr. 25, 1924. Serial No. 9,400. Term of patent 14 years.

The ornamental design for lace as shown.

65,137. LACE. GEORGE RADFORD, Oakland Beach, R. I., assignor to Richmond Lace Works, New York, N. Y., a Corporation of Maine. Filed Apr. 26, 1924. Serial No. 9,415. Term of patent 14 years.

The ornamental design for lace as shown.

65,138. LACE. GEORGE RADFORD, Oakland Beach, R. I., assignor to Richmond Lace Works, New York, N. Y., a Corporation of Maine. Filed May 6, 1924. Serial No. 9,493. Term of patent 14 years.

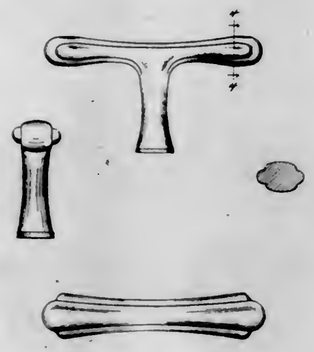


The ornamental design for lace as shown.

65,139. CRETONNE. JACOB C. REZNIK, Brooklyn, N. Y. Filed July 23, 1923. Serial No. 6,840. Term of patent 7 years.

The ornamental design for cretonne, as shown.

65,140. CEILING FIXTURE FOR ELECTRIC LIGHTS. CEPHAS B. ROGERS, Danbury, Conn. Filed Mar. 25, 1924. Serial No. 9,067. Term of patent 3½ years.



The ornamental design for a ceiling fixture for electric lights, as shown.

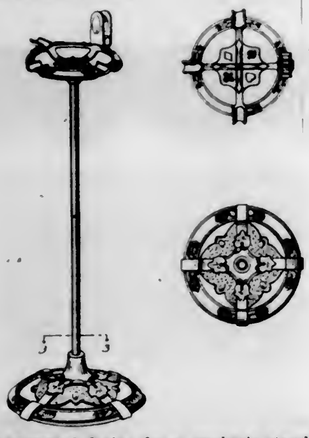
65,141. ELECTRIC-LIGHT BRACKET. CEPHAS B. ROGERS, Danbury, Conn. Filed Mar. 25, 1924. Serial No. 9,068. Term of patent 3½ years.

The ornamental design for an electric light bracket, as shown.

65,142. HANDLE. LOUIS ROTH, New York, N. Y., assignor to Sterling Bronze Company, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1922. Serial No. 1,386. Term of patent 7 years.

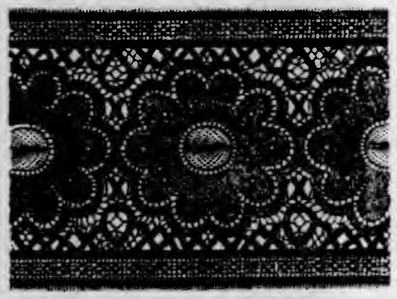
The ornamental design for a handle, as shown.

65,143. BOTTLE. ANDREW J. SANFORD, Newark, Ohio, assignor to A. H. Heisey & Co., Newark, Ohio. Filed June 17, 1921. Serial No. 478,447. Term of patent 3½ years.



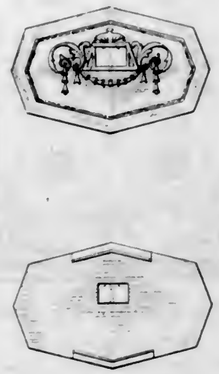
The ornamental design for a bottle as shown and described.

65,144. BOTTLE. ANDREW J. SANFORD, Newark, Ohio, assignor to A. H. Heisey & Co., Newark, Ohio. Filed June 17, 1921. Serial No. 478,449. Term of patent 3½ years.



The ornamental design for a bottle as shown and described.

65,145. SMOKER'S STAND. BERNHARD SCHAEFER, Cincinnati, Ohio. Filed Apr. 14, 1924. Serial No. 9,253. Term of patent 7 years.



The ornamental design for a smoker's stand, as shown.

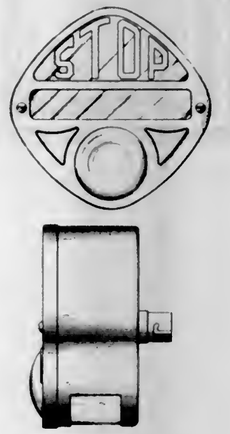
65,146. LACE. HANS SEEL, Hopkinton, R. I., assignor to Richmond Lace Works, New York, N. Y., a Corporation of Maine. Filed May 6, 1924. Serial No 9,495. Term of patent 14 years.

The ornamental design for lace as shown.

65,147. BELT-BUCKLE FRAME. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 30, 1924. Serial No. 9,445. Term of patent 7 years.

The ornamental design for a belt buckle frame, as shown.

65,148. BELT SLIDE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 30, 1924. Serial No. 9,446. Term of patent 3½ years.



The ornamental design for a belt slide, as shown.

65,149. BELT SLIDE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 30, 1924. Serial No. 9,447. Term of patent 3½ years.

The ornamental design for a belt slide, as shown.

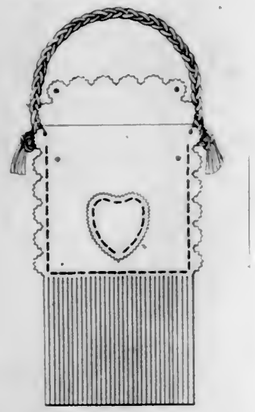
65,150. AUTOMOBILE SIGNAL LAMP. PAUL A. STOVER, Racine, Wis. Filed Aug. 25, 1923. Serial No. 7,090. Term of patent 14 years.

The ornamental design for an automobile signal lamp as shown.

65,151. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 21, 1924. Serial No. 9,346. Term of patent 3½ years.

The ornamental design for a rug, as shown.

65,152. RUG. RAYMOND WALDO, St. Paul, Minn. Filed Apr. 21, 1924. Serial No. 9,347. Term of patent 3½ years.

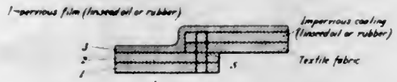


The ornamental design for a rug, as shown.

65,153. RUG. ALGERMONT H. WALDO, St. Paul, Minn. Filed Apr. 23, 1924. Serial No. 9,373. Term of patent 3½ years.

The ornamental design for a rug, as shown.

65,154. HAND BAG. MARTHA J. WASIA and LENA L. CARR, Dickens, Nebr. Filed Apr. 15, 1924. Serial No. 9,279. Term of patent 3½ years.

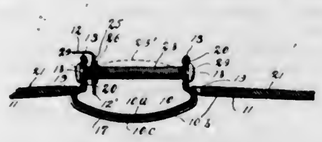


The ornamental design for a hand bag, as shown.

PATENTS

GRANTED JULY 8, 1924.

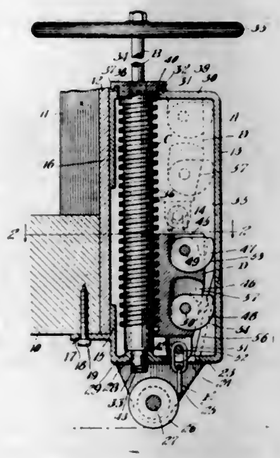
1,500,097. IMPERVIOUS-SEAMED ARTICLE AND PROCESS OF MAKING THE SAME. CLINTON D. ABRAHAM, Wilmington, Del.; Chester H. Ross administrator of said Abraham, deceased. Filed Apr. 14, 1920. Serial No. 373,961. 23 Claims. (Cl. 91—68.)



1. The process of making an impervious seamed article which comprises securing together the margins of suitably shaped fabric that has been coated on one side only with an impervious film, applying a coating solution of an impervious film-forming substance to the resulting article, and upon said one side only, and drying the article to produce a second film.

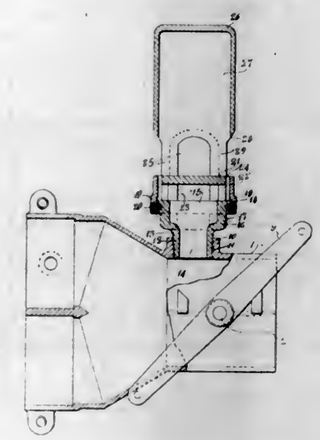
10. The process of making an impervious article, which comprises coating a web of fabric with a solution of an impervious film-forming substance, dissolved in a suitable solvent, drying the fabric to provide a film, making the fabric into the article, coating the made up article with a solution essentially similar to the first named solution though containing more solvent, and drying the article.

23. A protective glove made of cotton fabric having a soft, napped interior surface and having for its exterior surface a continuous film of fluid-impervious material extending over the seams of the glove as well as over the unseamed surface thereof.



1,500,098. LOOSE-LEAF ALBUM. JULIUS M. ALTER, Brooklyn, N. Y. Filed Jan. 18, 1923. Serial No. 613,444. 2 Claims. (Cl. 129—20.)

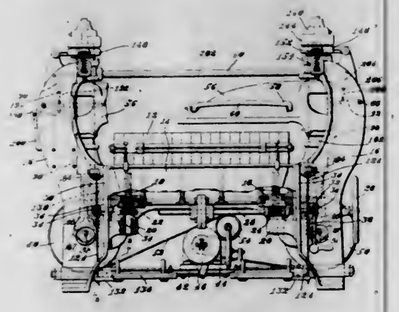
1. The herein described book construction comprising a channel-shaped metal back having spaced parallel edges, a series of leaves having hinge portions located between said edge portions of the back, a pair of flexible hinge strips having their edges secured to said edge portions of the back, and fasteners for the leaves passing through said hinge strips, the metal back edges, and the leaves.



1,500,099. HAND BRAKE. HARLEY E. ANDERSON, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Aug. 31, 1922. Serial No. 585,479. 17 Claims. (Cl. 74—119.)

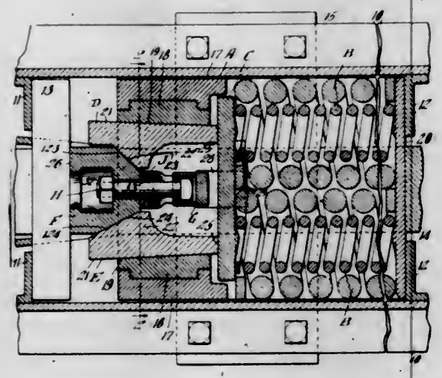
1. In a hand brake for railway cars; the combination with a shaft; of a brake chain; mechanism connecting the shaft and chain to cause the chain to be tightened during the rotation of said shaft in one direction; and

automatic means for causing said mechanism to be disconnected upon rotation of said shaft in the reverse direction.



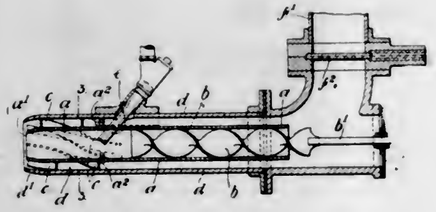
1,500,100. EXHAUST WHISTLE. ROBERT C. ANDERSON and FREDERICK F. RIKE, Dayton, Ohio, assignors to Buckeye Iron & Brass Works, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 3, 1923. Serial No. 616,818. 2 Claims. (Cl. 116—138.)

1. A two-part automotive exhaust whistle comprising a lower part having a hollow attaching nipple opening



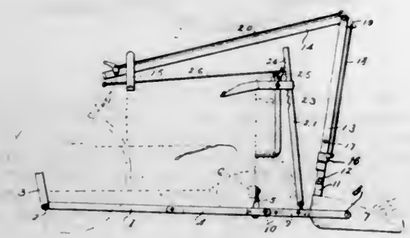
into an expanded chamber, said chamber having on its exterior a threaded flange, a disk above said chamber having cut away portions and supported on legs integral with said lower portion and disk, a dome screw-threaded for attachment to said flange and having legs which when attached to the lower portion and adjusted for use, stand opposite the legs on the lower portion of the whistle, said disk filling said dome portion except for the cut away portions at the periphery of the disk, said dome having cut away portions above the cut away portions in the disk.

1,500,101. PRESS. MILTON H. BALLARD, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 16, 1921, Serial No. 470,087. Renewed Nov. 10, 1923. 47 Claims. (Cl. 164—19.)



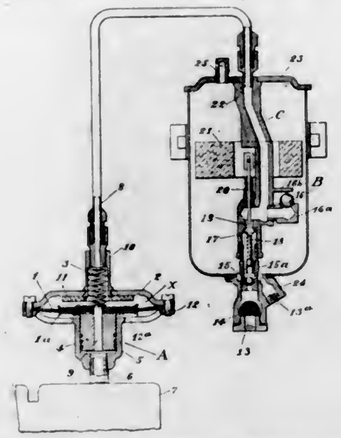
1. In a starting mechanism, a clutch, a lever having connections to the clutch, a second lever movable relatively to the first mentioned lever angularly in the plane defined by alined portions of said levers while the first lever remains stationary, and a manually operable lever having an arm movable in a plane at right angles to the first mentioned plane for operating the clutch lever.

1,500,102. FRICTION SHOCK-ABSORBING MECHANISM. ARILD M. BRENNE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Aug. 7, 1922. Serial No. 579,999. 6 Claims. (Cl. 213—32.)



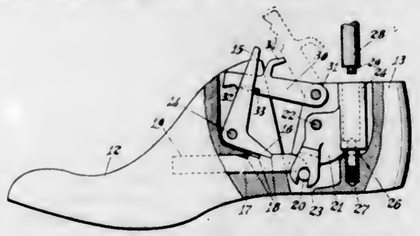
1. In a friction shock absorbing mechanism, the combination with a friction shell; of friction shoes cooperable therewith; pressure-transmitting wedging means cooperating with the shoes; a main spring resistance operative to yieldingly resist relative movement between the shoes and shell; a supplemental spring resistance; and means operative after a predetermined movement of the mechanism arranged to render said supplemental spring resistance effective in tandem with the main spring resistance during a compression stroke.

1,500,103. FLUID-FUEL BURNER. WILLIAM MURRAY BURDON and MATTHEW MURRAY BURDON, Bellshill, Scotland, assignors to Burdons Limited, Bellshill, Lanarkshire, Scotland, a Corporation of Great Britain. Filed Dec. 20, 1920. Serial No. 432,010. 16 Claims. (Cl. 158—1.)



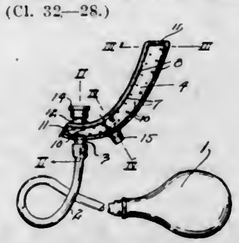
1. A burner for furnaces comprising an outer tube, an inner tube disposed within the outer tube and acting to divide a current of air introduced into the outer tube into two streams, means on the inner tube for supporting one end of said tube centrally within the outer tube and for gyrating one of said air streams in one direction, means within the inner tube for supporting the other end thereof centrally within the outer tube and for gyrating the other of said air streams in the opposite direction to that of the first mentioned stream, and means disposed angularly to the axis of said burner for introducing fluid fuel under gravity into the inner tube, the inner end of the last said means being disposed in front of the gyrating means in the inner tube.

1,500,104. EXCAVATING SHOVEL OR SCRAPER. WALFRED F. CARLBERG, Sisseton, S. Dak. Filed May 10, 1922. Serial No. 559,841. 9 Claims. (Cl. 37—126.)



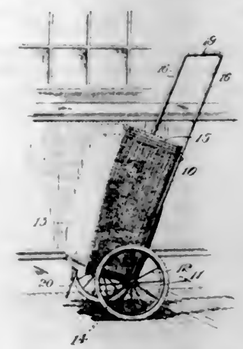
1. An excavating scraper, designed for connection with tractors, including a scraping bucket, means to permit said bucket to automatically elevate on endwise strain incident to a scooping movement, and means to automatically lock said bucket in elevated position.

1,500,105. DIAPHRAGM PUMPING DEVICE. WILLIAM C. CARTER, St. Louis, Mo. Filed Dec. 27, 1920. Serial No. 433,399. 4 Claims. (Cl. 103—44.)



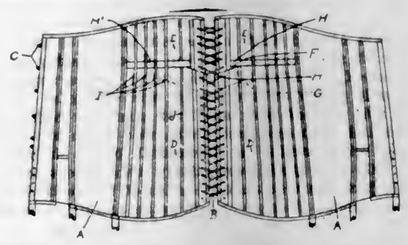
1. A pumping device, comprising a diaphragm, an actuating means for said diaphragm comprising a piston mechanically connected to the diaphragm, a cylinder in which said piston is reciprocatingly mounted, a second cylinder wherein pressure is created intermittently, and a connection between said cylinders.

1,500,106. LAST. JAMES CAVANAGH, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 17, 1919. Serial No. 290,674. 15 Claims. (Cl. 12—136.)



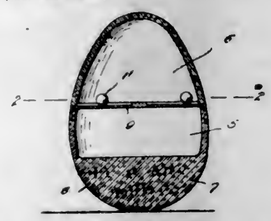
1. A last comprising fore and heel parts having longitudinally adjustable connections, whereby the operative length of the last may be substantially varied, constructed and arranged to hold the last against collapse, said connections being readily separable in the use of the last.

1,500,107. DENTAL APPLIANCE. JERMAIN CHANDLER, Toledo, Ohio. Filed June 5, 1923. Serial No. 643,493. 7 Claims. (Cl. 32—28.)



1. In an appliance for cleansing the mouth, a passage forming channel for opposing a jaw, said channel having from its passage and directed into the way provided by said channel jet outlets.

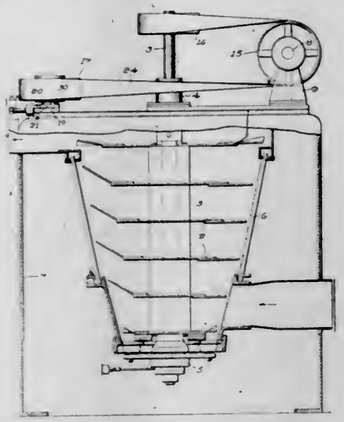
1,500,108. SHOPPING OR MARKETING TRUCK. GRACE T. CLAYTON, Chevy Chase, Md. Filed Sept. 27, 1920. Serial No. 413,045. 7 Claims. (Cl. 280—51.)



1. An article truck comprising the combination, with a substantially flat inverted U-frame and a pair of running wheels secured to said frame adjacent the lower ends of the U-arms, of a vertically elongated noncollapsible basket, open only at its upper end and having a flattened rectagular cross-section, secured flatwise to said frame, said frame extending upwardly beyond said container to provide both a handle bar and a bail.

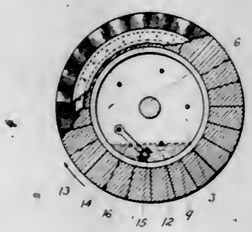
1,500,109. CORSET. HARRY A. COLLEY, Detroit, Mich., assignor to American Lady Corset Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 24, 1920. Serial No. 376,254. 5 Claims. (Cl. 2—27.)

1. A corset comprising complementary main body sections, and a lacing connecting said sections, each section having overlapping upper and lower marginal portions engaged by said lacing, and tie strips secured to the upper marginal portions near their adjacent edges and in proximity to the lower marginal portions, said strips extending freely across said upper marginal portions and being secured to the body portions of the sections.



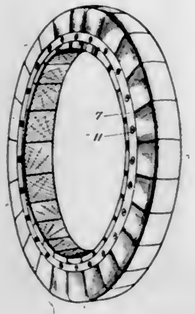
1,500,110. GAME DEVICE. JOHN W. CULP, Johnstown, Pa. Filed Aug. 6, 1923. Serial No. 655,907. 3 Claims. (Cl. 46—56.)

1. In a game device of the character set forth, a hollow and transparent egg shaped member weighted at its



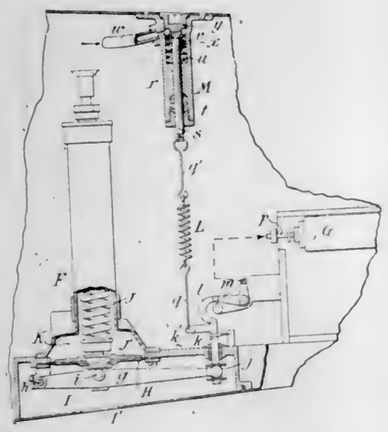
lower end whereby said member normally assumes an upright position, a supporting plate within said member, and a pair of game pieces movable thereon for purposes described.

1,500,111. VERTICAL COTTON-OPENING MACHINE. ROBERT S. CURLEY, Lowell, Mass., assignor to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 9, 1923. Serial No. 618,148. 2 Claims. (Cl. 19—90.)



2. A cotton opening machine comprising, in combination, an outer casing, a vertical beater mounted in said casing, a vertical shaft supporting said beater, bearings supporting said shaft, a driven pulley mounted on the upper end of said shaft above said casing, a horizontal jack shaft supported on the top of said casing at one side thereof, a horizontal guide pulley, means supporting said guide pulley on the top of said casing at the opposite side thereof from said jack shaft for adjustment toward and from said jack shaft, said guide and driven pulleys being located in horizontal planes below and above said jack shaft, respectively, two pulleys mounted on said jack shaft at opposite sides of the vertical plane passing through the axes of said guide, and driven pulleys, one of the pulleys on said jack shaft being fast thereon and the other loose, and a belt supported on all of said pulleys and driven by said fast pulley.

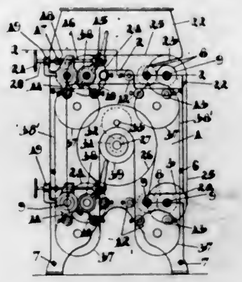
1,500,112. OILER. THOMAS G. DADE, St. Marys, Ohio. Filed May 14, 1923. Serial No. 638,879. 3 Claims. (Cl. 64—26.)



1. In combination with a wheel having a central cavity and an axle projecting through it, of an oiler member comprising a pivoted lever arm eccentrically mounted in the cavity and having swinging movement toward and away from the axle so as to take up oil from the cavity and deposit it on the axle.

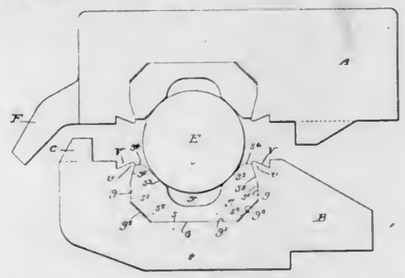
1,500,113. WHEEL. THOMAS G. DADE, St. Marys, Ohio. Filed May 14, 1923. Serial No. 638,882. 1 Claim. (Cl. 152—9.)

A wheel tire comprising a plurality of wedge-shaped wooden blocks arranged end to end in circular series, flat metallic rings inserted into grooves in opposite faces of the blocks and screws passing through the rings and into the blocks, there being two screws in each block, one entering through a ring on each side of the block.



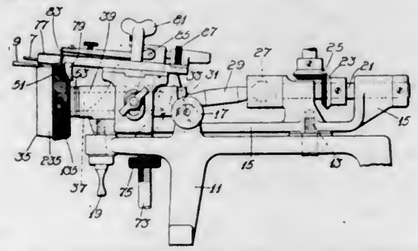
1,500,114. DEPTH MECHANISM FOR AUTOMOBILE TORPEDOES. WILLIAM DIETER, Newark, N. J., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Feb. 9, 1924. Serial No. 691,721. 9 Claims. (Cl. 114—25.)

1. In a torpedo, a hydrostat comprising a diaphragm exposed on its exterior side to hydraulic pressure, and a spring chamber and spring on its interior side, combined with means for compensating during the run of the torpedo for the variation in pressure against the diaphragm due to temperature changes within the torpedo.



1,500,115. ROLLER MILL. ROWAN T. F. DODDS, Welland, Ontario, Canada. Filed Nov. 24, 1922. Serial No. 602,932. 3 Claims. (Cl. 83—12.)

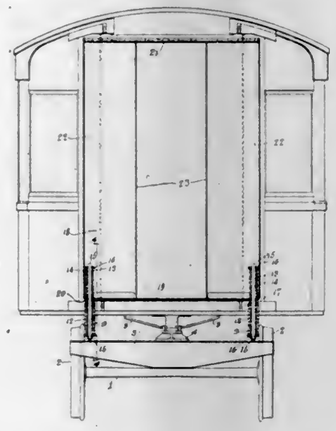
1. In a roller-mill, end frames of metal each formed with an integral upward extension at the middle of its upper end; brackets for the spindle bearings of grinding rolls secured to the frame adjacent the angles between said extension and the upper end of the frame; and



brackets for complementary grinding rolls pivoted on the main part of the frame adjacent the top of the lower part of the frames at each side of the extension.

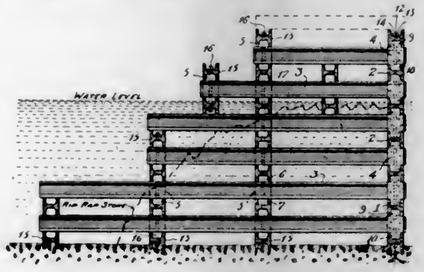
1,500,116. TYPEWRITING MACHINE. BERNARD J. DOWD, Hartford, Conn., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 29, 1923. Serial No. 660,008. 3 Claims. (Cl. 197—69.)

1. A bearing for a typewriter carriage, comprising balls or rollers, and rails between which the balls are mounted provided with wearing members having wearing faces which engage the balls, one of said rails having a forwardly extending flange to protect the bearing from dust.



1,500,117. SKIVING MACHINE. NEWELL V. DYER, Holbrook, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 13, 1919. Serial No. 317,311. 26 Claims. (Cl. 69—16.)

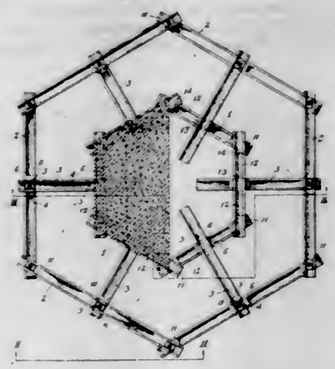
1. A machine of the class described having, in combination, a feed roll having a single work-engaging surface adapted to permit skiving of work upon it, and work gaging means for guiding the work over the roll in either of two different positions to produce either a feather-edge or a seam scarf; said roll being adjustable to produce a shoulder scarf.



26. A machine of the class described having, in combination, a skiving knife, a feed roll for advancing work to the knife, an angularly adjustable carrier by which the roll is carried, the axis about which the member is adjustable being substantially tangential to the periphery of the roll at a point spaced a substantial distance from one end thereof, and means whereby the roll and knife may be adjusted relatively to each other in a direction transverse to the direction of feed of the work.

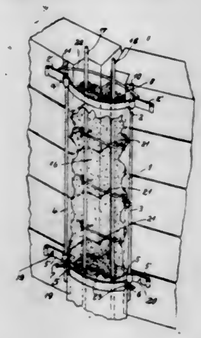
1,500,118. RAILWAY CAR. CHARLES J. ELLIS, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 14, 1923. Serial No. 680,603. 7 Claims. (Cl. 105—4.)

1. In a railway car, the combination with a truck bolster and cars articulated thereon, of a vestibule partly positioned over the platforms and partly over the bolster, and resilient side bearings acting between the bolster and the vestibule to cause the vestibule to resist swaying movements or tendencies of the platforms.



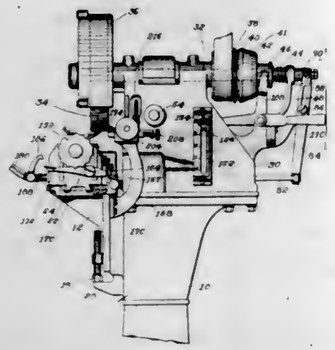
1,500,119. WAVE-RESISTING STRUCTURE. WILLIAM H. EVERS, Lakewood, Ohio, assignor of one-third to William E. Pease and one-third to Noah H. Suloff, both of Cleveland, Ohio. Filed Jan. 3, 1922. Serial No. 526,549. 3 Claims. (Cl. 61—47.)

1. A crib consisting of crossed courses of concrete H beams, the beams of one of said courses being arranged with the webs thereof substantially horizontal, the beams of an intersecting course being arranged with the webs thereof substantially vertical, said horizontal web beams and vertical web beams alternating at the intersection of said courses; pillow blocks between adjacent horizontal web beams, said pillow blocks each having



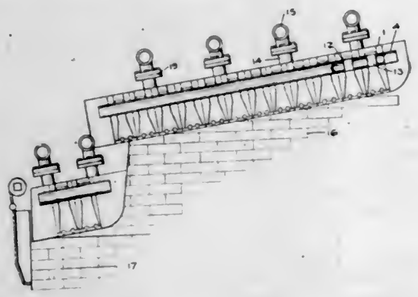
end portions fitting within opposed channels of said horizontal web beams and an intermediate portion fitting within a channel of the intermediate vertical web beam; and tie bolts passing through the horizontal webs and pillow blocks.

1,500,120. WAVE-RESISTING STRUCTURE. WILLIAM H. EVERS, Cleveland, Ohio, assignor of one-third to William E. Pease and one-third to Noah H. Suloff, both of Cleveland, Ohio. Filed Jan. 3, 1922. Serial No. 526,550. 12 Claims. (Cl. 61—47.)



2. In a wave resisting structure, the combination with an inner polygonal solid wall; of an open cribwork consisting of crossed courses of beams surrounding and spaced from said wall, and means connecting said courses of beams with the solid wall.

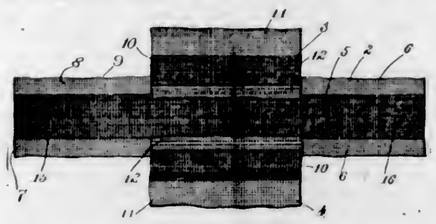
1,500,121. METAL FALSEWORK FOR CONCRETE CONSTRUCTION. DANIEL JEAN GUSTAVE FONTAINE, Paris, France. Filed Dec. 22, 1922. Serial No. 608,555. 2 Claims. (Cl. 25—131.)



1. A falsework shield of metal for constructions made partly or entirely of reinforced shaken concrete consisting of a plate of sheet iron of cross section curved according to the shape which the shaken concrete is designed to have and having two notches in its lower edge one near each lateral edge, band irons at the upper end lower edges of said plate projecting over the lateral edges of the same to serve as handles, band irons stiffening the lateral edges of said plate curved to form lugs, iron rods on said lugs projecting over the upper edge of said plate, hooks at the upper ends of said rods and means for securely fixing said plate upon the walling, in course of construction.

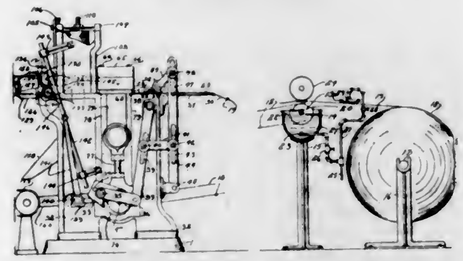
1,500,122. GRINDING MACHINE. ALFRED B. FOWLER, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 26, 1916. Serial No. 138,913. 48 Claims. (Cl. 51—82.)

1. In a machine of the type described, a blade holder, a gage for determining the position of the blade in the holder, means for setting the machine in operation, and means responsive to the operation of the first mentioned means for causing the withdrawal of said gage to inoperative position.



1,500,123. FURNACE ARCH. JOHN WILLIAM GATES, Montreal, Quebec, Canada. Filed May 11, 1923. Serial No. 638,275. 5 Claims. (Cl. 110—99.)

1. In furnace arch construction, transverse main air tubes suitably supported in the furnace structure, longitudinal subsidiary tubes supported from said main tubes and having enclosed passages therethrough open to the atmosphere and to the arch and rows of bricks joined to said subsidiary tubes and having passages therethrough registering with passages through said subsidiary tubes.

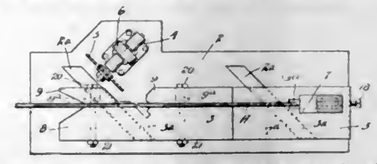


1,500,124. FILTER-PRESS CLOTH. HARRY C. HALE, Baltimore, Md., assignor to William E. Hooper and Sons Company, a Corporation of Maryland. Filed July 26, 1923. Serial No. 653,972. 1 Claim. (Cl. 100—54.)

A filter press cake wrapper composed of woven fabric consisting of a center strip and side flaps, the center strip having warp threads in the central portion thereof, closely laid, and warp threads in the edge portions thereof less closely laid producing a heavy closely woven central portion, and a comparatively light loosely woven edge portion, the side flaps likewise having a heavy closely woven central portion and a lighter more loosely woven edge portion, the thickened portion of the centre strip serving to cover the top, bottom and ends of the press cake, and the thickened portions of the side flaps

serving to cover the sides of the press cake, the lighter edge portions serving to hold the flaps in position substantially as described.

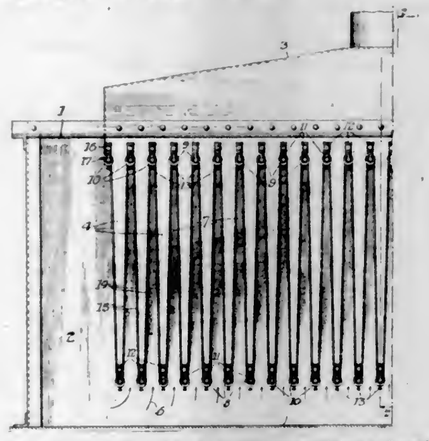
1,500,125. TRAY MANUFACTURE. WILLIAM E. HALL, Monroe, Mich., assignor to Fred M. Longnecker, Delta, Ohio. Filed Mar. 19, 1923. Serial No. 626,016. 8 Claims. (Cl. 93—42.)



1. The method of producing a tray from continuous sheet stock, including the defining of a form, and the scoring of the form in a line on one side of the stock, and simultaneously scoring the form in a line on the opposite side of said stock, said lines in the direction of their extent diverging from each other.

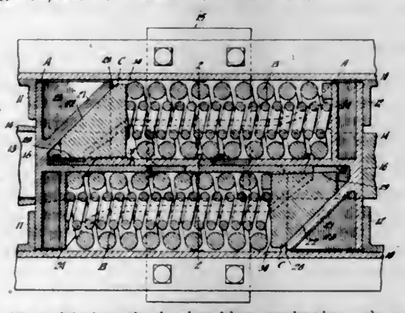
1,500,126. PROCESS OF PURIFYING BRINE FOR ELECTROLYSIS. HUGO H. HANSON and JOHN T. LEECOCK, Bangor, and CHARLES A. BLODGETT, Brewer, Me., assignors to Eastern Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 9, 1919. Serial No. 329,424. 2 Claims. (Cl. 23—13.)

1. The herein described process of purifying a sodium chloride brine, containing a soluble salt of magnesium, for use in electrolytic cells, which comprises the following steps: evaporating and concentrating the mixed sodium chloride, and caustic effluent resulting from the electrolytic decomposition of a sodium chloride solution, removing from said effluent the sodium chloride and a proportion of caustic soda in excess of that required to precipitate magnesium hydroxide in said first-mentioned solution, whereby such magnesium hydroxide may be precipitated, and mixing the removed sodium chloride and excess caustic soda with said first-mentioned brine to be purified.



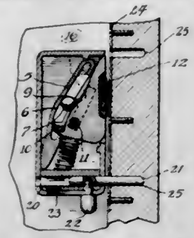
1,500,127. TUBE-CUTTING APPARATUS. JOSEPH D. HARRIS, Detroit, Mich., assignor to McCord Manufacturing Company, Detroit, Mich., a Corporation of New York. Filed May 9, 1921. Serial No. 467,863. 6 Claims. (Cl. 29—69.)

1. An apparatus for cutting a plurality of cylindrical members with their ends at an angle to their axes, comprising a holder for said members, a gauge having a flat gauging surface of sufficient extent to be contacted by all said members extending substantially normal to the axes of said members, and a cutting member, in relation



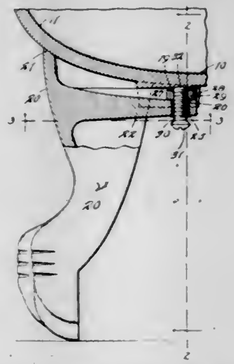
to which the said holder is movably arranged, with its cutting edge inclined to the axes of the cylindrical members at the desired angle of cut.

1,500,128. DRY FILTER. BERT S. HARRISON, Chicago Ill., assignor to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1922. Serial No. 548,379. 4 Claims. (Cl. 183—71.)



1. A filter of the class described comprising a housing having an inlet and an outlet, longitudinal depending serrated partitions in said housing, a double row of supporting bars extending between said partitions part at the bottom and part at the top of the serrations, a filtering cloth stretched in festoons between said bars, and metallic clips substantially U-shaped in cross section for securing the filtering cloth to the edges of said serrated partitions.

1,500,129. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 21, 1923. Serial No. 652,901. 7 Claims. (Cl. 213—22.)



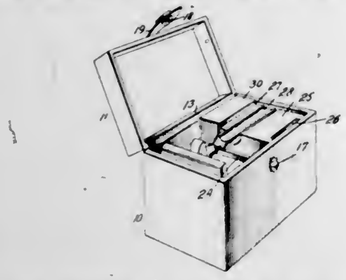
1. In a friction shock absorbing mechanism, the combination with two friction cages having longitudinally arranged and opposed friction surfaces, said cages having integral engaging shoulders limiting their separating movement; of spring and wedge means co-operating with said cages and arranged to exert pressure in a direction transverse to the line of relative movement of said cages.

1,500,130. WINDOW-SASH STOP AND LOCK. WILLIAM HERINGER, Dogden, N. Dak. Filed Jan. 31, 1922. Serial No. 533,021. 8 Claims. (Cl. 292—342.)

1. In combination with a window sash a resiliently actuated shoe movable obliquely in relation to the sash and the window frame; operatively associated with an obliquely inclined fixed track whereby to secure wedging engagement; and means coacting with the weight of the sash to automatically sustain pressure engagement between the sash and the window frame.

1,500,131. FASTENER FOR BATHTUB LEGS. EDWIN A. HIBLER and LEONARD BROWN, Uniontown, Pa. Filed May 25, 1923. Serial No. 641,303. 1 Claim. (Cl. 4—186.)

In a device of the class described, the combination with a bath tub having a pair of spaced apart undercut lugs depending from the underside thereof, a supporting leg provided with a tenon projecting horizontally therefrom and adapted to fit between the pair of lugs and between the legs and the tub with a dove-tail tenon connection therebetween, the upper side of the tenon facing the tub provided with an easily accessible non-circular recess, a tube extending vertically through the tenon and opening at its upper end into the recess, the upper end of the tube being constructed and arranged to provide a nut seat, of a readily replaceable attachment comprising a nut loosely contained in the recess in bearing engagement with the nut seat and held by the sides of the recess from rotary movement and in bearing engagement with the upper end of the tube, and a bolt extending through the tube and otherwise independent of the same, accessible from the underside of the tenon, threaded through the nut and adapted to be screwed into bearing engagement with the underside of the tub to force the nut against the upper side of the tenon and thus force the tenon into engagement with the lugs thereby to lock the leg to the tub.



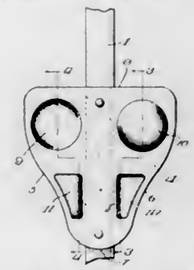
1,500,132. COMBINATION SHOVEL. CHARLES E. HUMMELGARD, Jersey City, N. J. Filed Mar. 9, 1923. Serial No. 623,837. 3 Claims. (Cl. 294—53.)

1. A device of the class described comprising a socket member having a pair of spaced apart ears thereon, a handle on said socket, a shovel spoon, a tongue member rigid on said spoon having a plurality of small holes on one face, a bolt passing thru said ears and tongue, a wing nut engaging said bolt, a plunger slidable in one of said ears, one end of said plunger extending above the surface of the ear and beneath the bolt head, the

latter being adapted to urge the end of said plunger stem into a hole in the tongue when tightened down on said ears, said plunger being adapted to lock the spoon in place by engaging a hole in said tongue, and means for lifting said plunger out of engagement with the tongue.

1,500,133. CONTAINER FOR SAFETY RAZORS. JOSEPH KAUFMAN, New York, N. Y., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a Corporation of Virginia. Filed Sept. 11, 1923. Serial No. 662,040. 4 Claims. (Cl. 206—16.)

1. A container of the character described for safety-razor outfits and to receive coins, said container being of box-like construction and comprising a body-portion and a chambered cover hinged at one edge thereto, said body portion having a horizontal partition subdividing it into a lower money-chamber and an upper chamber to receive a safety-razor and a package of reserve blades, said upper chamber having a vertical transverse partition and at one side thereof a space for a package of blades and a removable block which is grooved longitudinally to receive the handle of the razor while the body of the razor is within the space at the opposite side of said vertical partition, said horizontal partition having a hole in it mainly below said block and said block having a coin entrance slot leading to said hole.

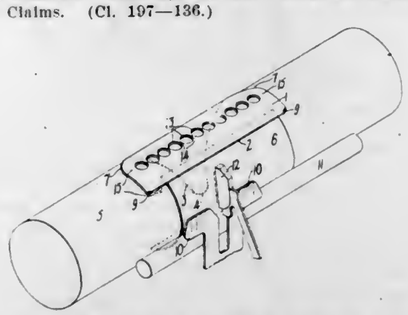


1,500,134. STRING FASTENER. WILFRIED KLAMROTH, New York, N. Y. Filed Apr. 17, 1920. Serial No. 374,550. 1 Claim. (Cl. 24—117.)

A string fastener comprising a pair of spaced members joined at one side thereof, a spiral spring interposed between said members, said spaced members having their edges crimped around the end convolutions of the spring,

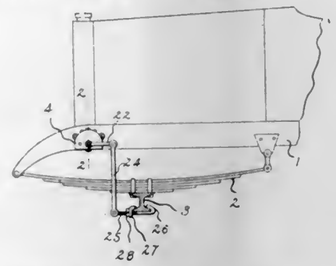
adjacent convolutions of the spring being bent to diverge opposite the slide at which the spaced members are joined.

1,500,135. METAL FENCEPOST. RAYMOND C. KNOPKE, Wheaton, Ill. Filed Apr. 17, 1919. Serial No. 290,816. 3 Claims. (Cl. 189—29.)



1. In combination, a post and an anchor plate secured thereto, said plate having a struck up strengthening rib thereon extending outwardly from the plane of the plate on one side thereby forming a depression upon the opposite side, said rib being joined throughout to the remainder of the plate.

1,500,136. CRATE. HARRY N. KNOWLTON, Chicago, Ill., assignor to Weyerhaeuser Forest Products, St. Paul, Minn., an Unincorporated Association. Filed Aug. 1, 1923. Serial No. 655,090. 9 Claims. (Cl. 217—49.)

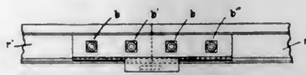


1. A crate, comprising a plurality of first pieces fitted together in the form of an open flat frame, a plurality of second pieces secured to the first pieces across the joints of the latter, and braces disposed angularly to each other on opposite sides of the pieces and secured thereto at their ends, whereby an article may rest flat-wise on the first pieces between the braces and be enclosed peripherally by the second pieces.

1,500,137. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 8, 1922. Serial No. 550,635. 8 Claims. (Cl. 197—136.)

1. To co-operate with a cylindrical platen of a typewriting machine, a card or label holder of thin resilient sheet-material to be sprung upon the platen to grip the platen, so as to be detachably held in position thereon by reason of its resiliency, said holder comprising a gripping lip to press one of the margins of a card or label against the platen to hold it for typing, and a tapering body to co-operate with the lip to grip the platen and the card or label.

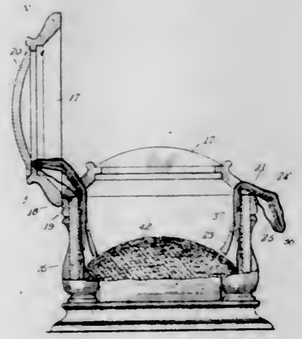
1,500,138. SHOCK ABSORBER. GEORGE ROBERT LE MAIRE, Central City, Ky. Filed Feb. 19, 1923. Serial No. 620,021. 1 Claim. (Cl. 188—89.)



The combination with a vehicle frame and a spring supported wheel carrying axle thereon, of a shock absorber including a casing having a flat base and a rounded top secured to the frame, a block having an upper hollow face arranged centrally on the base of the casing, a hollow blade in the casing in contact with the side and top walls thereof, a hub on the blade resting in the concaved face of the block and having trunnions journalled one in the side and one through the opposite side of the casing, normally closed means for admitting a fluid into the casing to the opposite sides of the blade, spaced grooves on the hub to establish fluid communications in the casing to either side of the blade when the blade is moved to certain positions and to prevent such passage of fluid when the blade is in another position, means adjustable on the block and entering one of the grooves for regulating the passage of fluid through said grooves, and means carried by the axle and connected to the projecting trunnion of the blade for swinging the blade when the axle is subjected to vertical movement by shocks or jars.

1,500,139. RAILROAD TIE. HUGH C. LOAD, Erie, Pa. Filed June 27, 1921. Serial No. 480,616. 15 Claims. (Cl. 238—38.)

1. In a railroad tie, the combination of two plates having rail flange engaging lips, the lips of one plate extending in a direction opposite to that of the other and adapted to be moved over a rail flange by endwise movement of the two plates relatively to each other; and automatic means locking the plates in engaging position as they are moved endwise into engagement.



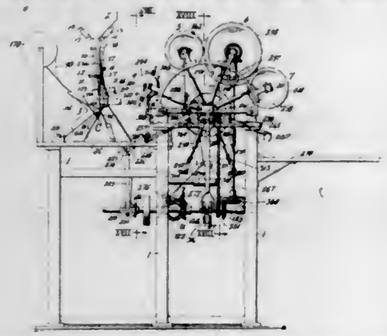
1,500,140. RAIL JOINT. JOHN E. MCMULLEN, Council Bluffs, Iowa. Filed Oct. 19, 1923. Serial No. 669,570. 1 Claim. (Cl. 238—193.)

In a rail joint two fish plates each having a complementary base plate formed thereon, said complementary

base plates forming a joint diagonal with the axis of the rails, a pin and receptacle in each complementary base plate adapted to engge a pin and receptacle in the other and bolts adapted to hold the said complementary plates engaged and to clamp the ends of the rails.

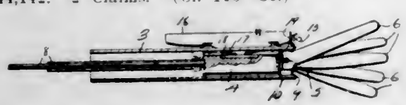
1,500,141. BURIAL CASKET. MURRAY J. MACDONALD, New York, N. Y. Filed Mar. 4, 1924. Serial No. 696,726. 17 Claims. (Cl. 27—19.)

1. A casket shell, a cover therefor, independently adjustable folding supports hinged to the inner edges of the opposite sides of said shell and adapted to be extended over the edges of said shell and a lining secured to the edges of the shell and enveloping said folding supports, said supports being adapted to be folded up entirely within said shell and below the edges thereof.



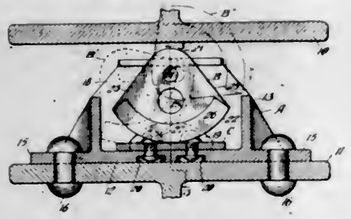
1,500,142. RECEPTACLE. FRANK MADLE, Berwyn, Ill., assignor to Cruver Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 27, 1923. Serial No. 647,968. 3 Claims. (Cl. 220—1.)

1. A receptacle of the kind specified including a peripheral wall, a pair of heads secured thereto, a central opening in one of said heads, a cover-member having a central projection fitting said opening and frictionally engaged with the wall of same to seal said receptacle, said projection having a central opening and the peripheral wall thereof constituting a frame, a mirror or the like mounted in said frame, said cover member of greater area than said receptacle and equipped with a peripheral flange overlapping the peripheral wall of same, and a covering of celluloid or the like embracing said last-named flange of said cover and extending over the body and central opening of said cover for holding said mirror or the like in place in said frame.



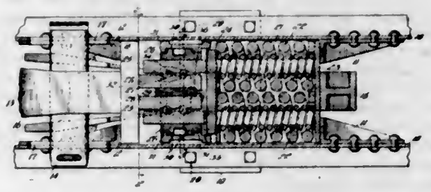
1,500,143. AUTOMATIC WRAPPING MACHINE. ALBERT E. MASPONS, Philadelphia, Pa. Filed Mar. 30, 1921. Serial No. 456,861. 58 Claims. (Cl. 93—5.)

1. A method of wrapping a cigar, which comprises rolling a wrapper about the cigar, creasing the wrapper about the tapering ends of the cigar, compacting the extreme ends of the wrapper on the cigar, pressing and



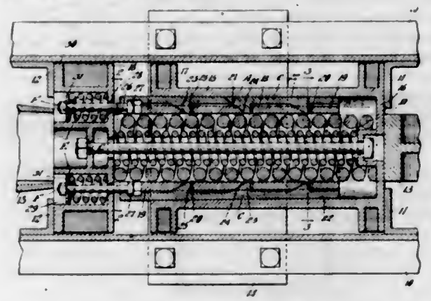
smoothing the creased portions of the wrapper upon the cigar, and trimming off any excess of wrapping material at the ends.

1,500,144. AUTOMOBILE SIGNAL. WILLIAM MEHLHAF, Sutton, Nebr. Filed Mar. 16, 1922. Serial No. 544,142. 2 Claims. (Cl. 116—30.)



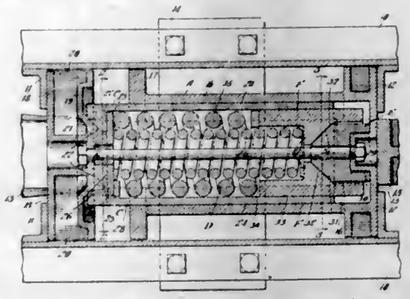
1. A vehicle direction indicator comprising elongated casings axially aligned, elongated members slidably mounted in said casings, said elongated members being connected together, a plurality of arms pivotally connected to the elongated members and forming signalling fans, the inner ends of said members being provided with straight surfaces, said straight surfaces being in the same vertical plane when the fans are spread, slidable spring actuated blocks mounted in chambers of the elongated members and cooperating with said straight surfaces for opening the fans when forced out of the casings and a handle member whereby either of said elongated members may be moved.

1,500,145. ANTIFRICTION SIDE BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Dec. 2, 1920. Serial No. 427,734. 6 Claims. (Cl. 64—65.)



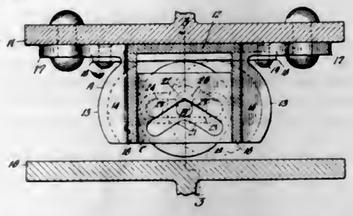
1. In an anti-friction side bearing, the combination with a retaining member open at the top having a bearing surface therein and provided with spaced end and side walls, said side walls having continuous inturned flanges along their edges remote from the bearing surface terminating short of the respective end walls, thereby restricting said top opening between said flanges; of an anti-friction element adapted to roll back and forth within said member, said element having integral studs at its ends, the overall distance from end to end of said studs being greater than the width of the restricted portion of the top opening and less than the distance between said side walls, said studs always extending under said flanges in any position of said element within its limits of travel; and means for limiting the travel of said element including a plurality of spaced lugs projecting from said bearing surface within said retaining member, said element having corresponding recesses cooperable with said lugs to thereby prevent bodily shifting of said element with respect to the retaining member, at least one of said lugs and the anti-friction element remaining in operative relation in any possible position of said element within its limits of travel.

1,500,146. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 8, 1921. Serial No. 499,210. 5 Claims. (Cl. 213—32.)



1. In a friction shock absorbing mechanism, the combination with a friction shell; of friction shoes within said shell; a pair of wedge members co-acting with said shoes; a movable friction element interposed between said members, said element being provided with guides, and said shell being provided with ways to receive said guides, said ways being provided with stops to limit the movement of said guides; and a spring resistance opposing inward movement of said shoes.

1,500,147. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 19, 1922. Serial No. 575,962. 8 Claims. (Cl. 213—32.)

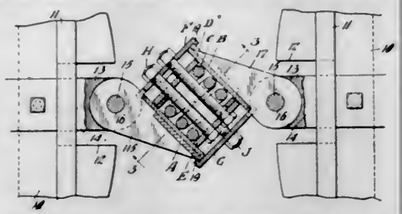


1. In a draft gear, the combination with an elongated hollow inner casing open at one end and provided with an abutment at the other end; of an elongated hollow outer casing telescopically receiving said inner casing and having an abutment at one of its ends opposite the abutment of said inner casing; elongated shoes interposed between said casings and each provided with a plurality of wedge surfaces disposed at intervals throughout its length, one of said casings having a corresponding plurality of cooperable wedge surfaces; a spring interposed between said abutments of the two casings; and yieldable means, located exteriorly of said inner casing, cooperable with said shoes and the casing having the wedge surfaces to hold the sets of wedge surfaces of the shoes and casing in engagement.

1,500,148. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 19, 1922. Serial No. 575,964. 2 Claims. (Cl. 213—32.)

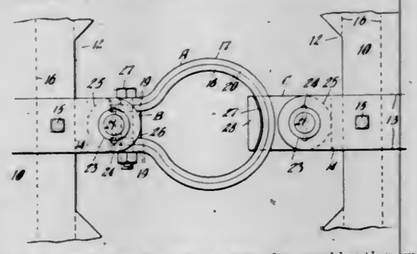
2. In a friction shock absorbing mechanism, the combination with an outer casing; of a plurality of elongated shoes telescoped within and frictionally cooperable with said casing; a follower movable toward and from said casing; cooperable wedge means on said follower and adjacent ends of said shoes tending to force the shoes laterally outwardly; wedge means movable with said casing and cooperable with the opposite ends of said shoes to press said shoes laterally outwardly; spring means engaging said follower, said means reacting between the latter and the last named wedge means, operative to yieldingly resist relative approach of the casing and follower, and to effect an initial outward movement of said follower independently of said shoes during release of the mechanism; and cooperable means on said followers and adjacent ends of said shoes for retracting said shoes upon separation of the follower and casing.

1,500,149. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 9, 1923. Serial No. 650,206. 5 Claims. (Cl. 64—64.)



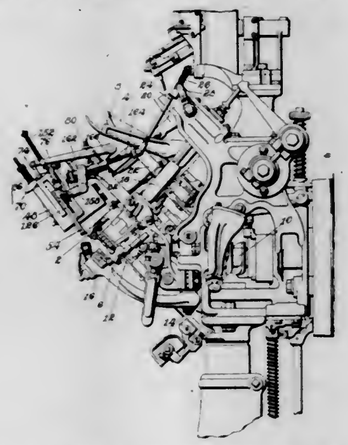
1. In an anti-friction bearing, the combination with a housing adapted to be secured to a bolster or the like; of an anti-friction element within said housing adapted for rolling movement to either side of central normal position; a counter-weight vertically, slidably mounted on said housing and having a double cam recess therein symmetrically arranged with respect to the vertical center line thereof; and an axially disposed projection carried by and movable bodily with said element and extended within said recess whereby, when said element is moved to either side of central position, said counterweight is vertically elevated and adapted to return the element to central position when said element is relieved of load.

1,500,150. RESILIENT SHACKLE. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 9, 1923. Serial No. 650,211. 8 Claims. (Cl. 213—22.)



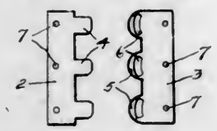
3. In a cushioning device, the combination with a spring; of a follower at each end of said spring; two

additional outer followers opposite said spring followers; tension transmitting means between each spring follower and corresponding remote outer follower; and



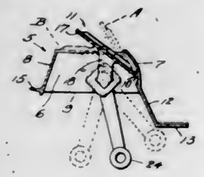
members, relatively movable in either direction, interposed between said outer followers and adapted to separate the latter upon relative movement of said members in either direction.

1,500,151. RESILIENT CONNECTER FOR MINE CARS. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 4, 1923. Serial No. 660,726. 7 Claims. (Cl. 213—181.)



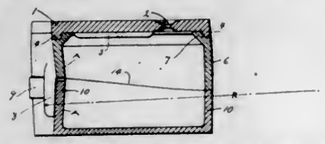
1. In a connecter for mine cars, the combination with a resilient loop; of means for connecting the same to two adjacent cars, comprising a block to which one end of the loop is pivotally connected, and a hook member coacting with the other end of the loop, said block being attached to one of said cars and the hook being attached to the car.

1,500,152. MACHINE FOR WORKING UPPERS OVER LASTS. CHARLES F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 24, 1919. Serial No. 332,958. 86 Claims. (Cl. 12—4.)



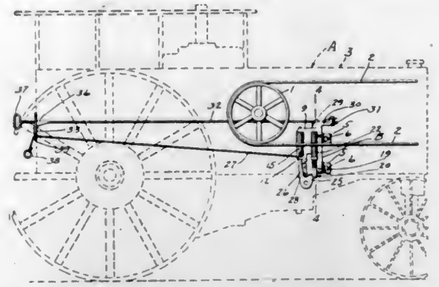
1. In a machine of the class described, the combination with means for working an upper inwardly over the margin of a sole on a last and for holding it in overworked position, of means arranged to operate while the upper is thus held to force a plurality of fastenings, through the upper and into the sole in directions substantially parallel to the plane of the sole.

1,500,153. BELT-FASTENING DEVICE. BESSIE E. REED, Kansas City, Mo. Filed July 29, 1922. Serial No. 578,432. 1 Claim. (Cl. 24—225.)



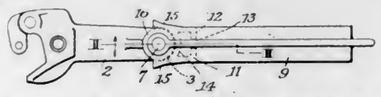
In a belt fastening device, the combination of a hook member comprising a plate having its one edge cut away to form of the cut away portions flat fingers, the end portions of the fingers being formed down and then formed back to form concealed hooks, and a hook engaging member comprising a plate having its one edge cut away to form of the cut away portions flat ears, said ears being apertured transversely on a suitable radius to form forwardly curved eyes, the concaved edge of the eyes being adapted for frictionally engaging the hooks on said hook member to thereby hold said members coupled and substantially aligned.

1,500,154. FIREPLACE DAMPER. ALBERT P. ROBINSON, Seattle, Wash. Filed Aug. 16, 1921. Serial No. 492,648. 12 Claims. (Cl. 126—288.)



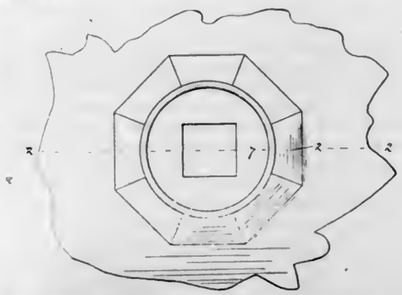
12. A fireplace damper comprising a casing having a throat opening with its ends inclined towards each other, a pivoted damper plate adapted to close the throat opening, the pivot axis thereof being located intermediate its side edges and laterally offset from its plane, to thereby swing through one side of said throat opening.

1,500,155. DENTAL FLASK. WILLIAM M. ROMINE and WALTER J. CLARK, Wichita, Kans. Filed Apr. 13, 1923. Serial No. 631,805. 2 Claims. (Cl. 18—33.)



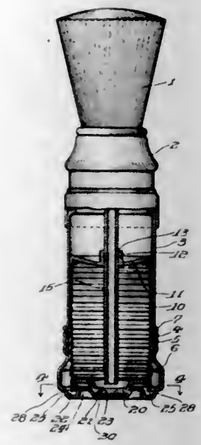
2. In a dental flask, a base containing member, a top member conforming in shape for the inside walls of said base member, a lid placed on said top member, guide means for causing said base and top member to register when placed together and to hold said members in rigid position, and said members adapted to close at the front, first, and rocking together, having a radial cam guide at the rear of said top member, causing said members to register firmly, an opening in the rear of said flask between said bottom and top members, and an opening between the straight portions on the rear of said flask, by which means superfluous materials may pass out when under pressure, the said straight portion of said flask members being inclined inward, as bracing means for said straight portion, all for the purpose set forth and described.

1,500,156. BELT-THROWING DEVICE. JOHN J. SATERN, Rothsay, Minn. Filed Nov. 1, 1920. Serial No. 420,974. 4 Claims. (Cl. 64—4.)



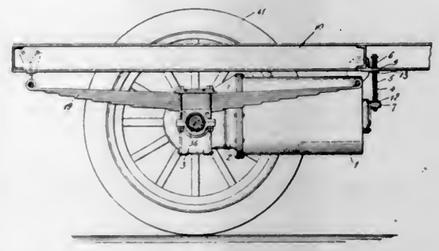
1. The combination with a tractor, and the driving pulley thereon, of a belt thrower located adjacent the lower side of the driving pulley comprising a bracket, a swinging means thereon for holding the belt on the pulley, a pivoted bell crank lever, a spring carried by the bracket normally holding said lever in position to engage and retain the swinging means in its normal position, an operating member connected to said lever for moving it to permit said swinging means to move from normal position, a pivoted lever having a roller thereon contacting the belt, and an operating means connected to said lever for swinging the same to push the belt from the pulley.

1,500,157. COUPLER YOKE. ERNEST H. SCHMIDT, Cleveland Heights, Ohio, assignor, by mesne assignments, to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 5, 1919. Serial No. 321,926. 3 Claims. (Cl. 213—72.)



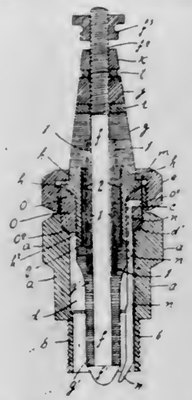
1. A coupler yoke comprising an upper and a lower arm integrally united at their rear ends; lugs at their forward ends providing a pivotal connection with a coupler shank; the yoke arms to the rear of said pivotal connection being united by walls forming a hollow rectangular member, the side walls of said member being extended forwardly and reinforcing said lugs against spreading, said reinforcement extending continuously from a point forward of said hollow rectangular member rearwardly to the rear wall thereof.

1,500,158. BUNGHOLE SPUD. THOMAS SEVERSON, Duluth, Minn.; James W. Walker, Duluth, Minn., administrator of said Thomas Severson, deceased. Filed Sept. 18, 1922. Serial No. 588,953. 1 Claim. (Cl. 220—39.)



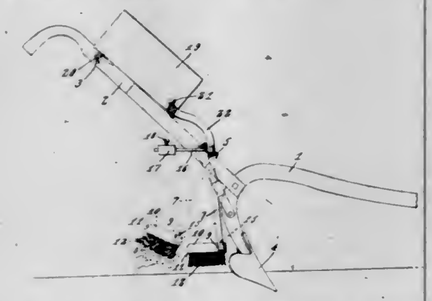
The combination with a metallic receptacle having a bunghole therein, of a spud for same having an inclined circumferential wall and an inclined annular slot spaced inwardly from the inclined wall and parallel therewith, said slot being for the reception of the marginal edges of the bunghole, and an annular stepped gasket seat intermediate of the uppermost termini of the inclined walls.

1,500,159. DISPENSING DEVICE. ISAAC C. SHALKOP, Philadelphia, Pa., assignor to The De Luxe Brush Company, Wilmington, Del., a Corporation of Delaware. Filed June 9, 1922. Serial No. 567,069. 3 Claims. (Cl. 221—79.)



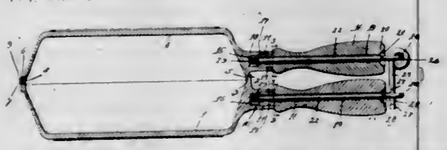
1. In a device for dispensing liquid or semi-liquid materials, comprising a shell adapted to receive a container for the material to be dispensed, which shell has a cap at its outer end which is provided with projections which are adapted to engage the said container whereby when the said shell is rotated the said container is rotated, and means whereby when the said container is rotated in one direction the material therein is caused to be discharged.

1,500,160. MOTOR-VEHICLE CONSTRUCTION. DONALD C. STOPPENBACH, New York, N. Y., assignor to Steinmetz Electric Motor Car Corporation, New York, N. Y., a Corporation of Maryland. Filed May 28, 1920. Serial No. 384,790. 3 Claims. (Cl. 180—57.)



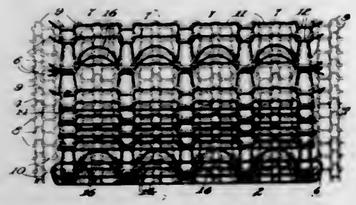
1. In a motor vehicle construction, the combination with the chassis frame, of a motor, a driving axle, a housing for said axle, a motor casing, a yielding support for said motor casing comprising a single universally mounted spring-connection between said casing and said frame, which permits the motor casing to move in a vertical plane in both directions from its neutral or rest position, and springs connected to said chassis frame and rotatably mounted on said axle housing.

1,500,161. SPARKING PLUG FOR INTERNAL-COMBUSTION ENGINES. GERALD BASIL SYKES, Cleckheaton, England. Filed June 14, 1921. Serial No. 477,580. 1 Claim. (Cl. 123—169.)



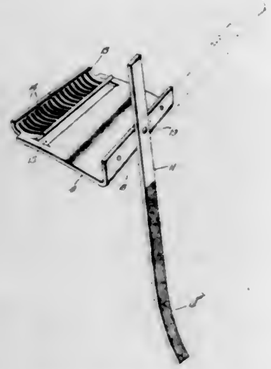
In a spark plug, the combination of a casing having a central hole and a tapering face therein, a positive electrode extending through said casing, an insulated metal sleeve having an annular projection and a tapered lower surface encircling said positive electrode within the casing, a vertical groove in the periphery of said sleeve, a negative electrode extending within said groove, and a grooved ring having tapered ends adapted to engage said sleeve and said negative electrode.

1,500,162. BOLL-WEEVIL DESTROYER. JAMES E. TATE, Elberton, Ga. Filed Nov. 14, 1921. Serial No. 515,081. 5 Claims. (Cl. 299—30.)



1. In a device of the class described, a support; a shaft mounted to rock on the support and having a depending arm; an applying member carried by the arm and adapted to engage a standing plant; and means for adjusting the pressure with which the applying member bears against the standing plant.

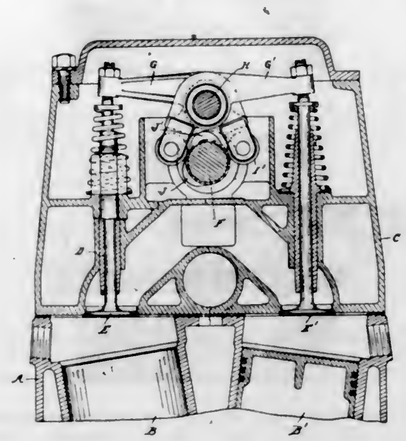
1,500,163. SKILLET. JAMES EDWARDS TATE, Elberton, Ga. Filed Dec. 1, 1922. Serial No. 604,252. 2 Claims. (Cl. 53—7.)



1. In a device of the class described, superposed pans having interengaging elements; handles; washers abutting against the handles, one washer carrying a keeper; securing members uniting the handles detachably with the pans and having heads engaging the washers; and a latch pivoted to one head and constructed to engage with the keeper of said washer of the other handle.

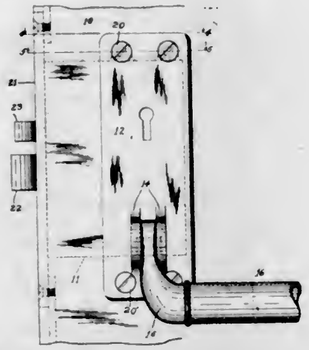
1,500,164. KNITTED FABRIC. EDWARD C. TAUBEL, Norristown, Pa. Filed Aug. 28, 1922, Serial No. 584,822. Renewed May 19, 1924. 10 Claims. (Cl. 66—4.)

1. A knitted fabric of the character described having a stripe formed in the knitting from additional threads, and a series of raised areas spaced apart at intervals longitudinally of said stripe and formed by drawing together groups of said additional threads with corresponding threads of the main fabric, certain of the additional threads of said groups having greater tension than the others, while the additional stripe-forming threads in the spaces between said raised areas follow the same courses and have the same tension as the corresponding threads of the main fabric.



1,500,165. SAFETY RAZOR. TOWNSEND THORPE, Wilmington, Del. Filed Jan. 22, 1920, Serial No. 353,136. Renewed June 13, 1922. Serial No. 568,009. 5 Claims. (Cl. 30—12.)

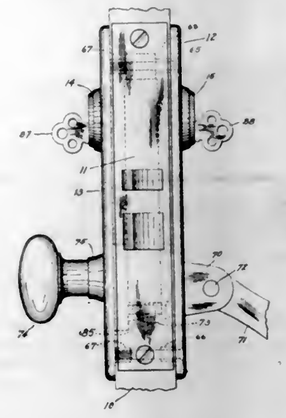
1. A safety razor comprising a head having its body curved to provide an upper convex blade-flexing surface and provided with a portion thereof along one edge upset in approximately semi-cylindrical form to constitute a guard, the head having a slot between its said surface and the guard, and having a flange along the opposite side of its said surface, and a handle pivoted to the flange to swing toward either side into parallel relation with the head, the pivot of said handle having a blade engaging cam adjacent to the inner surface of the flange, as described.



1,500,166. VALVE-OPERATING MECHANISM. CORNELIUS W. VAN RANST, Detroit, Mich. Filed Aug. 7, 1923. Serial No. 656,194. 3 Claims. (Cl. 123—55.)

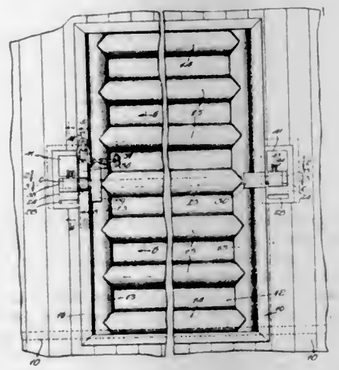
1. In an internal combustion engine, the combination with a cam shaft and an inlet valve on each side thereof, of a pair of coaxially mounted rockers engaging the respective valves, and separate cams on said cam shaft

engaging the respective rockers, said cams having different contours such as to impart the same opening and closing movement to the opposite valves.



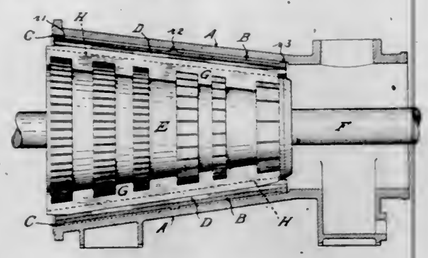
1,500,167. LOCK. HENRY G. VOIGHT, New Britain, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed July 3, 1918. Serial No. 243,126. 23 Claims. (Cl. 70—29.)

1. In combination with an emergency exit lock, an escutcheon having lugs upon the outer face thereof having an emergency actuating lever pivotally mounted between said lugs, and means for securing said escutcheon to said lock, whereby said emergency lever is properly positioned relative to said lock.



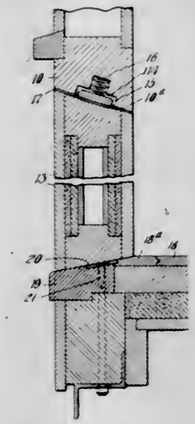
1,500,168. LOCK. HENRY G. VOIGHT, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 18, 1919. Serial No. 283,342. 33 Claims. (Cl. 70—46.)

1. In combination with a mortise lock having a latch bolt, an escutcheon plate separate from said lock, a latch operating slide operatively mounted upon said escutcheon plate and constructed and arranged to retract said latch bolt, and manually rotatable means for operating said slide.



33. A lock comprising a case, a latch bolt reciprocably mounted therein, means for retracting said bolt, a dogging slide for preventing the operation of said retracting means, means for moving said dogging slide, including a key operated member, a dog for said latch bolt, a dog controlling plunger, and a member operable to retract both said plunger and said latch bolt, said member being actuated in turn by said key operated member independently of the actuation of said dogging slide thereby.

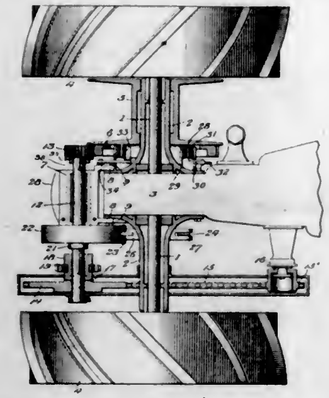
1,500,169. DOOR-LOCKING MECHANISM. CHARLES I. WALKER, Los Angeles, Calif. Filed Sept. 29, 1921. Serial No. 504,190. 17 Claims. (Cl. 292—218.)



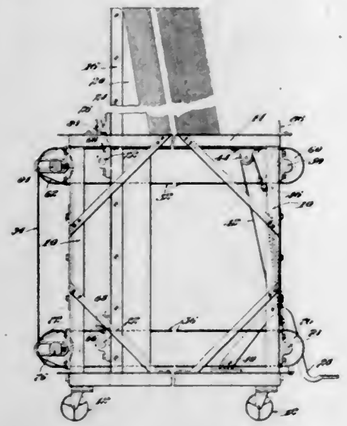
1. In a door locking mechanism, the combination with a member having a slidable door opening in a wall thereof and a slidable door movable to a position to close said opening; of a housing secured to said wall adjacent an edge of the door when in closed position, said housing having a locking shoulder thereon; a shaft rotatably mounted on said door and having one end thereof projecting beyond the edge of said door; a shouldered element on said projecting end of the shaft co-operable with the housing shoulder when the shaft is rotated to locking position; means on said housing co-acting with said element to prevent sliding movement of said door; and means for rotating said shaft.

1,500,170. PAPER-MAKING MACHINERY. WALTER WERNER, Hoosick Falls, N. Y., assignor to The Noble & Wood Machine Co., Hoosick Falls, N. Y., a Corporation of New York. Filed Sept. 13, 1923. Serial No. 662,402. 2 Claims. (Cl. 92—27.)

1. In a Jordan engine, a conical liner the small end thereof adapted to seat against the engine shell the large end thereof wedged into and held concentric in said shell by a ring of wedge-shaped cross section driven between said shell and said liner.



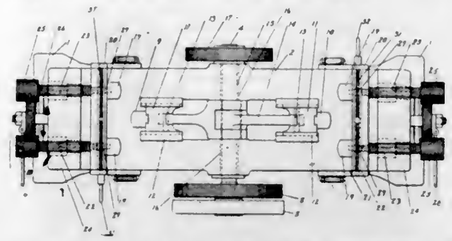
1,500,171. REFRIGERATOR-CAR CONSTRUCTION. LEWIS S. WEST, Rochester, N. Y. Filed July 19, 1922. Serial No. 576,055. 2 Claims. (Cl. 20—21.)



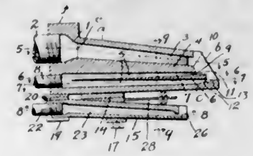
1. In a refrigerator car having a door opening defined by lintel, jambs and wooden threshold, the combination with a door adapted to close said opening; of heat insulating packing located between said door and the adjacent portion of the car defining the door opening; and a threshold metallic wear plate inserted in said wooden threshold, said plate being of lesser width than the thickness of said door, whereby, at least one edge of said plate which extends parallel with the door when the latter is in closed position, is disposed intermediate the inner and outer planes of the door to thereby prevent transference of heat from one side of the door to the other side.

1,500,172. POWER-DELIVERING ATTACHMENT FOR MOTOR VEHICLES. HENRY H. WHITE, Muskogee, Okla. Filed Nov. 9, 1922. Serial No. 599,835. 11 Claims. (Cl. 254—166.)

1. A power delivering attachment for a motor vehicle having a motor, propelling wheels, transmission-gearing including differential gearing and axle housings, a winding drum rotatably journaled on one of said axle-housings, an auxiliary drive-shaft carried by said housings and geared to said winding drum, means for driving said auxiliary shaft independently of the motor vehicle driving mechanism, and means for connecting and disconnecting the auxiliary shaft from the independent driving means.



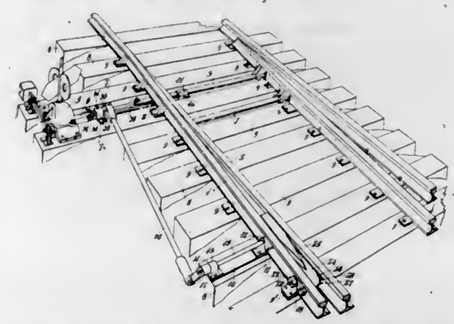
1,500,173. TRUCK. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 30, 1920. Serial No. 400,230. 12 Claims. (Cl. 214—83.)



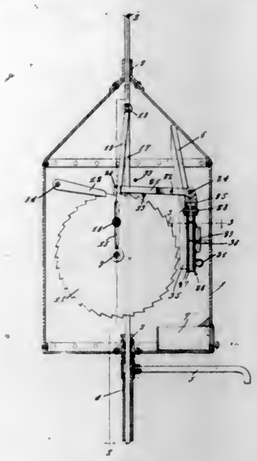
1. A wheeled truck comprising a horizontal support presenting a plane surface without edge obstructions at the forward end at least for material to be transported, a horizontally movable carriage for supporting sheet material on edge and feeding it across said support into position to be slid sidewise off the support at its forward end, and a stop at each end of said support for limiting the movement of the carriage thereon.

1,500,174. BAR-STRAIGHTENING MACHINE. GEORGE A. WISE, Pittsburgh, Pa., assignor to Sutton-Abramsen Engineering Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 12, 1922. Serial No. 581,497. 4 Claims. (Cl. 153—48.)

1. In a machine for straightening metallic bars the combination of pressure heads arranged to act upon bars at both ends of the machine, unitary means for actuating all the pressure heads of the machine, a backing block at each end of the machine and adjustable longitudinally thereof, and a pair of buffer heads for supporting bars being acted upon mounted in each backing block and adjustable toward and away from each other therein independently of the longitudinal adjustment of the backing block in which they are mounted.

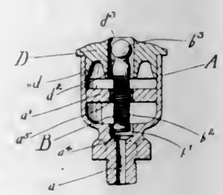


1,500,175. CRUDE-OIL BURNER. STEFAN AMZLER, Ogden, Utah, assignor of one-fourth to William C. Sumner, Ogden, Utah. Filed Mar. 24, 1922. Serial No. 546,458. 5 Claims. (Cl. 158—78.)



1. A crude oil burner, consisting of a member cast in one piece, rectangular in cross-section, with sidewalls at right angles to the floor, diverging right and left from head to delivery, provided with a hood and converging top, from the vertical shoulder of the hood to a point where the sidewalls are beveled downward and meet with the projecting floor, having a passage for liquid fuel and a passage for steam under pressure, each passage provided with a nipple to connect with supply pipe, said passages separated from each other by a main horizontal transverse partition, and again subdivided by horizontal and vertical partitions, provided with passages and exit openings, projecting shelves, sidewalls and floor.

1,500,176. SWITCH-RAIL GUARD. FRANK C. ANDERSON, Cincinnati, Ohio. Filed Aug. 4, 1923. Serial No. 655,715. 19 Claims. (Cl. 238—380.)

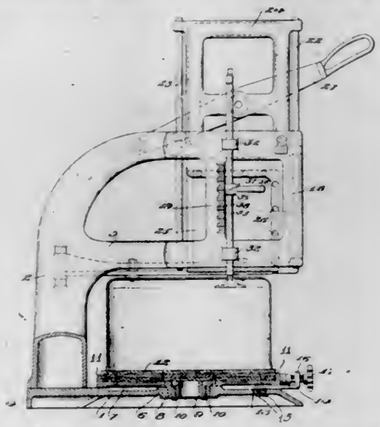


1. An elongated tapered guard element to occupy the space between diverging rails of a switch, one of said rails being movable, and means articulately connected to said movable rail to hold said element with the top of one end part substantially in the plane of the tops of said rails or to move said element until said top is a substantial distance below said rail tops.

1,500,177. AUTOMATIC LIQUID PUMP. WILLIAM S. AUSHERMAN, Talmage, Kans. Filed June 1, 1923. Serial No. 642,846. 2 Claims. (Cl. 194—29.)

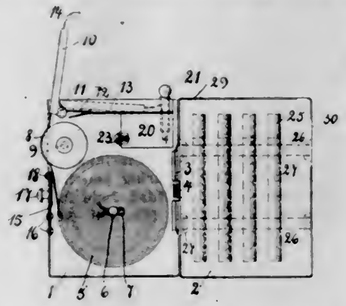
1. In a device of the class described a coin receptacle comprising separable parts, a movable detent carrying the receptacle, a rotary member including a projection engaging the detent to hold the rotary member against rotation, the detent being movable out of engagement with the projection under the weight of a coin in the receptacle, and the projection being so located as to separate the parts of the receptacle and to permit a discharge of the coin in the receptacle and to permit a return of the detent into engagement with the projection.

1,500,178. BUBBLER HEAD FOR DRINKING FOUNTAINS. THOMAS E. BART, Cincinnati, Ohio, assignor to The Murdoch Manufacturing and Supply Company, a Corporation of Ohio. Filed June 22, 1920. Serial No. 390,849. 3 Claims. (Cl. 299—16.)



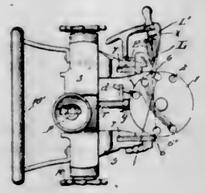
1. In a bubbler head the combination of a cup having an entrance port, a valve stem having an end adapted to regulate the size of the entrance port and at its other end a globular head, a cap closing the cup and having a central opening surrounded by a flange whereby an elongated passage way is formed through the cap within which way the globular head of the stem is disposed, thereby forming a guarded exit port for the water.

1,500,179. CHEESE CUTTER. WILLIAM BILODEAU, Montreal, Quebec, Canada. Filed Feb. 17, 1923. Serial No. 619,617. 3 Claims. (Cl. 31—19.)



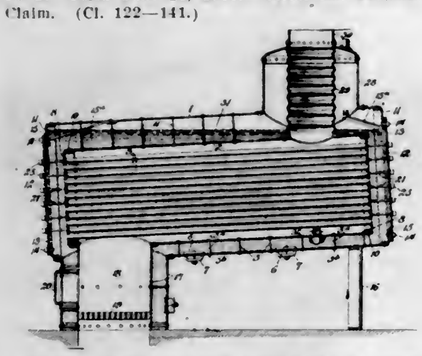
1. In a cheese cutter, comprising a supporting base, a supporting bracket, a vertically moving knife carried by said supporting bracket, means for moving said knife into engagement with a cake of cheese on said supporting base, a sectional cover over the cheese cake provided with arms pivotally connected to the said supporting

bracket, a rod slidably supported by said bracket and arm, a clamp carried by one end of said rod, and means loosely



mounted on said rod for engagement with rack teeth carried by said bracket and supporting arm for holding a cake of cheese.

1,500,180. POCKET LAMP FOR HIGH LIGHT POWER. WILHELM BOEHM, Berlin, Germany. Filed Mar. 23, 1922. Serial No. 546,207. 5 Claims. (Cl. 67—7.)

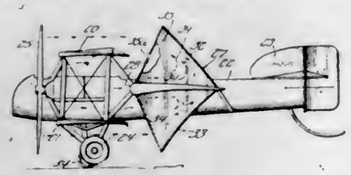


1. A pocket lamp, comprising in combination, a case, a strip of illuminating material arranged within said case, and a discharge nozzle for said strip of illuminating material and arranged on said case, said discharge nozzle being adapted to be folded inside said case.

1,500,181. ARMATURE AND COIL WINDING MACHINE. PENROSE E. CHAPMAN, St. Louis, Mo. Filed Dec. 14, 1914. Serial No. 877,167. 38 Claims. (Cl. 242—13.)

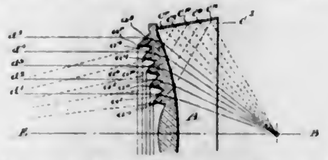
1. In an armature winding machine the combination of means for winding an armature with wire directing guides that act principally against head forming portions of said wire.

1,500,182. STEAM BOILER. GEORGE COOK, Buffalo, N. Y. Filed June 24, 1918. Serial No. 241,591. 1 Claim. (Cl. 122—141.)



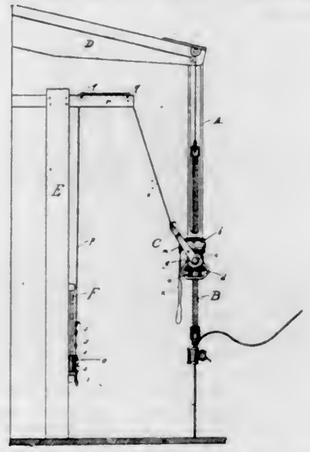
In a steam boiler, in combination, a pair of concentric shells, a water firebox adjacent one end of said shells, a plurality of water tubes connected to the end walls of the inner shell, said shells and water tubes being inclined upwardly from the firebox end, a steam dome connected to and projecting upwardly from the uppermost end of the outer shell, a flue passing through the steam dome and communicating with the inner shell, and means for maintaining said shells in spaced relation.

1,500,183. GOLF-PRACTICE DEVICE. DAVID DEWAR DALL, Toronto, Ontario, Canada. Filed May 31, 1923. Serial No. 642,716. 2 Claims. (Cl. 265—21.)



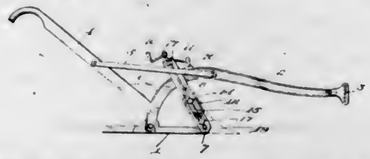
1. In a device of the class described, a case, friction pads affixed to its bottom, a graduated ratch slidable in said case, a tension spring secured to said ratch and to said case, a spring-pressed click disposed in the case and engaging the ratch teeth to retain the ratch in an extended position, means cooperating with the gradation upon the ratch to indicate its extended position, a tether, a golf ball, said tether being secured to the ratch and golf ball.

1,500,184. BRAKE FOR AIRCRAFT. ROBERT ELLSDORF, Chicago, Ill. Filed Sept. 10, 1920. Serial No. 409,460. 13 Claims. (Cl. 244—29.)



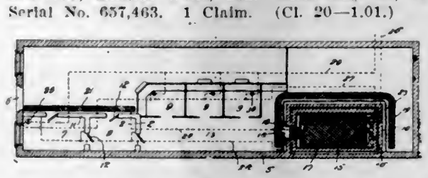
1. In an aircraft, the combination with the propeller thereof of a pair of deflectors carried by the aircraft, and located in the propeller slip stream, said deflectors being normally disposed edgewise to the propeller axis, but being capable of movement to positions such that they are inclined relatively to the propeller axis and constitute a substantially V-shaped box closed at its apex and disposed with the open side thereof facing the propeller so that the slip stream is diverted along lines such that the deflected air opposes forward movement of the aircraft.

1,500,185. MEANS FOR INCREASING THE ILLUMINATING POWER FOR CORRUGATED LENSES. HENRY PHELPS GAGE, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Original application filed Oct. 29, 1920, Serial No. 420,412. Divided and this application filed Feb. 25, 1922. Serial No. 539,099. 3 Claims. (Cl. 240—106.)



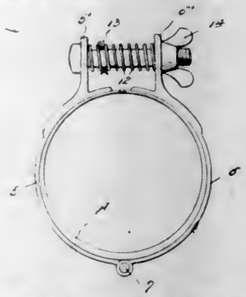
1. In an optical system, the combination of a corrugated lens having steps and risers, a light source, and a conoidal mirror positioned between the lens and light source, the parts being so arranged that rays falling on the lens directly from the light source pass through the lens substantially parallel with the faces of the adjacent risers and are refracted by the steps in a substantially parallel bundle, and that rays falling on the lens after reflection by the mirror pass through the lens substantially parallel with the adjacent steps and are projected by the risers in a converging beam.

1,500,186. FEEDING MECHANISM FOR OIL DRILLING. JAMES D. GIBBS, Louisville, Ky. Filed Apr. 2, 1921. Serial No. 458,150. 8 Claims. (Cl. 255—15.)



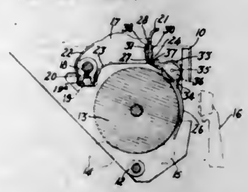
1. In a well drilling apparatus a walking beam, a pendant supported thereby, a nut carried by said pendant, a drill supporting screw engaging said nut, a swing lever articulated on the pendant and having operating connections for rotating said nut, and flexible means connecting said swing lever with a fixed support.

1,500,187. PLOW. CHARLES GLUECK, Gainesmoore, Tex., assignor of one-half to R. E. Vineyard, Wharton, Tex. Filed Feb. 25, 1922. Serial No. 539,135. 2 Claims. (Cl. 97—197.)



1. A plow including a pivotally mounted standard, means for securing the standard in adjusted angular position, a block mounted for sliding movement in said standard, a rotatable shaft carried by said standard and screw-threadedly engaging said block, means for rotating said shaft whereby the block is raised or lowered, and means for mounting a plow share on said block.

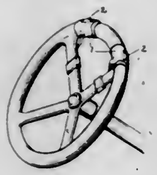
1,500,188. ROBBER EXTERMINATOR. SAMUEL D. GOSWICK, Mineral Wells, Tex. Filed Aug. 14, 1923. Serial No. 657,463. 1 Claim. (Cl. 20—1.01.)



In combination with an enclosure having a hand rail and provided with a metallic threshold plate, said hand rail being a conductor of electricity, a transformer having its secondary respectively connected at opposite sides with the hand rail and threshold plate, a primary circuit including the primary of said transformer, and manually controlled switches within the enclosure for closing the primary circuit of the transformer at any desired one of a plurality of points within the enclosure.

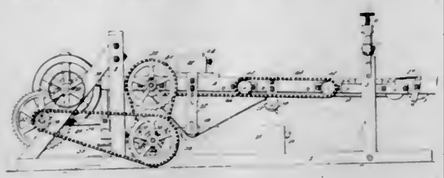
1,500,189. PISTON-RING COMPRESSOR. FREDERICK W. GRAF, Houston, Tex. Filed June 22, 1923. Serial No. 647,134. 2 Claims. (Cl. 29—86.4.)

1. A piston ring compressor comprising a pair of semi-circular half sections hingedly joined together at one end, said sections being provided at their free end portions and spaced from the end edges thereof with outstanding fingers, a traction bolt passing transversely through the fingers and bridging the space between them and the end edges of the sections, and a spring mounted upon the bolt and bearing at its ends against the inner faces of the fingers.



1,500,190. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 16, 1922. Serial No. 544,168. 5 Claims. (Cl. 199—139.)

1. In a typewriting machine, a revoluble platen, a relatively stiff sheet-metal finger for guiding the paper around the platen, a relatively resilient sheet-metal plate,

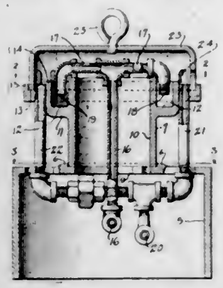


a paper-holding roll carried by said plate for yieldable engagement with the platen independently of the finger, and a bracket on which the finger and roll-holding plate are held, the plate on top of the finger, with the roll engageable with the platen through an opening in the finger.

1,500,191. SIGNALING SYSTEM. ROBERT P. HERBERT, Rochester, N. Y. Filed Aug. 22, 1922. Serial No. 583,507. 2 Claims. (Cl. 74—33.)

1. In a switch for an automobile signaling device the combination of a casing adapted to fit the closed hand, means adapted to clamp said casing to the rim of a steering wheel, a switch operating member mounted within said casing and projecting out therefrom to form an irregular outline at a predetermined point on the outside of said casing so that by closing the hand to simultaneously grip the rim of the steering wheel and said casing prior to and during the turning of the steering wheel said switch operating member is automatically operated and kept in operative position.

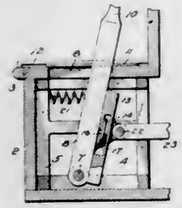
1,500,192. CONCENTRATOR. ALBERT H. HOLLENBECK, Fair View, N. Mex., assignor of one-half to F. E. Vassar, Los Angeles, Calif. Filed Mar. 6, 1922. Serial No. 541,394. 3 Claims. (Cl. 83—83.)



1. A concentrator of the class described comprising a table, a belt carried thereby, means for reciprocating the table and for moving the belt, means for tilting the belt transversely and alternately in opposite directions as it travels along, such means consisting of supporting rollers having projections on the end portions.

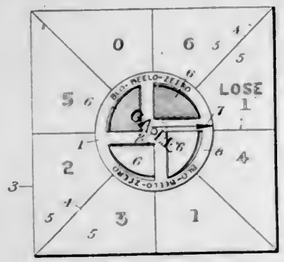
1,500,193. LUBRICATING COMPOUND. ROBERT H. HUTCHINSON, Dallas, Tex. Filed Feb. 21, 1922. Serial No. 538,342. 1 Claim. (Cl. 87—9.)

A compound for softening brake bands of motor vehicles, consisting of cylinder oil, castor bean oil, and castor machine oil, to which is added paraffine and neat's-foot oil, and alcohol as a solvent of the paraffine and castor bean oil, to allow them to mix with the other ingredients when the compound is heated.



1,500,194. OIL BURNER. CHARLES A. JAPHET, Seneca, Kans. Filed Dec. 6, 1923. Serial No. 678,923. 2 Claims. (Cl. 158—91.)

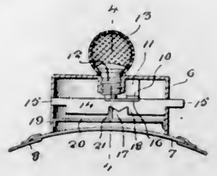
2. In an oil burning device, the combination of a hollow substantially cylindrical burner member having an integral outwardly and upwardly extending flange forming a pair of concentric circular channels, the inner channel being deeper than the outer channel, a base for supporting said burner member and providing means for admitting air to the base of the burner, an oil supply pipe extending through the base upwardly through the burner member and having outlets overhanging the inner channel, a water supply pipe having outlets extending upwardly through the bottom of the outer channel,



and a cap adapted to rest on said flange and enclose the oil and water channels and having a series of openings in its base for the emission of the flames and products of combustion.

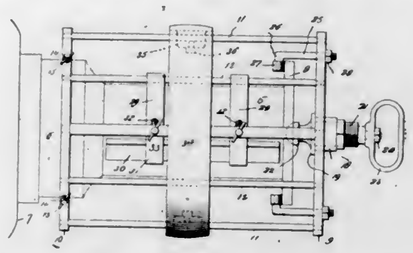
1,500,195. COIN-CONTROLLED MECHANISM FOR DISPENSING APPARATUS. WILLIAM R. LOVE, Armour, N. C. Original application filed Oct. 28, 1919. Serial No. 334,010. Divided and this application filed Mar. 1, 1920. Serial No. 362,246. 11 Claims. (Cl. 194—85.)

2. In a coin-controlled mechanism for dispensing apparatus a manipulating lever accessible to a customer, an other lever mounted to move about the same axis as the first lever and provided with a coin passage therethrough in a plane transverse to the plane of the movement of the levers, coin engaging means carried by the manipulating lever and transversely entering the slot in the second lever to receive a coin traversing said slot, whereby said levers are positively locked together, and connections from the second lever to dispensing parts to be actuated.



1,500,196. GAME INDICATOR. CHESTER MCKAY, Glen Brook, Conn. Filed June 3, 1921, Serial No. 474,660. Renewed Dec. 31, 1923. 4 Claims. (Cl. 46—56.)

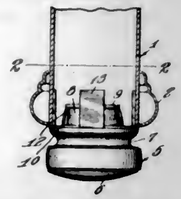
1. In a game-indicator, the combination with a base plate having radially arranged indicia thereon, of an indicator disk centrally swiveled on said base plate and



having upwardly inclined wings mounted thereon, whereby said disk may be rotated by a current of air, and a pointer on the upper surface of said disk, said disk having a continuous annular marginal portion for the purpose specified.

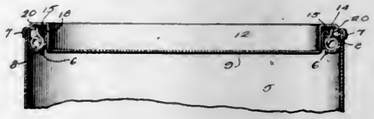
1,500,197. LAMP. FRANK C. MONROE, Enderlin, N. Dak. Filed Aug. 9, 1920. Serial No. 402,156. 1 Claim. (Cl. 200—60.)

A device of the character described comprising a casing having openings therein at diametrically opposite points, a bar arranged in the casing and capable of longitudinal movement therein and having its ends reduced and slidably disposed in the openings, the under face of the bar being provided with an M-shaped recess, a horizontally arranged bracket extending transversely of the casing and arranged below the bar, an upstanding resilient finger carried by the bracket and arranged in the M-shaped recess, a fixed contact arranged in the casing and adapted to be connected with a source of electrical energy, and a contact plate carried by the bar and adapted to engage the fixed contact, a resilient finger serving to normally urge the bar to a position where the contacts will be engaged, and to lock said bar in such position.



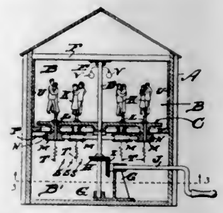
1,500,198. CAR-JOURNAL-POLISHING DEVICE. EDWARD C. MORRISON, Fayetteville, N. Y. Filed Oct. 8, 1923. Serial No. 667,339. 1 Claim. (Cl. 51—241.)

A portable car journal polishing device comprising a pair of end frame members rigidly connected in parallel spaced relation by means of longitudinal frame bars, means to center the inner end of the car journal within one of said end frame members, a center screw engageable in the center socket in the outer end of the car journal for centering the outer end of said journal within the outer end of the frame, a ring pulley mounted upon certain of said rods for facilitating application of rotation to said frame, longitudinal polishing elements disposed inwardly of the longitudinal frame bar, tangential resilient arms carried by others of said bars and having their free ends urging the polishing strip toward the journals, and means to adjust the tension of said spring arms toward the journal.



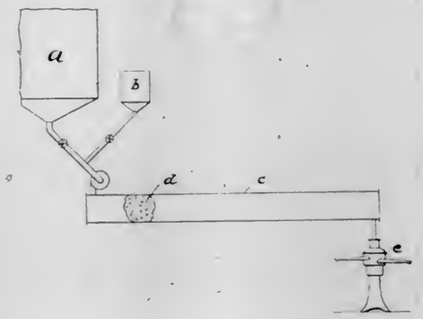
1,500,199. GLASS CASTER. CHARLES G. OVERMYER, Hartford City, Ind. Filed July 9, 1923. Serial No. 650,411. 3 Claims. (Cl. 16—39.)

2. In a device of the class described, a caster comprising a body and a stem, said stem having an annular flange at its outer end, an attachment for connecting a caster to a hollow leg including a plate supported on said body and having fingers to receive said stem and



engage under said flange, said attachment also having other fingers to enter and hold the retainer and caster in a hollow furniture leg.

1,500,200. SEALING MEANS FOR RECEPTACLES. JOHN TALLY OVERSTREET, Uvalde, Tex. Filed Sept. 21, 1921, Serial No. 502,231. Renewed Nov. 19, 1923. 4 Claims. (Cl. 220—60.)

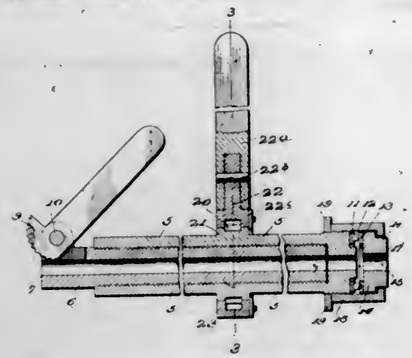


1. A receptacle comprising a body, an annulus secured to the end of the receptacle and having a trough, and a cover provided with sealing prongs received in said trough, the terminal portions of said prongs being curved whereby the prongs are coiled upon insertion into said trough.

1,500,201. TOY. ALEXANDER OZEROWICZ, Romulus, Mich., assignor of one-third to Joseph Antonuitis and one-third to Kazimer Salavejus, both of Detroit, Mich. Filed Apr. 3, 1922. Serial No. 549,289. 1 Claim. (Cl. 46—40.)

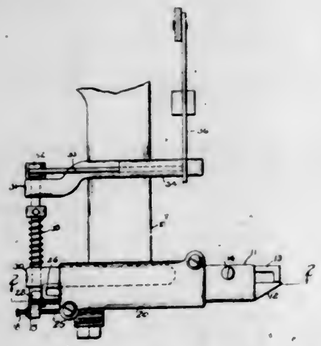
In a device of the character described, an inclosed housing divided into upper and lower chambers, the lower chamber providing a sound, chamber, a shaft journaled centrally through both chambers, a disc secured to the vertical shaft and rotatably operable in the upper chamber, a plurality of relatively short vertical shafts journaled in the rotatable disc, dolls mounted upon the upper ends of the vertical shafts above the disc and adapted to turn with said short shafts, a manually operable crank shaft extending through one side of the supporting housing into the same and having geared connection with said first mentioned shaft to rotate the latter, said short shafts each having a pulley on its lower end located below said disc and disposed in the lower chamber, a stationary belt adapted to impinge upon the said pulley, a spring engaging the belt and the housing to maintain the belt in frictional driving contact with the pulley, a plurality of wires suspended from the rotatable disc and extending into the lower chamber, and a plurality of spaced wires mounted in the lower chamber over which the aforesaid wires are dragged as the disc is rotated to produce a musical sound in the lower chamber, and mirrors disposed in the upper chamber.

1,500,202. PROCESS OF PURIFYING MINERAL OIL. EARL PETTY, Winfield, Kans., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 24, 1921. Serial No. 495,080. 1 Claim. (Cl. 196—25.)



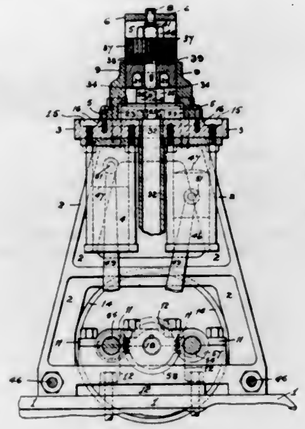
The process of purifying an emulsion of mineral oil and a contaminating liquid, such as water, which comprises establishing a flow of the emulsion, establishing another flow of a treating agent adapted to facilitate the resolution of the emulsion, regulating the volume of the flow of the treating agent so as to continuously admix with the emulsion a substantially smaller proportion of the treating agent than would operate efficiently by mere admixture, forcing the mixture of emulsion and treating agent through a permeable mass of neutral material adapted to effect a wide distribution of the emulsion and more intimate mixture of the treating agent therewith, whereby the emulsion is substantially broken down in the course of its passage through said material and converted into a separable mixture of the constituents of the original emulsion, directing the entire mixture including such of the contaminating liquid as has been precipitated, to a locus of separation, and there subjecting the mixture to centrifugal force to effect a separation of the oil from the contaminating liquid

1,500,203. TRACK FASTENING. CHARLES E. PRICE, Austen, W. Va. Filed June 29, 1923. Serial No. 648,530. 2 Claims. (Cl. 238—60.)



1. In a mine track fastening, the combination of a tie provided at its ends with inwardly extending overhanging rail-engaging flanges and provided at its sides with depending flanges having longitudinally extending slots therethrough at and near its ends, rail-engaging clamps spanning the tie and provided at their ends with depending side plates bearing against the side flanges of the tie and constructed with slots adapted to aline with slots in the side flanges of the tie and provided at their outer edges with overhanging rail-engaging flanges, and securing keys inserted through the alined slots of the tie and the clamps, said keys being provided along one edge with teeth to engage the opposed wall of a slot and prevent withdrawal of the key.

1,500,204. TIE-ROD TIGHTENER AND PULLER FOR CONCRETE FORMS. ANTHONY HENRY RICHARD, Alexandria, La. Filed July 19, 1921. Serial No. 485,902. 2 Claims. (Cl. 254—29.)

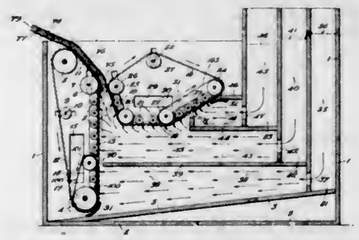


1. A tool as herein set forth comprising inner and outer cylindrical members, the outer member internally threaded and inner member externally threaded, and adapted to move longitudinally within the internally threaded outer member, means carried at the rear end of the inner member for releasably locking it to the tie rod, a thrust bearing assembly projecting beyond the front end of the outer member, said assembly member comprising a swivelly mounted nose portion having a smooth central bore, and an annular external shoulder, a threaded collar nut mounted on the front end of the outer cylindrical member and adjustably holding said nose portion at the end of said outer member, a lock nut washer controlling said collar nut, and an antifriction ball race interposed between said nose portion and the front end of the outer cylindrical member.

1,500,205. WEFT-DETECTING MECHANISM. EPPA H. RYON, Waltham, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 17, 1922. Serial No. 553,668. 4 Claims. (Cl. 139—284.)

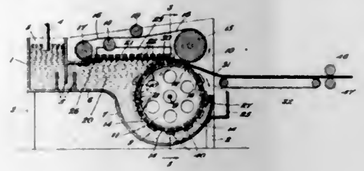
1. In a loom, weft detecting mechanism comprising a stand, a casing slidable in said stand, fixed and movable weft detectors mounted on said casing and projecting rearwardly therefrom, an adjustable rearward stop for said movable detector, a yieldingly mounted member connected to indicate substantial weft exhaustion, and a rod slidable in said casing, and disposed between said member and said movable detector, said rod having a laterally projecting portion affording an enlarged bearing surface engaging said member and also preventing angular displacement of said rod.

1,500,206. STEAM, HYDRAULIC, AND OTHER FLUID-PRESSURE ENGINE. JAMES EDWARD SCHUMACHER, York, England. Filed July 9, 1923. Serial No. 650,422. 2 Claims. (Cl. 121—182.)



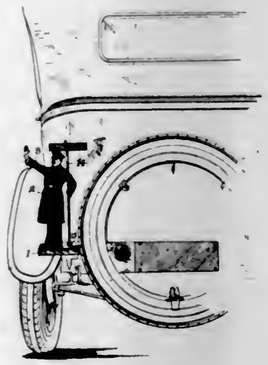
1. Mechanism for controlling the admission and exhaust of a fluid pressure engine comprising a casing, a rotary valve in said casing having a stem extending outward through the casing and provided with an abutment, a piston loosely mounted on the valve stem between the valve and the abutment, means for introducing operative fluid into the casing to act on the opposed faces of the piston and valve, and means for rotating the valve.

1,500,207. FIBER BOARD HAVING ORNAMENTAL SURFACES. JOHN K. SHAW, Minneapolis, Minn., assignor to C. F. Dahlberg, St. Paul, Minn. Filed Mar. 26, 1920, Serial No. 368,992. Renewed Jan. 9, 1923. 4 Claims. (Cl. 154—28.)



1. A fiber board composed of a body portion of one kind of fiber interlaced with another kind of fiber covering said body portion; and a surface portion covered with a hard stone like composition having an ornamental surface, substantially as described.

1,500,208. PROCESS OF AND APPARATUS FOR MAKING FIBER BOARDS JOHN K. SHAW, Minneapolis, Minn., assignor to C. F. Dahlberg, St. Paul, Minn. Filed Apr. 6, 1920, Serial No. 371,568. Renewed Jan. 9, 1923. 11 Claims. (Cl. 92—39.)

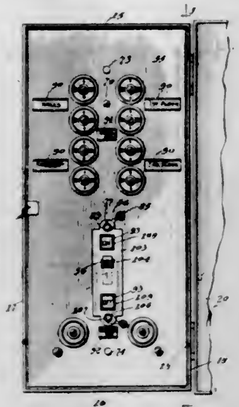


1. The process of interlacing fibers on an endless revolving screen having meshes too large to efficiently stop said fibers, which consists in causing said fibers to assume more or less parallel positions in a direction transverse to the path of movement of said screen; causing some of said fibers to be interlaced and massed at each revolution of said screen, on a portion only of the latter; and then causing the moving interlaced mass of fibers to stop and interlace with other fibers to form the desired product, substantially as described.

1,500,209. FELTING AND RECESSING MACHINE. JOHN K. SHAW, Minneapolis, Minn. Filed Oct. 23, 1920, Serial No. 419,047. Renewed Jan. 20, 1923. 7 Claims. (Cl. 92—39.)

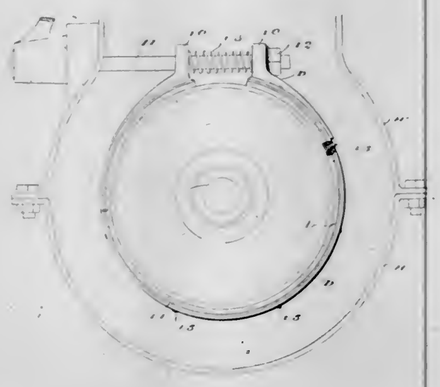
1. In a felting machine for making wall boards, the combination of means comprising a foraminous traveling surface having an undercut projection for producing a fibrous mass with an empty space having a projecting edge torn out of its body portion; and means to press down said edge, substantially as described.

1,500,210. TRAFFIC SIGNAL FOR AUTOMOBILES. BERNARD H. SKELLY, Bridgeport, Conn. Filed Aug. 7, 1923. Serial No. 656,159. 4 Claims. (Cl. 116—46.)



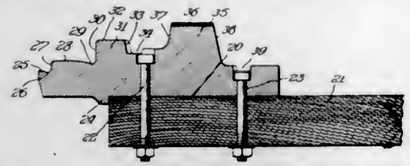
1. An automobile traffic signal, consisting of an effigy of a traffic officer carried on the rear of the automobile and having a signal arm pivoted at the shoulder so as to be capable of upward and outward swinging movements, a rotary notice bearing standard in proximity to said effigy, the other arm of the latter being extended with the hand loosely embracing the standard, and means under the control of the automobile driver and operatively connected with the signal arm and with the standard for rotating the latter to exhibit the proper notice and for simultaneously raising the signal arm.

1,500,211. PANEL BOARD AND PANEL-BOX CONSTRUCTION. HENRY F. STARRETT, Chicago, Ill., assignor to Starrett Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 27, 1919. Serial No. 307,189. 12 Claims. (Cl. 247—10.)



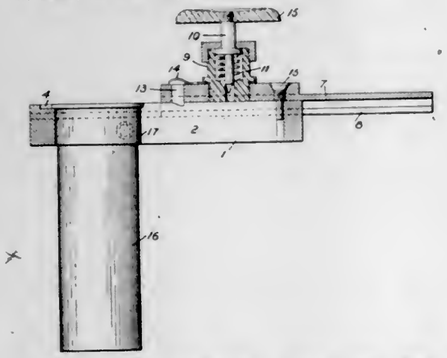
1. In a device of the character described, a panel-box enclosure, a panel-board carrying circuit-controlling apparatus mounted in said enclosure, a dead front shield

removably mounted in said enclosure over said panelboard, said shield being apertured to permit the projec-



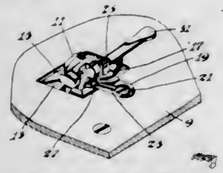
tion of the circuit-controlling portions of said apparatus thereto, and designation means for said apparatus rotatably mounted on said shield.

1,500,212. BRAKE-BAND LINING. ARTHUR WILLARD STATLER, Denver, Colo. Filed Jan. 18, 1922. Serial No. 530,042. 1 Claim. (Cl. 18—249.)



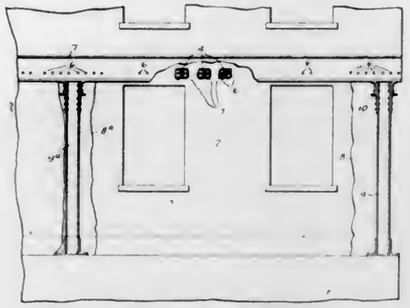
In combination, a brake band, a divided ring removably interfitting the brake band and extending thereabout, a strip of friction material upon the inner periphery of the divided ring, a plurality of brads extending through the divided ring transversely thereof, said brads being provided with inwardly extending means engaging the friction material whereby to secure said friction material to the ring, said brads also having outwardly extending means forming band engaging studs projecting beyond the outer periphery of the split ring, and said brake band having openings therethrough to receive the said studs, the studs and brake band openings cooperating to hold the divided ring and friction strip against lateral and longitudinal movement relative to said brake band without necessitating additional means for this purpose.

1,500,213. ANVIL BLOCK. IRA A. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Nov. 3, 1920. Serial No. 421,478. 6 Claims. (Cl. 78—60.)



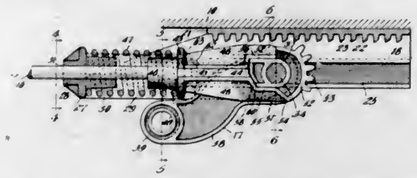
1. As an article of manufacture, an anvil block for use with vehicle wheel rims having a curved surface adapted to conform substantially to the curvature of the inner face of a vehicle wheel rim and a shoulder against which an edge of the rim is adapted to bear when applied to said curved surface, substantially as described.

1,500,214. PROJECTOR. SAMUEL WILEY, Metuchen, N. J. Filed Mar. 7, 1923. Serial No. 623,465. 4 Claims. (Cl. 244—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



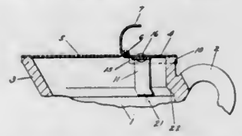
1. A projector, embodying a plate formed with an elongated aperture one end of which provides a rest for a signal device, yielding means for holding a signal in place, a slide on the plate, a housing secured to the slide, a firing pin mounted in the housing and adapted to be brought to position over the primer of a signal, an extractor for extracting the shell of a signal device and means for limiting the movement of the slide.

1,500,215. FRENCH-BINDING-FOLDING MACHINE. SHERMAN WILLIS, Portsmouth, Ohio, assignor, by mesne assignments, to P. R. Glass Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 26, 1921, Serial No. 503,282. Renewed Dec. 8, 1923. 11 Claims. (Cl. 12—55.)



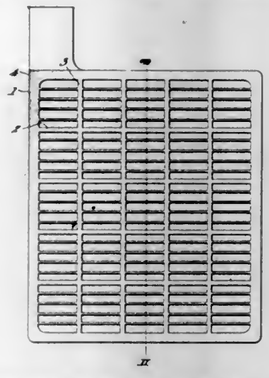
1. A machine for operating upon a piece of work which consists of a piece of sheet material to which a strip of binding is attached having, in combination, a stationary member having a substantially flat surface for supporting the main portion of the work, a member having an upwardly extending surface for engaging the binding, there being at the junction of the two surfaces a groove so located that a portion of the binding engaging member overhangs it, means for holding in the groove the ridge formed by bending the free portion of the binding over the attached portion thereof, and means for feeding the work and for pressing the binding.

1,500,216. MEANS FOR SUPPORTING THE UPPER STORIES OF A BUILDING. FREDERICK ZACHARIAS and EMANUEL MANHEIMER, New York, N. Y. Filed Sept. 29, 1923. Serial No. 665,522. 4 Claims. (Cl. 189—1.)



1. The herein described method which comprises installing struts through the wall of a building at the top of a story to be removed and tying parallel beams to the ends of these struts, to form a permanent supporting structure deriving its support from the wall itself for support of the upper stories, and then tearing out a part of the lower wall, substantially as set forth.

1,500,217. BRAKE RIGGING FOR RAILROAD CARS. HARLEY E. ANDERSON, Chicago, Ill., assignor of one-half to William L. Kellogg, Chicago, Ill. Filed Aug. 31, 1922. Serial No. 585,480. 30 Claims. (Cl. 74—119.)

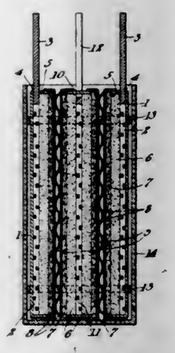


1. In a brake rigging, the combination with a brake chain and a brake rod; of a brake booster interposed therebetween, said booster including a connecting lever between the rod and the chain and moving therewith when a comparatively low tension is upon the parts, and a fulcrum for said lever extraneous of the rod and chain against which the lever is adapted to engage, which lever rotates between the rod and chain upon a comparatively higher tension of the parts.

1,500,218. LIQUID CONTAINER WITH DETACHABLE TOP. CHARLES S. BARON, Tiffin, Ohio. Filed Mar. 11, 1921. Serial No. 451,648. 5 Claims. (Cl. 65—31.)

3. An open mouthed container body provided below its mouth-defining wall with an internal shoulder outwardly flared from said wall and adapted for operative engagement with a latch upon a detachable top for securing said top to the container.

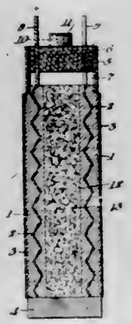
1,500,219. STORAGE-BATTERY GRID. RAYMOND C. BENNER, Bayside, N. Y., assignor, by mesne assignments, to The Prest-O-Lite Company, Inc., New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 557,905. 2 Claims. (Cl. 204—29.)



1. A conductive support for the active material of storage batteries coated with a plastic conductive protective layer comprising lead dioxid.

1,500,220. SEPARATOR AND METHOD OF MAKING THE SAME. RAYMOND C. BENNER, Bayside, N. Y., assignor, by mesne assignments, to The Prest-O-Lite Company, Inc., New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 557,906. 15 Claims. (Cl. 204—29.)

1. A storage battery separator consisting of a uniformly pervious sheet formed of fibers uniformly free from substances which detrimentally affect the operation of a battery, such sheet having cementitious material incorporated therein bonding said fibers together.



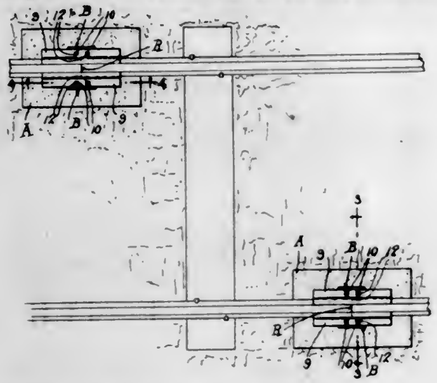
1,500,221. STORAGE CELL OR BATTERY AND ELECTRODE THEREFOR. RAYMOND C. BENNER, Bayside, N. Y., assignor, by mesne assignments, to The Prest-O-Lite Company, Inc., New York, N. Y., a Corporation of New York. Filed May 3, 1922. Serial No. 558,110. 6 Claims. (Cl. 204—29.)

1. A storage cell comprising a container, active material and electrolyte therein, and an impervious, acid

resistant means preventing exposure of an extended portion of the surface of the active material to the action of the electrolyte, whereby action upon the active material is restricted to the desired area.

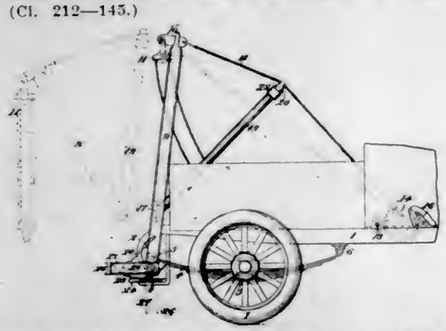
1,500,222. STORAGE CELL OR BATTERY. RAYMOND C. BENNER, Bayside, and HARRY F. FRENCH, Flushing, N. Y., assignors, by mesne assignments, to The Prest-O-Lite Company, Inc., New York, N. Y., a Corporation of New York. Filed May 5, 1922. Serial No. 558,607. 2 Claims. (Cl. 204—29.)

1. A storage cell or battery container comprising a wall formed of plumbic active material having a portion adapted for exposure to electrolyte, and an acid-resistant, impervious substance impregnating the exposed outer surface of said wall and preventing passage of electrolyte therethrough.



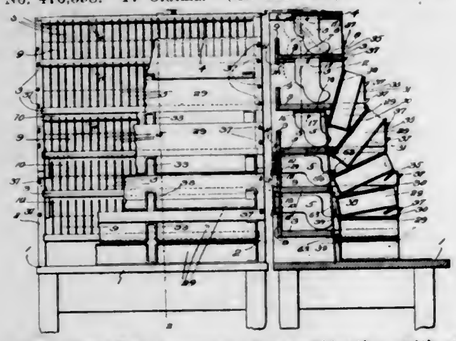
1,500,223. GARTER OR SLEEVE HOLDER. JOHN L. BISHOP, Jackson, Tenn. Filed Jan. 4, 1923. Serial No. 610,649. 3 Claims. (Cl. 241—5.)

1. A garter consisting of an endless band of substantially inelastic material and having a slip knot formed therein and located to leave a closed portion of the band at each side of said slip knot, and means passing through one portion for securing it to the other portion.



1,500,224. RAIL ANCHOR. CHARLES BLAKE, Pontiac, Ill. Filed Nov. 14, 1923. Serial No. 674,703. 4 Claims. (Cl. 238—315.)

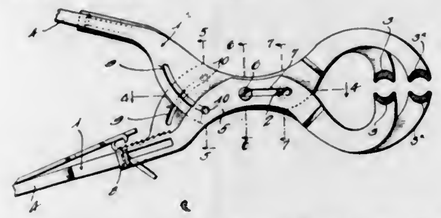
1. A rail anchor of the class described, comprising a pillar having pockets in its upper surface, anchor rods embedded in the pillar with their upper ends projecting into the pockets, clamping bolts loosely engaging the projecting ends of the anchor rods, an apertured base plate



partially covering the pockets, clamping plates in spaced relation over the base plate and a nut on the free end of the clamping bolt.

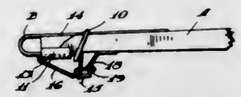
1,500,225. WRECKING TRUCK AND TOWING APPARATUS. GEORGE D. BORNSCHEIN, San Francisco, Calif. Filed Mar. 27, 1923. Serial No. 627,968. 4 Claims. (Cl. 212—145.)

1. In combination with a vehicle, a boom carried at the rear end thereof, and a guard carried by the frame and associated with the rear end of the vehicle to normally project rearwardly therefrom, said guard adapted for movement to provide a frame rest to support the load carried by the boom.



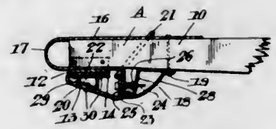
1,500,226. POST-OFFICE FURNITURE. ROBERT T. BOURN, Templeton, Mass. Filed June 10, 1921. Serial No. 476,598. 17 Claims. (Cl. 211—36.)

1. In post-office furniture, the combination with a routing case having shelves divided by partitions into



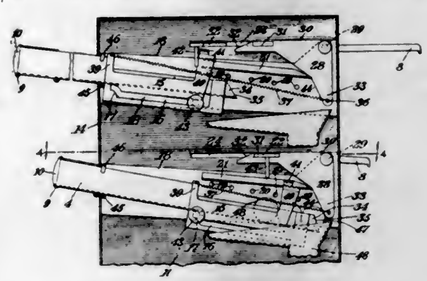
compartments for receiving letter mail, of a plurality of receptacles to receive bulky mail as it is sorted, and means for supporting said receptacles on the routing case in front of the shelves.

1,500,227. SPECULUM AND DILATOR. JOSEPH T. BRENEMAN, El Cerrito, Calif. Filed Nov. 9, 1922. Serial No. 599,867. 1 Claim. (Cl. 128—17.)



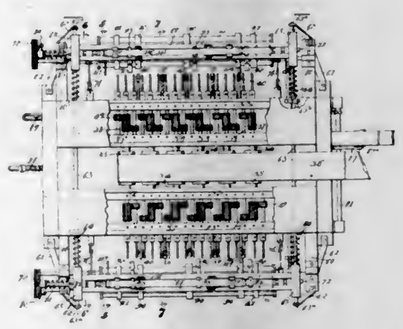
In combination, a pair of levers pivoted together between their ends and having dilating fingers at their front ends, a second pair of levers at the outer sides of said first named levers and connected slidably and pivotally between their ends to said first named levers, the front ends of said second pair of levers having dilating fingers while the rear ends thereof are slidably connected with the handle-forming rear ends of said first named levers, and means for effecting longitudinal movement of said second pair of levers when swung on their pivots, by the other levers, said means being disposed at a point spaced rearwardly from the aforesaid pivot and comprising studs on one pair of levers and oblique cam slots in the other pair of levers receiving said studs.

1,500,228. YOKE-RING LOCK AND REIN GUARD. EDWARD BROUGHAM, Pennant, Saskatchewan, Canada, assignor of one-half to James P. Baker, Henribourg, Saskatchewan, Canada. Filed June 26, 1922. Serial No. 570,961. 2 Claims. (Cl. 278—51.)



1. A yoke ring lock and rein guard comprising, in combination, a wagon tongue formed with a recess on the underside, an inverted channel member adapted to fit into said recess, a tip for the tongue adapted to engage with said channel member and formed with a double bend adjacent thereto, a wedge member of resilient material bent at one end to fit between the channel member and said tip and adapted at the other end to extend through said double bend and means for securing the wedge in said double bend.

1,500,229. YOKE-RING LOCK AND REIN GUARD. EDWARD BROUGHAM, Pennant, Saskatchewan, Canada, assignor of one-half to James P. Baker, Henribourg, Saskatchewan, Canada. Filed May 19, 1923. Serial No. 640,168. 3 Claims. (Cl. 278—51.)

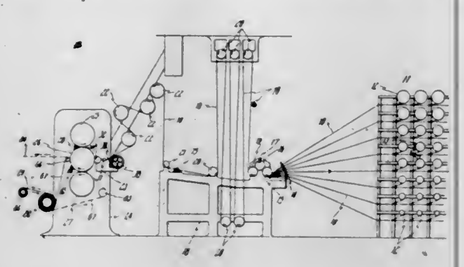


1. A yoke ring lock and rein guard comprising, in combination with the pole of a vehicle, a metallic reinforcing member on the end of the pole, a U-shaped bend formed in the member, and means for connecting said member to the pole comprising a channel member formed with flanged sides secured to the pole and adapted to engage with the metallic member, a resilient wedge-shaped member adapted to detachably engage with the channel member, spring-actuated means connecting the end of the said wedged member with the metallic member, and rein guard means for the metallic member.

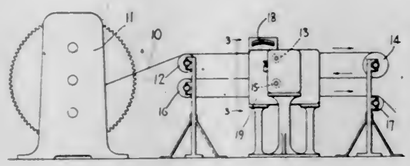
1,500,230. COIN-CONTROLLED APPARATUS. JOSEPH N. BURNO, Chicago, Ill., assignor to Budde & Westermann, a Corporation of New York. Filed Sept. 22, 1921. Serial No. 502,350. 10 Claims. (Cl. 194—59.)

1. A coin-controlled apparatus comprising a compartment, a door therefor, a sliding member arranged to open and close the door, a toggle lever arrangement for operating the sliding member, means for operating the toggle lever arrangement consisting of a lock for the toggle lever member, a coin receiving member adapted to be partially withdrawn from the apparatus when coins are placed therein and release toggle lever member to open the door.

1,500,231. GANG BORING MACHINE. OSE F. CARPENTER, Brightwood, Va. Filer Nov. 3, 1921. Serial No. 512,543. 17 Claims. (Cl. 144—111.)



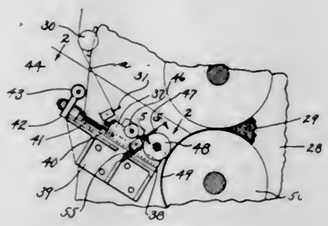
1. In a boring machine which is provided with a plurality of bits that are maintained in alinement, driving means for the bits, a work carrier mounted for rotation and movement toward and away from the bits, and a magazine maintained above the work carrier to be movable therewith.



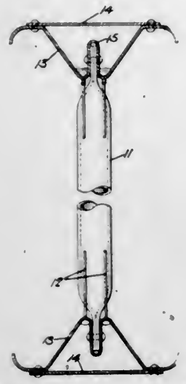
1,500,232. MANUFACTURE OF CORD FABRIC. MARTIN CASTRICUM, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 15, 1922. Serial No. 560,919. 4 Claims. (Cl. 154—1.)

1. In an apparatus for producing weftless cord fabric, a calender adapted to form and support a rubber sheet, a smooth surfaced roll adapted to guide a series of cords

into contact with the rubber sheet, means for moving the roll towards or away from the rubber sheet on the calender, a device positioned to arrange the series of cords in parallel relation on said roll, and means for adjusting the device to vary the spacing of the cords.

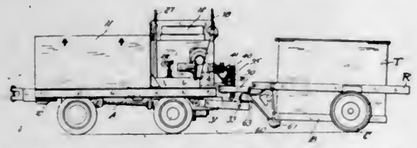


1,500,233. WEIGHING MOVING MATERIAL. MARTIN CASTRICUM, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 30, 1922. Serial No. 597,751. 5 Claims. (Cl. 265—27.)



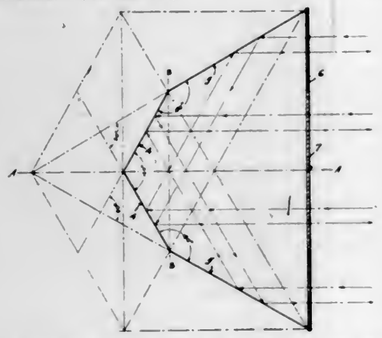
1. A method of weighing a unit area of moving flexible material which comprises passing the material over a support attached to a weighing apparatus with a unit width of the material resting upon the support, and preventing contact of the remaining width of the material with the support.

1,500,234. MANUFACTURE OF WEFTLESS CORD FABRIC. MARTIN CASTRICUM, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed July 5, 1923. Serial No. 649,413. 10 Claims. (Cl. 154—1.)



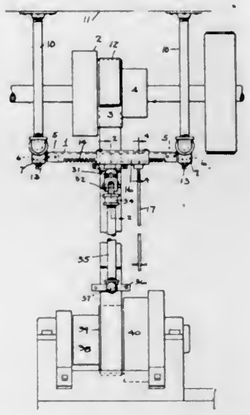
6. An apparatus for guiding parallel cords to a rubber coating calender comprising a roll upon which the cords may be arranged exactly as they are desired for coating and a comb for so arranging them, said comb having the free ends of its teeth extending toward the roll in overlapping relation therewith, all constructed and arranged so that a knot in a cord will ride along the extended ends of the teeth, spread them and drop onto the roll while maintaining its parallel relation with other cords.

1,500,235. AIRPLANE-WING SPAR. VIRGINIUS E. CLARK, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 4, 1922. Serial No. 534,227. 7 Claims. (Cl. 244—31.)



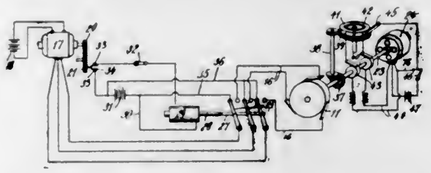
1. An airplane wing spar, comprising upper and lower beams built up from sheet metal, struts spaced at intervals between said beams, and diagonal brace wires between said struts, said beams having salient folds and said wires being secured thereto at said salient folds.

1,500,236. INDUSTRIAL TRUCK. CLYDE E. COCHRAN, Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 24, 1921. Serial No. 455,252. 9 Claims. (Cl. 280—33.1.)



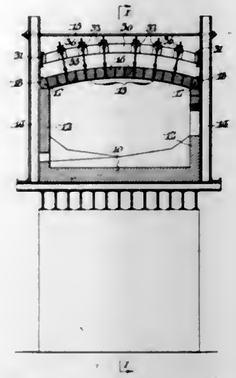
1. The combination of a truck and a trailer, the truck having a pivotally mounted lifting member thereon, a coupling pin actuated by said lifting member, the trailer having a coupling element provided with a downwardly facing cup adapted to fit over the pin, whereby the top of the pin may engage the top of the cup to lift and the side of the pin may engage the side of the cup to pull the trailer while allowing it to turn on the coupling pin as a center.

1,500,237. LIGHT REFLECTOR. ALFRED L. COFFEY, Seattle, Wash. Filed May 5, 1923. Serial No. 636,975. 3 Claims. (Cl. 88—1.)



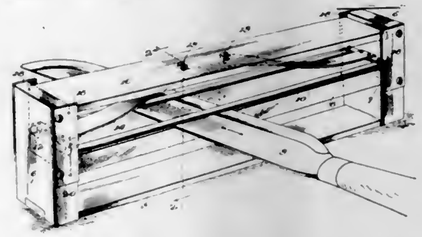
1. A reflector embodying a conical portion having a concave light reflecting surface forming an angle of 60 degrees with respect to its axis and a portion of truncated shape disposed in axial alignment with said conical portion and having reflecting surfaces forming an angle of 30 degrees with respect to said axis and intersecting the reflecting surfaces of said conical portion at an angle of 150 degrees.

1,500,238. BELT-SHIFTING MECHANISM. ROBERT R. CUMMINS and ROBERT W. KREMER, Cleveland, Ohio, assignors to The Kremer-Cummins Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 20, 1919, Serial No. 305,606. Renewed Nov. 22, 1923. 8 Claims. (Cl. 64—4.)



8. In a device of the character described, the combination of a support mounted substantially parallel with the axis of a driving pulley, a carriage movable along said support, a rod mounted on said carriage to move transversely to the movement of said carriage, and a belt-shifting loop mounted on said rod, but in an offset plane, whereby said loop and rod will lie in different vertical planes.

1,500,239. SYNCHRONOUS TRANSMISSION SYSTEM FOR GYROSCOPES, ETC. ARTHUR P. DAVIS, Far Rockaway, N. Y. Filed May 26, 1919. Serial No. 299,871. 14 Claims. (Cl. 177—351.)

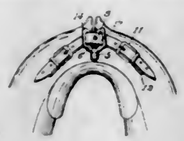


14. A gyroscopic compass system comprising a master compass having a moving element, a transmitter, means for controlling the movement of said transmitter in accordance with the movements of said moving element including means for connecting said transmitter to said moving element and disconnecting it therefrom, a plurality of repeaters each having an actuating motor, circuits connecting said motors with said transmitter, and means including said circuits for bringing the elements of the system into phase comprising means for operating the transmitter independently of the master to actuate the repeaters and for disconnecting the several repeaters from the transmitter as each of them arrives at a selected position, and comprising means for thereafter operating the transmitter independently of the master to bring the transmitter to said selected position.

1,500,240. FURNACE-ROOF CONSTRUCTION. RAYMOND E. GRIFFITH, Philadelphia, Pa. Filed Nov. 3, 1922. Serial No. 598,754. 24 Claims. (Cl. 263—46.)

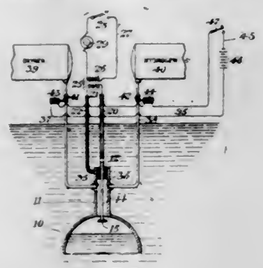
1. In a metallurgical furnace, a roof structure composed of refractory elements, noncombustible inserts between the refractory elements to permit expansion of the structure by heat with the imposition of minimum strain within the elements, and means supporting the roof structure against internal strains incidental to its own weight.

1,500,241. KNIFE SHARPENER. FRANCIS M. GUM, Stockton, Calif. Filed July 7, 1921. Serial No. 483,001. 1 Claim. (Cl. 51—211.)



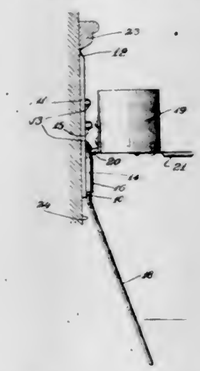
A knife sharpener comprising a base having upstanding ends formed with shoulders on their inner sides, a sharpening stone having its ends mounted upon said shoulders, a pair of spaced parallel rods extending above said stone and being formed from round metal, transversely extending connecting members mounted at the ends of said rods and having grooves for receiving the ends of said parallel rods and retaining same in spaced relation, a top bar supported above said sharpening stone and parallel rods, and a longitudinally curved leaf spring secured intermediate its ends to said top bar and having its free ends engaging said connecting members between the ends of said connecting members and substantially away from said parallel rods for holding said parallel rods in engagement with said sharpening element and adapted to be yieldable angularly with relation thereto.

1,500,242. HORSE-COLLAR PAD. CASPER HUGO GRINGS, Waterloo, Iowa, assignor to Waterloo Saddlery Company, Waterloo, Iowa. Filed July 16, 1923. Serial No. 651,946. 2 Claims. (Cl. 54—19.)



2. A horse-collar pad, comprising a rigid metal liner plate having a pair of hooked projections and an orifice intermediate the projections, a cushioning envelope covering said plate and provided with apertures in line with said projections and said orifice, a headed pin traversing the orifice in the plate and the alined aperture in the

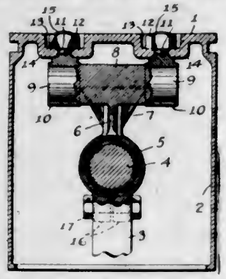
envelope, a member orifice to receive said pin therethrough and having opposite margins engaged by said hooked projections, other margins of said member being bent up-



wardly and slotted in line to receive a billet-strap, and a spacing-body mounted on said pin above said member to support the strap medially, the extremity of the pin being inserted in a hole in said strap.

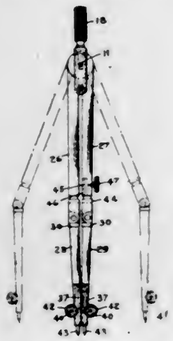
1,500,242. SUBMARINE SOUND TRANSMITTER. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Feb. 20, 1918, Serial No. 218,325. Renewed Nov. 9, 1923. 17 Claims. (Cl. 177—386.)

1. The combination with a hollow submarine device provided with an outlet, of means for continuously supplying the interior of said device with an explosive mixture, and means for exploding said mixture within said device periodically.



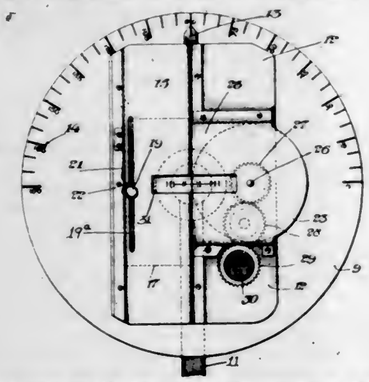
1,500,244. PAINTER'S DEVICE. VICTOR HARTMANN, Long Island City, N. Y. Filed May 25, 1922. Serial No. 563,526. 3 Claims. (Cl. 91—65.)

2. In a new article of manufacture, a shield member having sharp, beveled edges, and handle and container receiving means provided with said shield member.



1,500,245. PISTON. HENRI J. HOUPERT, Mamaroneck, N. Y. Filed Feb. 15, 1922. Serial No. 536,647. 2 Claims. (Cl. 74—108.)

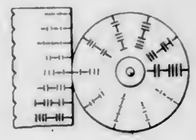
1. In an internal combustion engine and in combination with a connecting-rod and a wrist-pin in the end of said connecting-rod, a piston within which said wrist-pin is enclosed, a yoke engaging the ends of the wrist-



pin and embracing the end of the connecting-rod, and a pivot connecting said yoke with the piston above and at right angles to the wrist-pin.

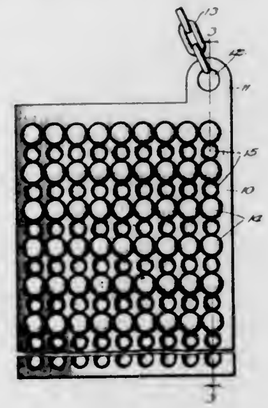
1,500,246. DRAWING INSTRUMENT. ADOLF W. KEUFFEL, Montclair Township, Essex County, N. J., assignor to Keuffel & Esser Company, Hoboken, N. J., a Corporation of New Jersey. Filed Apr. 26, 1922. Serial No. 556,767. 4 Claims. (Cl. 33—157.)

1. In a drawing instrument the combination of two cylindrical tapered legs having circular shoulders adapted to fit together, pintles projecting from each of said shoulders outwardly, a fork head with two spring arms adapted to snap over said pintles and having recesses on the inside adapted to receive the same, and a screw to fasten the lower end of said fork arms together.



1,500,247. MEANS FOR TESTING VISION. FRANCIS PARK LEWIS, Buffalo, N. Y. Filed Aug. 17, 1922. Serial No. 582,368. 19 Claims. (Cl. 88—20.)

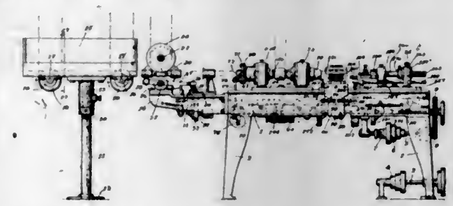
1. Apparatus for testing vision comprising the combination of means for exposing to the eye a symbol or



character subtending a predetermined visual angle at a fixed distance from the eye, and means for matching said symbol with a symbol or character subtending a corresponding visual angle.

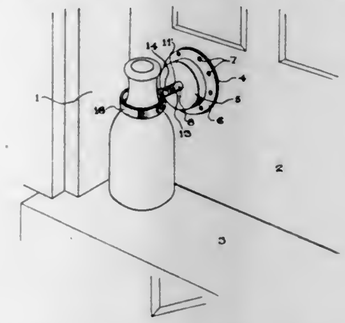
1,500,248. METHOD FOR TESTING VISION. FRANCIS PARK LEWIS, Buffalo, N. Y. Filed Aug. 17, 1922. Serial No. 582,369. 21 Claims. (Cl. 88—20.)

1. The herein described method of testing vision which consists in exposing to the eye a symbol or character subtending at a fixed distance from the eye a predetermined visual angle, and matching said symbol with a corresponding symbol or character.



1,500,249. TRACTION GRIP. ARTHUR MCCRACKEN and WILLIAM V. MONROE, Chicago, Ill. Filed Nov. 12, 1918. Serial No. 262,151. 2 Claims. (Cl. 238—14.)

1. A traction grip for insertion under one of the traction wheels of a self-propelled road vehicle, which comprises a suitably stamped sheet metal plate provided with transversely extending rows of depressions forming projections alternately arranged on opposite sides of said plate, said depressions being substantially hemispherical in shape and being formed out of the metal of the plate whereby corresponding substantially hemispherical rounded protuberances are provided on the opposite sides of the plate.



1,500,250. AUTOMATIC WOOD-TURNING LATHE. FRANK H. MCLAIN, Portland, Me., assignor to The McLain Co., Portland, Me., a Corporation of Maine. Filed Feb. 17, 1923. Serial No. 619,596. 6 Claims. (Cl. 144—46.)

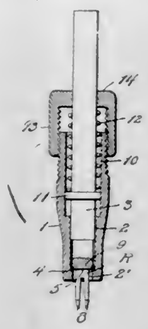
1. In a wood-turning lathe, the combination, with a bed; supporting legs; a headstock; a hollow, chuck-carrying spindle mounted in bearings in said headstock and means whereby said spindle may be rotated; with a chuck mounted on the nose of said spindle; of means for intermittently and positively opening the jaws of said chuck; means for intermittently and yieldingly closing the jaws of said chuck; the cooperation of said positive and yielding means automatically providing for

a closure of said jaws on said chuck firmly on to successive dowels, of slightly varying diameters, entering said chuck through said spindle, substantially as described.

1,500,251. ATTACHMENT FOR MILK BOTTLES. FRED MANGNER, Deer Park, Md. Filed Aug. 28, 1922. Serial No. 584,778. 1 Claim. (Cl. 232—42.)

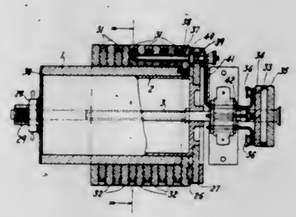
A device for the purpose set forth, comprising a fixed casing, a shaft journaled therein and projecting therethrough, a pivotally supported ring on the outer end of the shaft normally pendent therefrom and susceptible to swinging to longitudinal alignment therewith when swung in one direction only, a ratchet wheel fixed on the shaft in the casing, and a spring pawl in the casing engaging the ratchet wheel.

1,500,252. PISTON RING. LEWIS C. MARSHALL, Walpole, Mass., assignor to Pressure Proof Piston Ring Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 20, 1921. Serial No. 493,794. 10 Claims. (Cl. 74—109.)



1. A piston ring having an undercut groove disposed centrally of the width of its outer circumferential surface, and a ring loosely fitting within said groove, said ring having a bevelled edge corresponding to the undercut surface of the groove.

1,500,253. RIVET HOLDING AND SETTING TOOL. FRED. A. MILLER, St. Louis, Mo., assignor of one-half to Benjamin E. Tate, St. Louis, Mo. Filed Dec. 14, 1923. Serial No. 680,644. 5 Claims. (Cl. 218—19.)



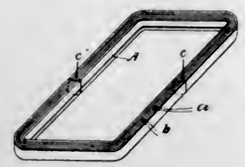
1. A riveting tool comprising a tubular body, a rivet-head seat at one end of said body comprising a recess

adapted to receive the marginal portion of the head of a rivet, and a plunger cooperating with said rivet-head

seat adapted to shear off that portion of the rivet not received in said head seat and set the same.

1,500,254. APPARATUS FOR CONTROLLING THE OPERATION OF TALKING MACHINES OR MACHINES IN TIMED RELATION TO A CINEMATOGRAPHIC MACHINE. FRANK ERNEST MOSLEY, Shettleston, Scotland. Filed Nov. 29, 1920. Serial No. 427,135. 1 Claim. (Cl. 200—24.)

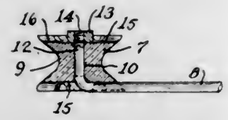
A selector switch comprising, in combination, a rotary shaft, a driving flange on said shaft, said flange having pockets, a drum of insulating material adapted to be removably secured to said flange, a plurality of axially separable conducting rings fixed to said drum and conjointly presenting a continuous surface of rotation, each ring comprising, conducting and insulating segments spaced differentially apart, a return ring coaxial with said conducting rings, conducting pins parallel with the axis of the shaft, said pins electrically connected to the several conducting rings and disposed opposite the pockets in said flange, a set of spring-pressed terminals in said pockets engageable with said pins, said terminals normally protruding beyond the face of said flange, a set of terminals in the return ring, and electrical connections between said sets of terminals.



1,500,255. PROCESS FOR THE PRODUCTION OF EFFECT THREADS WITH ANIMAL FIBERS. FERDINAND MÜNZ, Fechenheim-on-the-Main, Germany, assignor to Leopold Cassella & Co. Gesellschaft mit beschränkter Haftung, a Corporation of Germany. Filed Apr. 9, 1923. Serial No. 630,969. 1 Claim. (Cl. 8—13.)

A process for the production of effect threads with animal fibers by treating the fiber with esterified tannic acid in combination with metal salts, exerting a fixing effect on tannic acid.

1,500,256. METHOD OF TREATING COAL. THEODORE NAGEL, Brooklyn, N. Y. Filed Aug. 26, 1922. Serial No. 584,396. 3 Claims. (Cl. 44—1.)



1. The method of agglomerating small coal particles which method consists in bringing into intimate contact with the coal particles a substance formed by converting silicate of soda with water into a hydrated silica to unite the coal particles into lumps.

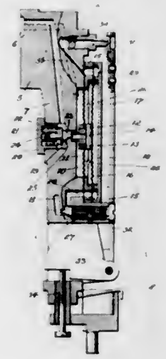
1,500,257. PICTURE FRAME. WALTER OPEL, Leipzig, Germany, assignor to the Firm Georgi & Co., Leipzig, Germany. Filed Apr. 27, 1923. Serial No. 634,997. 7 Claims. (Cl. 40—154.)

1. A picture frame or the like having the sides thereof formed of continuous successive layers of material, said layers being displaced, to a predetermined extent, to provide a desired profile or design on the front edge of said frame, the rear edge of said frame being of irregular contour because of said displacement.

1,500,258. THREAD GUIDE FOR SPINNING MACHINES. OTHO O'SULLIVAN, Willimantic, Conn. Filed Nov. 24, 1923. Serial No. 676,752. 8 Claims. (Cl. 242—157.)

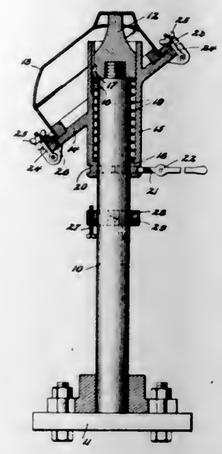
1. A thread guide, comprising a disc provided with a comparatively deep annular groove for frictionally engaging the thread, the disc having an axial bore, a holder for the disc comprising a rod bent to extend transversely at its end portion and adapted to engage the disc bore, securing means on the free projecting end of the rod bent portion, the disc having a plurality of means for engagement with the stem on one side face, whereby the fastening means will clamp the stem at such portions to hold the disc against turning, and on loosening such securing means the disc can be shifted on the stem for engagement with other said engaging portions and clamped in such adjusted positions by said means, and a thread guide held by said stem retaining means on the opposite face of the disc in adjusted positions, said guide having an arm deflected across the plane of the disc and that of the stem.

1,500,259. THERMOSTAT. ARTHUR J. OTTO, Milwaukee, Wis., assignor to Johnson Service Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 18, 1923. Serial No. 646,091. 3 Claims. (Cl. 236—82.)



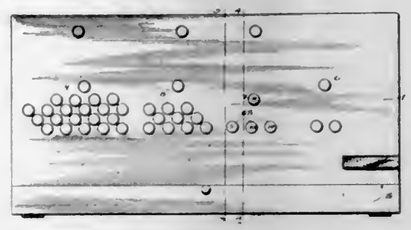
1. In an automatic control device, the combination of independently movable inlet and exhaust valves, a lever mechanism constructed and arranged to balance an opening stress exerted thereby on one of said valves against a closing stress simultaneously exerted thereby on the other of said valves; resilient means arranged to resist movements of the valves under the stresses exerted thereon through said lever mechanism, and to

exert a predominant resistance on one of said valves, whereby said valves are caused to open, one at a time, by the lever mechanism in different positions thereof and both valves are closed in an intermediate position: a diaphragm subject on one side to the pressure con-



trolled by said valves, and arranged to actuate said lever mechanism; a responsive element arranged to control a fluid pressure acting against the other side of said diaphragm; and means for subjecting a controlled device to the first named pressure.

1,500,260. THERMOSTAT. ARTHUR J. OTTO and CARL A. OTTO, Milwaukee, Wis., assignors to Johnson Service Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 31, 1923. Serial No. 671,936. 2 Claims. (Cl. 236—82.)

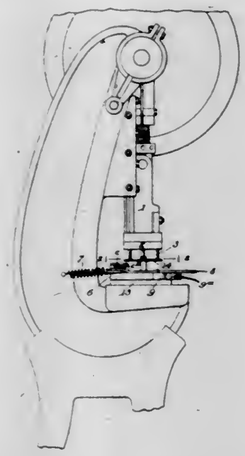


1. A control device comprising in combination a body having a chamber, a pressure fluid inlet port leading thereto, and a port for connecting said chamber with a device to be controlled; a movable wall closing one side of said chamber and formed with an exhaust port leading through said wall to atmosphere; a valve controlling said supply port, spring urged in its closing direction, and arranged to be engaged by said movable wall, and when so engaged to close said exhaust port and upon further inward movement of said wall to open said supply port; a second chamber having a movable wall larger than and in opposed thrust relation with the movable wall of the first chamber; and a valve mechanism responsive to changes in the medium to be controlled and serving to vary the pressure in said second chamber.

1,500,261. SHEET-METAL-SPINNING MACHINE. GEORGE E. PAGE, Rochester, N. Y., assignor to Montour Aluminum Soldering Corporation, Montour Falls, N. Y., a Corporation of New York. Filed Apr. 18, 1921. Serial No. 462,218. 3 Claims. (Cl. 113—52.)

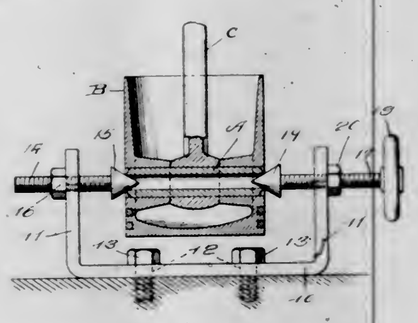
1. A device of the class described for spinning a nose on a cup-shaped sheet metal article at an angle to the axis of the article, comprising in combination, a rotatable mandrel, and a work holding platform inclined to the axis of the mandrel and rotatable therewith but longitudinally movable relatively thereto.

1,500,262. CHANGE-MAKING DEVICE. ANGELO PAPOULIAS, Steubenville, Ohio. Filed May 31, 1923. Serial No. 642,691. 11 Claims. (Cl. 133—2.)



1. In a change making device, a money changing unit including a coin holder, an ejector for said holder, a sliding plunger, a slidable connecting plate between the sliding plunger and the ejector and a key for controlling said slidable connecting plate.

1,500,263. SOLE-PUNCHING MACHINE. JOSEPH E. PERRAULT, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed July 23, 1923. Serial No. 653,269. 12 Claims. (Cl. 164—59.)

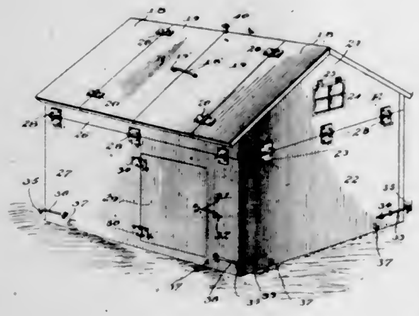


1. In punching apparatus for the purpose described, a die plate having a die opening, and a reciprocating cylin-

drical punch cooperating therewith, said die opening having its upper portion corresponding in diameter and

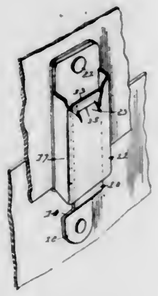
length to the die, and having a converging portion immediately below said cylindrical portion.

1,500,264. PISTON VISE. GEORGE M. PETERSON, Sturgeon Bay, Wis. Filed May 16, 1923. Serial No. 639,352. 2 Claims. (Cl. 81—3.)



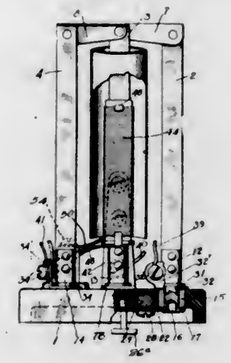
1. A vise of the character described comprising a base having upstanding parallel arms, the arms being internally screw-threaded, an adjustment screw passing through one of said arms and having a conical head, the adjustment screw carrying a nut holding the screw locked in place, and an adjustment screw passing through the other arm and having an enlarged conical head, this screw being provided with a handle whereby it may be rotated, and a set nut on the screw for holding the screw in adjusted position.

1,500,265. METHOD OF EXTRACTING LIQUID FROM POROUS MATERIAL CONTAINING THE SAME. JOSEPH E. PLUMSTEAD, Wilmington, Del., assignor to The Jessup & Moore Paper Co., Philadelphia, Pa., a Corporation of Massachusetts. Filed Nov. 2, 1922. Serial No. 598,697. 1 Claim. (Cl. 44—1.)



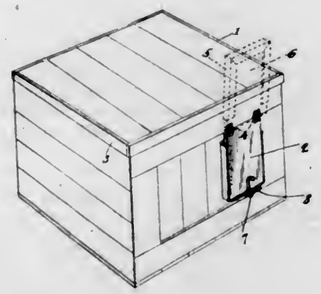
A method of preparing pulverized fuel, which includes the step of subjecting a moist carbon sludge resulting from the reclamation of soda pulp black liquor, to a grinding action, thereby overcoming the cohesion between the carbon masses and carbon particles, and separating each from its neighbor to free mechanically held water, and separating said water from said carbon.

1,500,266. HUT FOR SWINE. JAMES DARREL PRIMM, Sr., Athens, Ill. Filed Apr. 13, 1922. Serial No. 552,117. 2 Claims. (Cl. 20—2.)



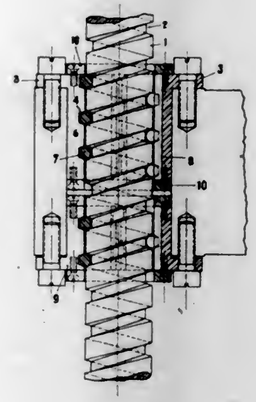
1. In a hut of the character described, a pair of side walls each comprising a single door hinged for upward swinging movement, and a cable for each door adapted to have its ends connected thereto and its middle portion attached to the roof of the hut for holding the door in an upwardly swung position.

1,500,267. BUCKLE. STANLEY K. REDDING, Bluffton, and ORVA V. LANTIS, Markle, Ind. Filed Sept. 7, 1922. Serial No. 586,628. 3 Claims. (Cl. 24—230.)



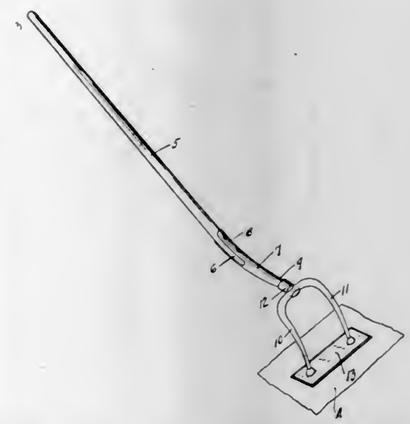
1. A buckle having complemental members of which one is provided with a tongue having a terminal opening and the other is provided with a sleeve for the reception of said tongue and carries a lug for engagement with the opening in said tongue, said sleeve member consisting of a folded blank having a main strip foldable longitudinally to lie in contact with opposite surfaces of an interposed object and a lateral wing for transverse folding with relation to said strip to form the sleeve.

1,500,268. THERMOSTAT DEVICE. JAMES B. REPLOGLE, Detroit, Mich., assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed July 5, 1919. Serial No. 308,744. 17 Claims. (Cl. 297—11.)



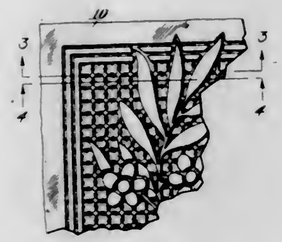
1. A thermostat device comprising a plurality of thermostatic elements whose movements due to environment temperature are compensatory, and which have relative movement on increase in temperature of one of the elements in respect to the other, means for utilizing said relative movement, and means for applying heat to one of said elements to raise its temperature above the environment temperature.

1,500,269. CARD-HOLDING DEVICE. FRANK J. REYNOLDS, Rockville Center, Long Island, N. Y. Filed July 14, 1922. Serial No. 574,914. 1 Claim. (Cl. 40—16.)



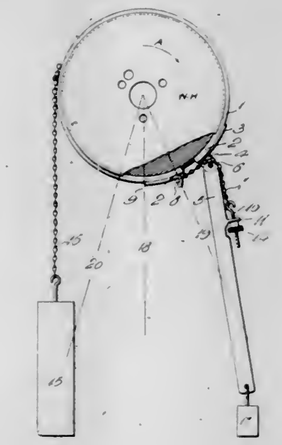
The combination of a shipping case constructed with reinforcing boards along the edges to provide a recess having a reentrant angle in the side of the case, and a base plate hinged at its lower rear side to one of the said boards adjacent said angle so as to occupy a portion of the recess, said base plate carrying a card with its face toward the shipping case and in inverted position.

1,500,270. BALL BEARING FOR SCREW GEARING. FRIEDRICH G. B. RÖDEL, Lutzen, Germany. Filed Dec. 6, 1923. Serial No. 678,839. 5 Claims. (Cl. 74—40.)



1. In a ball bearing for screw gearing, a threaded shaft, a threaded casing surrounding said shaft, ball bearings received in the threads of said shaft and said casing, and means confining said balls, said means comprising members insertable axially of said shaft.

1,500,271. WEEDER. ARGYLL L. RUMBAUGH, Dillon, Mont. Filed Apr. 6, 1922. Serial No. 550,662. 1 Claim. (Cl. 97—68.)



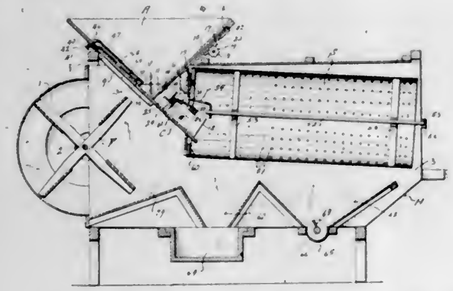
An agricultural implement comprising a handle having one end thereof curved, a substantially U-shaped member carried by the curved end of the handle, and including a pair of spaced arms, said arms being longitudinally curved in the opposite direction to the curvature of the end of the handle and having their extremities beveled, and a single cutting blade secured to the beveled ends of the arms, said arms being positioned at the longitudinal center line of the blade and inwardly of the ends thereof.

1,500,272. METHOD OF ORNAMENTING STONE. ROBERT GREENLEAF SANBORN and FREDERICK HASLAM, Northfield, Vt., assignors to E. A. Chase Granite Company, Northfield, Vt. Filed June 23, 1923. Serial No. 647,404. 4 Claims. (Cl. 41—39.)

1. The method of producing a recessed surface on a block of stone which consists in cutting away a part of the stone by a blast of abrasive, interposing a screen in the path of the abrasive, and thereafter cutting away additional stone with the blast directed through the screen, thereby substantiallily reproducing the formation of the screen on the face of said recessed portion.

1,500,273. LET-OFF. HERMAN J. SATTLER, Sr., Quakertown, Pa. Filed Sept. 22, 1923. Serial No. 664,259. 12 Claims. (Cl. 188—88.)

1. The combination with a warp head; of a friction band surrounding the periphery of said head and having its ends spaced apart, and means controlled by the rotation of said head for causing said ends to approach one another at predetermined intervals, whereby to radially tighten said band around the head to obtain a frictional grip from end to end of the band.

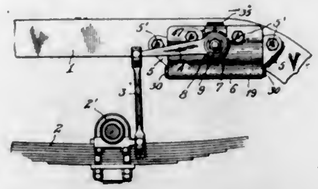


1,500,274. WINDOW CLEANER. NICHOLAS D. SCARLING, Richmond, Va. Filed Aug. 31, 1921. Serial No. 497,271. 1 Claim. (Cl. 15—126.)

A cleaning appliance of the class described comprising a support, a handle therefor, an elongated cap detachably mounted on said support, parallel flanges upstanding from a wall of said cap, a rubber strip clamped between said

flanges and extending beyond the free outer edges thereof, said clamping means passing through said parallel flanges and rubber strip.

1,500,275. FANNING MILL. GOTTFRIED SCHICK, Tampa, Kans. Filed Oct. 29, 1921. Serial No. 511,317. 3 Claims. (Cl. 130—16.)



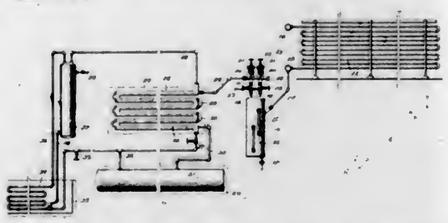
1. In a fanning mill, bearing means carried by the casing, a bar pivoted at one end on the front of the casing and extending entirely thereacross, a shaft journaled in said bearing means and said bar and carrying a sieve, a shaft journaled exteriorly of the casing and having one end carrying a cam engaging said bar for oscillating the same, and means for simultaneously rotating both of said shafts.

1,500,276. COMPOUNDING VEHICLE OR BASE. JOSEPH SCHNEIBLE, Chicago, Ill. Filed Dec. 17, 1921. Serial No. 523,234. 7 Claims. (Cl. 167—9.)

3. A compounding vehicle or base in the form of an unctuous mass containing a neutral soap, water, and free fatty acid finely and uniformly dispersed therethrough, there being 15 to 20% of solids therein, and the proportion of free fatty acid being about one-half that of the neutral soap.

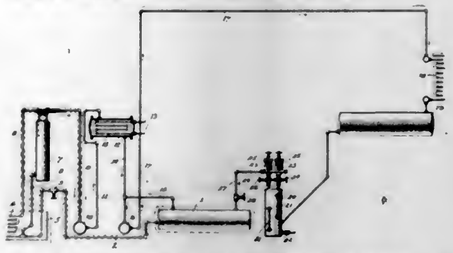
7. The process of preparing a compounding vehicle or base which comprises forming a solution of a neutral soap in water, incorporating a stearic acid therein at a temperature above the melting point of said acid, the proportion of fatty acid being about one-half that of soap and the total solids in the mass being 15 to 20%, slowly cooling the mixture to below the crystallization temperature of the stearic acid, whereby the stearic acid is finely and uniformly dispersed through the mass, and thoroughly intermixing the mass.

1,500,277. SHOCK ABSORBER. HARRY SELKER, Cleveland, Ohio. Filed July 23, 1921. Serial No. 486,967. 29 Claims. (Cl. 188—88.)



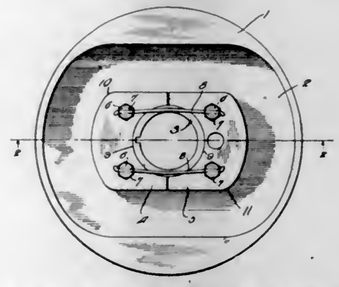
1. In a fluid shock absorber, the combination of a casing having a cylindrical chamber; a piston adapted to reciprocate in said chamber and dividing the same into a plurality of compartments; means providing a plurality of conduits of restricted cross-sectional area each communicating with a plurality of said compartments; means preventing fluid transfer through some of said conduits in one direction of movement of the piston and through the other of said conduits in the other direction of movement of the piston; and shock-transmitting means connected to the movable body whose shocks are to be absorbed and acting upon the piston.

1,500,278. SOLDERING IRON. FREDERICK W. A. SENKEL, Baltimore, Md. Filed Sept. 14, 1923. Serial No. 662,700. 2 Claims. (Cl. 113—109.)



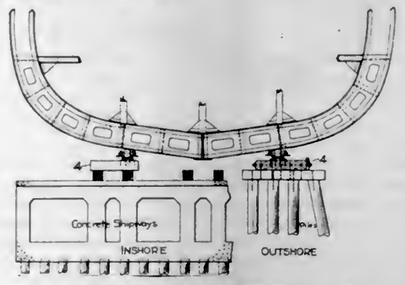
1. A soldering iron of the class described including a head, a container connected to the head, said head provided with a conduit communicating with the container, said head also provided with a valve seat extending across the conduit, a valve movable in the head adapted to be seated on the valve seat by gravity whereby the flow of solder from the container through the conduit may be regulated by turning the soldering iron in the manner and for the purpose specified.

1,500,279. METHOD OF AND MEANS FOR SEPARATING OIL FROM THE REFRIGERANT IN REFRIGERATING SYSTEMS. THOMAS SHIPLEY, York, Pa. Filed Oct. 2, 1923. Serial No. 666,196. 16 Claims. (Cl. 62—178.)



8. The method of removing oil from the refrigerant in a refrigerating system of the compressor condenser evaporator circuit type, which consists in subjecting the refrigerant between the compressor and the evaporator to a two-stage cooling treatment in the first stage of which the refrigerant is condensed and subjecting the refrigerant as it flows between said stages to successive gravity separation and filtering treatments.

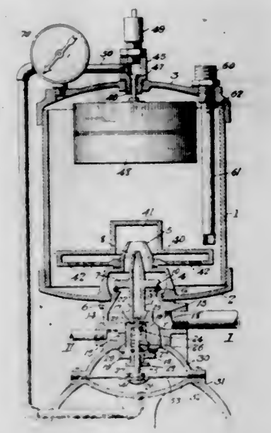
1,500,280. MEANS FOR SEPARATING OIL FROM THE REFRIGERANT IN REFRIGERATING SYSTEMS. THOMAS SHIPLEY, York, Pa. Filed Jan. 4, 1924. Serial No. 684,348. 7 Claims. (Cl. 62—115.)



1. The combination with a refrigerating system of the compressor condenser evaporator circuit type, including two compressor stages and an intermediate receiver subject to the suction pressure of the high pressure stage, and connected to receive liquefied refrigerant from the condenser and to feed it to the evaporator, of an oil removing filter interposed in the refrigerant line between the condenser and the intermediate receiver.

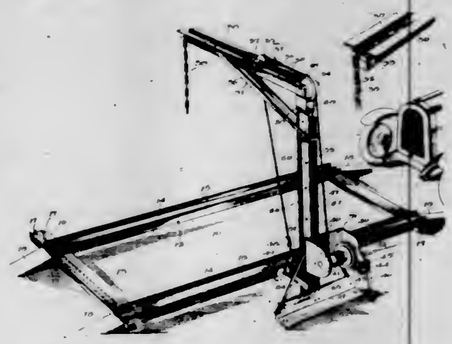
1,500,281. NIPPER CAM FOR WHITIN COMBERS. RUFUS EDWARD STARNES, Mount Holly, N. C. Filed July 20, 1923. Serial No. 652,846. 2 Claims. (Cl. 19—116.)

1. In a device of the class described, the combination of a cam member having a cam race, a central bearing, opposite cam members removably and reversibly mountable on the bearing member and forming the inner wall of the cam race and means for releasably locking said cam members in position on the cam to complete the cam race.



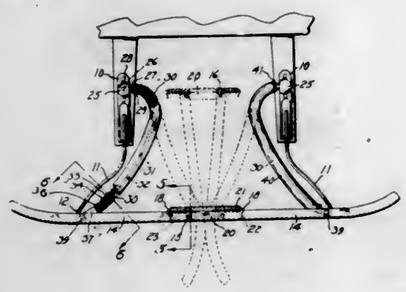
1,500,282. HAULING-OUT SYSTEM FOR SCRAPPING VESSELS AND APPARATUS FOR THE SAME. FREDERICK C. STAUFFEN, Baltimore, Md., assignor to Union Shipbuilding Company, a Corporation of Pennsylvania. Filed Mar. 4, 1924. Serial No. 696,865. 2 Claims. (Cl. 61—67.)

1. An apparatus for drawing floating bodies out of the water, consisting of an inclined way, tracks thereon,



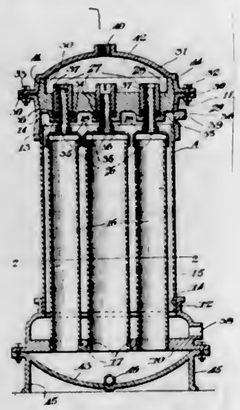
and a series of connected and spaced rollers traveling thereon upon which rollers the floating body directly rests, and upon which it travels.

1,500,283. CARBONATING APPARATUS. HUGH S. STINSON, Minneapolis, Minn. Filed June 21, 1922. Serial No. 569,837. 12 Claims. (Cl. 261—64.)



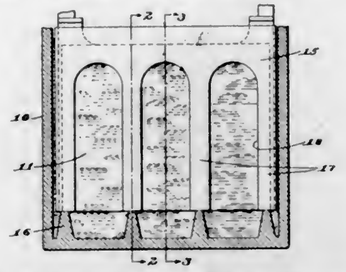
2. Appratus for carbonating water and the like, comprising a tank, a discharge connection therefor, liquid and gas supply connections thereto, means to maintain the pressure in the tank below that of the liquid supply, means responsive to the difference in the pressure in the tank and the liquid supply connection for controlling the supply of gas to the tank, and means for receiving and mixing the gas and liquid and discharging the mixture into the tank.

1,500,284. HOIST FOR MOTOR VEHICLES. WILLIAM L. STUBBS, Norfolk, Va. Filed Nov. 17, 1922. Serial No. 601,521. 7 Claims. (Cl. 214—1.)



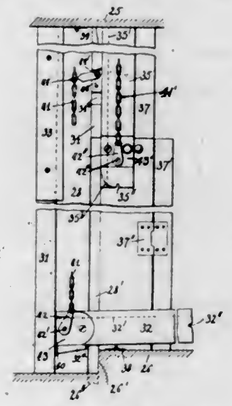
1. In an apparatus of the character described, a frame, means for supporting the frame to permit transverse movement thereof, a post positioned at one side of the frame and at a point central to the length of the frame, a connection between the last named side of the frame and the post, said connection including roller means to permit free upward movement of this side of the frame, and means for lifting the last named side of the frame, said means being adapted to exert a pull from a point occurring above the frame and inwardly spaced with relation to the post.

1,500,285. FOLDING BUMPER FOR AUTOMOBILES. THOMAS D. TERLIZZI, Worcester, Mass. Filed Aug. 27, 1923. Serial No. 659,461. 12 Claims. (Cl. 293—55.)



1. In an automobile bumper, the combination of two opposite arms and a center block, said arms being pivotally connected with the center block and capable of swinging inwardly at that point, and means for rigidly supporting said arms at points at a distance from their ends.

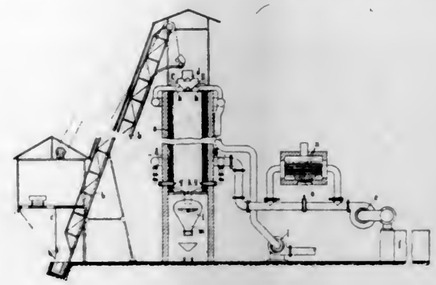
1,500,286. WATER HEATER. JOSEPH ALEXIS OVILA TERRIAULT, Ottawa, Ontario, Canada. Filed Nov. 7, 1922. Serial No. 599,562. 3 Claims. (Cl. 257—224.)



1. A heater of the character described comprising in combination, a cylindrical casing threaded at each end to engage with a lower and apertured plate member, and an upper flanged ring shaped member, a plurality of tubes in the casing adapted to fit into the lower plate member, a detachable inner plate adapted to fit into said ring member and provided with spaced restricted openings therethrough, a dome shaped head formed with a flange adapted to overlap the flange on the ring shaped member and bolt securing means extending through said flanges, an extension formed on the inner plate and a recess formed in the head piece adapted to snugly engage with said extension, whereby the joint between the head piece and the ring shaped member is rendered leak-proof, restricted pipe means detachably secured on said tubes and designed to extend through said inner plate, and a suitably formed base member provided with supports adapted to be clamped to the lower plate member, a steam discharge opening at said base and a steam intake opening in the head piece and water intake and discharge means in the bottom plate and ring shaped member respectively.

1,500,287. STORAGE BATTERY. RALPH W. WALES, Auburndale, Mass. Filed May 5, 1921. Serial No. 467,006. 5 Claims. (Cl. 204—29.)

1. A storage battery comprising, in combination with the active plates and the electrolyte thereof; separators, made of insulating material arranged between the active plates, and having openings extending up and down, with lateral surfaces of said openings so steeply inclined as to shed downward any solid substance falling thereon; there being at the bottom a space below said opening into which material shed therefrom may fall; and the horizontal and vertical boundaries of said openings in each separator being integral with each other, whereby the entire thickness of stock is used in their junction.



1,500,288. WINDOW. JACOB WEBER, New York, N. Y. Filed Aug. 5, 1920. Serial No. 401,372. 9 Claims. (Cl. 20—42.)

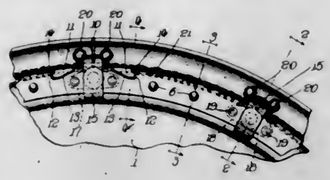
1. In a window, a frame, a sash, means to suspend said sash from said frame for free vertical movement, said sash provided with normally inactive pivot bolts at its sides, and said frame provided with elongated sockets with which said bolts are brought into alignment when said sash is brought to its lowermost position, said bolts and sockets located at one side of the central vertical plane of the sash whereby when said bolts are projected into said sockets a pivotal connection between said sash and frame is effected, said bolts being transversely movable in said sockets and the place of said connection being located to provide clearance between the lower edge of the sash and the frame during the pivotal movement thereof and said bolts being mounted for free slidable movement into said sockets.

1,500,289. PROCESS FOR THE PRODUCTION OF AN ALKALI METAL SULPHATE AND HYDROCHLORIC ACID. JOSEF WENER, Essen, Germany. Filed Aug. 30, 1921. Serial No. 496,908. 6 Claims. (Cl. 23—1.)

1. The process for the production of alkali metal sulphates and hydrochloric acid from alkali metal chlorides consisting therein that an alkali metal chloride is caused to pass from the top to the bottom of a shaft against an uninterrupted current of an atmosphere of gases com-

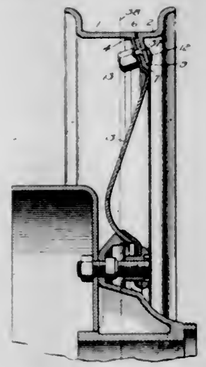
prising sulphurous acid, water vapor and oxygen, and the solid product of reaction of said alkali metal chloride with said gases is discharge at the bottom and the gaseous reaction product at the top of the shaft.

1,500,290. PUMP. ABNER H. WINORG, Buffalo, N. Y. Filed Apr. 14, 1922. Serial No. 552,822. 1 claim. (Cl. 103—179.)



A pump comprising a working barrel, a rod mounted therein and carrying a working valve, a sleeve threaded upon the upper end of the barrel and slidably receiving the rod, a seating member threaded within the upper end of the barrel and having a portion disposed above the upper end edge of the barrel, a piston rod slidably received in the seating member, a disk slidably mounted upon the piston rod and housed within the sleeve, stops carried by the sleeve and spaced above the seating member and disposed in the path of movement of the disk, said disk being provided at its upper side with an annular cavity, the parts being so arranged that the piston rod may have unlimited sliding movement with relation to the disk.

1,500,291. WHEEL RIM. WILLIAM ERASTUS WILLIAMS, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 23, 1920. Serial No. 412,159. 6 Claims. (Cl. 152—21.)

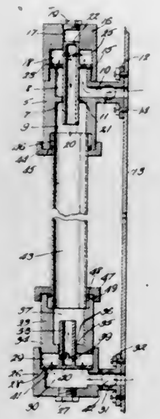


1. The combination with a wheel web, of a main tire receiving rim member having at one margin an outwardly extending flange and at the other side an in-

wardly offset portion merging into an inwardly extending flange overlapping and rigidly fixed to said web, and a transversely divided rim ring having an outer tire

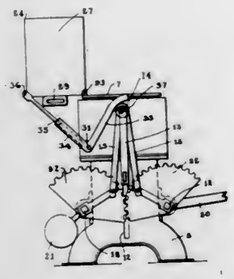
retaining flange and a portion fitting over said inwardly offset portion and forming, peripherally, an extension of the tire receiving surface of the main rim member.

1,500,292. METAL RIM AND DISK WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Original application filed July 26, 1920, Serial No. 398,927. Divided and this application filed June 16, 1921. Serial No. 478,029. 8 Claims. (Cl. 152—21.)



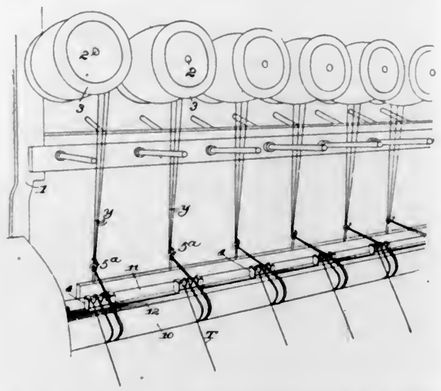
4. A rim composed of a main annular member and a companion annular member, each provided, at some distance outwardly from the central load plane, with an inwardly extending flange inclined outwardly with respect to the plane of the wheel, the flange of the main member having elongated perforations, and a series of bolts fixed to the flange of the companion member and adapted to pass through said perforations and to receive clamping nuts.

1,500,293. FIREARM. HENRY E. WINANS, Alton, Ill. Filed Dec. 5, 1923. Serial No. 678,627. 9 Claims. (Cl. 42—1.)



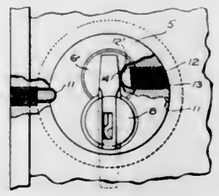
9. A firearm having a barrel, and a rib extending longitudinally of said rib, said rib being formed of a material impervious to heat and said rib being provided with an inclined top face along which the object being fired upon is sighted.

1,500,294. WATER GAUGE. ERNEST WOOD, Yorkton, Saskatchewan, Canada. Filed Oct. 14, 1920. Serial No. 416,949. 1 Claim. (Cl. 73—54.)



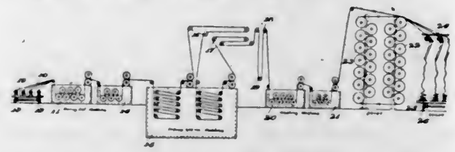
A water gauge adapted for connection to a steam boiler comprising a pair of spaced open ended valve casings, a gauge glass, means for securing said gauge glass to adjacent ends of the valve casings, means forming an upper and lower chamber in each valve casing including a horizontal member having a passage for establishing communication between said chambers, a valve comprising a disk having a sleeve secured to one face thereof and extending at right angles thereto, said disk having ports adjacent its periphery and said sleeve having ports near its attachment to the disk, means for normally supporting said valves in spaced relation from said horizontal member so that the sleeves thereof are slidable in the passage extending through the member, whereby upon breakage of the gauge glass the valves are caused to move vertically to closed position thereby cutting off communication between the upper and lower chambers in each casing through the ports in the valves.

1,500,295. CEMENT-BLOCK MACHINE. CLEMENT ZOPHY, West Allis, Wis. Filed June 9, 1922. Serial No. 566,993. 6 Claims. (Cl. 25—41.)



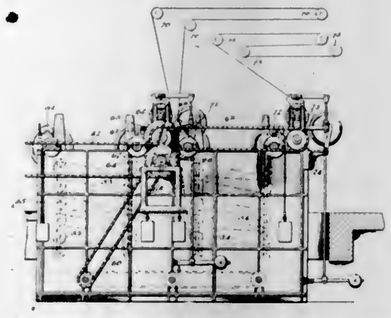
1. A machine of the class described comprising a casing; a mold supporting member within said casing; a mold member pivotally secured to said supporting member; and means for moving said mold and supporting members out of said casing and simultaneously swinging the former about its pivot.

1,500,296. TWISTER. JOHN SNELGROW BACHMAN, Rome, Ga. Filed Mar. 3, 1923. Serial No. 622,636. 6 Claims. (Cl. 117—21.)



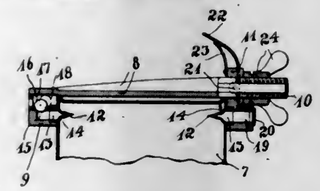
1. In combination with the revolving rolls of a twister, means disposed between the rolls to keep separated strands of yarn wrapped from one roll to the next, and means to adjust the position of the separating means in respect to the rolls.

1,500,297. CYLINDER LOCK. FRANK E. BEST, Seattle, Wash. Filed Feb. 14, 1922. Serial No. 536,428. 2 Claims. (Cl. 70—46.)



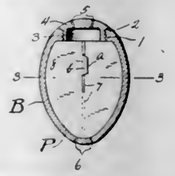
1. In a lock of the class described the combination with a core housing arranged to be inserted in a lock case and provided with a hole in one side, of a core adapted to fit into said core housing and having an indentation arranged to register with said hole in said core housing and detent means operable in said hole and arranged to enter said indentation to retain said core in said core housing, access to said detent means being impossible when said core housing is within a lock case.

1,500,298. LONG-CHAIN-WARP-TREATING APPARATUS. HAROLD MASON CHASE and GEORGE WILMOT ROBERTSON, Danville, Va., assignors to Riverside and Dan River Cotton Mills, Inc., Pittsylvania County, Va., a Corporation of Virginia. Filed Dec. 5, 1922. Serial No. 605,032. 4 Claims. (Cl. 8—19.)



1. In an apparatus for the treatment of long chain warps, boiling-out tanks, a dye vat, washing tanks and a drier arranged for a continuous run of long chain warps therethrough, and divided into two ranges having a compensating device therebetween and of which one range is provided with means to increase and decrease the speed of movement of warps therethrough, with respect to the other.

1,500,299. WARP-DYEING APPARATUS. HAROLD MASON CHASE and GEORGE WILMOT ROBERTSON, Danville, Va., assignors to Riverside and Dan River Cotton Mills, Inc., Pittsylvania County, Va., a Corporation of Virginia. Original application filed Dec. 5, 1922, Serial No. 605,032. Divided and this application filed Sept. 29, 1923. Serial No. 665,722. 3 Claims. (Cl. 8—19.)



2. In a warp treating apparatus, a warp dyeing machine including a single dye chamber having means for separate, successive movements of warps therethrough, and having squeeze rolls and oxidizing devices for the warps after each movement thereof through the dye chamber, and means for continuously agitating the dye material in said dye chamber.

1,500,300. ATTACHABLE VALVE. WILLIAM R. CLARK, San Diego, Calif. Filed June 15, 1922. Serial No. 568,524. 2 Claims. (Cl. 221—23.)

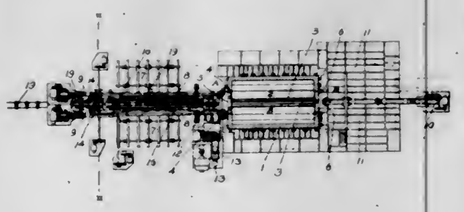
1. In a device of the class described, a bar to be placed on the top of a liquid-holding container having a hook-like end to reach over one side and terminating at its other end in a threaded portion to extend over the opposite side of the container, a valve controlled hollow piercing member in the hook-like end of the bar, and another valve-controlled hollow piercing member adjustably mounted on the threaded end of the bar.

1,500,301. CONTAINER. BENJAMIN F. CUMMINGS, Reeds Spring, Mo. Filed Feb. 23, 1922. Serial No. 538,601. 1 Claim. (Cl. 119—46.)

In combination with a receptacle provided with openings, partitions arranged within the receptacle to divide

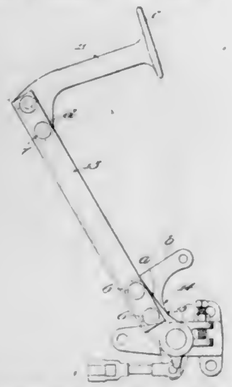
the same into compartments, said partitions having open slots to permit said partitions to interlock, the side wall of the slot of one of the partitions being provided with a recess, the second wall of the slot having a lug which normally extends within said recess, the second partition inwardly of the open slot therein having an opening through which the lug of the first partition extends when the partitions are in interlocking arrangement.

1,500,302. RAIN PROTECTOR FOR VEHICLES. GEORGE W. DOVER, Cranston, R. I., assignor of one-half to John Montgomery, Woonsocket, R. I. Filed Oct. 10, 1921. Serial No. 506,723. 7 Claims. (Cl. 296—99.)



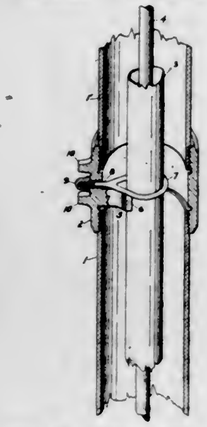
1. In a rain protector for vehicles, a vehicle top provided with a bow, clamping means detachably secured to said bow, a shield pivotally supported by said clamping means for movement into outwardly extending position or inwardly retracted position relative to said top, a curtain carrying roll rotatably supported by said detachable clamping means, and a curtain carried by said roll and movable into extended position when said shield is in either its extended or retracted positions.

1,500,303. PROCESS OF MAKING RESINOUS MATERIAL FROM PARALDEHYDE. CARLETON ELLIS, Montclair, N. J. Filed July 3, 1923. Serial No. 649,377. 3 Claims. (Cl. 260—4.)



1. The process of making a resin which comprises adding paraldehyde to a reactive phenol capable of resinification therewith, in the presence of an acid catalyst, the addition being made very gradually to obtain a chilling effect in part compensating for the heat of the reaction whereby regulation of the temperature is better effected.

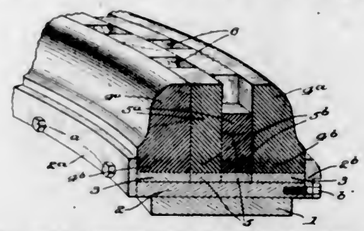
1,500,304. PIPE MILL. FRANK I. ELLIS, Pittsburgh, and JOHN H. SENNETT, Woodlawn, Pa., assignors to Jones & Laughlin Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 11, 1920. Serial No. 429,853. 14 Claims. (Cl. 78—83.)



1. In a pipe-welding mill, the combination of a furnace, a welding machine with its bar puller standing opposite the delivery opening from the furnace, and a conveyor for the welded pipe leading from the welding machine and bar puller in longitudinal continuation of the line of the advance of the pipe through the welding machine, substantially as described.

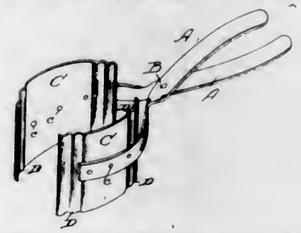
1,500,305. PEDAL FOR AUTOMOBILES. STEPHEN I. FEKETE and STUART G. BAITS, Detroit, Mich., assignors to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 2, 1923. Serial No. 655,260. 2 Claims. (Cl. 74—81.)

1. The improved pedal for automobiles which comprises an arm for engagement with a cross shaft, a channel member secured at one end to said arm and a foot plate member secured to the other end of said channel member.



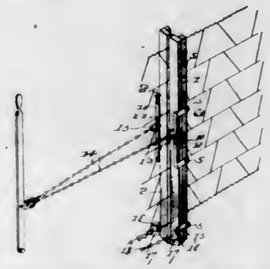
1,500,306. DEEP-WELL-PUMP COLUMN COUPLING. WALTER L. FORWARD, Oakland, and JOHN B. KEATING, Piedmont, Calif. Filed Oct. 5, 1922. Serial No. 592,495. 7 Claims. (Cl. 103—111.)

3. In a deep well pump column, a coupling, comprising, a body threaded at each end for the reception of the outer column pipe sections, and a ring bolt member adapted to loosely encircle the inner pipe column, the said body provided with an inner projection and outer projections, the said inner projection adapted to partially encircle the said inner pipe column, and in conjunction with said ring bolt, center, align and hold the said inner column in position; the said outer projections on said body adapted to protect the nut of the said ring bolt from injury in the lowering or withdrawing of the column in the well.



1,500,307. SECTIONAL CUSHION TIRE. ALFRED A. GLIDDEN, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed May 8, 1923. Serial No. 637,523. 3 Claims. (Cl. 152—9.)

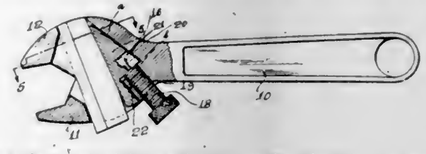
1. In a sectional cushion tire and in combination, an annular carrying rim having removable tire retaining means at one edge thereof, and a sectional cushion tire removably carried thereby and comprising a plurality of annular members, each of which in turn comprises an



annular metal carrying band and an annular cushion tire section fast thereon, certain of said tire sections having transversely disposed grooves or recesses in their peripheries.

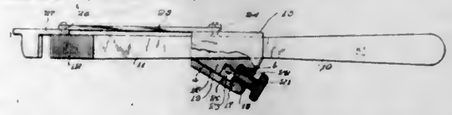
1,500,308. GRIPPING DEVICE FOR CANNING JARS. MAX GOLDBERG, Detroit, Mich. Filed Aug. 27, 1923. Serial No. 659,481. 2 Claims. (Cl. 81—3.2.)

1. In a device of the character described, a pair of hinged members provided with relatively broad arcuate shaped jaws having terminal engaging portions provided with corrugations extending entirely across the said terminal portions from the upper to the lower edge thereof and adapted to engage the surface of a canning jar.



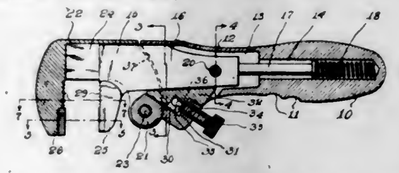
1,500,309. FENCE-WIRE CLAMP FOR FENCE STRETCHERS. WILEY L. GOLDSTON, Quebeck, Tenn. Filed Apr. 15, 1922. Serial No. 552,987. 1 Claim. (Cl. 254—83.)

A wire stretcher clamp comprising a pair of elongated rigid clamping jaws rearwardly extending U-shaped brackets fixed to the outer sides of the jaws midway between the ends thereof and embodying relatively long central portions extending parallel with the jaws and having notches in their inner edges, and rings releasably engageable in desired ones of said notches and constructed for connection with a pulling mechanism whereby the pulling stress may be exerted in a plane at either side of the transverse center of the clamp.



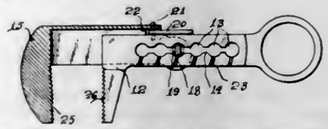
1,500,310. WRENCH. FRANK C. HACHENEY, John Day, Oreg. Filed July 16, 1923. Serial No. 651,923. 2 Claims. (Cl. 81—154.)

1. A wrench comprising a fixed member and a slidable member, said fixed member having a guide opening and a recess therein, said slidable member having a shank received in said guide opening, said recess having two walls at right angles to each other and one of said walls provided with a screw threaded opening, a tapered locking key cooperating with said shank for holding said slidable member in rigid adjusted position and having



two faces at right angles to each other to cooperate with the right angular walls of the recess, and a screw operating member passing through said opening in the wall of the recess and connected to said locking key, whereby the key is adjusted to locking position by sliding over the other of said right angular walls of the recess.

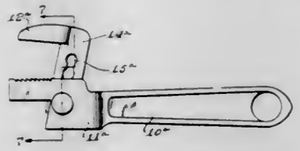
1,500,311. WRENCH. FRANK C. HACHENEY, John Day, Oreg. Filed July 16, 1923. Serial No. 651,924. 4 Claims. (Cl. 81—106.)



1. A wrench comprising a shank, a slidable member on said shank and adjustable longitudinally thereof, means for holding said slidable member in adjusted position, a head associated with said shank, a bar pivotally connected to said slidable member, and a head pivotally connected to said bar and cooperating with the head associated with the shank.

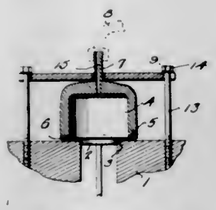
1,500,312. WRENCH. FRANK C. HACHENEY, John Day, Oreg. Filed July 16, 1923. Serial No. 651,925. 5 Claims. (Cl. 81—154.)

1. A wrench comprising a stationary member having a longitudinal bore and a recess in communication with said bore, a longitudinally movable member having a tapered shank slidable in said bore over said recess, a head pivoted to said stationary member at a point below said tapered shank, a tapered locking key within said recess and cooperating with said tapered shank for holding the latter in rigid adjusted position with respect to said stationary member, and a screw bearing on said locking key for holding same against said tapered shank.



1,500,313. WRENCH. FRANK C. HACHENEY, John Day, Oreg. Filed July 16, 1923. Serial No. 651,926. 4 Claims. (Cl. 81—109.)

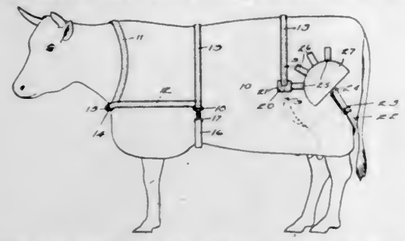
1. A wrench comprising a stationary member having a shank portion provided with a series of longitudinally spaced holes connected together by slots, a movable member having a channeled shank slidably positioned on



said stationary shank and provided with aligned openings in the sides thereof, a pivot pin passing through said aligned openings and positioned in a predetermined hole in the stationary shank, said pivot pin having a reduced portion to permit of its passing through said slots from hole to hole when the wrench is to be adjusted, and a locking bar pivotally connected to said movable member and cooperating with said stationary member to prevent accidental longitudinal movement of the movable member.

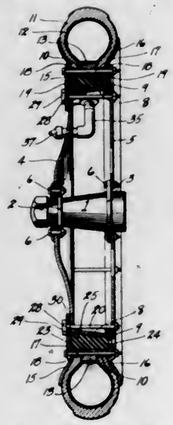
1,500,314. WRENCH. FRANK C. HACHENEY, John Day, Oreg. Filed July 16, 1923. Serial No. 651,927. 1 Claim. (Cl. 81—109.)

In a wrench, the combination of a shank having a straight fixed head in longitudinal alignment therewith and offset therefrom in a transverse direction, said head having two work engaging flat faces, a channel at right angles to said shank and openings in the side walls of the channel, a straight movable head having a shank at right angles thereto and provided with a single work engaging flat smooth face, said shank having a plurality of holes therethrough, adjacent holes being connected by slots, a pin passing through the openings in the side walls of the channel and through a selected hole of said movable shank, said pin having a cup shaped washer at one end thereof and a fastening screw therefor and a spring for holding said pin in proper position, said fastening screw being quickly removable to permit of the removal of the pin so that the movable head may be positioned reversibly so as to present its work engaging smooth face with either of the work engaging faces of the fixed head.



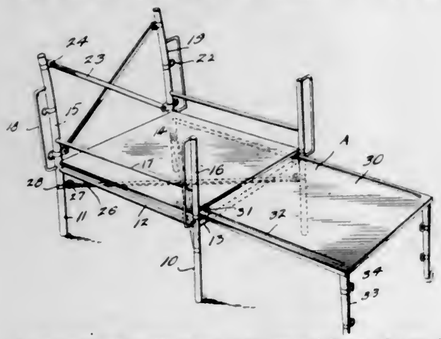
1,500,315. TOOL. NELSON C. HALL, Olin, Iowa. Filed Jan. 9, 1922. Serial No. 528,006. 3 Claims. (Cl. 73—51.)

1. A valve testing tool comprising an air cup, means for admitting air into a cup, said yoke comprising a plate, said cup provided with an air inlet neck, said yoke provided with a central opening for receiving said neck, said yoke provided with laterally extending arms having notched ends, and clamping means engaging the notched ends for clamping the cup over and around the valve of an engine.



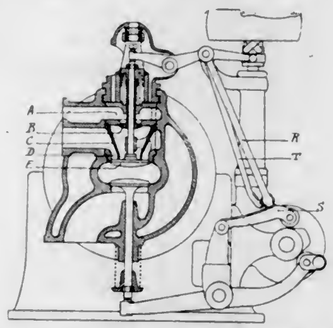
1,500,316. ANIMAL COVER. WILLIAM EDWIN HAMLIN, Des Moines, Iowa. Filed Feb. 13, 1923. Serial No. 618,790. 8 Claims. (Cl. 54—79.)

1. A protective blanket for animals comprising a sheet of material, means for fastening the blanket around the neck of the animal, and means for fastening the rear end of the blanket to the hind legs of the animal, said means including straps fastened to the underside of the blanket at points spaced from the sides and end of the blanket, flexible loops attached to the upper side of the blanket, said straps being adapted to be passed



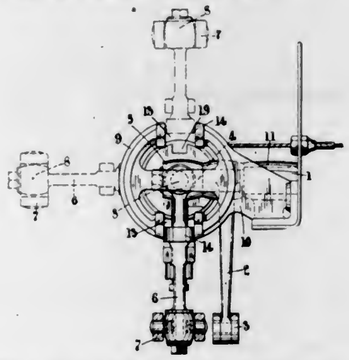
around and under the rear legs of the animal and slidable connections between said flexible loops and the straps.

1,500,317. AUTOMOBILE AIR WHEEL. JEREMIAH HAYES, Everett, Wash. Filed Sept. 25, 1922. Serial No. 590,393. 6 Claims. (Cl. 301—63.)



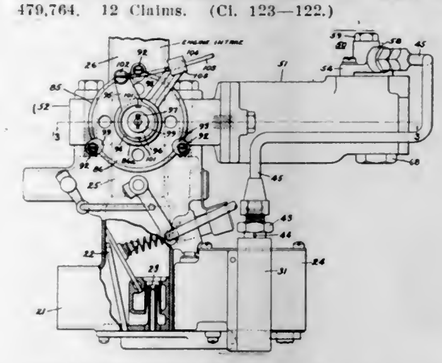
1. A wheel of the class described comprising a body forming disk having a marginal portion forming a rim seat, a rim forming a tire base, a tire mounted on said rim, a cushioning ring fitted within the rim and demountably on the rim seat and means detachably securing the rim to the wheel body.

1,500,318. COMBINATION CHAIR AND BABY CRIB. LOUISE B. HENRY, Meadow, Nebr. Filed Aug. 29, 1923. Serial No. 660,006. 2 Claims. (Cl. 155—44.)



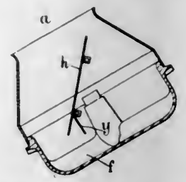
1. A combined chair and crib comprising a frame including front and rear supporting legs, transverse longitudinal braces for the legs, a chair back frame carried by the rear pair of legs, hollow side chair arms associated with the frame, headed guide pins carried by the front transverse brace bar, a chair bottom connected with the legs arranged above the brace bars, a crib bottom slidably associated with the frame and arranged below the chair bottom, guide pins carried by the front transverse brace bar, the crib bottom having longitudinally extending slots formed therein for receiving the pins, supporting legs for the forward end of the crib bottom, side walls slidably associated with the hollow chair arms, and a removable front ornamental piece detachably carried by the front pair of legs for association with the side walls when the same are extended to their operative position.

1,500,319. INTERNAL-COMBUSTION ENGINE. HENRI HERSU, Meudon, France. Filed July 2, 1920. Serial No. 393,675. 1 Claim. (Cl. 123—75.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



In an internal combustion engine, a cylinder, a piston therein, a trumpet-shaped water-cooled combustion chamber joining the cylinder, igniting means connected with the chamber, an exhaust valve and an admission valve seated in the chamber, a tubular gas valve mounted slidingly on the stem of the admission valve, a funnel surrounding said gas valve and forming closing contact edge with the admission valve, an air-chamber around said funnel and ending in a recessed seat for the admission valve, a cam-shaft parallel with the axis of the cylinder, lever mechanism actuated by said shaft for operating the exhaust valve, and lever mechanism, actuated by the cam-shaft of the first said lever mechanism, and controlled by a speed-governor for operating conjointly the admission valve and gas valve.

1,500,320. STEERING GEAR FOR MOTOR ROAD VEHICLES. ALEXANDER ALBERT HOLLE, Paddington, London, England. Filed Nov. 30, 1923. Serial No. 677,739. 4 Claims. (Cl. 280—91.)

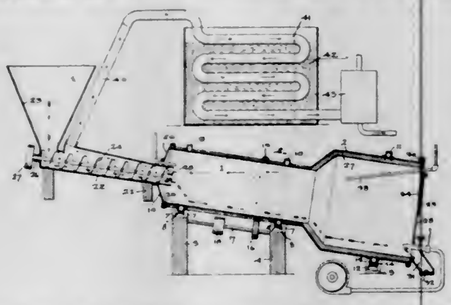


1. In a steering gear for motor road vehicles, the combination with the shaft operated by the hand-controlled mechanism of a drop arm fixed on said shaft and adapted to be connected to the link-work between one pair of road wheels by a suitable connecting rod; a drop arm adapted to be connected to the link-work between the other pair of road wheels by means of a suitable connecting rod, said arm being pivoted to said shaft so that it is free to turn through an arc the plane of which lies at right angles to the plane in which it rocks to impart the steering movement; and means for moving the pivoted arm through the desired arc and for locking same in the desired position.

1,500,321. SUCTION BURNER CONTROL. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed June 23, 1921. Serial No. 479,764. 12 Claims. (Cl. 123—122.)

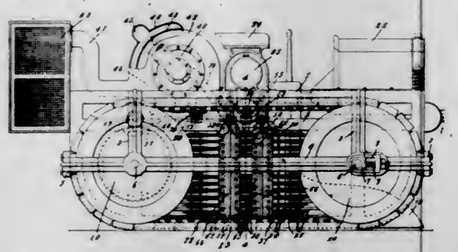
1. In a heating device for the intake of an internal combustion engine, the combination with an engine having an intake; of a burner including a combustion chamber in contact with the intake and in communication therewith through a passage; means under control of engine suction for supplying the burner with a fuel mixture; and automatic means for controlling the passage between said combustion chamber and said intake in accordance with intake suction.

1,500,322. MIXING MACHINE. PHILIP DENIS IONIDES, Ipswich, England, assignor of one-half to Ransome Machinery Company (1920) Limited, London, England. Filed Dec. 8, 1923. Serial No. 679,381. 4 Claims. (Cl. 83—73.)



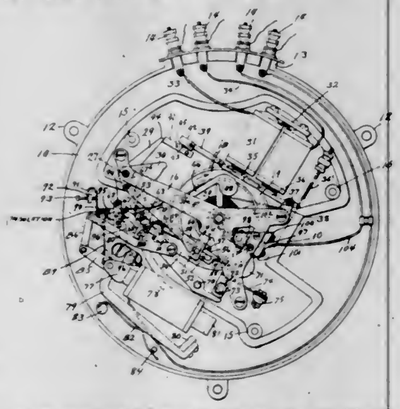
1. A mixing machine having a drum comprising a frusto-conical upper wall, an annular wall joining said upper wall a base or bottom portion the interior surface of which is curved so as to merge into the aforesaid annular wall and into a tubular bearing rising from the bottom of the drum and a number of ribs or projections upstanding from the curved bottom of the drum the contour of said ribs being also curved so as to merge into the parts of the drum adjacent the ribs.

1,500,323. OIL-SHALE EXTRACTION PROCESS. ROBERT W. JENKINS, Richmond, Calif. Filed May 12, 1921. Serial No. 468,844. 2 Claims. (Cl. 196—21.)



1. The herein described process of distilling oil from oil shale, comprising progressively passing predetermined quantities of shale into a heated retort; revolving said

retort to advance said shale therethrough; subjecting said shale to direct contact with the flame of a heating

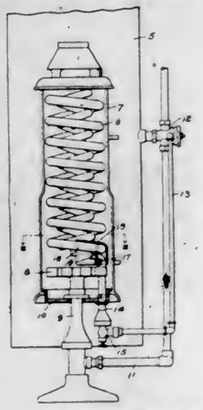


medium for distillation purposes; collecting the heated oil vapors of said shale and relieving said retort of excess pressure.

1,500,324. COMBINED TRACTOR AND COTTON-PICKING MACHINE. BILLIE JOHNSON, Temple, Tex. Filed Apr. 5, 1920. Serial No. 371,351. 12 Claims. (Cl. 56—14.)

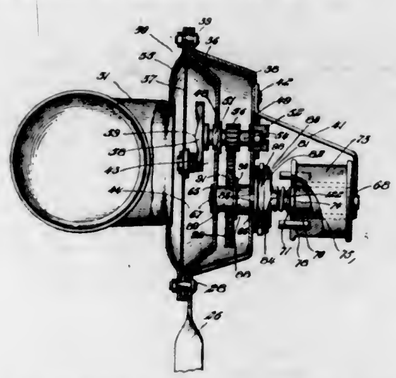
2. In a cotton picking machine a collecting chamber having a perforated inner side wall, superposed holding chains movable around said chamber, outstanding plant engaging devices thereon, and a group of superposed picking needles mounted for rotation between said superposed chains and for reciprocation transversely of the collecting chamber and within the perforations in the inner side wall.

1,500,325. SELF-WINDING GONG. WALTER H. KALLENBACH and CHARLES C. BERTSCH, Boston, Mass., assignors to Alfred A. Zeigler, Roxbury, Mass. Filed Nov. 29, 1919. Serial No. 341,473. 8 Claims. (Cl. 177—288.)



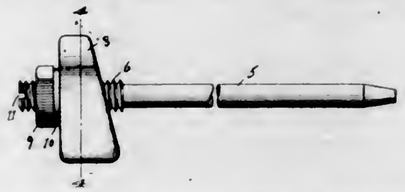
1. In an electrically operated gong, the combination of a spring motor, a rotatable member operable thereby and provided with an annular groove, a clutch member mounted in said groove and movable tangentially of said rotatable member, a pivotally mounted latch, a hammer associated therewith, electrically operated means for releasing said latch and hammer, means associated with said latch and hammer for simultaneously operating the aforesaid clutch member, a second clutch member mounted in said groove, a rewind mechanism, and means for connecting said rewind mechanism to said second clutch member to drive the rotatable member and store its energy in the spring motor.

1,500,326. CHURN DASHER. JAMES W. LANCASTER, Senath, Mo. Filed May 24, 1923. Serial No. 641,182. 3 Claims. (Cl. 259—142.)



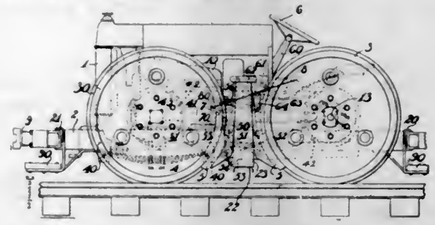
1. A churn dasher including a handle, and propellers rotatably mounted adjacent the lower end of the handle and positioned one above the other, the upper propeller having a hub, a set of blades extending from the hub upon an axis extending at right angles to the axis of the handle, and a second set of blades extending from said hub and inclined upwardly, the lower propeller having a hub, a set of blades extending therefrom upon an axis extending at right angles to the axis of the handle and a second set of blades inclined downwardly.

1,500,327. WATER HEATER FOR STAND BOILERS. LINDLEY S. LAWSON, Pittsburgh, Pa. Filed Nov. 18, 1922. Serial No. 601,928. 4 Claims. (Cl. 122—250.)



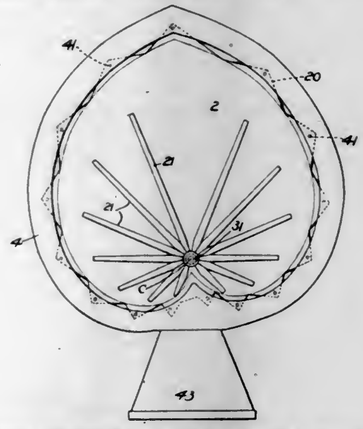
1. The combination with a stand boiler, of a heating coil connected thereto, a main burner below said coil, a guard or shield depending from said coil and a combined pilot light and circulation burner of the Bunsen type so located that the flame therefrom will be directed through said shield and in contact with the lowest convolution of said coil.

1,500,328. MECHANICAL WARNING SIGNAL. LEONARD C. LESTER, Cranston, R. I. Filed Oct. 3, 1923. Serial No. 666,301. 6 Claims. (Cl. 116—59.)



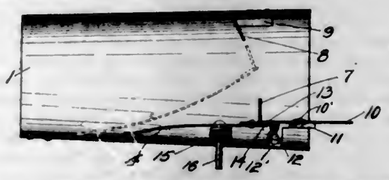
6. In combination with the body, the engine case, the fan, the fan belt, and the steering post of an automobile, of a bracket on the engine case, a signal comprising a frame supported by the bracket, and a sound outlet, a diaphragm in the frame, a rotatable vibrator supported in the frame in operative engagement with the diaphragm, a shaft fixed in the frame adjacent the vibrator, a driven member rotatably mounted on the fixed shaft for actuating the vibrator, a pulley loosely mounted on the fixed shaft engaging the fan belt, a projection on the face of the pulley, a disk rotatably mounted on the fixed shaft and axially slidable thereon, lugs on the disk engaging the driven member, a shifting lever pivotally supported intermediate its length upon the frame engaging the disk, a lever pivoted to the body, a rod connecting the levers, a collar on the steering post, a rod slidably supported in the collar engaging the second lever, a knob on the slidable rod, and a spring interposed between the knob and the collar.

1,500,329. PICKER ROD AND STAND FOR LOOMS. WILFRID H. LUSIGNAN, Worcester, Mass. Filed Mar. 14, 1923. Serial No. 625,038. 2 Claims. (Cl. 139—158.)



1. A device of the character described comprising, a picker rod, one extremity thereof being screw threaded, a picker rod stand provided with an internally threaded bore adapted to receive the threaded extremity of the picker rod, a nut adapted to engage the extremity of the picker rod after the same has been inserted through the stand, means for preventing displacement of the said nut, a screw threaded bore provided at right angle to the first mentioned bore adapted to connect the stand upon the loom, and a boss formed on one side of the stand about the last mentioned screw threaded bore.

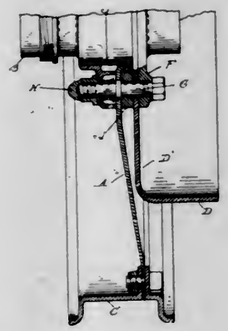
1,500,330. LOCOMOTIVE. SYDNEY S. MCINTYRE, Sedro Woolley, Wash. Filed Oct. 27, 1921. Serial No. 510,715. 3 Claims. (Cl. 105—62.)



3. A locomotive comprising a self-contained power plant of the tractor type, a frame upon which said power plant is mounted, an axle driven directly by said power plant, tractor wheels secured on said axle, a second axle mounted upon said frame, tractor wheels journaled upon said second axle, driving means connecting the two wheels of each side, a cross beam secured to the frame and located between the two sets of wheels, a standard carried upon each end of the cross beam and extending upwardly between the wheels, brake shoes engaging the adjacent faces of said wheels, links suspending said brake shoes from said standards, and means for applying said brake shoes comprising a wheel which is the steering wheel of the original tractor.

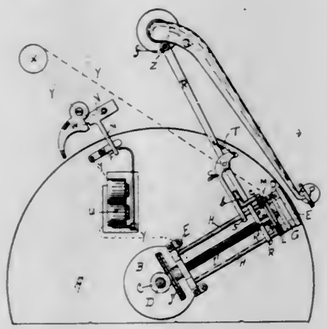
1,500,331. TELEPHONIC RECEIVER. ROBERT H. MARRIOTT, Bremerton, Wash. Filed July 20, 1922. Serial No. 576,313. 1 Claim. (Cl. 181—32.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

A sound reproducing diaphragm having a cardioid outline in which the halves at opposite sides of its major axis are unequal.



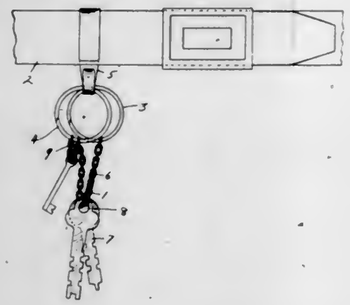
1,500,332. ANIMAL TRAP. WILLIAM PRESTON, Spokane, Wash. Filed May 17, 1921, Serial No. 470,388. Renewed Dec. 10, 1923. 1 Claim. (Cl. 43—82.)

The combination with a tubular casing having an upper, transversely arranged fixed jaw, of a longitudinally disposed spring plate fixed at one end and provided



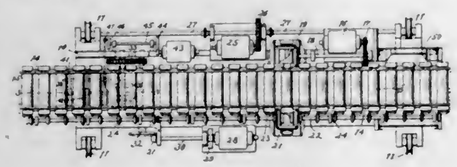
with a complementary jaw at its free end, a lip at the free end of the spring plate, a pivoted plate having a detent thereon to engage said lip and hold the trap set, and an actuating spring located between said spring plate and the casing.

1,500,333. REVERSIBLE DISK WHEEL. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 28, 1918. Serial No. 256,009. 6 Claims. (Cl. 301—63.)



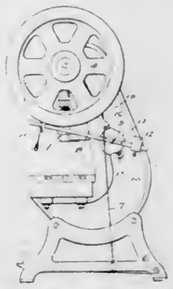
2. The combination with a wheel hub having a flange extending from the periphery thereof, of a demountable wheel comprising a dished disk, the central portion of said disk being arranged adjacent to the central plane of impact of the wheel, and co-operating studs and clamping nuts for engaging and securing said disk in reverse positions upon said hub.

1,500,334. NONSET AUTOMATIC ELECTRICAL STOP FOR PHONOGRAPHS AND OTHER LIKE INSTRUMENTS. BERTRAM REEVE, Chatham, Ontario, Canada. Filed June 6, 1923. Serial No. 643,719½. 1 Claim. (Cl. 192—118.)



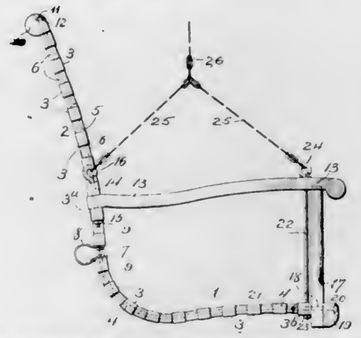
The combination of a gear wheel mounted on the shaft of the machine, a larger gear wheel lying at right angles to the former, a horizontal threaded shaft, with means to attach said larger gear wheel to the inner end of said shaft, track guides, shafts and guide supports, means to allow said shaft to revolve on said supports, means to attach said guides to said supports and means to fasten said supports to the top of motor block, a clutch made to conform with and threaded to fit on above mentioned shaft, a carriage that moves back and forth on said guides carrying an insulated block and stem, a contact bar, an adjustment screw and means to attach said insulated block, stem, contact bar and adjustment screw to said carriage, means to hinge above mentioned clutch to the under side of said carriage, a spring with means to fasten said spring to and hold said clutch in position on the above mentioned shaft when carriage is travelling forward and also to allow said clutch to be released when carriage is to be moved backward, a control lever projecting outward from the tone arm, of the machine and means to attach said lever to said tone arm, a projection upward on said tone arm to act as a fulcrum against the above mentioned control lever, when said lever is drawn backward, a releasing bar lying parallel with said control bar, the upper end of said releasing bar being curved and crossing over said control bar at a certain point, means to fasten said releasing bar to said control lever, a tension spring connecting the outer end of said releasing bar with a point on the said control bar, a right angled bar attached to and projecting forward at right angles from the contact bar previously mentioned, the outer arm of said bar lying parallel with the above mentioned control bar with its outer end turned downward, a stop trip lever and brake constituting the mechanical parts with electrical parts consisting of a dry cell, a magnet, and insulated wires as means to connect the said dry cell to the aforesaid contact bar, the dry cell to the stop trip lever, the circuit breaker to the magnet and the magnet to a ground.

1,500,335. KEY RETAINER. WAYNE L. RILEY, Flushing, Mich. Filed Aug. 7 1923. Serial No. 656,216. 2 Claims. (Cl. 24—3.)



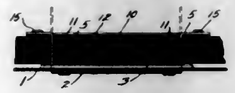
1. The combination with a support, of a key retainer comprising a link chain and a pair of rings carried by the support, one ring engaging one link of said chain, the other ring detachably engaging a second link of said chain to form a loop for carrying keys and also detachably engaging another link to form a second loop for carrying other keys.

1,500,336. ROLLING-MILL MANIPULATOR. JOHN F. ROGERS, Cleveland Heights, PAUL H. DOUGLAS, East Cleveland, and CHESTER W. BENJAMIN, Lakewood, Ohio, assignors to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 5, 1919. Serial No. 301,887. 11 Claims. (Cl. 80—45.)



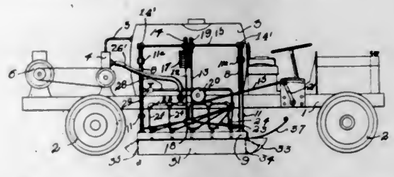
1. In a rolling mill construction, a table comprising a main supporting frame, a roll carrying portion pivotally supported on the frame so that it may be tilted about one end thereof, means movable with said portion and adapted to be shifted up and down between the rolls thereof for turning an ingot regardless of whether the said pivoted roll carrying portion is horizontal or inclined, operating means mounted on the main supporting frame and connections from said operating means to said ingot turning means through which said ingot turning means may be operated in the various positions of the roll carrying portion.

1,500,337. PUNCH-PRESS GUARD MECHANISM. EMIL ROTH, Cleveland, Ohio, and EDWARD P. ELZY, Hartford, Conn., assignors to The Aetna Life Insurance Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 30, 1922. Serial No. 548,225. 2 Claims. (Cl. 74—105.)



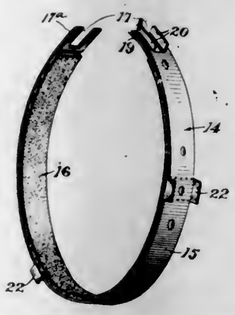
2. A punch press guard mechanism comprising an oscillatory guard carrying lever, a reciprocatory clutch controlling bar, and a cam forming a positive connection between said lever and bar whereby the rotation of the cam first causes the oscillation of the lever and then the reciprocation of the bar.

1,500,338. SEAT. FREDERICK W. SHUMAN, South Bend, Ind. Filed Aug. 11, 1121. Serial No. 491,467. 2 Claims. (Cl. 155—58.)



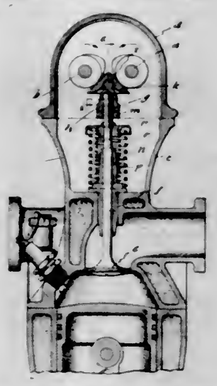
1. A device of the character described having back and bottom portions comprising slats, spaced apart, flexible rods passing through holes near respective ends of the slats, one end of each of said rods provided with a head, a nut threaded on the other end of each of said rods, some of the slats near the lower edge of the back portion being extended beyond the side edges of the back portion, arm rests secured to said projecting end portions of said slats, supporting posts for said arm rests, the front slats of the bottom member being extended beyond the side edges of the bottom member, means for securing the lower ends of the posts to the extended ends of said front slats, and means for securing the front ends of the arm rests upon the upper ends of the posts.

1,500,339. LOOSE-SHEET BINDER. SAMUEL SMILEY, Jr., Cincinnati, Ohio, assignor to The Globe-Wernicke Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 14, 1923. Serial No. 625,103. 8 Claims. (Cl. 129—25.)



1. In a device of the class described, in combination with a foldable sheet, a tang-carrying member having the tangs thereof projected through the sheet, a second member at the opposite side of the sheet and traversed by said tangs, and means for clampingly fastening said members together.

1,500,340. ROADSIDE WEED BURNER. ARCHIE Y. SMITH, Rocklyn, Wash. Filed June 19, 1922. Serial No. 569,526. 2 Claims. (Cl. 126—271.2.)



1. The combination with a vehicle, as described having a suspending frame including spaced posts, of a burner apparatus including a horizontally disposed, vertically adjustable hood slidably connected to said posts, means for counterbalancing the weight of the apparatus, means for elevating the apparatus, flame projectors carried by the hood, and flexible flaps on said hood.

1,500,341. TRANSMISSION RELINING BAND. DOUGLAS B. SMITH, San Francisco, Calif. Filed Sept. 24, 1923. Serial No. 664,363. 4 Claims. (Cl. 188—249.)

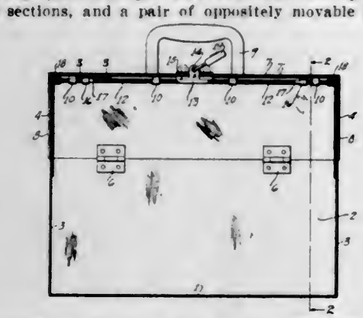
2. A liner for a planetary transmission band, said liner being capable of being inserted into place without disassembling said transmission, said liner comprising a lined flexible band having sloted ends to coincide with the slotted ends of the transmission band, aligning lugs formed at one of said slotted ends of the flexible band, said lugs being adapted to engage the sloted opening in one of the lugs of said transmission band, and a plurality of guide members fixed to the band at a plurality of points around the circumference thereof for engagement with the sides of the transmission band to guide the liner when it is being positioned and to maintain the liner correctly positioned on said transmission band, said guide members comprising flat members extending transversely of the flexible band, the ends of said flat members being bent outwardly so as to extend radially from opposite sides of the flexible band.

1,500,342. VALVE CONSTRUCTION. MILTON H. SMITH, Detroit, Mich. Filed Oct. 29, 1923. Serial No. 671,332. 10 Claims. (Cl. 123—90.)

2. In a valve mechanism, the combination of a longitudinally guided valve and push member, a pair of oppositely rotating cams for thrusting the valve open and so located as to neutralize side thrust on the push member.

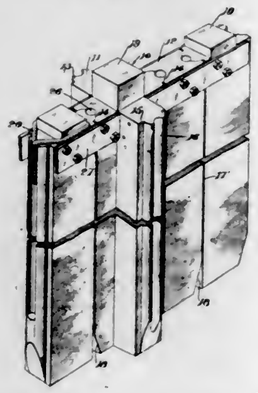
1,500,343. POULTRY FEED TROUGH. THOMAS W. SOUTHARD, Kansas City, Mo. Filed Apr. 12, 1922. Serial No. 551,785. 1 Claim. (Cl. 119—61.)

A feed trough of the kind described having two ends and an intermediate channel portion, and a longitudinal V-shaped guard member above and spaced apart from said channel portion and provided at its respective ends with trunnions disposed substantially at the apex of the guard and respectively pivoted in the ends of the trough, substantially as set forth.



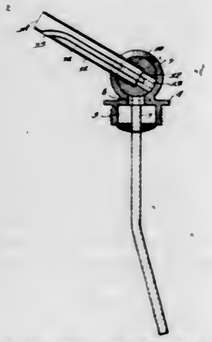
1,500,344. VIEW FINDER. CHARLES F. SPEIDEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 10, 1922. Serial No. 559,846. 9 Claims. (Cl. 88—15.)

2. In a view finder, the combination with a support, including a lens board, of a second support consisting of a bracket, a finder box interposed between the two supports, the bracket being adapted to retain the finder box in position.



1,500,345. SLIDING LOCK. WILLIAM W. SPURRIER, St. Louis, Mo., assignor of thirty-eight per cent to Ben F. Schuetz, Jefferson City, Mo. Filed June 30, 1922. Serial No. 571,986. 5 Claims. (Cl. 292—32.)

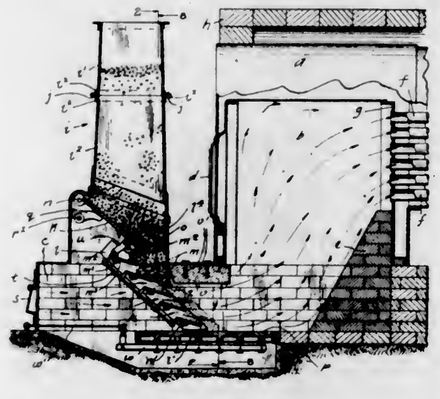
1. The combination with a container comprising a body and having end walls and a pair of oppositely swingable top sections, of means for releasably locking said sections together and to said end walls, said means including locking eyes fixed upon said end walls and upon one of the sections, and a pair of oppositely movable lock bars



mounted for slidable movement upon the other of said sections and adapted for engagement with said eyes.

1,500,346. CONCRETE PILING. JOHN STOCKFLETH, Crockett, Calif. Filed Apr. 5, 1921. Serial No. 458,790. 13 Claims. (Cl. 61—59.)

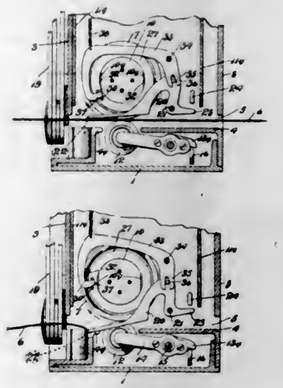
1. In a plastic sheet pile construction, a starting pile having a central portion from which a plurality of wings project, certain of said wings being formed with a longitudinally extending groove along their outer edges and certain of said wings being formed with a longitudinally extending tongue along their outer edges.



1,500,347. FILLING CAN. JOSEPH STUBBERS, Cincinnati, Ohio, assignor to The Incandescent Light & Stove Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 17, 1922. Serial No. 537,310. 1 Claim. (Cl. 221—28.)

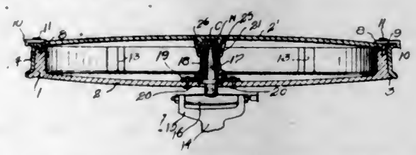
A nozzle for attachment to fuel containers comprising an annular valve seat having an aperture, two ports, and

a cap portion by which it is secured to the container, a rotatable valve member in said annular valve seat having a three-way passage two openings of which are adapted to register with said ports, the third with a portion of said aperture, a filling tube on said valve and rotatable therewith, extending through said aperture and seated in one passage of the three-way opening, an air intake tube extending from a point near the extremity of the filling tube to an opening of the three-way passage which registers with a port in the annular valve seat, an air inlet duct from the last designated port into the fuel container, thereby making two closable passages from the inside of the container to the end of the filler tube isolated from each other.



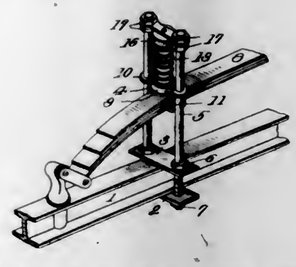
1,500,348. FUEL FEED FOR FURNACES. CLAUD M TACKABERY, Portland, Oreg., assignor of one-half to Joseph W. Baker, Portland, Oreg. Original application filed Oct. 22, 1920, Serial No. 418,723. Divided and this application filed July 11, 1923. Serial No. 650,805. 19 Claims. (Cl. 110—29.)

13. In a furnace, an extension of the fire box of the furnace, such extension provided with a fuel inlet, a fuel distributing-plate hinged in such extension on a transverse axis and adapted for angular adjustment towards the mouth of the throat of the fire box, an inclined grate extending to the floor of the extension of said fire box, said grate being hingedly attached to the free end of said distributing plate thus adapted for angular adjustment, said grate consisting of sides and a plurality of plate-like grate-bars pivoted between said sides in steps spaced one above the other and descending towards the throat of the fire-box and being inclined downwardly towards said throat, said steps provided respectively with a pendent fixed arm, a bar connecting such arms, a link connecting one of said steps with said distributing-plate, the point of such connection being located relative to the axis of the hinge connecting said distributing-plate with the grate, so that moving the distributing plate will relatively move the grate-bars and maintain the latter at a constant angle with a horizontal plane, means for angularly adjusting the distributing-plate, and therewith said grate, thereby to regulate the size of the mouth of the throat of the furnace.



1,500,349. ANTISPINNING DEVICE FOR CLOTH-MEASURING MACHINES. ANTHONY VANDERVELD, Grand Rapids, Mich. Filed Nov. 25, 1922. Serial No. 603,382. 10 Claims. (Cl. 33—133.)

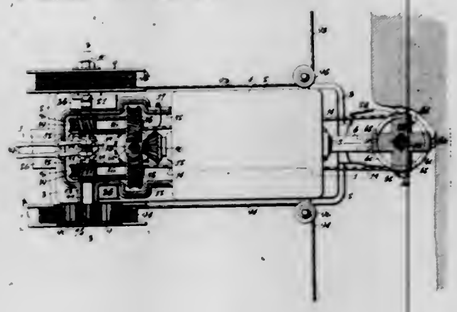
1. In a machine of the class described, a measuring roller adapted to be driven by frictional contact of cloth therewith, brake means associated with said roller, and means for operating said brake means to operative or inoperative position, said last mentioned means being moved to one position by cloth passing thereunder to operate said brake means to inoperative position and released



on the passage of the cloth at its end therefrom for movement to another position to operate said brake means to operative position, substantially as described.

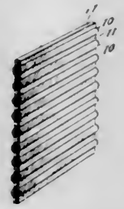
1,500,350. VEHICLE WHEEL. FRED M. VANSICKLE, Lewiston, Idaho. Filed Sept. 1, 1923. Serial No. 660,616. 5 Claims. (Cl. 301—63.)

3. The combination with a disk wheel having a rigid hub sleeve and a head on the sleeve, of a cover plate for said wheel, a pair of latches pivoted at the inner side of said cover plate for engagement with said head, and means whereby said latches may be disengaged from the exterior of the cover plate.



1,500,351. SHOCK ABSORBER. STANLEY J. VESELY, Cedar Rapids, Iowa. Filed Apr. 21, 1921. Serial No. 463,105. 1 Claim. (Cl. 267—28.)

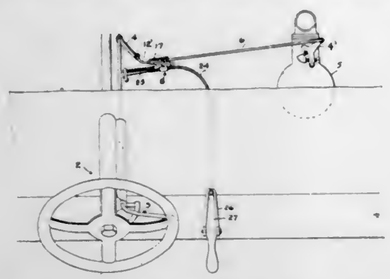
A shock absorber for motor vehicles comprising a pair of plates having apertured ends adapted to embrace a fixed element of a vehicle, a pair of bolts extending through the apertures of said plates carrying nuts to each side of said plates for securing said plates over said fixed element and for supporting said bolts in vertical pending yoke extending under the spring of the vehicle, a plate having apertures slidably mounted on said bolts above the spring of the vehicle, said plate having a depending loke extending under the spring of the vehicle, a



cup formed on said plate, a coil spring seated in said cup having its ends secured therein, a second plate adjustably mounted on the upper ends of said bolts having a cup to receive the upper end of said coil spring and means for securing the upper end of said coil spring in said cup.

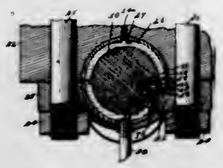
1,500,352. COAL-MINING MACHINE. JAMES WALKER, Nettleton, Pa. Filed Feb. 4, 1921. Serial No. 442,501. 5 Claims. (Cl. 262—24.)

1. A coal mining machine of the character described, comprising a base slidable over the mine floor, a power unit securely mounted upon said base to move therewith, a rotary cutting head supported upon and in advance of said power unit to rotate on a vertical axis, a pair of oppositely disposed winding drums loosely mounted upon horizontal axes, cables secured to said drums and to predetermined fixed points within the mine, transmission means for applying power from the power unit to the rotary cutting head and the drums, and means for retarding rotation of the drums as to cause bodily movement of the machine over the mine floor diagonally forward, straight forward or laterally.



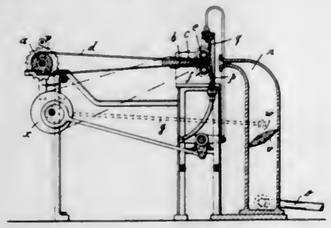
1,500,353. SEPARATOR. THEODORE A. WILLARD, Cleveland Heights, Ohio. Filed Feb. 17, 1921. Serial No. 445,673. 6 Claims. (Cl. 204—29.)

4. A separator composed of a body of porous material extending in the general direction of the plane of the separator, with rubber as a binding agent arranged at intervals in the porous material.



1,500,354. ACCELERATOR. LLOYD M. WILLIAMS and PERCY J. WILLIAMS, San Francisco, Calif. Filed May 14, 1923. Serial No. 638,801. 12 Claims. (Cl. 74—39.)

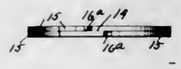
1. In an accelerator, the combination with the hand operated crank arm, the throttle valve crank arm and the connecting rod between said arms of the throttle valve controlling mechanism of an automobile, of a member to which an extremity of the connecting rod after being thus disconnected from the hand operated crank arm, is secured, a rod on which said member is slidable having an angularly directed portion pivoted to the hand operated crank arm, a spring mounted on the second named rod and against the action of which said member slides, a pedal mechanism, a tube connected with said



member and a flexible wire extending through the tube having one extremity fastened to one end of said second named rod and its other extremity connected with the pedal.

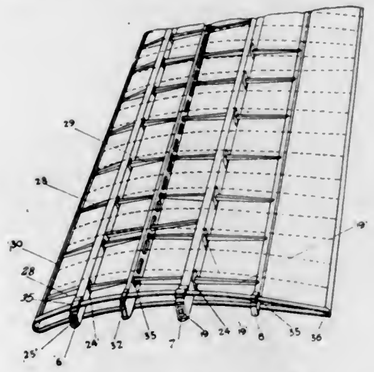
1,500,355. FORCE-FEED LUBRICATING DEVICE. ROY V. YEAGER, Des Moines, Iowa. Filed July 10, 1923. Serial No. 650,617. 3 Claims. (Cl. 184—31.)

3. A force feed lubricating device comprising in combination a shaft, a bearing in which the shaft is mounted, there being an annular groove between the bearing and the shaft, a force feed blade slidingly mounted in the shaft to project into said groove, a spring for normally holding it outwardly, means for limiting its outward movement, the outer end of said blade being beveled or inclined in a direction outwardly relative to the shaft from its advance side, a cam guide mounted in the bearing and projected into said annular groove, there being a passageway formed in the shaft at a point slightly spaced apart from the force feed blade on the advance side thereof, and means for admitting oil into said groove, said parts being so arranged and combined that when the oil discharge passageways have passed the cam guide, the oil contained in the groove between the cam guide and the force feed blade will be prevented from escaping and will serve to force the force feed blade inwardly into the shaft to prevent its striking upon the cam guide.



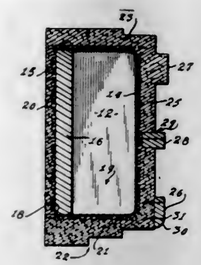
1,500,356. MACHINE FOR REMOVING BRISTLES FROM SKINS OR HIDES. ARTHUR GUSTAV ZEUMER, Markranstadt, Germany. Filed Dec. 5, 1923. Serial No. 678,700. 1 Claim. (Cl. 149—25.)

In a machine for removing bristles from skins or hides, the combination with a rotary shaft, a horizontally lo-



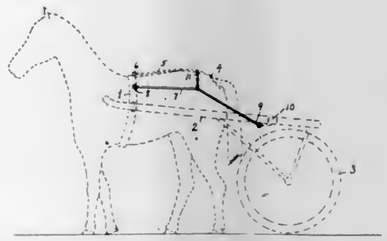
cated stretching-board having a pointed outer edge, a stepwise moved endless ribbon led around said shaft and board and adapted to receive the skin or hide to be treated thereon, and a pair of brushes, one above and the other below the pointed outer edge of said stretching-board; of a long narrow suction nozzle directly in front of the pointed outer edge of said stretching-board, and means to control the bore of said nozzle in dependence upon the advance of said endless ribbon; substantially as and for the purpose set forth.

1,500,357. PISTON RING. HENRY J. ANDERSON, Minneapolis, Minn., assignor, by direct and mesne assignments, to E-Z Manufacturing Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Dec. 11, 1920. Serial No. 430,093. 2 Claims. (Cl. 74—109.)



1. A piston ring made in one piece split circumferentially to form free body portions that lap side by side throughout the greater portion of the ring, leaving a short unsplit rigid body portion, said body portion and the ends of said split free portions of said ring having co-operating straight beveled surfaces that overlap and converge radially of the ring, the beveled surfaces on said rigid body portion being at opposite ends thereof and laterally offset and inclining in opposite directions so that the free ends of said ring, under contraction of the ring, will be forced in the same direction radially of the ring and both ends of said ring will be forced radially outward against the walls of a cylinder in which said ring is applied.

1,500,358. AEROPLANE. GUIDO ANTONI and UGO ANTONI, Florence, Italy. Filed May 19, 1923. Serial No. 640,061. 3 Claims. (Cl. 244—12.)

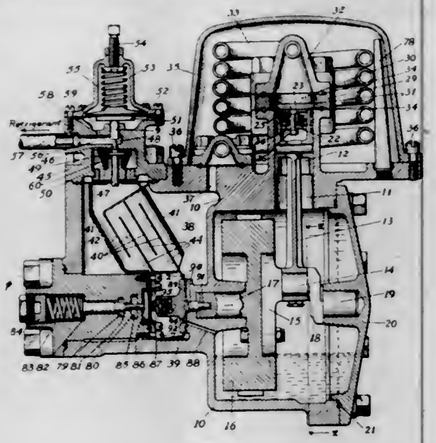


1. An aeroplane with resilient wings, ribs composed of resilient frames forming the structure of said wings, disjunctions in said frames to allow one frame to slide on the other, bracket connections of said ribs with the longérons of the wings, transversal shafts on said wings, arranged longitudinally thereon, levers mounted on said shafts and interconnected to one another, arms of said levers extending forwards and rearwards within the body of said wings, and acting respectively on a forward longéron and a rear longéron of said wing, means to exert an angular rotation on said levers.

1,500,359. FRAME CONSTRUCTION FOR WINDOWS, DOORS, AND THE LIKE. JOHN F. AULD, Santa Monica, Calif. Filed Mar. 5, 1923. Serial No. 622,839. 3 Claims. (Cl. 72—98.)

1. In a frame of the character described, a hollow transverse frame element, a pair of spaced vertical hollow cement frame elements, a lower transverse hollow cement frame element, a reenforcing block of wood in each end of said upper transverse element; each forming a closure for the respective ends, a reenforcing block of wood in the upper end of each of the said vertical elements, and a reenforcing block of wood in each end of the lower transverse frame elements; each forming a closure for the respective end; each end of the upper transverse element capable of being placed in abutment with the upper end of a corresponding vertical element, and each lower end of the said vertical elements capable of being placed in abutment with the respective end of said lower transverse element.

1,500,360. HARNESS. LEWIS HOMER BOYLE, Beloit, Ohio. Filed Dec. 26, 1923. Serial No. 682,627. 3 Claims. (Cl. 54—2.)

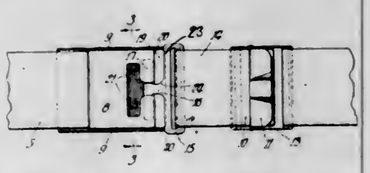


3. In a harness for hitching horses to light wagons, comprising a saddle and a pair of traces attached thereto and having their rear ends joined and adapted to be secured to a transverse member of the vehicle, and a cross-strap extending across the back of the animal at about the point of the hip and attaching at its ends to the traces at about the height of the hip joint, the portions of the traces forward of such points of attachment of the cross-strap being substantially horizontal and the portions in the rear of said points of attachment lying against and around the thighs of the animal.

1,500,361. PUMP LUBRICATION MECHANISM. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Feb. 24, 1920. Serial No. 360,882. 8 Claims. (Cl. 230—6.)

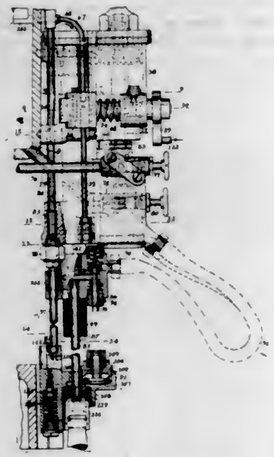
1. In pump mechanism, a high pressure chamber and a low pressure chamber, an oil duct leading from the

former to the latter, and a rotating element in said high pressure chamber normally closing said duct but



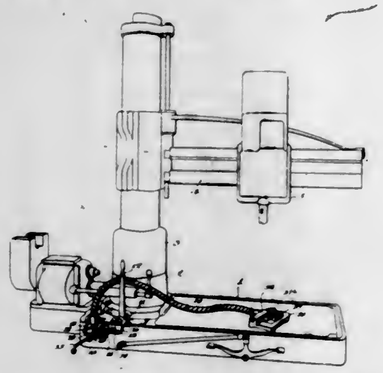
provided with an oil pocket adapted to come into registration periodically with said duct.

1,500,362. BELT BUCKLE. SAMUEL BUCHSBAUM, Chicago, Ill. Original application filed Jan. 31, 1921, Serial No. 441,232. Divided and this application filed Aug. 4, 1921. Serial No. 489,857. 3 Claims. (Cl. 24—191.)



2. A belt buckle of the character described comprising a curved sheet metal front plate having side flanges, a curved sheet metal clamping plate positioned between the side flanges of said front plate, said clamping plate being of sharper curvature than said front plate and having its convex side toward said front plate and being mounted for movement toward and away from said front plate by means of a pin and slot connection, and means for moving said clamping plate toward said front plate comprising an angular clamping lever engaging said clamping plate on the concave side thereof at one end thereof and being provided with belt gripping means at the other end thereof.

1,500,363. THREE-PIECE BUCKLE. SAMUEL BUCHSBAUM, Chicago, Ill. Filed July 13, 1922. Serial No. 574,704. 11 Claims. (Cl. 24—78.)

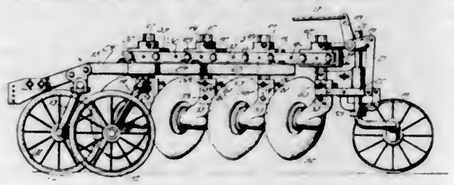


1. A device of the character described, comprising a front plate, a member pivotally mounted on said front plate and having gripping means adapted to clamp one end of a belt between itself and said front plate, said member having a free end portion adapted to engage said front plate and means on the other end of said belt detachably engaging said member, whereby the tension on said belt tends to swing said member toward said front plate.

1,500,364. BOTTLE FILLING AND SEALING MACHINE. AMOS CALLESON, Brooklyn, N. Y. Filed Aug. 9, 1920. Serial No. 402,230. 12 Claims. (Cl. 226—98.)

3. In combination, with a valve-support, means yieldable therein under pressure of a container exerted on said means toward the support for forming with the container a sealed space, and a valve carried by the support, said means having an inlet, controlled by said valve, for delivering fluid to said space and also having a valve-controlling detector movable therein by the pressure of the fluid in said space and adapted when so moved and on yielding of said means to engage and actuate the valve.

1,500,365. TRANSPORTABLE THROTTLE DEVICE. JACK C. CARLTON, Cincinnati, Ohio, assignor to The Carlton Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 23, 1922. Serial No. 546,138. 4 Claims. (Cl. 77—28.)

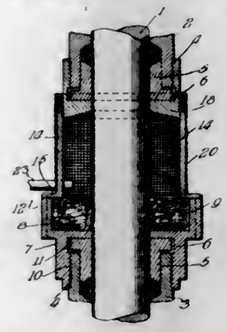


1. A radial drill column clamping device comprising a fluid motor operated clamp, a fluid motor, a transportable throttle for controlling fluid pressure to and exhaust from said motor, a flexible primary supply conduit extending from the motor to the throttle and communicating with said throttle, secondary flexible conduits attached to said motor and throttle communicating with both, and alternately with said primary conduit through said throttle, and a flexible protecting cable enclosing all conduits and attached at opposite ends to said motor and throttle.

1,500,366. CELLULOSE-ETHER COMPOSITION. STEWART J. CARROLL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 12, 1923. Serial No. 631,697. 4 Claims. (Cl. 106—40.)

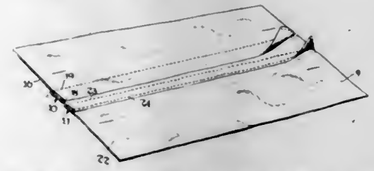
4. A composition of matter comprising 1 part of water-insoluble ethhyl cellulose dissolved in from 4 to 6 parts by weight of a mixed solvent, said mixed solvent comprising 3 parts by weight of methyl acetone to 1 part by weight of ethyl acetate.

1,500,367. IMPLEMENT FRAME. ROBERT C. CAUGHEY, Dixon, Ill., assignor, by mesne assignments, to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed July 12, 1919. Serial No. 310,397. 5 Claims. (Cl. 97—53.)



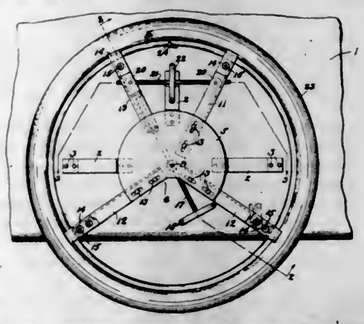
1. In an agricultural implement, the combination of a frame having a pair of upright flanges mounted transversely thereon, a plurality of socket members interposed between the flanges and adjustable therebetween at optionally spaced intervals, means for adjusting one of the flanges toward the other so as to closely confine the socket members therebetween, stub beams vertically adjustable in the socket members and earth turning bodies secured to the lower ends of the stub beams.

1,500,368. VENTILATOR. ALEXANDER CHUPA, Livingston Manor, N. Y. Filed Feb. 23, 1924. Serial No. 694,684. 1 Claim. (Cl. 98—27.)



A ventilator for chicken houses and the like, comprising a sill, uprights rising from said sill, a top cross-piece, an outside partition located above said sill but terminating some distance below said top cross-piece, thus affording an air inlet opening above said partition, a cloth screen attached to the inside of said top cross-piece and said uprights and extending downward a considerable distance below the said air inlet opening but terminating some distance above the said sill, thus affording an inlet to permit the passage of entering air into the room of the building, a roof between which and said top cross-piece is an air outlet opening, and a depending baffle board in front of and serving as a protector to the said air outlet opening, said baffle board assisting in a proper ventilating circulation.

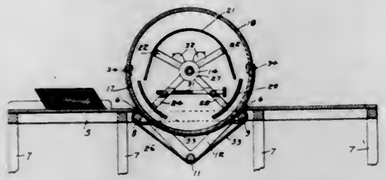
1,500,369. LUBRICATOR. NICHOLAS J. COONEY, Chicago, Ill. Filed Oct. 12, 1922. Serial No. 594,105. 7 Claims. (Cl. 286—13.)



1. A lubricator for a reciprocating element comprising a hollow member having a threaded portion surrounding said element, a tubular member within said member and slidably encircling said reciprocating element and provided with a threaded portion at one end engageable with said first-mentioned threaded portion, said hollow member constructed to permit a limited axial movement of said second-mentioned member when assembled, but preventing the accidental separation thereof.

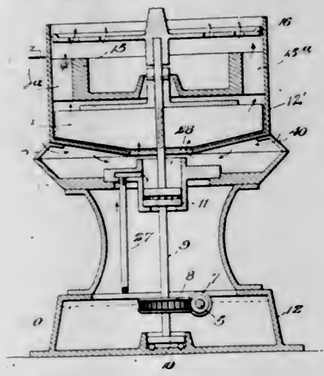
1,500,370. REVERSIBLE CUFF. WILLIAM R. CORNELIUS, Nashville, Tenn. Filed Oct. 24, 1923. Serial No. 670,561. 7 Claims. (Cl. 2—79.)

1. A soft cuff comprising a foldable, flexible body portion formed of a pair of complemental sections having arranged therebetween and secured therewith an interlining, said inter-lining having two spaced pairs of lengthwise extending folds providing a pair of offset portions arranged on opposite sides and spaced from the bend formed in the cuff body when the latter is folded.



1,500,371. TIRE CARRIER AND RIM REMOVER. THOMAS COSGROVE, Jr., and NILES A. SPONSELLER, Canton, Ohio. Filed Apr. 17, 1922. Serial No. 554,174. 3 Claims. (Cl. 224—29.)

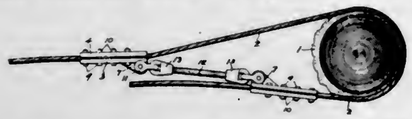
2. A rim remover including a plate, fixed radial arms thereon, a swiveled bearing upon the plate, a screw lo-



cated through the bearing, an arm carried by the screw, means upon all of the arms for engaging a tire rim, and a screw for oscillating the last named arm.

1,500,372. PHOTOGRAPHIC MACHINE. MALCOLM L. COSSITT, San Francisco, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed Jan. 26, 1920. Serial No. 354,211. 6 Claims. (Cl. 95—77.5.)

1. In a photographic machine, the combination of a support, a drum rotatable on said support, said drum having a transparent portion, a light within the drum, a shaft within said drum, means for rotating said drum, a travelling web approximating said drum, a reflector supported on said shaft, shutters mounted on said shaft and serving to limit the area of illumination of said drum, and further to prevent rotation of said reflector on said shaft.

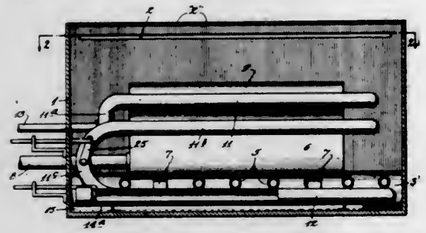


1,500,373. OIL BURNER. ADELARD COUTURE, Warren, R. I. Filed July 28, 1923. Serial No. 654,426. 5 Claims. (Cl. 158—28.)

3. In an oil burner, a casing having air inlets, a fixed air diverter in the casing, spaced curved blades between the diverter and the inner face of the casing forming substantially vertical passages open at their upper and lower ends, a rotary perforated oil receiving member above the diverter and blades, and a fan beneath the diverter, means to supply oil to the top of the oil receiving member, and means to rotate the fan and said member.

4. In an oil burner, oil burner means including a rotary member, an electric motor for driving said member, a governor operated by the motor, a source of electrical supply, manual control means for the motor, means to electrically connect the source of supply to the motor, governor and said manual means whereby upon initial movement of said manual means in one direction the latter will pass the current directly through the motor to start same and upon a second movement in a different direction will subsequently divert the current to cause same to pass through the governor and then the motor and means whereby upon failure of the current supply the governor will break the electrical connection to the motor and stop the latter thereby to require said initial movement of the manual means to restart the motor.

1,500,374. GUY-LINE CLAMP. HENRY P. COX and HENRY D. DANIELS, Portland, Oreg. Filed Nov. 12, 1923. Serial No. 674,355. 2 Claims. (Cl. 24—125.)

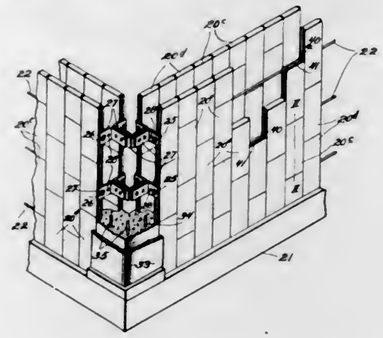


1. In a guy line clamp, the combination of illustrated parts as follows; the two pairs of opposing plates having opposing longitudinal grooves therein, an integral eye lug on one plate, also means to secure said plates to each other about a line extending between them within the grooves, the clevis pivotally mounted in the lug eyes, and the link having closed sockets at each end connected with the clevis on the opposing plate, said apparatus being adapted to allow the plates to be adjusted about opposing parts of a guy line when the same has been extended about a holding object to form a loop.

1,500,375. SPRING BUMPER FOR MOTOR VEHICLES. ERNEST G. DANN, Chicago, Ill. Filed Dec. 14, 1922. Serial No. 606,795. 3 Claims. (Cl. 293—55.)

1. In an article of the character described, the combination of a resilient impact bar, a supporting bar of spring material pivotally connected at its ends with said impact bar, a unit of spring material, and means for attaching said unit to said impact bar and said supporting bar at central points, respectively.

1,500,376. APPARATUS FOR BURNING LIQUID FUEL. MICHAEL G. DELANEY, New York, N. Y., assignor, by direct and mesne assignments, to Delway Heaters, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 27, 1923. Serial No. 659,423. 15 Claims. (Cl. 158—56.)

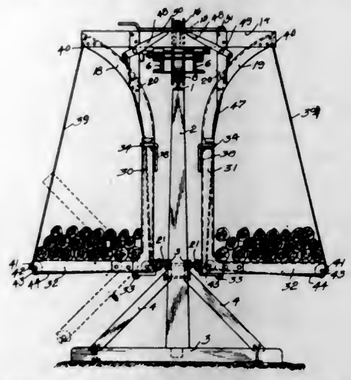


1. The combination with a generator; of a burner located beneath the generator and consisting of a continuous pipe bent to form a plurality of pipe loops having jet openings spaced throughout their lengths, each loop extending substantially under the entire area of the generator, and a valve at the junction of said loops for cutting off one of said loops.

9. In a burner apparatus having a burner tube, a water container, having an inlet and an outlet, a mixing chamber, means for feeding water to the container and liquid fuel to the mixing chamber, means for mixing the vapors arising from the water and liquid fuel in their passage to the burner tube, a pipe convolution lying above the burner tube and communicating with the mixing means and forming a superheater for the mixed vapors, said pipe convolutions communicating at one end with the mixing means and at the other end with the burner tube, a hood entirely surrounding the burner tube, the mixing means and the pipe convolution and having flame openings in its upper part, pipes leading through said hood from end to end on each side of the burner tube and opening outwardly at the ends of the hood, and jet nozzles extending from said pipes inwardly toward the center of the hood.

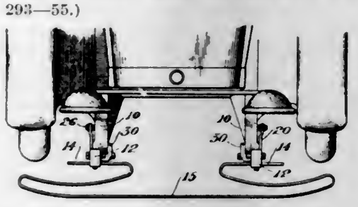
15. The method of burning liquid fuel and water which consists in vaporizing a controlled supply of water, adding a controlled supply of liquid fuel thereto, superheating the mixture, completely confining and partially burning the resultant gases in the presence of preheated air, supermixing the burning gases by applying jets of air thereto, and passing the supermixed gases into the exterior atmosphere for final combustion.

1,500,377. WALL CONSTRUCTION. DAVID W. DODSON, Wichita, Kans. Filed Mar. 7, 1921. Serial No. 450,266. 4 Claims. (Cl. 72—26.)



1. A building wall construction comprising a curtain wall structure consisting of a plurality of sets of vertically alined slabs assembled in wall form with the slabs of adjoining sets in staggered relation, anchoring rods embedded in said slabs in the plane of the wall and acting to retain the same in upright position, said rods being threaded through the intermediate portions of the slabs of every other set and also intersecting the abutting ends of the slabs of the remaining sets and said ends being formed with grooves for accommodating said rods, and tightening means connected with said rods and operative to clamp said slabs securely in assembled relation.

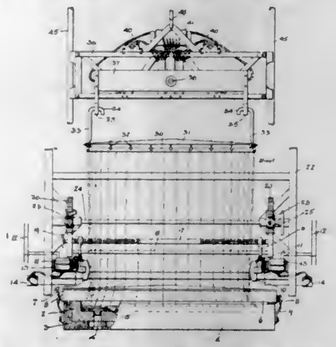
1,500,378. PROCESS OF BLEACHING FIBROUS MATERIAL. VIGGO DREWSEN, Brooklyn, N. Y., assignor to West Virginia Pulp and Paper Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 5, 1921. Serial No. 505,622. Renewed Feb. 2, 1923. 7 Claims. (Cl. 8—2.)



1. The process of bleaching wood fibre cellulose material that has been produced by the digestion of raw vegetable fibre with soluble monosulphite solution, which comprises treating the washed fibre while suspended in water with chlorine and simultaneously agitating the same, washing out the chlorination product thus formed and further bleaching the fibre with bleaching powder as an after-bleach.

1,500,379. OVERHEAD RAILWAY. ANDERS JOHAN ENGLUND, Spokane, Wash. Filed Jan. 11, 1924. Serial No. 685,711. 8 Claims. (Cl. 105—145.)

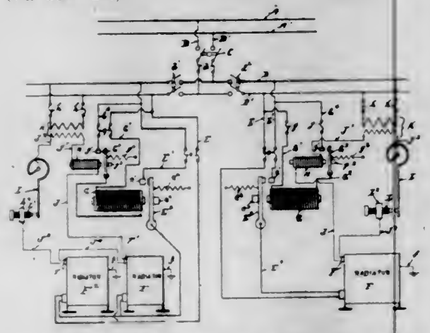
1. The combination with a railway truck, of a transversely arranged supporting member thereon, means on the truck whereby said member is permitted to swing in the direction of travel with relation to the truck, laterally disposed carriers supported from said member, and means for shifting said member transversely of the truck for counterbalancing the weight of the carriers.



1,500,380. BUMPER MOUNTING. ROLLIE B. FAGEOL, Oakland, Calif., assignor to American Chain Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Jan. 31, 1923. Serial No. 616,071. 7 Claims. (Cl. 293—55.)

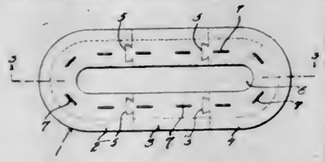
2. A bumper mounting comprising a pair of clamping plates adapted to be disposed upon opposite sides of a vehicle frame horn, means for clamping said plates against the opposite sides of the horn to rigidly secure the head to the frame, and means substantially maintaining the plates in parallelism comprising adjustable means interposed between the forward ends of the plates.

1,500,381. METHOD OF AND APPARATUS FOR DRAWING SHEET GLASS. ROBERT L. FRINK and FRED J. FRINK, Lancaster, Ohio. Filed Jan. 14, 1920. Serial No. 351,380. 20 Claims. (Cl. 49—17.)



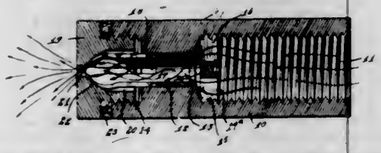
7. The herein described method of drawing sheet glass, which consists in lowering into and raising from a bath of molten glass a rectilinear bait-member, and at the same time maintaining the side edges of said sheet

adjacent the bath in adhesive contact with members normally stationary relatively to said sheet, and spaced from the surface of said bath, whereby the width of the sheet is maintained substantially constant.



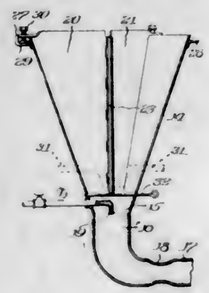
11. In apparatus of the character described, the combination with a bath of molten glass, of a vertically reciprocable, horizontally disposed, angularly adjustable rectilinear bait member adapted to be lowered into and raised from such bath, said bait member having a coefficient of expansion different from that of glass, and means adapted to pass a heating electric current through said bait member as it is raised.

1,500,382. TEMPERATURE-CONTROLLING SYSTEM. JAMES E. GANNON and MONTAGUE W. WARD, Erie, Pa. Filed Oct. 19, 1922. Serial No. 595,609. 4 Claims. (Cl. 219—20.)



1. In a thermostatic control for electric heating device, the combination with the main high voltage electric circuit and heating element connected therewith, a make-and-break device adapted to open and close said circuit, a shunt circuit connected to the said main circuit, a make-and-break device in said shunt circuit, and a low voltage circuit, an electromagnetic device in said low voltage circuit adapted to operate the make-and-break device in said shunt circuit, and a thermostatic circuit opening and closing device in said low voltage circuit.

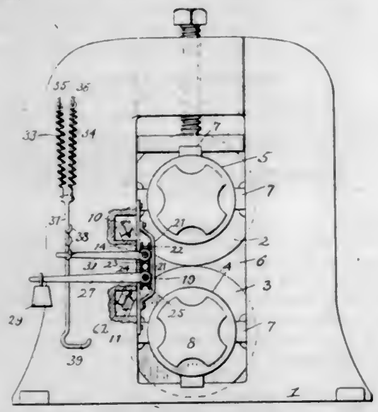
1,500,383. KNITTING DEVICE. WILLIAM J. GOURIE, Philadelphia, Pa. Filed Aug. 26, 1922. Serial No. 584,586. 2 Claims. (Cl. 66—31.)



1. A knitting device including a body provided with an oblong slot and a series of loop holders fixed to the body and surrounding the slot, the body consisting of detachable sections connected by dove-tail joints whereby its length may be increased or decreased.

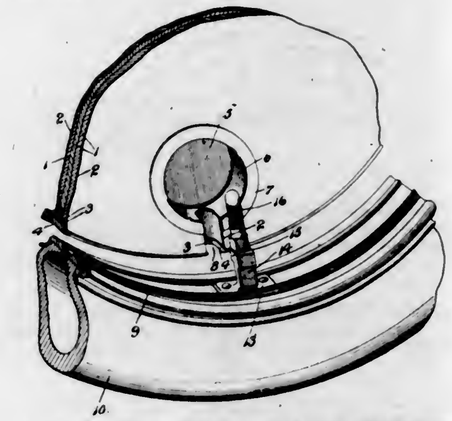
1,500,384. NOZZLE FOR PAINT SPRAYING. RALPH J. HAGERMAN, Cedar Rapids, Iowa. Filed Apr. 25, 1922. Serial No. 556,501. 1 Claim. (Cl. 299—120.)

A spraying nozzle comprising a nozzle body having a central passageway through it, and a reduced opening at the discharge end, a hollow adjustable current regulating member through which liquid flowing through the nozzle may pass and provided with a reduced portion at its discharge end, means for adjusting the size of the passageway through said reduced end, and a disk having diagonal slots extended through it for imparting a whirling motion to the liquid, said disk being located in the nozzle between the current regulating member and the receiving end of the nozzle.



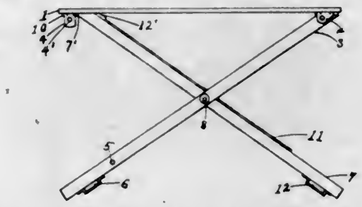
1,500,385. METHOD OF AND APPARATUS FOR MIXING MATERIALS. ERLE P. HALLIBURTON, Duncan, Okla. Filed Jan. 4, 1924. Serial No. 684,379. 27 Claims. (Cl. 83—73.)

1. A mixing device comprising an upright substantially cylindrical mixing chamber, a lateral outlet conduit having therein a constricted zone, means for introducing a jet of liquid at high velocity into said upright mixing chamber, such introduction being in the direction of flow of the mass at the point of such introduction, means for delivering solid pulverulent material directly into said mixing chamber.



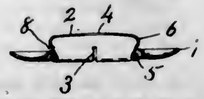
21. The process of hydrating and synchronously delivering cement for use, which comprises introducing cement into the path of a high velocity stream of water in a zone of reduced pressure, conducting the mixture to a container to permit the dissipation of freed air, and synchronously conducting the cement from the container to the point of use.

1,500,386. ROLL GRINDING AND POLISHING DEVICE. HENRY J. HARRIS, Youngstown, Ohio. Filed May 28, 1923. Serial No. 641,888. 14 Claims. (Cl. 80—1.)



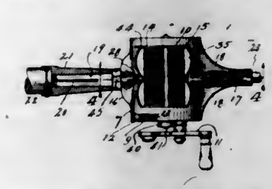
1. A roll polishing device for rolling mills, comprising a flexible bar adapted to conform to the longitudinal curvature of the surface of the roll, and means for yieldingly pressing the bar against the roll.

1,500,387. MOTOR VEHICLE WHEEL CONSTRUCTION. AUGUSTIN HENDRICKS, Grand Rapids, Mich. Filed Dec. 31, 1921. Serial No. 526,271. 8 Claims. (Cl. 301—63.)



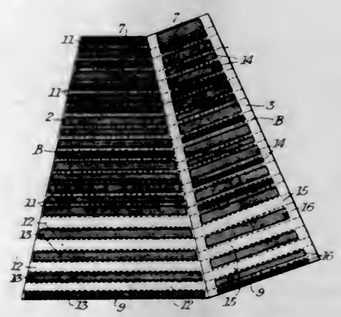
1. In combination, a wheel rim, a tire casing thereon, an air tube within the casing, a valve stem attached to the tube and passing through the rim, and a member comprising a base having an opening to receive the valve stem, a radially extending post from the base at one side thereof and a lug at the outer end of the post, said base being permanently secured to the rim, and said stem passing through the base and lug.

1,500,388. FOLDABLE FURNITURE COMBINATION. CHRISTIAN HEUMADER, St. Joseph, Mo. Filed July 19, 1921. Serial No. 485,823. 1 Claim. (Cl. 45—11.)



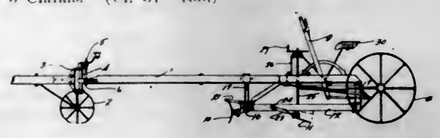
In a foldable table, a top, pairs of crossed legs at opposite sides of the table top and with one leg of each pair hinged to one end of the top, a stop depending from the other end of the top and adapted to receive the upper ends of the other crossed legs thereagainst to support the table in set up position, said crossed legs being pivotally connected in independent pairs, cross braces secured against the lower edges of said legs and adapted to support a folded chair thereon between the legs, and braces secured across the upper edges of the legs which engage said stop for engagement with the upper side of the folded chair when the legs are collapsed, said braces being spaced apart the width of said legs to provide an uninterrupted compartment from end to end of the structure.

1,500,389. SNAP FASTENER. GEORGE A. HOLMES, Newton Center, Mass., assignor to United States Fastener Company, a Corporation of Maine. Filed Apr. 26, 1921. Serial No. 464,521. 1 Claim. (Cl. 24—216.)



A socket member of a snap fastener consisting of a cup shaped socket piece the side walls of which are convergent from the closed toward the open end of the cup and terminate in an outwardly convex mouth, the external diameter of which is approximately the same as that of the base of the cup, the said side walls and mouth being split and adapted to yield inwardly or outwardly, combined with a body piece having an opening of smaller diameter than the external diameter of the socket mouth and adapted to be assembled with the socket piece by crowding the mouth of the socket piece through the opening of the body piece.

1,500,390. REEL HOLDER FOR FISHING RODS. PAUL H. HUSSEY, Indianapolis, Ind. Filed Apr. 19, 1923. Serial No. 633,302. 2 Claims. (Cl. 43—20.)



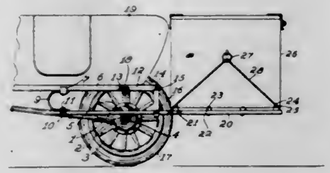
1. The combination with a fishing rod, a reel, and a holder in which the reel is rotatably mounted comprising end disks connected by rods, of a cylindrical body to which the line end of the rod is joined diametrically of the cylinder on one side, and to which the handle-end is joined on the diametrically opposite side, and in which the holder and reel are removably held, a lever pivoted at one end to the cylindrical body and having a notch removably engaging one of the rods of the holder.

1,500,391. CAMERA BELLOWS. CHARLES E. HUTCHINGS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 28, 1923. Serial No. 648,360. 10 Claims. (Cl. 95—39.)

1. A camera bellows having a series of folds, the folds of certain areas of the bellows differing in thickness from the folds of certain other areas.

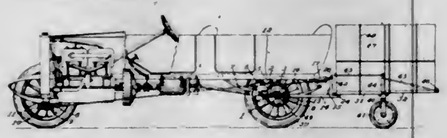
1,500,392. ROAD MACHINE. JAMES B. JARMIN, Spokane, Wash. Filed Apr. 10, 1922. Serial No. 551,317. 3 Claims. (Cl. 37—155.)

1. The combination in a wheeled implement with its main frame, of a flexible substantially U-shaped frame



having a central swiveled connection with the main frame at one end and pivotal connections with said frame at the other end, a smoothing bar pivotally supported in the flexible frame, and means for adjusting the pressure of said smoothing bar on the roadway surface.

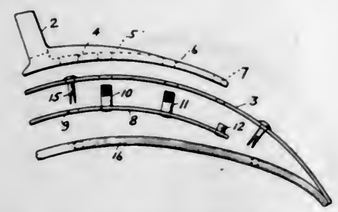
1,500,393. PHOTOGRAPHIC CARTRIDGE AND METHOD OF MAKING SAME. JOHN G. JONES and HAYWOOD G. DEWEY, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 24, 1922. Serial No. 563,447. 5 Claims. (Cl. 95—9.)



1. A photographic roll film cartridge comprising interwound strips of film and of protective material and a sticker, one portion of which is coated with an adhesive material unaffected by moisture and attached thereby to one end of the film, and another portion of which is free and unattached and coated with an adhesive material capable of being affected by water.

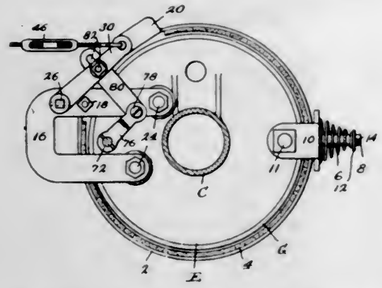
1,500,394. AUXILIARY FREIGHT CARRIER FOR VEHICLES. GEORGE COLVIN KENNEDY, Waterloo, Iowa. Filed Dec. 7, 1922. Serial No. 605,428. 18 Claims. (Cl. 224—29.)

2. The combination with the rear axle of a vehicle and a frame mounted thereabove, of bars positioned across said axle movably, and linking means movably engaged between the bars and said frame, certain of the linking-means being resilient.



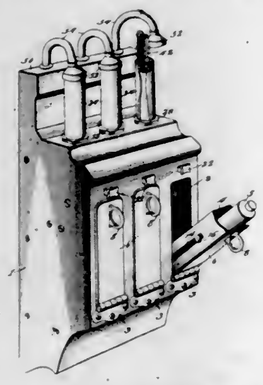
1,500,395. AUXILIARY FREIGHT CARRIER FOR VEHICLES. GEORGE COLVIN KENNEDY, Waterloo, Iowa. Filed Dec. 7, 1922. Serial No. 605,429. 9 Claims. (Cl. 280—33.44.)

1. The combination with a vehicle having both front and rear axles, of load-carrying bodies mounted on the rear axle projecting to the rear thereof, and connecting-means between said bodies and said front axle to anchor the projections of said bodies against downward movement.



1,500,396. BRAKE AND TRANSMISSION BAND. ARTHUR J. KIAN, Philadelphia, Pa., assignor of one-half to Clara M. Gruber, Philadelphia, Pa. Filed May 21, 1923. Serial No. 640,362. 3 Claims. (Cl. 187—249.)

2. In a band of the character described having openings at one of its ends the combination of an ear member having openings and adapted to overlie the end of the band, a retaining plate detachable from the band and adapted to



underlie its end, and fastening devices carried by and removable with the plate and adapted to connect and disconnect the plate, band and ear member.

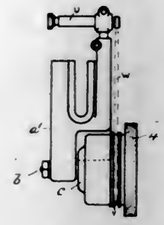
1,500,397. BRAKE FOR MOTOR VEHICLES. JOHN B. KLEIN, Kansas City, Kans. Filed Nov. 22, 1923. Serial No. 676,272. 5 Claims. (Cl. 188—18.)

1. In combination a drum, a braking member adapted to frictionally engage the periphery of said drum, a second braking member adapted to frictionally engage the inner surface of the drum, mechanism for causing one of said braking members to frictionally engage the drum, and means actuated by said mechanism for causing the other braking member to frictionally engage the drum.

1,500,398. SANITARY DENTAL SUPPLY HOLDER. LOUIS KUSNETZ, Chicago, Ill. Filed Sept. 19, 1922. Serial No. 589,041. 6 Claims. (Cl. 45—135.)

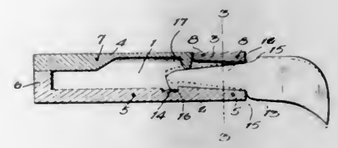
1. A cabinet of the class described having an opening in the front, a receptacle hinged to the cabinet and adapted to open and close the opening in it, a stationary receptacle mounted partially within the cabinet and having an opening at the top through which the stored article may be withdrawn, a movable plunger in the fixed receptacle, and connections between the movable receptacle and the plunger whereby as the movable receptacle is swung to open position the plunger will be raised for partially ejecting the article contained therein.

1,500,399. FIRE-ALARM DEVICE. ANTONIO C. LANESE, Cleveland, Ohio. Filed Dec. 7, 1923. Serial No. 679,054. 3 Claims. (Cl. 200—142.)



1. A fire-alarm device, comprising a body having a spring and electrical contacts mounted thereon, and provided with an opening adapted to permit a fusible member to be placed in lift engagement with said spring, and a cutting holder for said fusible member mounted upon said body adjacent said opening.

1,500,400. WELL-CLEANING DEVICE. CHARLES LARSEN, Denver, Colo. Filed Sept. 21, 1923. Serial No. 664,130. 3 Claims. (Cl. 166—17.)

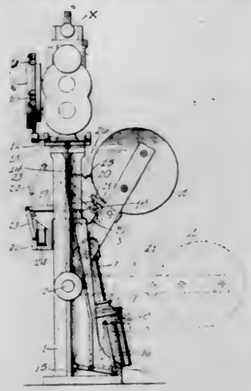


1. Means for heating the interiors of deep wells, which comprises a pump line extending from the top to the bottom of the well; a foot valve at the lower end of said pump line; a cylinder located above said foot valve; a piston in said cylinder; an oil pipe parallel to the pump line, and connected thereto at a point intermediate the foot valve and the piston; means for circulating highly heated mineral oil through said pipe and pump line; a steam pipe passing through the interior of the oil pipe, said pipe having radial openings at the bottom, said openings communicating with the interior of the well; and means for passing superheated steam through said steam pipe into the well.

1,500,401. GRINDING MACHINE. EUGEN LAUER-SCHMALTZ, Offenbach-on-the-Main, Germany. Filed June 23, 1920. Serial No. 391,241. 3 Claims. (Cl. 51—168.)

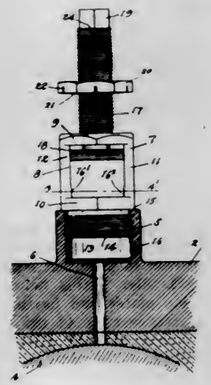
1. The combination with a field member and a supporting pin therein; of a bell-shaped armature enclosing said field member, a grinding tool directly mounted on the exterior cylindrical portion of said armature, and means on said armature for the reception of a driving belt.

1,500,402. KNIFE. ELIAS LEWIS, Terre Haute, Ind. Filed Nov. 2, 1922. Serial No. 598,628. 3 Claims. (Cl. 30—9.)



1. A knife comprising a handle including a pair of side plates, filler plates spacing the side plates apart and extending between longitudinal edge portions of the latter, one of said filler plates being co-extensive in length with the side plates and having a right angular portion extending transversely of the side plates at an end thereof, the other of said filler plates having a length less than that of the side plates, and a spring member secured between the side plates in alignment with the shorter filler plate and being in abutting relation adjacent to one of its ends with the right angular portion of the first filler plate, said spring member having an inwardly extending projection at its other end, said first filler plate having a notch in its inner edge, and a blade having a shank insertible between said filler plates into engagement with the projection on the spring member, said shank having a projection adapted to be forced into the notch of the first filler plate by pressure of the spring projection on the shank.

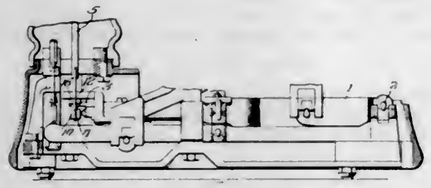
1,500,403. SAFETY CONTROL DEVICE. HENRY H. LOGAN, Chicago, Ill. Filed Aug. 2, 1923. Serial No. 655,322. 16 Claims. (Cl. 187—28.)



5. A device of the type described comprising a support, a shaft rotatably mounted in said support, a weighted arm rigidly secured to said shaft, a second arm pivotally carried by said support, a magnet adapted to lock said second named arm against movement when said magnet is energized, said second named arm having a recess therein, a hook carried by said weighted arm and adapted to be received in the recess of said

second named arm, and means for controlling the movement of said weighted arm when said weighted arm is

released by said second named arm, said controlling means being adapted to permit said weighted arm to swing rapidly or slowly.

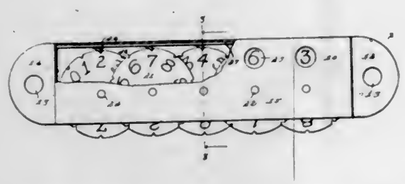


1,500,404. GREASE CUP. FRANK JAMES LOZO, Saskatoon, Saskatchewan, Canada. Filed June 1, 1920. Serial No. 385,719. 2 Claims. (Cl. 184—38.)

2. A grease cup comprising an internally threaded collar a body formed with a lower cylindrical portion externally threaded for engagement with said collar and an upper portion octagonal in cross section having opposite wall portions cut away to provide a wrench hold and a pair of filling openings at opposite sides of the wrench hold, said body being formed with an internal thread extending from the lower extremity of the annular portion to a point above the lower edge of the filling openings, a feed plunger formed with a peripheral thread engaging the internal thread of said body and an actuating stem threaded through the upper end of the body and secured to said plunger.

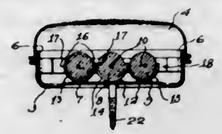
1,500,405. THERMOSTATICALLY-ADJUSTED SCALE LEVER. GEORGE M. LUDLOW, Evanston, Ill., assignor to Sanitary Scale Company, Chicago, Ill., a Corporation of Illinois. Filed June 4, 1923. Serial No. 643,140. 17 Claims. (Cl. 265—69.)

1. A scale lever having a load transmitting toe piece adjustable longitudinally of the lever, and a ridge and groove bearing through which the lever transmits its load to the toe piece, extending in the direction of the



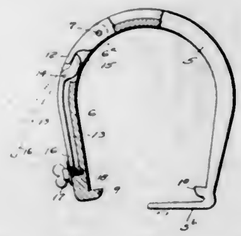
length of the lever and permitting movement of the toe piece relatively to the lever in said direction while resisting its displacement transversely thereto.

1,500,406. COLLAPSIBLE HACK SAW. ERASTUES W. MCINTIRE, Salt Lake City, Utah. Filed Nov. 20, 1922. Serial No. 602,162. 7 Claims. (Cl. 145—33.)



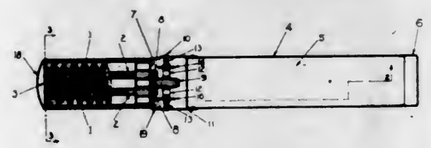
1. A saw comprising a frame, a lever pivoted to the frame, a blade connected at one end to the frame remote from said lever, and a link connected at one end to the lever eccentric of the lever pivot and at the other end to the other end of said blade, so that when the lever is swung on its pivot to tension said blade, it will move the link into a firm engagement with the frame at a point on the link between the connections of the same to the lever and blade.

1,500,407. MILEAGE REGISTER. JOHN P. MCLAVEY, Iowa Falls, Iowa. Filed Sept. 12, 1923. Serial No. 662,248. 4 Claims. (Cl. 235—114.)



1. A register having a body portion formed of a single piece of material provided with a back and top edge and a front plate and a bottom edge member, said bottom edge member being turned inwardly to form a spring, a series of numeral wheels pivotally mounted between the said inwardly extending portion and the front plate, each of said numeral wheels being provided with a series of notches in its edge, a spring plate adjacent to the inner edge of said wheels, said plate being provided with a series of spring members, one for each of said wheels and designed to engage the notches when the wheels have been placed in a predetermined position.

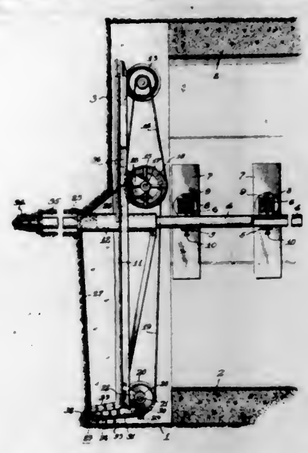
1,500,408. AUTOMATIC FIRE ALARM. ALBERT S. MARTIN, East Burlington, N. J. Filed Dec. 18, 1922, Serial No. 607,627. Renewed Apr. 20, 1924. 6 Claims. (Cl. 116—105.)



5. An automatic fire alarm comprising a casing having a series of openings therein, an inside cover for said openings, a two-part inflammable ring within the covering, detonating elements adapted to be exploded by the ignition of said inflammable ring and a resilient holder for said detonating elements.

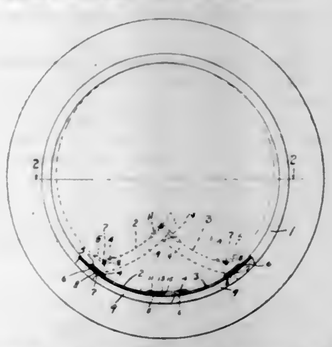
1,500,409. ATTACHMENT FOR AUTOMOBILE WHEELS. PERRY O. MELTON and M. C. LASELL, Aberdeen, S. Dak. Filed Jan. 23, 1923. Serial No. 614,442. 6 Claims. (Cl. 152—14.)

2. A device of the character described of general horseshoe shape having inturned ends and made in two sections hingedly connected to each other, a locking tongue carried by one of said sections and comprising a nose adapted to engage beneath an overhanging part upon the other of said sections and a tail portion and means for holding said tail portion against outward movement.



1,500,410. TOOTHBRUSH. JOHN MERKEL, Jr., Evansville, Ind. Filed Oct. 17, 1921. Serial No. 508,332. 10 Claims. (Cl. 15—25.)

1. In a device of the character described, a pair of oppositely rotating brushes having bristles thereon arranged in helical formation, said brushes being so arranged that said helically arranged bristles on opposed brushes inter-mesh.

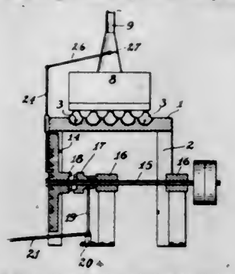


1,500,411. TUNNELING MACHINE. GUTTORM MILLER, Glens Falls, N. Y. Filed Jan. 17, 1921. Serial No. 437,776. 12 Claims. (Cl. 262—7.)

1. A tunneling machine including a plain endless cable having a free run forming a cutter for severing portions of the earth wall at the end of a tunnel bore, means for holding taut said cutting run of the cable during its

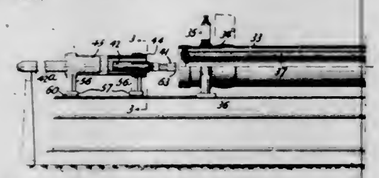
cutting travel, and means for causing an endwise traveling movement of said cable.

1,500,412. VEHICLE WHEEL RIM. JUDSON H. MISKIMEN, Glendive, Mont. Filed Apr. 15, 1920. Serial No. 374,119. 1 Claim. (Cl. 301—32.)



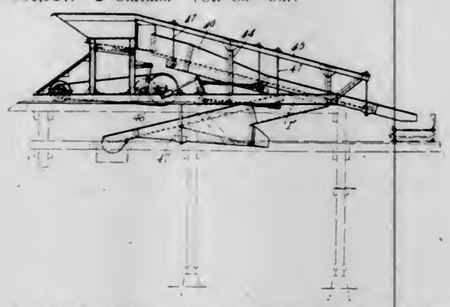
A demountable rim formed of a plurality of sections, each section providing a base and side flanges, and hinges secured to the bases of the sections to connect the sections together, the adjacent portions of said bases having complementary terminal recesses, each hinge being provided with shoulders adjacent its knuckle, said shoulders and knuckle being adapted to be received in and to fill said complementary recesses, the outer surface of said shoulders being adapted to form a continuation of the outer surface of the rim whereby the outer surface of the bases presented to a tire are substantially unbroken and whereby one leaf of the hinge connecting two adjacent sections may extend through one of said complementary recesses when the adjacent sections are inwardly broken.

1,500,413. PADDING MACHINE. ALLISTER S. MITCHELL, Oakland, Calif., assignor to California Cotton Mills Company, Oakland, Calif., a Corporation of California. Filed June 16, 1923. Serial No. 645,892. 9 Claims. (Cl. 225—43.)



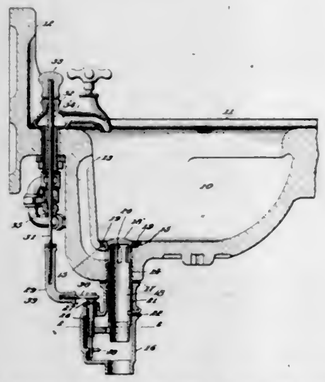
1. A padding machine comprising a table upon which the article to be padded is adapted to be placed, said article having at least one pocket formed therein, a tube positioned in front of said table and in alignment with

said pocket, means to reciprocate said tube into and out of said pocket, means holding one side of said article while the tube is being inserted into the pocket and means



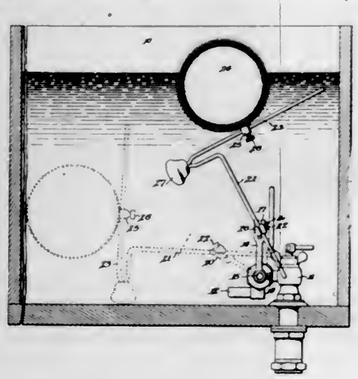
adapted to hold the other side of the article while the tube is being withdrawn from the pocket, and a cam adapted to actuate said means.

1,500,414. MEANS FOR THE MANUFACTURE, CENTRIFUGALLY, OF PIPES, COLUMNS, AND OTHER HOLLOW ARTICLES. DONALD MOIR and HUGH BUCHANAN, Rosario de Santa Fe, Argentina. Filed July 24, 1923. Serial No. 653,551. 9 Claims. (Cl. 25—30.)



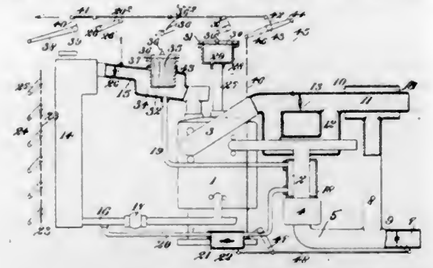
1. Means of the kind herein referred to, comprising a hollow revoluble member, a material-distributing trough adapted to be advanced longitudinally into the said member and means for supporting the trough at both ends during the time it is being thus advanced.

1,500,415. SHAKING SCREEN. FRANK C. MORROW, Wellston, Ohio. Filed Sept. 10, 1923. Serial No. 661,917. 2 Claims. (Cl. 83—56.)



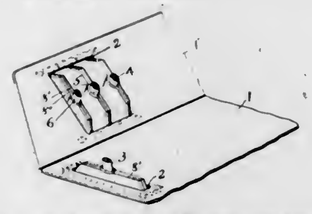
1. A shaking screen unit for bodily attachment to a tipple or the like, including a rigid base frame for receiving vibration and distributing it through the area of the base engaging portion of the supporting structure, a feed hopper fixedly connected to and mounted above the base, an upper frame fixedly connected to the base, a feed plate mounted for reciprocation within the hopper, separate screens supported by the upper frame and by said frame and base respectively for oscillation, levers supported by the base frame and mounted for simultaneous oscillation, pitmen connected to each lever at equal distances from and at opposite sides of the fulcrum thereof, and connected to the respective screens, means for oscillating the levers to simultaneously swing the screens in opposite directions respectively but uniformly, a shaft journaled on the base frame, crank arms thereon, link connections between the crank arms and the respective levers, and power mechanism supported solely by the base frame for operating the shaft.

1,500,416. WASTE STOPPER AND OPERATING MECHANISM. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Original application filed Nov. 12, 1919, Serial No. 337,496. Patent No. 1,447,808, dated Mar. 6, 1923. Divided and this application filed Apr. 18, 1922. Serial No. 554,442. 10 Claims. (Cl. 4—203.)



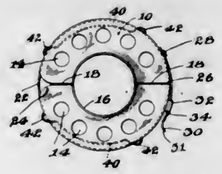
1. The combination in a fitting of the class described, of a stopper, a stopper casing into which the lower end of said stopper projects, a vertically disposed lifting rod extending from said casing, a vertically adjustable yoke on said rod and embracing said stopper, and means on said stopper for locking the parts together when the stopper is rotated in a predetermined position.

1,500,417. FLOAT-VALVE-OPERATING MECHANISM. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Original application filed Oct. 29, 1919, Serial No. 334,122. Divided and this application filed Apr. 30, 1923. Serial No. 635,599. 14 Claims. (Cl. 137—104.)



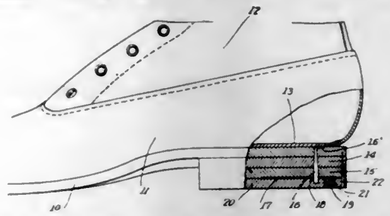
1. A valve operating float comprising a rod having an integral upwardly extending arm bent at an angle to the main portion of the rod, a float adjustably connected to said arm, and a bumper secured to said rod between the ends thereof.

1,500,418. TEMPERATURE-CONTROLLING MEANS FOR MOTORS. STANLEY H. PAGE, San Francisco, and JACOB B. STRUBLE, Oakland, Calif. Filed Jan. 19, 1921. Serial No. 438,518. 6 Claims. (Cl. 123—174.)



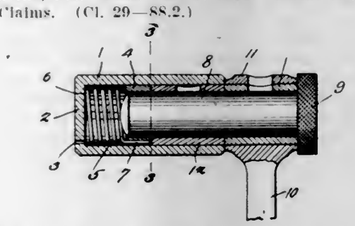
1. In combination with the cylinder of an internal combustion motor provided with a water jacket, a circulating water system connected with said jacket, a thermostat therein, means whereby said thermostat controls the temperature in said water system, and means actuated by the varying fluid pressure within the combustion chamber and operating jointly with said thermostat for regulating the operation of said water temperature controlling means.

1,500,419. SLOT CLOSER. ROSCOE RANDALL PAINE, Waterville, Me. Filed Mar. 29, 1923. Serial No. 628,607. 4 Claims. (Cl. 74—81.)



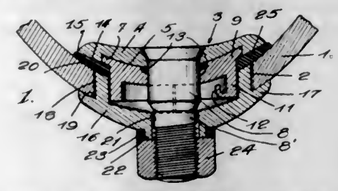
1. A slot closing device for automobiles and the like including two pieces of flat, elastic and flexible material as sheet rubber cut away to form a pair of upwardly projecting and contacting elastic flanges to cover the slot and surround the operating lever, the material composing the flanges being formed to connect with the lower edge of said flanges with a flat body portion surrounding the slot and a retaining mat having a slot therein fitting around said flanges and resting on said body portion to hold it in place.

1,500,420. SHADE HOLDER. JAMES I. POLLAK, Chicago, Ill., assignor to U. S. Tool Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 10, 1923. Serial No. 618,338. 8 Claims. (Cl. 240—129.)



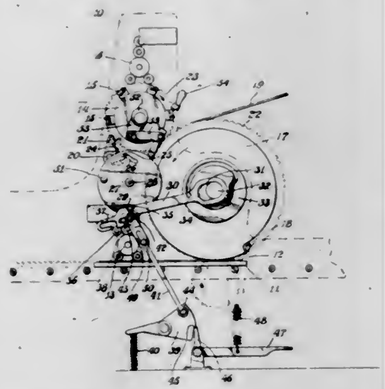
1. A shade holder including a circular plate, a downwardly extending flange integral with said plate, a diametrical cut in said plate, said cut being extended to one portion of the flange, the other portion of the flange diametrically opposite said cut comprising an integral spring hinge.

1,500,421. SHOE HEEL. ABRAHAM POSNER, Brooklyn, N. Y. Filed Sept. 19, 1922. Serial No. 589,098. 2 Claims. (Cl. 36—75.)



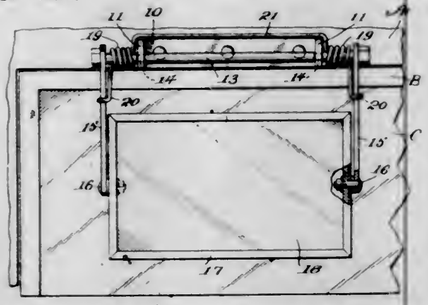
1. A shoe heel comprising two or more lifts, an arcuate row of slugs passing through said lifts into the shoe sole, the heads of said slugs extending outwardly, a metal plate having perforations registering with certain of said slugs, an outer lift in which the heads of said slugs are imbedded, said outer lift having openings near its rear and side edges, metal lugs fixed with said plate extending through the mentioned openings in said outer lift, and a marginal row of nails passing through all of said lifts exteriorly of the edge of said plate.

1,500,422. BUSHING REMOVER. JAMES K. ROBINSON, Jacksonville, Fla., assignor of one-fourth to S. S. Rickett and one-fourth to C. C. Robertson, both of Jacksonville, Fla. Filed Dec. 7, 1922. Serial No. 605,456. 4 Claims. (Cl. 29—88.2.)



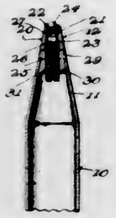
2. A device for re-bushing an article, comprising a plunger; a follower loosely surrounding the plunger; and a casing independent of the article to be rebushed and of sufficient diameter and construction to receive the plunger and the follower slidably.

1,500,423. HANDHOLE CLOSURE. JOHN C. SHERRY, Seattle, Wash. Filed Nov. 21, 1922. Serial No. 602,425. 11 Claims. (Cl. 220—25.)



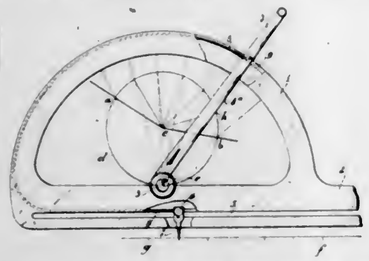
1. A hand hole closure having a head made up of independent sections adapted in one relative position to permit the insertion of the head through the hand hole and in another position to prevent movement of the head through the hand hole, the joint between said sections when in the latter position being disposed inwardly of the marginal edge of the hand hole, a bridge to engage the surface about the hand hole in opposition to the head and having a flange to fit within the marginal edge of the hand hole, the free edge of the flange extending in both directions beyond the joint between the head sections, and means for drawing said head and bridge toward each other, whereby said flange edge may act through an interposed sealing element to seal said joint.

1,500,424. PRINTING MACHINE. AMOS H. SMITH, Brooklyn, N. Y., assignor to American Bank Note Company, New York, N. Y., a Corporation of New York. Filed Oct. 28, 1922. Serial No. 597,441. Renewed Sept. 25, 1923. 12 Claims. (Cl. 101—77.)



1. A printing machine embodying therein a printing plate carrying member, an inking mechanism associated therewith, a numbering head cylinder, numbering heads thereon, an inking mechanism associated therewith, an impression cylinder cooperating with the plate upon said plate carrying member and with the numbering heads upon said numbering head cylinder respectively, numbering head actuating means, and means operative in synchronism with said impression cylinder, whereby said numbering head actuating means will be brought into the operative relation to said numbering heads, and out of operative relation thereto, upon alternate revolutions of said numbering head cylinder, said numbering head cylinder being of a diameter to require two revolutions thereof to develop an angular speed coinciding with the speed of said printing plate carrying member.

1,500,425. WINDSHIELD ATTACHMENT. WESLEY THURMAN and STELLA SMITH, Virginia, Minn. Filed Mar. 24, 1923. Serial No. 627,384. 2 Claims. (Cl. 20—40.5.)

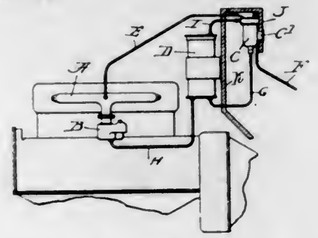


1. A windshield attachment comprising a supporting bracket adapted to be mounted above the windshield of an automobile, a bar detachably supported by said bracket, arms depending from said bar, and a rectangular glass covered frame carried by said arms and adapted to lie against the windshield, and spring means for urging said arms toward the windshield, and for holding the bar in position upon the bracket, consisting of a single length of wire having its intermediate portion engaging upon the top of the bracket, having its end portions coiled about the bar, with its terminals engaging said arms.

1,500,426. COMBINATION PENCIL CASE AND STYLUS. SEWELL HOMER TOWNSEND, Bucklin, Mo. Filed Aug. 14, 1923. Serial No. 657,396. 3 Claims. (Cl. 120—43.)

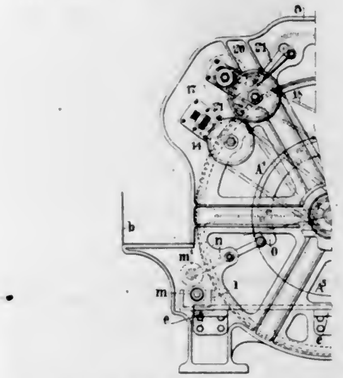
3. In a device of the character described, a tip having at one end a ball receiving socket provided with an opening, a ball arranged in the socket and having a portion projecting through and beyond said opening, said tip being internally threaded at the end thereof opposite said socket, an externally threaded stem engaged with the internally threaded portion of the tip and having a reduced extension provided with a concaved outer end engaging the ball to maintain the same in proper position in its socket, and a lock washer threaded on the stem and engageable with the tip.

1,500,427. INSTRUMENT FOR DIVIDING AND MULTIPLYING ANGLES. JOHANNES FREDERIK VALKENBURGH, The Hague, Netherlands. Filed Jan. 8, 1921. Serial No. 435,848. 2 Claims. (Cl. 33—75.)



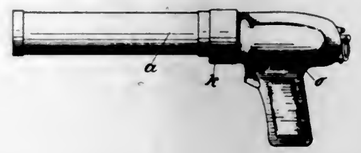
1. An instrument of the class described, an element forming an axis and having a piercing point at one end, an indicator angularly displaceable about such axis, a member, means for rectilinearly guiding said member, and means whereby movement of said member compels a proportionate angular displacement of the indicator.

1,500,428. CENTRIFUGAL CASTING. WILLIAM W. WEITLING, College Point, Long Island, N. Y. Filed Mar. 31, 1922. Serial No. 548,394. 5 Claims. (Cl. 22—65.)



1. In the art of making metallic articles of annular cross-section of a length at least as great as the inside diameter thereof, the process of distributing a pre-determined charge of molten metal in the rotary mould of a rotary casting machine, which involves introducing such charge in toto into the chamber bounded by the inside walls of the mould while there confining the charge in an elongated mass completely spaced from te mould but substantially co-extensive with the length of the mould, and then breaking up such mass by transferring the molten metal from the confines of the mass and against the inside surfaces of the mould in a rapidly sweeping flow beginning near one end of the mould and thence running along the length of the mould and terminating near the other end of the mould.

1,500,429. VISIBLE-FLOW FUEL-FEEDING DEVICE FOR AUTOMOBILE ENGINES. LEONARD H. WHEELER, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 19, 1922. Serial No. 576,006. 3 Claims. (Cl. 158—36.)



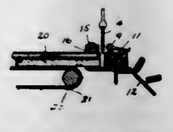
1. In combination with a motor vehicle and its engine, a fuel feeding device comprising a chamber into which fuel is moved from a lower source on the vehicle, said chamber having a transparent panel through which the interior conditions as to inflow, outflow and liquid level, can be observed; a fuel supply conduit leading to said chamber; means for causing inflow of fuel therethrough to the chamber, said chamber having an atmosphere inlet for permitting gravity outflow from the chamber; means operating by change of liquid level in the chamber, for alternating the operation of the inflow causing means and the atmosphere pressure for permitting outflow; a fuel reserve chamber positioned at a lower level than the first mentioned chamber and at a level for supplying the carbureter by gravity flow; a conduit for delivering the liquid by gravity from the first mentioned chamber to the second; a valve controlling liquid flow to said conduit, adapted to be opened in the direction of outflow from the first chamber toward the second, and to be held seated by the means for causing liquid inflow into said first chamber, said second chamber having a constantly open air inlet for permitting gravity outflow therefrom to the carbureter.

1,500,430. ROTARY LITHOGRAPHIC PRINTING MACHINE. THOMAS WALTON, London, England. Filed Mar. 11, 1924. Serial No. 698,498. 13 Claims. (Cl. 101—141.)

1. A rotary lithographic printing machine comprising a printing cylinder and a single member for damping and inking the printing cylinder.

1,500,431. FIRE-EXTINGUISHING DEVICE. ALBERT WOLF, Berlin, Germany. Filed Sept. 12, 1923. Serial No. 662,308. 1 Claim. (Cl. 42—1.)

In a fire extinguishing device, the combination of a pistol shaped trigger mechanism, an elongated cartridge containing a fire extinguishing substance and a priming composition, and means detachably connecting one end of the cartridge to said trigger mechanism, whereby said cartridge forms an elongated barrel for the pistol shaped trigger mechanism, said cartridge being of sufficient size to contain a full charge of the fire extinguishing substance and of sufficient length to direct the charge a considerable distance when the trigger mechanism is actuated.



1,500,432. METHOD OF ATTACHING LABELS OR THE LIKE. HARRY AYLIFFE, London, England, assignor to Caribonum Limited, Leyton, Essex, England. Filed Sept. 27, 1923. Serial No. 665,229. 5 Claims. (Cl. 216—62.)

1. Method of attaching a sheet to a surface, consisting in coating the surface with varnish, smearing the sheet with a softening agent for celluloid, pressing a film of celluloid over the smeared sheet, further pressing the celluloid-covered sheet with the application of heat, and finally pressing the sheet so treated on to the surface, the said final pressing operation being accompanied by the application of heat.

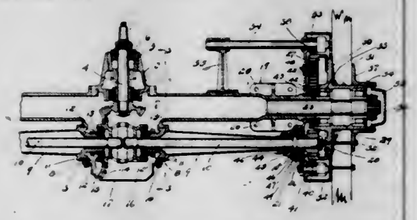
1,500,433. SENSITIZING COMPOSITION FOR PREPARING BLUE-PRINT PAPER. ERNEST BERTSCH, Haguenau, France. Filed Aug. 29, 1921. Serial No. 496,593. 2 Claims. (Cl. 95—7.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A composition for use in the production of blue print paper, comprising organic ferric salts, and a neutral alkali oxalate.

1,500,434. BREAD-SLICING MACHINE. HAROLD E. BJORLIN, Duluth, Minn. Filed Oct. 15, 1923. Serial No. 668,529. 2 Claims. (Cl. 146—154.)

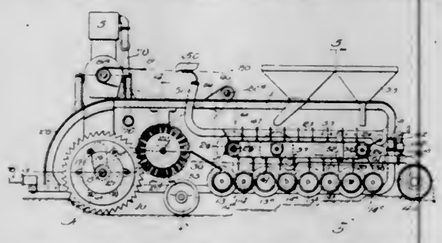
1. The combination with a bread slicing machine having a reciprocable knife for slicing loaves of bread, of a shaft, adjacent the knife, carrying gravity means for holding a number of slices in close juxtaposition to the knife for the purpose described.

1,500,435. LOCK. LEONARD G. BOWLES, Columbus, Ga., assignor of one-half to B. S. Miller, Columbus, Ga. Filed Oct. 18, 1923. Serial No. 669,406. 4 Claims. (Cl. 292—207.)



1. In a car door lock, a plate adapted for attachment to a car door and forming a base, a shaft extending slidably and rotatably through said plate, a locking arm on the inner end of the shaft, an operating handle on

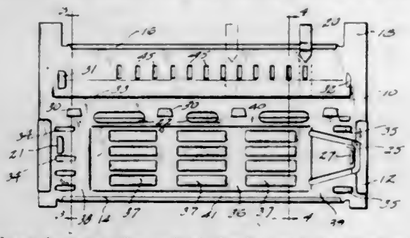
the outer end of the shaft, said inner and outer ends being hingedly connected to permit the handle to fold down on said plate upon retraction of the shaft, and



a key slidably mounted on said plate, said shaft having a slot extending through its inner end for engagement by said key whereby to prevent movement of the shaft when protracted and in locked position.

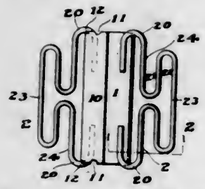
1,500,436. AXLE. WILLIAM M. BRITTON, Alma, Mich. Filed Aug. 30, 1920. Serial No. 407,000. 6 Claims. (Cl. 74—7.)

1. A drive axle constituting a main load carrying member having wheel carrying spindles mounted in the ends thereof, said axle having an integral gear housing provided with shaft receiving openings in the sides thereof, the centers of said openings being spaced from the centers of the wheel carrying spindles.



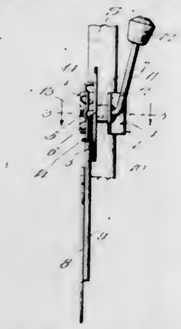
1,500,437. SOIL PULVERIZER AND SEEDER. CHARLES S. BURTON, Oak Park, Ill. Filed Feb. 8, 1918. Serial No. 215,968. 23 Claims. (Cl. 97—10.)

1. A machine for the purpose indicated mounted for travel, comprising means mounted thereon for excavating the soil, means for conveying the excavated soil rearward over the line of advance of the machine, and soil grinding or flouring means comprising a series of pairs of rolls; the conveying means being adapted for delivering the excavated soil between the rolls of the several pairs, and the grinding or flouring means being adapted for depositing the ground or floured soil in the furrow of the excavation.



1,500,438. ADDRESS-PLATE HOLDER. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 20, 1922. Serial No. 545,041. 8 Claims. (Cl. 101—369.)

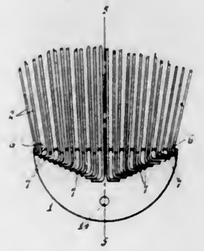
1. A movable index tab comprising a strip of material bent into a U-shape to provide two portions spaced apart a slight distance, one of said portions being provided with a transversely extending corrugation located about



midway between the end of the leg and the bend of the U, whereby said corrugation may embrace an edge bead and the tab project materially beyond the same.

1,500,439. BUCKLE. SHERMAN D. CLARK, Seattle, Wash., assignor of one-fourth to John F. McHugh, ten per cent to Anton De Muth and E. P. Sherman, all of Seattle, Wash. Filed Sept. 18, 1922. Serial No. 588,822. 5 Claims. (Cl. 24—74.)

3. A slidable buckle comprising a base having pivot-receiving eyes extending along two opposite edges, and spring loops pivotally mounted in said eyes, said loops being adapted to yield in the direction of the axis of said pivots, and having web holding bars extending parallel with their pivots and spaced from the plate to receive the web between said bars and the base, said base having notches in its edges receiving the loop ends when the loops lie in the general plane of the base and also when swung at right angles thereto.

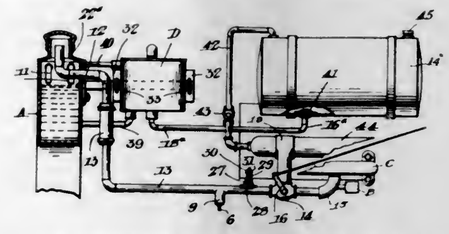


1,500,440. AUTOMOBILE DIRECTION SIGNAL. WILLIAM M. COLLINS, Huntington, Ind. Filed Mar. 11, 1924. Serial No. 698,555. 2 Claims. (Cl. 116—52.)

1. An automobile direction signal comprising a bracket adapted to be fastened to a support in substantially a vertical plane, said bracket being provided with a horizontally disposed bearing, an arm carrying an indicating element mounted to swing across a portion of one side of said bracket and having its inner portion contacting flatly with said side of said bracket, the inner end of said arm being bent laterally at right angles and passed through said bearing and then bent at an angle

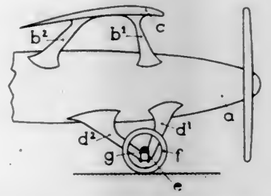
less than a right angle to form an operating handle located on the other side of said bracket, and a resilient member mounted on the first mentioned side of said bracket and bearing against said arm to maintain it flat against the first mentioned side of said bracket and hold it in adjusted positions.

1,500,441. GARDEN BROOM. HENRY F. CONGABLE, Oakland, Calif., assignor to Robinson Hardware Company, Oakland, Calif., a Corporation of California. Filed Dec. 24, 1921. Serial No. 524,748. 8 Claims. (Cl. 55—10.)



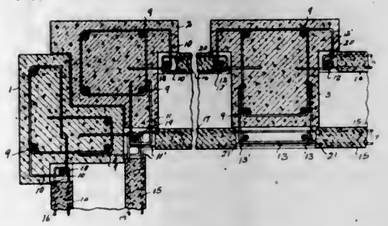
4. A garden broom including a head formed of a metal plate bent upon itself and provided with a plurality of spaced apertures in the bend thereof, tines extending through said apertures between the members of said plate, the inner ends of said tines being bent at right angles, the bent ends of the tines at the right of the center of the plate engaging each other successively except the bent end of the extreme right tine which engages the inner side of the bent portion of the plate, the bent ends of the tines at the left of the center of the plate engaging each other successively, except the bent end of the extreme left tine which engages the inner side of the bend in said plate, an offset in one member of said head engaging the bent ends of the two innermost tines to hold them against longitudinal displacement, a handle secured near its end to said head, and a spacer secured to the end of said handle for spacing the tines in diverging relation from said head.

1,500,442. FLY SWATTER. ALBERT N. COOPER, Lodi, Calif. Filed Feb. 10, 1923. Serial No. 618,419. 1 Claim. (Cl. 43—137.)



A fly swatter including a handle, a spring wire bent to form a loop, a coil formed by the ends of the wire, said handle being secured to that end of the coil remote from the loop, a metal fabric surrounded by the loop and joined at its edge to the inner surface of the loop, said fabric and loop forming a resilient body, the coil constituting a resilient connection between the body and the handle, said coil and handle being normally positioned in the same plane with the body, and a protecting sleeve surrounding the coil.

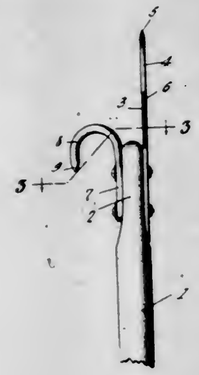
1,500,443. VAPOR AND AIR INTENSIFIER AND CARBURETOR ATTACHMENT. FRANK FREDERICK WILLIAM DOERING, Hibbing, Minn. Filed July 10, 1922. Serial No. 573,827. 12 Claims. (Cl. 123—25.)



1. The combination with a radiator having an overflow pipe, and the carburetor of an engine, of a three-way valve located between the carburetor and the radiator and connected thereto by conduits, air intake means in said conduits, means for actuating the valve, and air pipes extending through the top of the radiator and terminating at the lower end adjacent to the normal water level in the radiator.

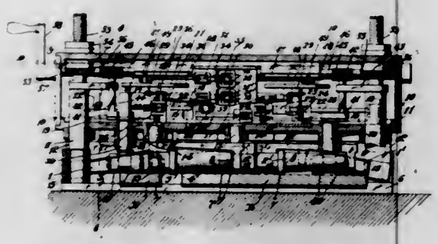
1,500,444. FLYING-MACHINE CONSTRUCTION. CLAUDIUS DORNIER, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,544. 5 Claims. (Cl. 244—14.)

1. In an aeroplane in combination, a body, self-supporting hollow joists with funnel shaped bases fixed to said body, and starting gear attached to the lower ends of said joists.



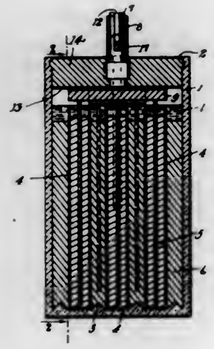
1,500,445. CONCRETE BUILDING CONSTRUCTION. WENZEL J. DVORAK, Sunset Heights, Tex. Filed Mar. 26, 1923. Serial No. 627,609. 2 Claims. (Cl. 72—16.)

1. A concrete construction composed of a base, precast concrete columns mounted on said base and forming corner columns and wall columns, vertical reinforcing rods embedded in said columns whose lower ends



project beyond the columns and are embedded in said base, precast concrete wall slabs disposed one above the other forming outer and inner walls horizontally arranged, reinforcing rods in said projecting columns and slabs which are formed into projecting loops which project from adjacent parts of the columns and slabs and overlap, locking rods projecting through said loops and locking them together, the upper ends of the vertical reinforcing rods of said columns projecting beyond the columns, and a cap plate molded onto the top of the complete wall of said construction, the said projecting upper ends of said rods being embedded in said cap plate.

1,500,446. HOOK. DANIEL FASOLD, Keswick, Iowa. Filed July 27, 1922. Serial No. 577,951. 1 Claim. (Cl. 30—11.)



In a device of the class described, a handle, and upper and lower hooks on the handle, the hooks being disposed in planes approximately at right angles to each other and being spaced apart longitudinally of the handle, the upper hook being so constructed as to serve as a cutting hook, and the lower hook being so constructed as to function exclusively as a holding hook.

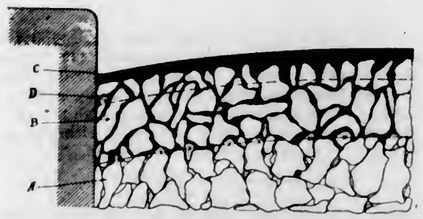
1,500,447. MEANS FOR MEASURING LUMBER. EDWIN A. GODLEY and LEO J. GRUBMAN, New York, N. Y. Filed Sept. 23, 1921. Serial No. 502,620. 18 Claims. (Cl. 33—142.)

1. In an apparatus for measuring lumber, a rotary member having parts of relatively different diameters adapted to be directly engaged by a board disposed in a plane parallel to the axis of rotation of said member whereby said member is rotated at a speed governed by the width of the board, an integrator, and means operatively connecting said member to the integrator to register the surface area of the board upon said integrator.

1,500,448. STORAGE BATTERY. VICTOR CLAUDE GOODRIDGE, Chicago,, Ill., assignor to Goodridge Battery Co., a Corporation of Illinois. Filed Jan. 23, 1922. Serial No. 531,120. 25 Claims. (Cl. 204—29.)

1. A lead-lead battery, comprising in combination a receptacle, positive and negative active materials therein, and a container surrounding and adapted to enclose, separate and isolate one of said materials from the other, the receptacle, the active materials and the container being in sequential and physical contact.

1,500,449. COMBINATION LOCK AND EMERGENCY BRAKE FOR INTERNAL-COMBUSTION ENGINES. VICTOR GRIFFITH, San Francisco, Calif. Filed Apr. 10, 1923. Serial No. 631,243. 4 Claims. (Cl. 251—6.)

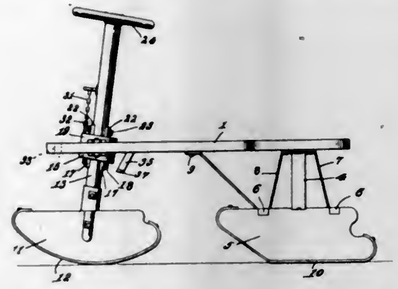


3. In a device of the character described, a substantially L-shaped housing having legs axially at right angle and bores extending longitudinally therethrough and communicating at their juncture, plungers fitted, respectively, to said bores and having adjacent ends obliquely fashioned for slidable contact, a transverse bore through a leg of said housing and the plunger therein as normally positioned relative to each other, a means, carried by the other of said legs, whereby the said plunger is forced into a position in which its transverse bore is out of registration with the transverse bore through the said leg, and means for returning the said, actuating means to the normal position.

1,500,450. TAKE-UP SPROCKET FOR MOTION-PICTURE MACHINES. BRONISLAW GWOZDZ, Warsaw, Poland. Filed Aug. 26, 1921. Serial No. 495,702. 1 Claim. (Cl. 74—31.)

In a device of the kind described in combination, a shaft, a pair of toothed discs loose and a collar fixed on said shaft intermediate said discs, and flat arms extending through slots in said collar and engaging said discs with their free ends, the contact surfaces of said arms with said collar and discs being rounded.

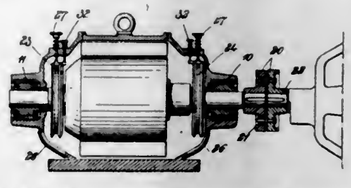
1,500,451. COMPOSITE PAVEMENT AND METHOD OF PRODUCING SAME. WILLIAM E. HACKER, Los Angeles, Calif. Filed Nov. 26, 1920. Serial No. 426,439. 8 Claims. (Cl. 94—20.)



1. A unitary bituminous pavement wearing structure composed of two dissimilar bituminous mixtures, the lower being a relatively stable coarse aggregate bituminous concrete containing relatively coarse and relatively fine mineral bodies and containing not more than substantially that proportion of relatively fine mineral bodies and bitumen which will fill the spaces otherwise existing between the relatively coarse bodies if compacted alone, the upper mixture being a relatively plastic fine aggregate bituminous mortar containing relatively fine mineral bodies and containing not less than substantially that proportion of bitumen which will fill the spaces otherwise existing between the mineral bodies if compacted alone, the contiguous portions of the two mixtures being so bonded and blended together by compression as to produce a unitary mass.

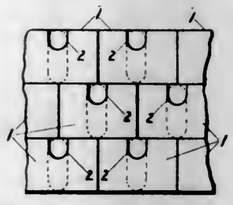
1,500,452. PLASTER WALL BOARD. JOSEPH F. HAGGERTY, Batavia, N. Y., assignor to Universal Gypsum Company, Chicago, Ill., a Corporation of Delaware. Filed June 2, 1922. Serial No. 565,433. 12 Claims. (Cl. 154—45.9.)

1. A wall board consisting mainly of gypsum and having a paper liner, cooked starch being incorporated with the gypsum, to insure secure adhesion of said paper liner.



1,500,453. SLED. HARRY HEFFNER, Cleveland, Ohio. Filed May 18, 1923. Serial No. 639,979. 3 Claims. (Cl. 280—12.)

1. A sled comprising a body board, a frame formed of metal straps arranged rightangularly with respect to each other secured to the board and having downwardly directed angle ends, spaced connected runners to which the ends of the frame are secured to the ends of one of the frame members being continued and connected approximately centrally to the body, a runner normally arranged on a line running centrally between the first mentioned runners and forward thereof, said forward runner having a curved surface engaging edge, cross sectionally V-shaped metal shoes on all of the runners, a post removably secured to the forward runner passing through bearings in the body board, said bearings each

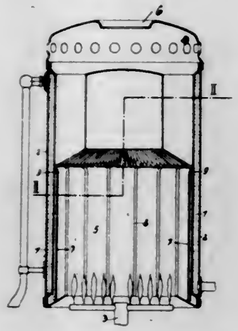


comprising castings having oppositely beveled body portions, disks in the castings having lugs to which the post is secured and whereby the post is arranged at an angle with respect to the body board, and an operating wheel for the post.

1,500,454. BALANCED MACHINE. HANS HEYMANN, Darmstadt, Germany. Filed Oct. 4, 1921. Serial No. 505,410. 14 Claims. (Cl. 73—51.)

1. A machine comprising in combination, a rotor, a journal connected with said rotor and bearings supporting said journal with a clearance between said bearings and said rotor adapted for the arrangement of balancing means, said bearings being capable of bodily oscillating substantially in a plane transversely to the axis of said rotor and separate means for locking each bearing in position.

1,500,455. CHECKER BRICK. JOSEPH HOGBIN, Pittsburgh, and WILLIAM LEHMAN, Aspinwall, Pa.; said Lehman assignor of his entire right to William Martin, Pittsburgh, Pa. Filed Sept. 28, 1923. Serial No. 665,413. 4 Claims. (Cl. 72—15.5.)



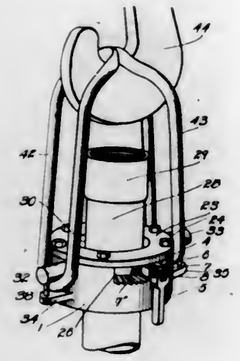
2. In a checker structure, a plurality of parallel supporting walls, and cross members rockably supported in spaced relation between said walls.

1,500,456. LIQUID HEATER. HUGO JUNKERS, Dessau, Germany. Filed June 29, 1920. Serial No. 392,837. 6 Claims. (Cl. 122—156.)

1. In apparatus of the kind described in combination, a wall, means for cooling one side of said wall, a pro-

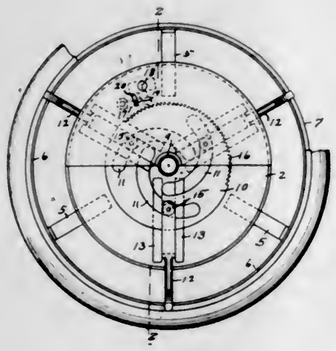
tective metal wall disposed near, but spaced apart from the other side of said cooled wall, heat-conductive connections between said walls and means for preventing hot gases from entering from below the space intermediate said walls.

1,500,457. VALVE GEAR. HUGO JUNKERS, Dessau, Germany. Filed Feb. 17, 1921. Serial No. 445,908. 2 Claims. (Cl. 123—41.)



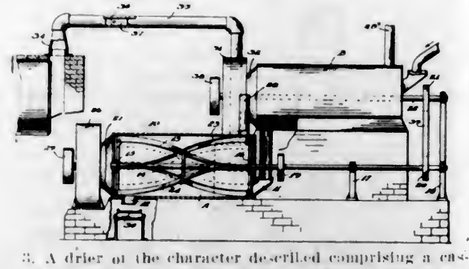
1. In mechanism of the kind described in combination, a valve, a valve lever, two connecting rods, one for forward and the other for reversed running designed to govern said lever, a cam intermediate each connecting rod and said lever, a link connected to each rod, a single crank adapted to drive both said rods, an operating lever and a pivot on said lever common to both said links, the total lengths of said rods and the distances between the centre of said crank and the point of connection of said links to said rods differing in such wise, that in forward running only the forward and in reversed running only the reverse rod will act on said valve lever.

1,500,458. FLEXIBLE DRIVING ELEMENT. WALTER REUBEN KEEN, Birmingham, England. Filed Dec. 29, 1920. Serial No. 433,913. 3 Claims. (Cl. 74—64.) (Granted under the provision of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



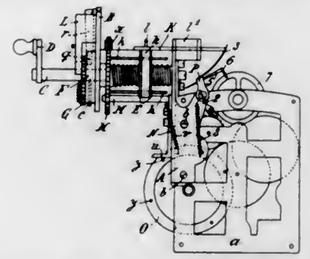
1. A flexible driving element comprising a series of links; hinges uniting said links together, end to end, to form a flexible band; an inclined sided gripping member attached to each of said links adapted to engage frictionally with the sides of a pulley groove, said gripping members having portions extending transversely in the space between them, which portions are bent to a curve to make them resilient and operate to form a resilient backing for the inclined sides to resist the inward displacement of said sides.

1,500,459. CASING ELEVATOR. GEORGE KRELL, Kansas City, Mo. Filed Nov. 30, 1921. Serial No. 518,797. 4 Claims. (Cl. 24—263.)



1. A casing elevator comprising a housing, radial jaws within the housing, a ring for actuating said jaws in radial directions, a lug on the ring, a vertically sliding pawl in the lug having a tooth for engaging a part of the housing, and a drift pin projecting through the end of the lug and having a cam face to contact with the pawl to raise it out of housing-engaging position.

1,500,460. TIRE RACK. CHRISTIAN H. LARSON, Godley, Tex., assignor of one-fourth to H. A. McDonald, one-fourth to J. L. Young, and one-fourth to H. P. Phillips, all of Jefferson County, Tex. Filed May 7, 1921. Serial No. 467,646. 1 Claim. (Cl. 229—29.)

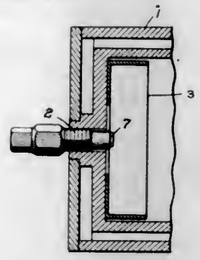


A device of the character described, including a casing, a rim support carried thereby and provided to receive a tire rim, radially movable members, the inner ends of which are bifurcated, a roller carried by the inner end of said bifurcations and within the casing, and whose outer ends have notches to receive the support and rim and lock them together when said members are extended, a rotary member within the casing having a portion of its edge serrated, and operatively connected with said movable members and by the rotation of which the movable members may be radially moved into extended or withdrawn position, said rotary member embodying cams which actuate said movable members, and means for locking said rotary member to hold said radially movable members in extended position.

1,500,461. PEAT DRIER AND THE LIKE. JOHN LUMSDEN, Ottawa, Ontario, Canada. Filed Dec. 6, 1921. Serial No. 520,368. 9 Claims. (Cl. 34—7.)

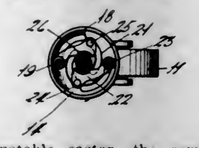
3. A drier of the character described comprising a casing, a plurality of spiral heaters formed with sifting and carrying means thereon rotatably mounted in said casing, feed and discharge openings in the casing, fan and blower means for said casing adapted to supply heated air thereto, air exhaust means for the casing whereby the moisture-laden air is discharged from the drier, conduit means connecting the drier with the source of heated air, and means in said conduit for regulating the volume and temperature of the heated air, and means for operating the drier.

1,500,462. COIN-CONTROLLED APPARATUS. MATHIAS ODIN SEVERIN MADSEN, Aarhus, Denmark, assignor to Otto Kristian Heesch, Aarhus, Denmark. Filed Apr. 30, 1921. Serial No. 465,914. 2 Claims. (Cl. 194—3.)



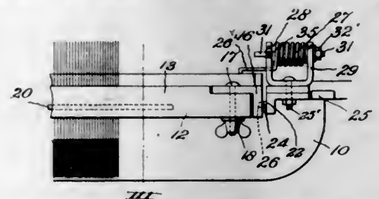
1. An apparatus of the class described comprising in combination, a clockwork train, a control device which is movable away from a clockwork stopping position proportionally to the number of coins inserted in succession, coin controlled means for moving said member as aforesaid, a slide adapted to be periodically actuated by a wheel of the clockwork train, a pawl member carried by said slide, a gear adapted to be turned stepwise by said pawl, and connections between said gear and the control device for returning the latter to its clockwork stopping position.

1,500,463. ADJUSTABLE SINKER. WILLIAM K. MATTERN, Germantown, Pa. Filed Dec. 22, 1923. Serial No. 682,254. 6 Claims. (Cl. 43—52.)



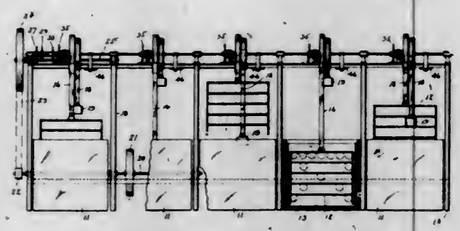
1. A sinker comprising a stem which includes a head and parallel shank members extending therefrom, weights having apertures to accommodate the shank members and adapted to be placed in any convenient plurality thereon with the lower weight resting on the head, and a locking member adapted to be inserted between the shank members and serving to spread them and lock the weights in position.

1,500,464. INTERNAL-COMBUSTION ENGINE. FRANK B. MORRISON, Marion, Ohio, assignor to The Power Manufacturing Company, Marion, Ohio, a Corporation of Ohio. Filed June 23, 1922. Serial No. 570,373. 1 Claim. (Cl. 123—32.)



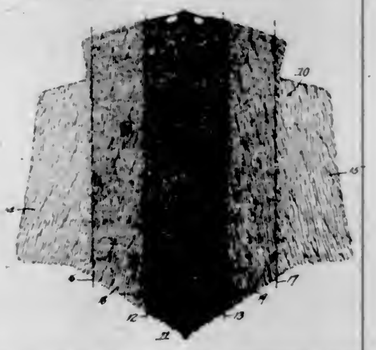
In an oil engine the combination of a cylinder having a head and water-cooled walls, a firing bowl arranged within the cylinder and in spacial relation of thermal equipoise to the walls thereof, whereby tendency of the bowl to manifest departure from its intended condition of temperature, expressing itself in variation of the space interval between bowl and cylinder wall, is corrected by a compensating variation in the rate of heat dissipation, a spray-plug extending axially through the cylinder head and adapted to deliver a jet of oil radially upon said firing bowl, and means for driving a jet of oil under pressure from said plug.

1,500,465. ADJUSTABLE CASTER. CHARLES R. NALLE, Wichita Falls, Tex. Filed May 22, 1923. Serial No. 640,638. 4 Claims. (Cl. 16—19.)



1. In an adjustable caster, the combination with a caster having a stem provided with grooves, of a rotatable adjusting member, pivoted locking dogs adapted to engage in the grooves of the stem, and connections between the dogs and the member for swinging the said dogs into and out of the grooves when the member is rotated.

1,500,466. LOOSE REED FOR LOOMS. CARMIN POLIZZO, Paterson, N. J., assignor of one-half to Raphael Jordan, Paterson, N. J. Filed Feb. 10, 1922. Serial No. 535,441. 4 Claims. (Cl. 139—189.)

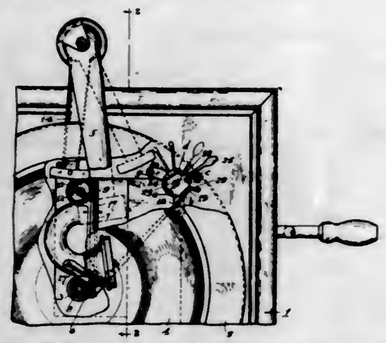


1. In a loom, a batten frame, a reed frame having a reed thereon, and means for attaching said reed frame to said batten frame, said means comprising a pivotal connection between said batten frame and reed frame, and a coil spring adjacent said pivotal connection and detachably mounted on the batten frame and having one end portion pressing said reed frame around said pivot against said batten frame, said attaching means permitting said reed frame to move slightly away from said batten frame when the reed presses a filler thread against the woven fabric, said spring normally holding said reed frame pressed against said batten frame.

1,500,467. LACQUERING MACHINE. WILLIAM H. POND, Providence, R. I., assignor to Theodore W. Foster & Bro. Co., Providence, R. I., a Corporation of Maine. Filed Sept. 7, 1922. Serial No. 586,692. 8 Claims. (Cl. 91—46.)

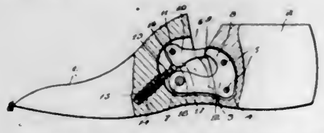
1. In a machine of the character described, a bath tank, a work carrying rack adapted to be lowered into said tank, means for lifting the rack and its work from the bath at a predetermined speed, driving means therefor and cam means for automatically disconnecting the lifting means from the driving means when the work has been lifted clear of the bath.

1,500,468. METHOD OF CUTTING FUR SKINS AND PRODUCT THEREOF. HAROLD A. REICH, New York, N. Y., assignor to Alexander D. Reich and Harold A. Reich, Copartners trading under name of R. Reich & Son, New York, N. Y. Filed Mar. 1, 1924. Serial No. 696,112. 4 Claims. (Cl. 149—28.)



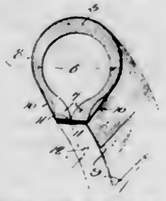
1. The method of cutting and connecting dressed fur skins of muskrats and the like, which comprises segregating each skin into three portions by four lines of cutting into a central or "groetzen" portion, two "belly" portions and two portions intermediate said central or "groetzen" portions and the respective "belly" portions, connecting to one another the central or "groetzen" portions of the respective skins to form a fur product, connecting to one another the "belly" portions of the respective skins to form a fur product and connecting to one another the intermediate portions of the respective skins to form a fur product.

1,500,469. METHOD OF DYEING OR IMPREGNATING THE WOOD IN LIVING TREES. OTTO REIMANN, Pferdsdorf, Germany. Filed Aug. 16, 1923. Serial No. 492,797. 1 Claim. (Cl. 47—58.)



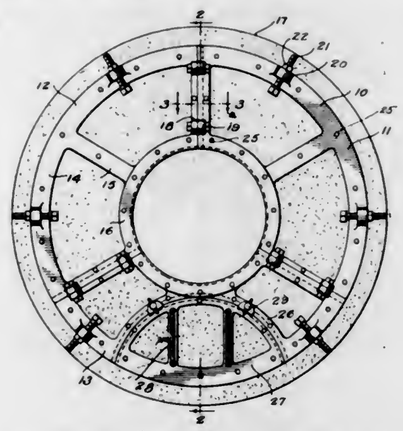
The method of impregnating the wood in living trees, which consists in providing in the trunk of the tree just above the ground in the same horizontal plane two intersecting rows of bores, dividing the cross-section of the trunk grid-like, so as to form a large number of uncut portions between the intersecting channels, said portions being distributed over the whole section of the tree, closing the outer ends of the bores, and introducing dyestuff into said bores.

1,500,470. PHONOGRAPHIC ATTACHMENT. WILLIAM C. ROE, Pittsburgh, Pa. Filed May 5, 1919. Serial No. 294,859. 19 Claims. (Cl. 192—118.)



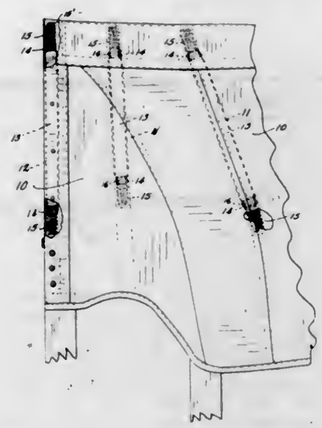
1. In mechanism for starting and stopping phonographs the combination of the tone arm, an arm carried by said tone arm having teeth or serrations in the outer edge thereof, A shiftable member carrying a loose pinion adapted to mesh with the teeth on said arm and a fixed gear adapted to receive power from the operative mechanism, in combination with the brake arm and an arm connected with the shiftable member adapted to be thrown out of restraining engagement with the brake arm of the machine to stop the same.

1,500,471. LAST. JOHN C. SCHELTER, Rochester, N. Y. Filed May 26, 1923. Serial No. 641,745. 1 Claim. (Cl. 12—136.)



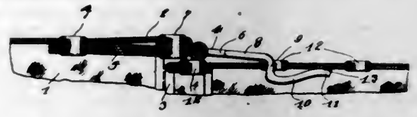
A last comprising a fore part and a heel part divided by a cut providing a V-shaped opening at the top, a bonding member pivotally connected with one of the last parts and rigidly connected to the other of the last parts, said bonding member having an abutment formed thereon and exposed at the V-shaped opening, a detent exposed for manual operation at the V-shaped opening pivotally mounted on the last part to which the bonding member is pivotally connected and having a surface for cooperation with said abutment and also a projecting portion below arranged to cooperate with the under face of the projection on which the abutment is formed to limit the outward movement of the detent, and a spring acting on the detent to move it into cooperation with the abutment.

1,500,472. TIRE WRAPPING. JOHN SCHERNER, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 7, 1919. Serial No. 315,914. Renewed Oct. 4, 1923. 1 Claim. (Cl. 206—46.)



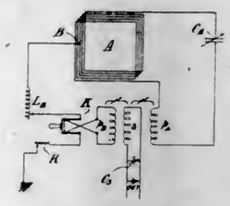
A wrapper for tires comprising an elongated strip of material in the condition of having been placed longitudinally around a tire and made to conform to the irregularities in the surface with its longitudinal edges overlapped, and a single length of tape covering the overlapped edges of said strip of material for securing the same around the tire.

1,500,473. AUXILIARY FURNACE FRONT. ALBERT TORRESSON, Woodhaven, and CHARLES H. ANDERSON, Pearl River, N. Y. Filed Mar. 16, 1923. Serial No. 625,408. 2 Claims. (Cl. 110—172.)



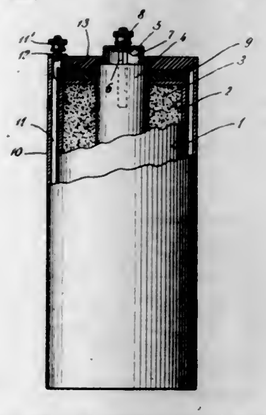
2. An auxiliary furnace front comprising a metallic frame composed of segments detachably secured together, a heat insulating material carried upon the inner portion of said frame, said frame and heat insulating material provided with an opening therein for the passage of fuel therethrough, and radially extending extensible fastening members adapted to engage the wall of the furnace and removably hold said front in position.

1,500,474. CORSET STAY. RIVEN TOVE, South Norwalk, Conn. Filed May 31, 1922. Serial No. 564,747. 6 Claims. (Cl. 2—264.)



1. A corset stay comprising a body portion of resilient material yieldable laterally of the stay but being substantially nonyieldable longitudinally thereof, and a cushion spring tip at the end of said stay yieldable both laterally and longitudinally of the stay.

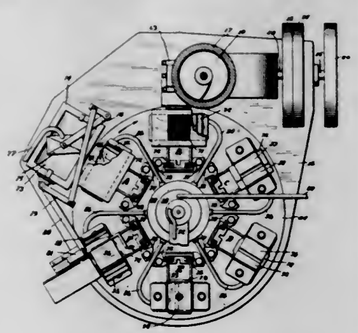
1,500,475. FASTENER. FREDERICK S. TYSON, Lock Haven, Pa. Filed June 11, 1923. Serial No. 644,592. 5 Claims. (Cl. 24—225.)



1. A fastener including a hook having its end bent outwardly and upwardly to extend beyond the length thereof, and an eyelet for receiving the hook, the highest point on the end of the hook extending beyond the body of the eyelet.

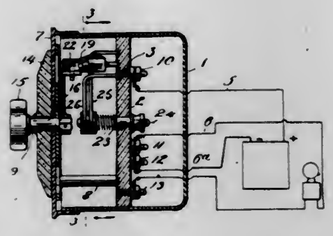
1,500,476. INTERFERENCE PREVENTION IN RADIO-RECEPTION. FREDERICK K. VREELAND, Montclair, N. J. Filed July 28, 1920. Serial No. 399,534. 39 Claims. (Cl. 250—20.)

1. The method of receiving radiant energy, which consists in exciting oscillations of signal frequency in a circuit tuned to this frequency, exciting in the same circuit oscillations of non-signal frequency approximately in quadrature with their electromotive force by virtue of detuning, exciting in a second circuit tuned to non-signal frequency oscillations in opposite phase relation to the non-signal currents produced in the signal circuit, balancing the effects of the two non-signal currents and observing the unbalanced signal current, substantially as set forth.



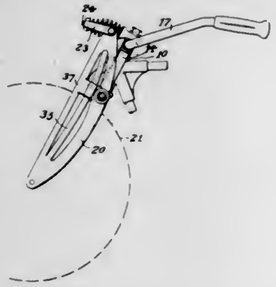
1,500,477. DRY BATTERY. HENRY E. WARNCKE, Norwalk, Conn., assignor to Fairfield Battery Company, South Norwalk, Conn., a Corporation of Delaware. Filed Aug. 1, 1922. Serial No. 578,891. 6 Claims. (Cl. 204—38.)

5. In a dry cell, the combination of a zinc container, a carbon rod and active galvanic materials therein, a brass cap on said carbon rod, a layer of sealing compound closing the end of said container and forming a substantially watertight joint at said rod below the top thereof, a waterproofed carton enveloping said container and extending above the top thereof, said carton being



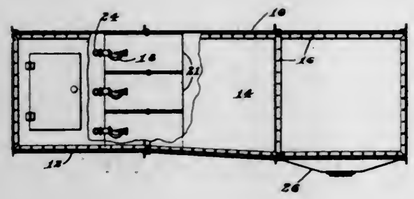
spaced from the sides of said container to form an annular receptacle and sealing compound poured in substantially flush with the upper edge of said carton and closing the top of said annular receptacle, said compound making a relatively long stepped joint with the sides and end of said rod and with the sides of said brass cap whereby moisture driven from said container by gas pressure will find easiest escape over the edge of said zinc container and into said annular receptacle.

1,500,478. FOLDING MECHANISM FOR PACKAGING MACHINES. FELIX WYNEN, New York, N. Y., assignor to Phenix Cheese Company, a Corporation of New York. Filed Jan. 25, 1922. Serial No. 531,599. 5 Claims. (Cl. 93—7.)



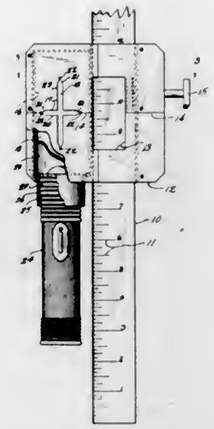
1. In a folding mechanism for packaging machines the combination, with a turntable, of a package wrapping platform carried by said turntable and provided with a portion for supporting a wrapper of sheet material and a cake of plastic material resting upon said wrapper, a pair of folder arms carried by said turntable and disposed upon opposite sides of said platform for the purpose of folding oppositely disposed edges of said wrapper, a pair of rocking shafts disposed upon opposite sides of said platform, each of said rocking shafts carrying one of said folder arms, a pair of pinions mounted upon said rocking shafts for actuating the same, a pair of racks each engaging one of said pinions, and mechanism connected with said racks and with said turntable, and controllable by the revoluble movement of said turntable, for actuating said racks one at a time.

1,500,479. SWITCH LOCK. EDWARD ZEMAN, Woodside, N. Y. Filed June 16, 1923. Serial No. 645,712. 5 Claims. (Cl. 200—43.)



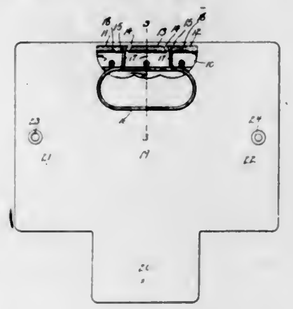
1. An electric switch comprising a pair of spaced plates, one of said plates being formed of an insulated material, concentric rows of indentations arranged on said insulated plate, contacts forming the terminals of an electric circuit arranged in certain of said indentations, a shaft secured to said insulated plate, a plurality of contact arms rotatably secured to said shaft and adapted to engage certain of said contacts, the other of said plates having a shaft rotatably secured therein, a contact arm secured thereto and adapted to engage certain other of said contacts, means secured to said shaft for rotating same, and means secured to said last mentioned contact arm for engaging with and actuating the contact arms on said insulated plates.

1,500,480. SPRING FORK FOR MOTOR CYCLES AND THE LIKE. AUGUST ZICHMAN, New York, N. Y. Filed Mar. 13, 1922. Serial No. 543,211. 3 Claims. (Cl. 208—97.)



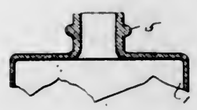
1. A fork for motorcycles and the like comprising a cross member, a bearing post integral with the cross member and adapted to be journaled in the frame of a cycle, steering posts integral with the cross member and projecting upwardly from said cross member, a spring seat secured to said steering posts, side frames pivoted at intermediate points to said cross member, a yoke pivoted to the upper ends of said side frames, and resilient means confined between the yoke and seat.

1,500,481. HUMIDIFYING SYSTEM. JOSEPH ARMSTRONG, Malden, Mass., assignor to American Moistening Company, Boston, Mass., a Corporation of Maine. Filed Jan. 30, 1922. Serial No. 532,804. 4 Claims. (Cl. 261—115.)



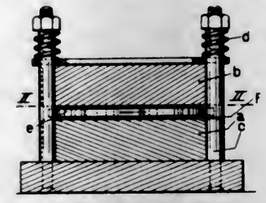
1. A conditioning chamber of a humidifying system, comprising a casing for flow of air; straight dividing means therein, providing separate, straight parallel air passages; moistening means in one of said air passages whereby the air that is moving through it is supersaturated; there being another of said air passages which is free from moisture supply, whereby the air therein is conducted unchanged to the end of said dividing means; and there being, beyond said dividing means a discharge duct wherein there is freedom for the air from the said separate passages to continue in the same direction for a distance in contiguity whereby the excess moisture is retained in the whole flowing body by absorption into the unmoistened air.

1,500,482. ILLUMINATED TARGET. WILLIAM J. BARRETT, Bridgeport, Conn. Filed Nov. 14, 1923. Serial No. 674,752. 10 Claims. (Cl. 240—8.4.)



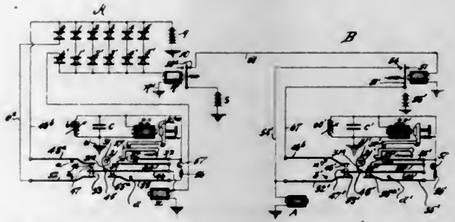
2. A target for a leveler's rod provided on the front wall thereof with a cross having vertical and horizontal arms, and means for illuminating said arms.

1,500,483. KEY HOLDER. CHARLES E. BRADSHAW, Waterbury, Conn. Filed July 2, 1923. Serial No. 648,963. 2 Claims. (Cl. 150—40.)



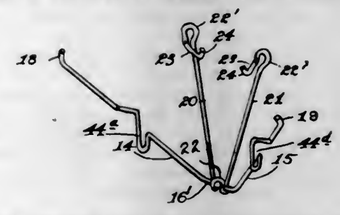
1. A key holder comprising a folder, a plate secured thereto, said plate formed with sockets and with a centrally-arranged lip and a key-loop formed from a single piece of wire and provided at its ends with fingers adapted to enter said sockets.

1,500,484. METHOD OF MAKING SHORT-NECK BOTTLES. HARRY O. BRAWNER, Baltimore, Md. Filed May 31, 1923. Serial No. 642,483. 1 Claim. (Cl. 49—79.)



The method of forming bottles with short necks which consists in forming a bottle with a neck having a relative long surplus end portion, reheating and shaping the neck to form an intermediate annular rib, and finally removing the surplus end portion from the mouth up to the rib to produce a finished bottle.

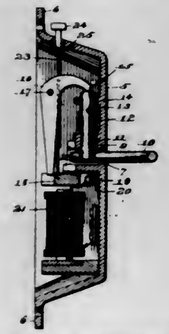
1,500,485. METHOD AND DEVICE FOR GRINDING BALLS OR ROLLERS. PAUL BRÜHL, Dusseldorf, Germany, assignor to Maschinenfabrik Rheinland A. G., Dusseldorf, Germany, a Firm. Filed Oct. 11, 1920. Serial No. 416,300. 6 Claims. (Cl. 51—130.)



3. In a device of the kind described in combination, two non-rotating blocks, resilient means for pressing said blocks towards each other, at least one of the contiguous block surfaces being a grinding surface, a work piece support, rotatable about an axis which is located outside said blocks, partly inserted between said blocks, means connected with said support for rigidly fixing said work piece thereon, and a groove in one of said blocks, which follows the path of said work piece.

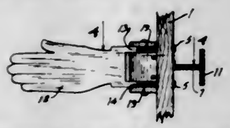
1,500,486. TELEGRAPH TRANSLATOR AND CIRCUITS THEREFOR. ALLEN D. CARDWELL, Brooklyn, N. Y., assignor to American Telegraph Typewriter Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Feb. 2, 1917. Serial No. 146,193. 12 Claims. (Cl. 178—33.)

1. A translator of the class described comprising a magnet, a starting circuit, a working circuit, and a holding circuit for the magnet, means to make and break said starting circuit at will, means controlled by the magnet to close the working circuit and to break the starting circuit of the magnet after the magnet has started, said means establishing the holding circuit for the magnet in case the first named means is closed at the termination of a cycle of operations of the magnet.



1,500,487. COMBINED SHELF AND BRACKET. ARVID F. CARLIN, Mamaroneck, N. Y. Filed Jan. 15, 1923. Serial No. 612,674. 5 Claims. (Cl. 248—18.)

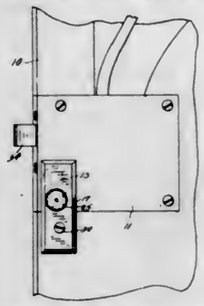
2. In a corner shelf bracket, a substantially triangular shelf having apertures near its rear edges, and a bracket comprising a wire having a vertical portion with the end bent to a vertical plane to form a supporting eye, and the extremity bent below the eye to extend forward some distance under the shelf and then extended upwardly to detachably engage a shelf aperture, the lower



end of the vertical portion being bent to form an eye, the bracket also including inclined portions formed by a wire having a loop at its middle portion engaging said lower eye on the vertical portion, said latter wire having each portion beyond the eye extended forwardly and upwardly to engage one rear side of the shelf respectively at an apertured portion in proximity to the forward part of the shelf, said inclined bracket portions being bent to form a loop of U-shape opening upwardly, and a bar provided near each end with an annular groove whereby the bar is engaged by the loop to support the bar on the bracket below the shelf.

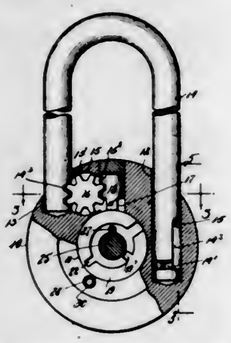
1,500,488. RELEASABLE CONNECTER. EDWARD DEATRICK, Lancaster, Pa. Filed Apr. 18, 1922. Serial No. 554,560. 5 Claims. (Cl. 74—93.)

1. A releasable connector embodying a casing having an opening therein, a connecter member insertable into said opening, a movable bolt adapted to engage and release said connecter member, a bolt-operating lever having a portion thereof in the path of said connecter member, means for retaining said lever in bolt-thrusting position, and means for retracting the bolt and causing said lever to strike and eject the connecter member.



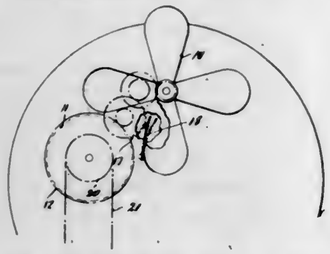
1,500,489. AUTOMOBILE TRAFFIC SIGNAL. OTTO ENAX and ROY D. ZILK, Denver, Colo. Filed Jan. 24, 1924. Serial No. 688,187. 2 Claims. (Cl. 116—52.)

2. In an automobile traffic signal, in combination, a U-shaped frame bracket having a substantially straight central portion with the end portions bent at right angles thereto, a shaft rotatably mounted in said end portions, a signal member secured to said shaft, said member having two spaced arms, the ends of which are nonrotatably secured to the shaft, a bevel gear also secured to said shaft between said arms, a bar rotatably mounted in the base of said bracket, a bevel gear on said bar, said gear meshing with the gear on the shaft, a casing for enclosing said shaft and gears, said casing having guiding lugs for engaging the side of the end portions of the bracket, said casing also having transverse slots for the reception of the spaced arms of the signal member, and means for securing the casing to the bracket.



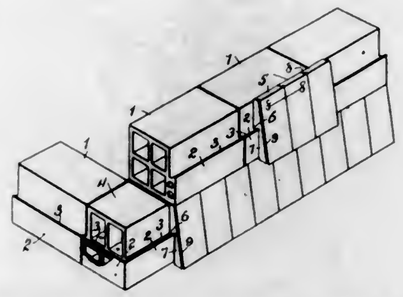
1,500,490. SPINDLE LOCKING DEVICE FOR VEHICLE DOORS. LOUIS W. GATES, New Haven, Conn., assignor to C. Cowles and Company, New Haven, Conn., a Corporation of Connecticut. Filed Sept. 6, 1921. Serial No. 498,741. 9 Claims. (Cl. 292—358.)

1. In combination with a lock having a spindle with a projecting free end, a locking attachment for the spindle comprising a support, an element mounted on said projecting end to turn with the spindle and carried by the



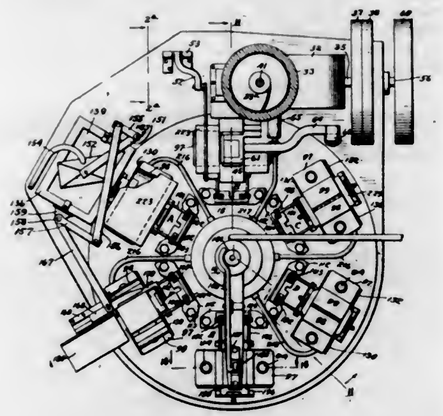
support independently of the spindle, and manually operable means carried by the support for locking said element against turning.

1,500,491. PADLOCK. GEORGE GRONELL, New York, N. Y. Filed Nov. 22, 1922. Serial No. 602,543. 6 Claims. (Cl. 70—113.)



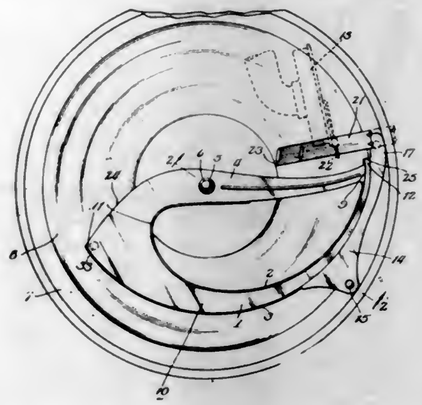
1. A pad lock comprising a body portion, a vertically movable and pivotally supported shackle and having its locking end toothed, a pinion in said body capable of meshing with said locking end, a rack arranged parallel to said toothed end and meshing with said pinion diametrically opposite said toothed end and means for arresting said rack and thereby locking said pinion and shackle in closed position.

1,500,492. AUTOMATICALLY-CONTROLLED VENTILATOR OR FAN. CHARLES HOLZENDORF, New York, N. Y. Filed Oct. 22, 1923. Serial No. 669,896. 1 Claim. (Cl. 230—1.)



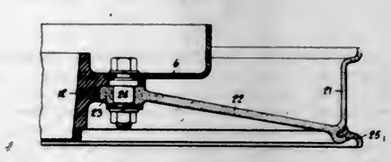
In a fan, the combination with its spindle, of a spring operated clock mechanism operating said spindle, and a motion control mechanism comprising a wheel and thermostatic stop cooperating with said wheel, to release or arrest the same according to the temperature influencing said stop.

1,500,493. WALL CONSTRUCTION. CHARLIE E. HUFFMAN, Beatrice, Nebr. Filed Sept. 9, 1921, Serial No. 499,481. Renewed Dec. 15, 1923. 3 Claims. (Cl. 72—21.)



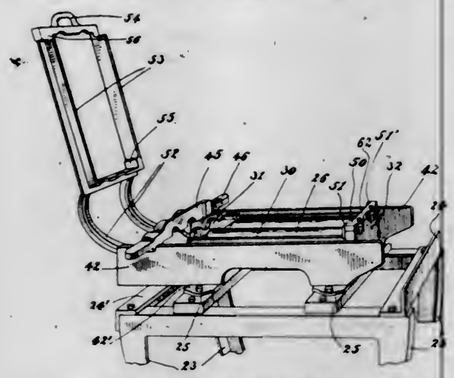
1. A wall comprising layers of blocks, each block of each layer having on its outer side a horizontal longitudinal ledge having in its upper side a longitudinal groove, the ledges of a layer alining with each other, and shingles supported on said ledges and having on their inner sides respectively overhanging flanges mounted in the adjacent grooves, the ledges of one layer overlapping the upper ends of the shingles next below and arranged to hold the shingles from being lifted to positions in which the flanges can pass over and out of their supporting ledges, substantially as set forth.

1,500,494. PACKAGING MACHINE FOR PLASTIC MATERIALS. LEWIS B. HUNTER, Yonkers, N. Y., assignor to Phenix Cheese Company, a Corporation of New York. Filed Feb. 6, 1922. Serial No. 534,634. 10 Claims. (Cl. 93—7.)



1. A device of the character described, comprising a turntable, means for turning the same step by step, a package wrapping platform mounted upon said turntable and revoluble therewith, folder mechanism carried by said turntable and disposed adjacent said package wrapping platform, a pneumatic holdfast carried by said turntable and connected with said package wrapping platform, for temporarily securing a wrapper upon said package wrapping platform, and a pipe connected with said pneumatic holdfast and extending away from said turntable, for maintaining a partial vacuum in said pneumatic holdfast.

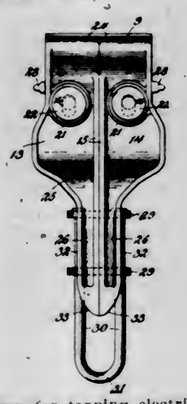
1,500,495. TALKING-MACHINE REPEATER. WALTER H. HUTH, Chicago, Ill. Filed Mar. 2, 1922. Serial No. 540,441. 21 Claims. (Cl. 274—15.)



1. In a repeater for talking machines, in combination, a body having retaining means to engage the stylus or needle of the machine during the playing of the record, to retain the repeater against rotation, and having guiding means to return the needle or stylus to starting point on the record, supporting means on said body to engage the center post of the turntable of the machine, supporting means on said body to engage the smooth outer surface of the record, with the greater portion of the weight of said repeater at one side of a radial line intersecting the points of contact of said two supporting means on the record, so that the mouth of said guiding means at one side of said line tends to tilt downward about an axis approximating said radial line, while said retaining means at the other side of said line tends to tilt upward, and engaging means on said body to bear against the record at opposite sides of said radial line, the engagement of the stylus or needle with said retaining means tending to tilt this lighter end of the repeater downward, whereby during playing of the record the weight of the repeater is mostly if not entirely on said supporting means and pressure of said engaging means is reduced on the record, the bottom of said guiding means being hard and glassy and of sufficient width to provide a different path each time for the point of the needle, thereby to minimize the friction between the needle and the repeater, and thereby to enable said supporting and engaging means to function with as little friction as possible.

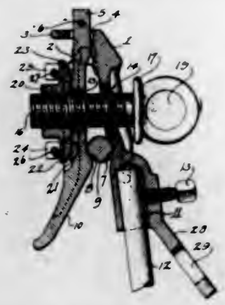
1,500,496. PRODUCTION OF WHEELS. ARTHUR S. HYDE, Hartford, Conn., assignor to Baush Machine Tool Company, a Corporation of Massachusetts. Filed June 21, 1920. Serial No. 390,404. 4 Claims. (Cl. 301—63.)

2. A vehicle wheel having the supporting portion between the hub and the rim made of an aluminum alloy of the class described consisting mainly of aluminum, and a rim made in one piece with said supporting portion and which has been worked and heat treated to increase its density, tensile strength and elastic limit.



1,500,497. CONCRETE-ROOFING-TILE MACHINE. EMIL R. JAHNA, Perrysville, Ind. Filed May 9, 1922. Serial No. 559,551. 2 Claims. (Cl. 25—43.)

1. A tile making machine comprising a frame, a pair of rails on the sides of said frame, means for forming the lower side of a tile, a manually operable smoothing bar, blocks dowelled to said bar slidable on said rails, means for adjusting said blocks relative to said bar, and guide lugs on said blocks engaging the sides of said rails.

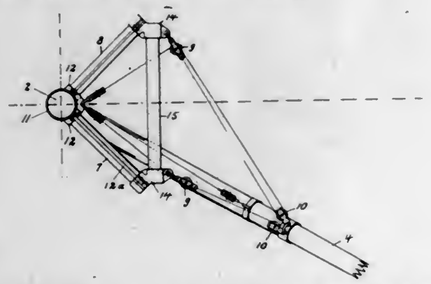


2. A tile making machine comprising a frame, a pair of spaced rails on said frame, means in said frame for forming a tile, a tamping bar slidable on said rails, a smoothing bar removably engaging said rails, blocks dowelled to said bar, and a screw intermediate said dowels for adjusting said smoothing bar relative to said rails by raising or lowering the same, said blocks having guide members contacting with the sides of said rails.

1,500,498. SNAP CLAMP FOR TAPPING ELECTRIC CONDUCTORS. TOMLINSON FORT JOHNSON, Jr., Atlanta, Ga. Filed Nov. 13, 1918. Serial No. 262,366. 9 Claims. (Cl. 173—273.)

3. A snap clamp for tapping electric line conductors, comprising a jaw having a holder for a branch conductor, and another jaw comprising a plurality of separate contiguous members hingedly connected to the first jaw and provided with spring compression means individual thereto for constraining the members of the second-named jaw independently and elastically toward the first-named jaw, said second-named jaw members each having a tail continuation at the end remote from the hinge connection and in divergent relation to the first-named jaw, and said tail continuation narrowing in width from the sides of the second-named jaw toward the longitudinal center line thereof.

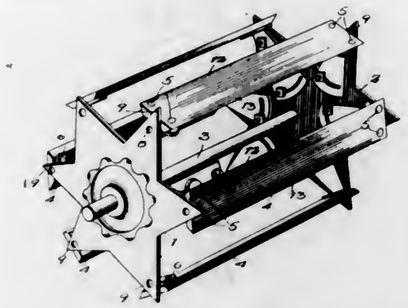
1,500,499. CLAMP FOR ELECTRICAL CONDUCTORS. TOMLINSON FORT JOHNSON, Jr., Atlanta, Ga. Filed Jan. 10, 1923. Serial No. 611,790. 14 Claims. (Cl. 173—273.)



4. A clamp for electrical conductors, comprising a pair of associated jaws, one having an inwardly-turned flange at its rear end with an opening therein elongated in a direction substantially perpendicular to the meeting faces of the jaws, the other jaw having a rearwardly-extending reduced end portion projecting through said opening and adapted to move lengthwise of said opening to permit opening of the jaws, said jaws having opposed grooves extending across their adjacent faces and adapted to receive an electrical conductor wire, said jaws being provided with alined openings extending therethrough between their interengaging rear end portions and the opposed grooves, and a screw-threaded pin and nut cooperating with the alined openings to clamp the jaws about said wire.

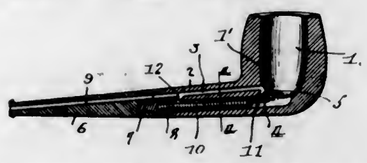
1,500,500. PAPER MAKING. FREDERICK KAYE, Ashton-on-Mersey, England. Filed June 22, 1921. Serial No. 479,642. 6 Claims. (Cl. 92—21.)

1. The process of making paper, which consists in adding to the paper pulp after digestion and prior to passing the pulp through a paper-making machine, a rubber-containing latex, mixing the mass thereby to disseminate the latex between the particles of pulp, and passing the mixed mass through a paper-making machine.



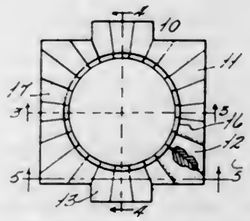
1,500,501. ADJUSTABLE GAFF. CARL W. A. KOELKEBECK, Pittsburgh, Pa. Filed Sept. 29, 1921. Serial No. 504,158. 4 Claims. (Cl. 114—97.)

1. A vessel having in combination therewith a non-rotatable mast, a gaff, a sail depending from the gaff, halyards for raising the gaff, arms secured to the mast and extending from the mast in directions at angles to the center line of the vessel, and means carried by the arms and adapted to engage and maintain the gaff in any desired position relative to the center line of the vessel.



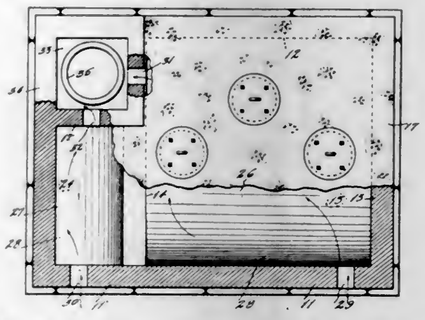
2. A vessel having in combination therewith a non-rotatable mast, a gaff, a sail extending from the gaff, halyards for raising the gaff, arms secured to the mast and extending from the mast in directions at right angles to the center line of the vessel and means extending from the arms to the gaff for shifting the latter in directions transversely of the vessel.

1,500,502. ROTARY PLOW. JOHN WILLIAM KUHN, Belleville, Kans. Filed Apr. 18, 1922. Serial No. 554,725. 2 Claims. (Cl. 97—215.)



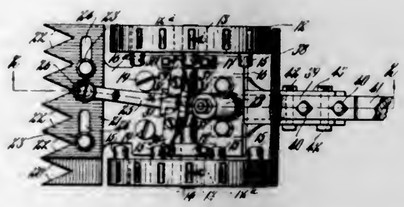
1. In a device of the character described, a pair of spaced-apart parallel star wheels, said star wheels being axially alined and arranged with corresponding pointed portions thereof in transverse alinement, substantially flat blades arranged between corresponding pointed portions of the two star wheels, and each blade extending at its opposite sides beyond the planes of the side edges of a pair of the pointed projections of the star wheels, said blades having cutting edges at opposite sides thereof, and blade holding members arranged at opposite ends of each blade for attaching the latter to the star wheels, whereby the angular relation of said blade to a radial line extending thereto from the axes of the star wheels may be varied.

1,500,503. SMOKING PIPE. JOSEPH ISIDORE LE BEL, Montreal, Quebec, Canada. Filed July 5, 1923. Serial No. 649,738. 7 Claims. (Cl. 131—12.)



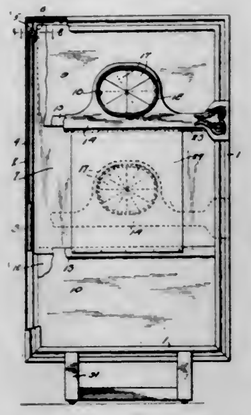
1. A smoking pipe comprising a bowl and a stem, said stem having formed therein a draft passage and a moisture chamber, both in separate communication with the bowl, said chamber being disposed beneath the passage, and inclined ducts connecting said passage and moisture chamber near the ends thereof.

1,500,504. THIMBLE. GUS F. LENK, Dallas, Tex. Filed Sept. 29, 1923. Serial No. 665,615. 6 Claims. (Cl. 110—1.)



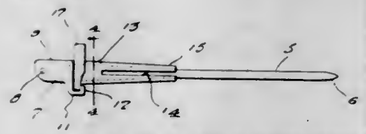
6. In a furnace structure, the combination with the roof of a combustion chamber having a charging hole therein, and a metal hopper depending in said hole, of a thimble composed of radiating interlocking blocks surrounding the lower end of the hopper and set into the roof there being ample clearance between the hopper and the thimble to constitute an expansion joint.

1,500,505. VENT STRUCTURE FOR FURNACES. GUS F. LENK, Dallas, Tex. Filed Sept. 29, 1923. Serial No. 665,616. 8 Claims. (Cl. 110—1.)



6. In a furnace, the combination of a burning chamber having a front wall and an arch at its top, a combustion chamber having a front wall and an arch at its top, a floor spaced above the arches, a stack connected with the combustion chamber and having a smoke conduit, an air chamber extending horizontally between the arches and the floor, an air admitting duct in the front wall of the burning chamber between the arch and the floor, a second air admitting duct in the front wall of the combustion chamber between the arch thereof and the floor, both of said ducts leading to the air chamber, a pair of air outlet ducts leading through the sides of the stack from the air chamber, and a vertical air passage in the stack separate from the conduit into which said outlet ducts discharge.

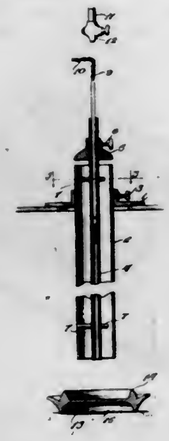
1,500,506. LAWN MOWER. JAMES J. LESSLIE, Boston, Mass. Filed Feb. 5, 1924. Serial No. 690,736. 3 Claims. (Cl. 56—263.)



1. A lawn mower comprising an axle; spaced apart traction wheels fixed to the axle and each provided with a circular row of tappets concentric with the axle, the tappets of one wheel being in staggered relation to those of the other; a holder hung upon the axle between the wheels; a fixed serrated cutter on the forward end of the holder; a movable serrated cutter slidable on the fixed cutter; a rocker-arm pivoted to the rear portion of the holder and loosely jointed to the movable cutter, said arm being provided with abutments; and dogs pivoted to the rocker-arm, projecting oppositely therefrom into the paths of the tappets and held yieldingly against said abutments, the arrangement being such that when the mower is moving forward, the dogs are rigidly supported by the abutments and positively oscillate the rocker-arm, so that the movable cutter is reciprocated, and when the mower is moving backward, the dogs yield to the tappets, so that the rocker-arm and movable cutter remain at rest.

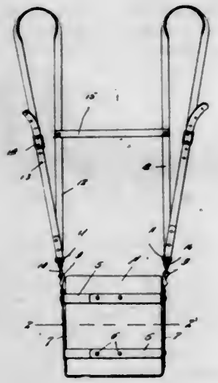
1,500,507. THEATRICAL DEVICE. LEON LEVY, New York, N. Y. Filed Dec. 30, 1921, Serial No. 525,983. Renewed Jan. 9, 1924. 5 Claims. (Cl. 46—70.)

5. In a theatrical device, an upright frame; a plate provided with a hole, adapted to slide in said frame; a bar or cannon support provided with a hole, fixed to one side of said plate; a second bar or cannon support detachably mounted on the back of said frame and provided with a hole; star traps mounted in the holes of said first and second supports and adapted to conceal the hole in said plate.



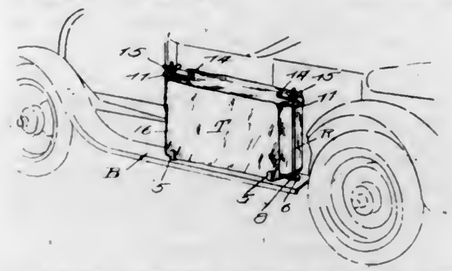
1,500,508. SHUTTLE SPINDLE AND COP-TUBE HOLDER THEREFOR. GEORGE LUX, Quakertown, Pa. Filed Dec. 5, 1923. Serial No. 678,653. 7 Claims. (Cl. 139—208.)

5. In combination with a shuttle spindle having a head at its inner end adapted for pivotal connection with a shuttle and formed with a tapered inner end portion that increases gradually in diameter toward the spindle head, a cop tube holder including a sleeve tapered internally and externally and adapted to fit the tapered portion of the spindle, said cop tube holding sleeve being provided with a plurality of jaw members expansible by the tapered portion of the spindle into gripping engagement with the interior of a cop tube, when said cop tube holding sleeve is moved onto the spindle toward its head beyond a predetermined point, means to simultaneously lock the cop tube holding sleeve upon the spindle and to cause its movement relative to the spindle toward the head, beyond said predetermined point, said last named means comprising a hook member rigid with the head of the spindle, and a cam flange upon the inner end of the cop tube holding sleeve having a cam face engageable with the free end portion of said hook, whereby the movement of the cop tube holder sleeve is had for expanding its jaws upon relative rotation of the spindle and cop tube holder.



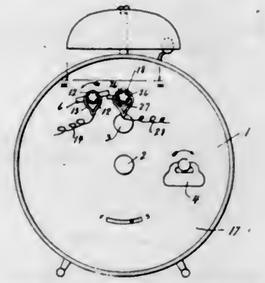
1,500,509. OIL BURNER. DOYLE W. MCCULLOCH, Blackwell, Okla. Filed Mar. 14, 1923. Serial No. 625,026. 1 Claim. (Cl. 158—91.)

A liquid fuel burner comprising concentric open-ended burner tubes, spaced rests within the outer tube bearing against the inner tube, securing members mounted in the wall of the outer tube and engaging the inner tube and cooperating with the rests to secure the inner tube in place, a splash plate disposed below and in spaced



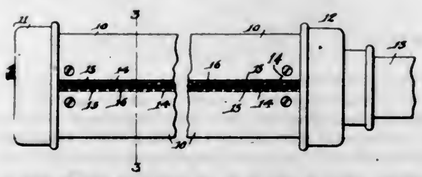
relation to and in axial alinement with the burner tubes, and means for supplying fuel to the inner burner tube at the upper end of the same.

1,500,510. CARRIER FOR MINERS' BATTERY BOXES. CARL MCELVAR and SAMUEL SIMMONS, Nesquehoning, Pa. Filed Apr. 30, 1923. Serial No. 635,765. 1 Claim. (Cl. 224—5.)



A battery box carrier including a pair of strap members, the ends of each strap member being permanently secured together, said members being formed into rectangular shape and arranged in horizontal spaced relation, a U-shaped member having the end portions doubled upon the adjacent portion of the member to form fastener securing eyes, means extending through said doubled end and the opposite end portion of the upper rectangular strap member for permanently securing said members together, means for securing the lower rectangular strap member to the U-shaped member above the bottom portion thereof, and shoulder straps having means cooperating with said fastener receiver eyes for detachable connection therewith, whereby said rectangular strap member, and said U-shaped strap member form a receptacle for slidably receiving a battery box therein.

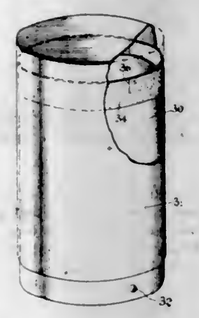
1,500,511. LUGGAGE HOLDER. CHARLES D. MCKENNEY, Petersburg, Pa., assignor to the Seward Trunk and Bag Company, Petersburg, Va., a Corporation of Virginia. Filed Aug. 13, 1923. Serial No. 657,000. 7 Claims. (Cl. 224—29.)



1. A device of the class described comprising, in combination, a rod, means for connecting an end portion thereof to the running board of a vehicle, a member adapted to be rested upon said running board and disposed transversely thereof, an outstanding arm carried by the central portion of the member, the rod extending through said arm, said rod having a shoulder coacting with said arm whereby the rod, when in applied position, maintains the member upon the running board.

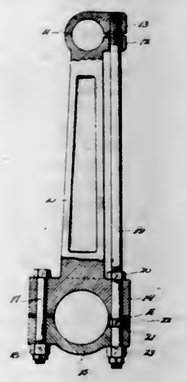
1,500,512. ELECTRIC SWITCH. CARL W. MATSON, Westport, Oreg. Filed Nov. 27, 1922. Serial No. 603,683. 3 Claims. (Cl. 200—35.)

1. In combination with an alarm clock having a key for winding the alarm when revolved in one direction adapted to be revolvel in the other direction when the alarm becomes active, a metallic arm extending from the key and a stud of insulating material mounted in operative proximity to the key having a metallic socket threadedly secured thereon with a metallic arm extending from the socket into the path of the key arm when the socket is screwed tight on the stud adapted to be removed from the path of the key arm when the socket is unscrewed through a fraction of a turn.



1,500,513. GAS BURNER. EDWIN C. MERRILL, Pittsburgh, Pa. Filed Mar. 19, 1923. Serial No. 626,079. 1 Claim. (Cl. 158—99.)

A gaseous burner comprising a tubular body having a longitudinally directed opening in one side and the edges of the opening turned inwardly to form support-

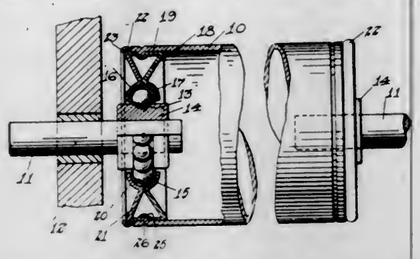


ling ribs, a grid of corrugated strips disposed within said opening and between said ribs, a holding member notched to receive said inturned ribs and the corrugated strips therebetween, and clamp devices operating to bind said holding members to the inturned portions of the body.

1,500,514. INSECTICIDE CONTAINER AND DISTRIBUTOR. ANN LEMUEL MILLIGAN, Atlanta, Ga. Filed Mar. 30, 1922. Serial No. 548,007. 1 Claim. (Cl. 43—146.)

An insecticide container and distributor comprising inner and outer telescoping sections, and an annular strip secured to the terminal portion of the inner section and having a plurality of transverse incisions defining a plurality of partly severed arcuate portions, said partly severed arcuate portions being adapted to provide a powder tight connection between the inner and outer sections.

1,500,515. CONNECTING ROD. GEORGE TOMAS MORRIS, St. Louis, Mo. Filed Aug. 21, 1923. Serial No. 658,577. 5 Claims. (Cl. 74—17.)

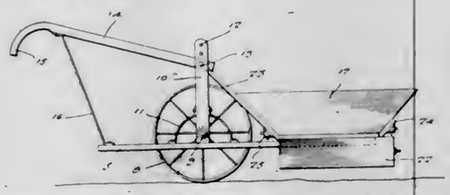


3. A connecting rod provided at one end with a split wrist pin bearing and at its opposite end with a bearing block, a rod rotatably fitting through the block to engage said bearing and provided with a shoulder to cooperate with the block whereby the rod may be rotated for tightening the bearing, and a bearing cap mating with said block and connected therewith by said rod, the cap being recessed to snugly accommodate said shoulder coacting therewith for locking the rod in rotatably adjusted position.

1,500,516. BALL-BEARING HEAD. FRED S. MORTON, Worcester, Mass. Filed Apr. 27, 1923. Serial No. 635,172. 3 Claims. (Cl. 64—36.)

1. As an article of manufacture, a conveyor roll comprising a pipe or tube having open ends and provided with a head in the end thereof having ball bearings and pro-

vided with a cylindrical outer surface and two opposite webs inside this cylindrical surface, the said cylindrical wall having an outwardly extending shoulder at one end for engaging and limiting the position of the roll on the head, one of said webs having an integral cylindrical wall beyond it at its circumference provided with an abrupt

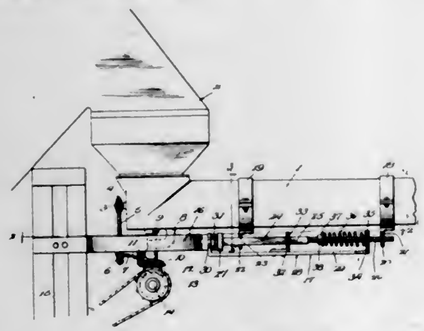


shoulder near the end of the cylindrical surface, with a circular groove under the shoulder for receiving the edge of the opposite web and being bent down around the last named edge to firmly hold the two parts together, said cylindrical wall also being provided with a circumferential groove for receiving a projection extending inwardly from the pipe or tube.

1,500,517. RAIL CHAIR AND COUPLER. WILLIAM F. MOUSER, Lodge, Mo. Filed Jan. 19, 1924. Serial No. 687,335. 2 Claims. (Cl. 238—177.)

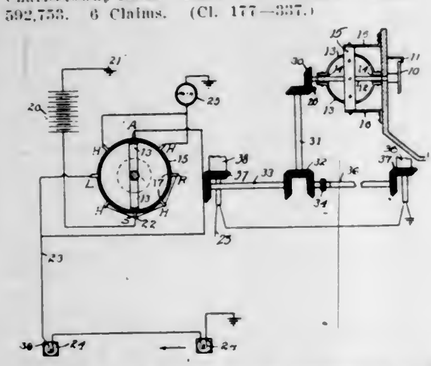
1. A rail joint chair having a longitudinally extending, vertical recess formed therein, the recess extending to the ends of the chair, the middle portion of the recess being laterally enlarged and one wall of each end portion of the recess being vertically cut away, rails formed with a vertical web and base flanges, the adjacent ends of each rail having a width approximately equal to the width of the enlarged portion of the slot in the chair, the base flanges being cut away inward of the rail ends to permit the insertion of the web of the rail in the narrow portion of said longitudinal slot in the chair, the rail end adjacent its base having a longitudinally extending groove, and a pin adapted to be passed through the slot of the chair and through the longitudinal grooves in the heads of the rails to thereby lock the ends of the rail in the chair.

1,500,518. INSECT TRAP. FRANK E. MULLEN, Lexington, Miss. Filed Nov. 6, 1923. Serial No. 673,112. 1 Claim. (Cl. 43—133.)



In an insect trap of the character described, a wheeled platform having a rearwardly extending handle for facilitating manual movement of the device along a row of plants and provided with a slot in the forward end portion thereof, a hopper disposed above the forward end of the platform and having a tubular outlet depending into but spaced entirely from the walls of said slot, and a removable drawer slidably suspended from the platform beneath said outlet of the hopper, said platform having a further slot in the rear end portion thereof in which the supporting wheel of the platform is positioned, uprights upon the platform supporting a transverse axle at the lower end upon which the supporting wheel is journalled, the forward end of the handle being adjustably attached to the upper ends of said uprights.

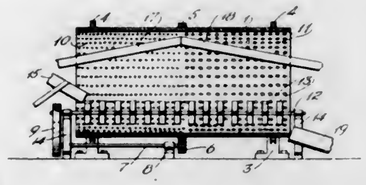
1,500,519. COMPOUND FOR TREATING HAIR. RAUL DIEZ MUÑO and ALEJANDRO LIMA Y BOYZ, Habana, Cuba. Filed Oct. 22, 1923. Serial No. 670,202. 3 Claims. (Cl. 167—5.)



2. As an article of manufacture, a compound for the hair comprising a cereal flour, alum, bicarbonate of soda and water, reduced by heat to a paste.

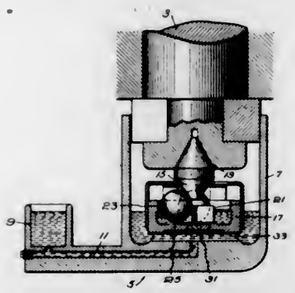
1,500,520. SPOUT LOCK. OSCAR L. NEANDER, Aurora, Nebr. Filed Aug. 11, 1923. Serial No. 656,980. 7 Claims. (Cl. 198—125.)

1. The combination with a delivery spout supported for angular adjustment about a fixed axis, of a fixed friction member concentric to the axis, and yieldable means operatively connected with the spout frictionally engaging the said friction member.



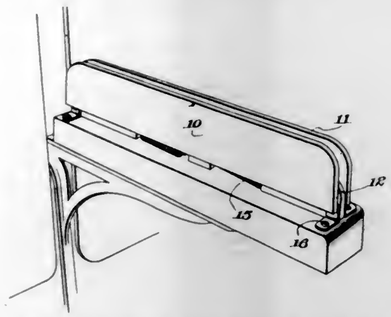
1,500,521. DIRECTION SIGNAL. PETER Z. NICHOLAS, Charlestown, Mass. Filed Oct. 6, 1922. Serial No. 592,753. 6 Claims. (Cl. 177—337.)

5. In a direction indicator, the combination with a rotary controlling wheel, a shaft on which said wheel is mounted, a pair of electric-conductors constituting brushes fixed on opposite sides of, and rotating with, said shaft, said brushes being connected together and insulated from the shaft, a ring of insulating material located in position for its inner surface to be engaged by said brushes all the time as they rotate, said ring having a series of



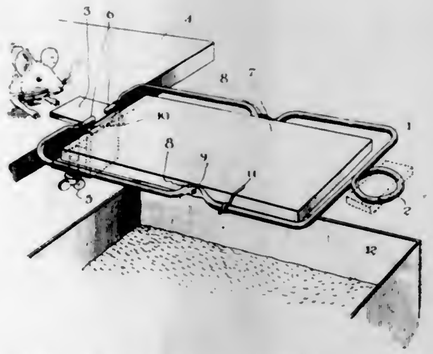
inserts of conducting material flush with the inner surface thereof and arranged in opposite pairs whereby said brushes will contact with them and establish electrical connections one by one as they rotate, a source of electrical energy connected to half of the inserts on one side of the ring, a conductor connected with the inserts on the other side, an electric lamp connected with said conductor, whereby the lamp will be lighted when the brushes contact with the inserts connected with it, a rod on which said electric lamp is located, a hollow shaft surrounding said rod, means connected with the first named shaft for rotating the hollow shaft at the same time the first named shaft is rotated and to the same degree, and a casing on the hollow shaft surrounding the lamp and rotating with the hollow shaft, said casing having four sides each provided with means for indicating a different direction, whereby the one visible to the public will show the direction in which the controlling wheel is set.

1,500,522. GRAIN SEPARATOR. LEON D. OBERT, Underwood, Minn. Filed June 2, 1923. Serial No. 643,043. 2 Claims. (Cl. 130—18.)



1. A rotary separator comprising a rotatable separator cylinder having groups of pockets of different size formed upon its internal face, oppositely inclined chutes extending through and arranged adjacent the upper portion of said cylinder for receiving and discharging matter delivered thereto from said groups of pockets from the cylinder, agitating means arranged in said separator cylinder in proximity to its lower portion, a delivery chute extending into one end of the cylinder adjacent the smaller group of pockets, and a discharge chute extending from the opposite end of said cylinder adjacent the larger group of pockets.

1,500,523. BEARING. CARL G. OSTEMAN, Boston, Mass., assignor to S. A. Woods Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 29, 1921. Serial No. 525,691. 3 Claims. (Cl. 64—49.)

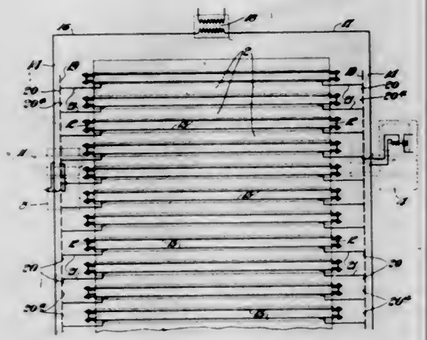


1. In combination with a shaft a step support therefor shaped to contain an oil supply, raised portions on the bottom thereof, a cup-shaped member having a perforated bottom freely resting on the support, a set of balls in the cup, a separator for the balls comprising radiating vanes, and a toe on the shaft entering between the balls.

1,500,524. ARMREST. WILLIAM E. PHILLIPS, Jacksonville, Fla. Filed May 11, 1923. Serial No. 638,299. 3 Claims. (Cl. 155—198.)

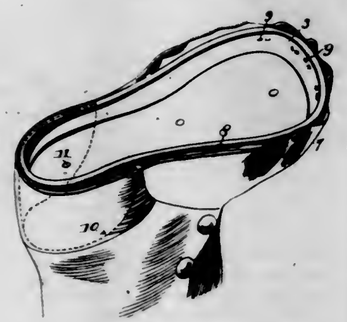
1. A chair attachment comprising a vertical wall adapted to be secured to the arm of a chair, an arm rest hingedly mounted on said wall and adapted to be swung from a normal and vertical position to a horizontal position for use, and means for automatically returning the arm rest to its normal position when the arm is removed from said rest.

1,500,525. TRAP. HUMBERT PIERINI, Greenville, Miss. Filed Oct. 29, 1920. Serial No. 420,426. 5 Claims. (Cl. 43—69.)



1. A device of the character specified, comprising a substantially rectangular frame having means at one end for clamping the frame to a table top or the like with the frame extending horizontally, and having at the other end an extension for supporting bait, a plate pivoted within the frame intermediate the ends of the plate, and mounted to normally tilt downward at the end adjacent to the clamp, said plate being adapted to tilt in the opposite direction under a slight excess of weight at the end adjacent to the bait holder, and means for normally preventing downward movement of the first named end of the plate, said frame being formed from a single length of wire, bent to shape having at one end an integral coil or loop for supporting the bait and having the wire at the other end of the frame bent inwardly in opposite directions.

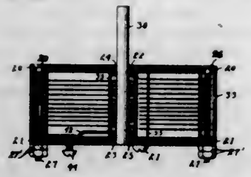
1,500,526. COKE-OVEN INTERLOCKING AND SIGNALING MECHANISM. FRANK KENNETH PORTER, Clairton, Pa. Filed Nov. 3, 1923. Serial No. 672,693. 5 Claims. (Cl. 214—23.)



1. In an apparatus for the destructive distillation of coal, a battery of ovens, each of said ovens being adapted to be pushed from one end and discharged from the

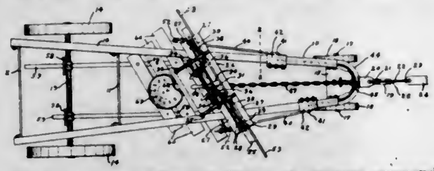
opposite end, a door operating machine movable along the discharge end of said ovens, and a pusher machine movable along the pushing end of said ovens, a ram carried by said pusher machine and adapted to enter and discharge the ovens, an electric motor for operating

said ram, means for completing an electric circuit to said motor, and means for preventing the completion of said electric circuit until both the door operating machine and pusher machine are positioned at the opposite ends of the same oven.



1,500,527. METHOD OF MAKING SHOES. ADAM H. PRENZEL, Halifax, Pa. Filed Mar. 9, 1920. Serial No. 364,382. 8 Claims. (Cl. 12—142.)

5. The method of making shoes, including molding a peripheral flange on an insole by turning the edge at right angles, drawing the upper leather and lining of a shoe over the flange until it substantially meets the edge, running a primary row of stitching around the base of the flange through the lining and upper leather in the plane of the sole with a curved needle, said flange then serving as a guide for the associated guide finger of said needle; and turning the flange so as to provide a flat insole surface, which then has a row of stitches spaced in from the edge.

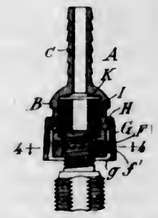


1,500,528. VARIABLE ELECTRIC PLATE CONDENSER. FAY F. RATHBUN, Jamestown, N. Y. Filed July 7, 1922. Serial No. 573,370. 6 Claims. (Cl. 250—41.)

2. In an electric condenser, a series of spaced plates, a tubular member having a series of lateral slots to receive portions of the respective plates to allow such portions to project within the interior of the member,

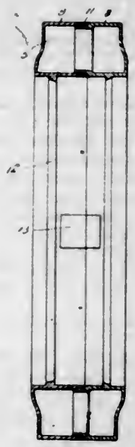
and a meltable binding means in the interior of the tube filling the spaces between the said portions of the plates and surrounding such portions.

1,500,529. ROAD-SURFACING MACHINE. DANIEL B. REARDON, Council Bluffs, Iowa, assignor to Bernard S. Reardon, Sioux Falls, S. Dak. Filed Dec. 1, 1921. Serial No. 519,114. 1 Claim. (Cl. 37—155.)



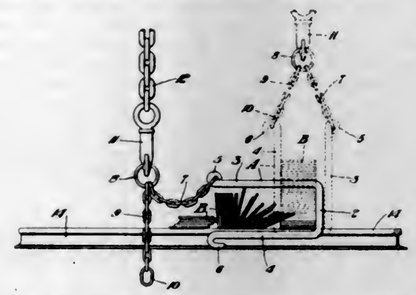
In a road maintainer, a frame, a scraper suspended beneath the frame, blocks mounted on the frame and connected to opposite ends of the scraper, a chain connecting the blocks together and extending around the forward end of the frame, a spring pressed bolt carried by the frame and adapted to extend forwardly through the chain for locking the same from sliding movement, a latch cord connected to the bolt, a lever pivotally connected between its ends to the latch cord and having a flat inner end and a flat edge at right angles thereto adapted to seat one at a time against said frame for maintaining the latch cord retracted and released, said lever also having a handle portion on its other end for manipulating the lever.

1,500,530. CLOTHESLINE PROP. RICHARD J. RILEY, Jennings, Mo. Filed July 2, 1923. Serial No. 649,062. 6 Claims. (Cl. 68—12.)



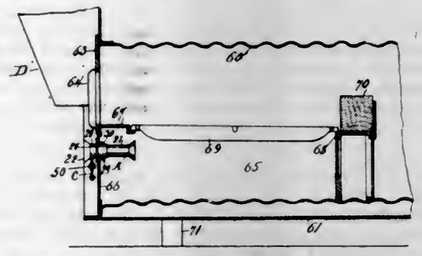
1. A clothes line prop having a line receiving slot, a line gripping clip having resilient arms and a V-shaped gripping portion between said arms to move across said slot for gripping the line in said portion, and guiding means for the clip carried by the prop, said arms being engageable with said guiding means to hold the clip in line gripping position and having finger pieces for disengaging the arms from said means and for moving the clip in said means from said position.

1,500,531. QUICK-ACTING PUMP COUPLING. MAXIMILIAN CHARLES SCHWEINERT, New York, N. Y., and HENRY PHILLIP KRAFT, Ridgewood, N. J. Filed May 20, 1921. Serial No. 471,241. 5 Claims. (Cl. 285—150.)



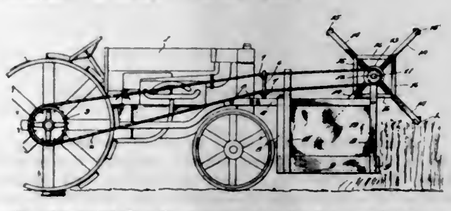
5. A pump coupling or the like, having a body portion provided with a bore and a recess a part movable in said recess in a direction at right angles to the longitudinal axis of the bore adapted to engage a threaded member therein to hold the coupling thereon, and a longitudinally movable sleeve carried by the coupling for moving said part into engaging position, said part and sleeve being formed with coacting surfaces.

1,500,532. TIRE ADAPTER FOR VEHICLE WHEELS. CLAUDE A. SHELTON, Mount Airy, N. C. Filed Sept. 27, 1923. Serial No. 665,040. 1 Claim. (Cl. 152—23.)



An adapter for conversion of a pneumatic tire truck wheel of standard make, having a fixed rim, formed on one side with an annular rib, and on the other side with an inclined abutment for a locking ring, into a non-pneumatic tread wheel, consisting of a pair of rings which are approximately U-shaped in transverse section, and having at their inner sides annular flanges adapted to bear against the opposite side portions of the rim structure, said rings abutting squarely against each other at their inner edges, and one of the rings being provided at its edges with continuous offset flange extensions which enter the other ring, and which bridge the joints along the lines of the abutting edges of the ring.

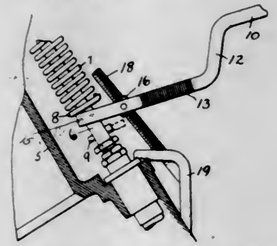
1,500,533. BAR-PILING APPARATUS. JAMES W. STUBBS, Steubenville, Ohio. Filed Nov. 3, 1923. Serial No. 672,664. 3 Claims. (Cl. 294—63.)



1. A bar repiling device comprising the combination with a lifting mechanism, of at least one U-shaped bar yoke adapted to have one of its legs passed under the bars to be piled, and lifting chains attached to the free ends of each of the legs of said bar yoke and to said lifting mechanism.

1,500,534. INDUCTION-TUBE FURNACE BLAST BLOWER. EDWIN H. SWIFT, Brooklyn, N. Y. Filed Feb. 2, 1921. Serial No. 441,798. 1 Claim. (Cl. 230—13.)

In combination a furnace blast blower comprising an induction and delivery conduit of two members telescoping with each other, one of said members having a flange extending from its outer surface and a flared inlet end and the other member having a flared outlet end, an induction tube for a propelling fluid supported in the conduit, piping connected to said induction tube for said fluid, a plate with an opening to support said member having the flange formed therewith, said flange bearing against one face of said plate, a loose sleeve on the member having said flange with one end bearing against the other face of said plate, a bayonet joint locking the members of the conduit together and a pin of said bayonet joint bearing against said sleeve.

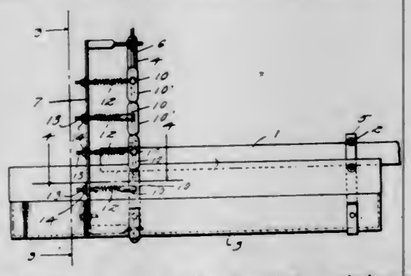


1,500,535. CLOVER HARVESTER. CLAUDE TAGGART, Martinsville, Ill. Filed Oct. 17, 1922. Serial No. 595,073. 1 Claim. (Cl. 56—130.)

An apparatus for the purpose set forth comprising supporting bars adapted to be secured at their rear ends to a portable support, front and rear hangers secured to and depending from said supporting bars, the front hangers

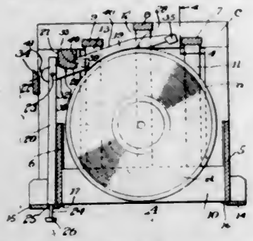
extending above the bars, transverse and longitudinal rails secured to and connecting the lower ends of said hangers, a floor carried by the lower ends of the hangers, posts rising from the supporting bars adjacent the rear hangers, a back wall secured to said posts and the rear hangers and rail, end walls secured to the hangers and the end rails, a shaft mounted in the upper ends of the front hangers, radial beater arms secured to said shaft, beater bars secured to and connecting the ends of the said beater arms and extending parallel with the said shaft, and means for rotating said shaft whereby the beater bars will be caused to travel rearwardly below the shaft through the open space between the front hangers.

1,500,536. VALVE LIFTER. ARCHIE TAYLOR, Scotch Plains, N. J. Filed Sept. 23, 1922. Serial No. 590,121. 2 Claims. (Cl. 29—86.3.)



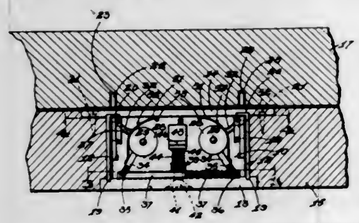
1. A valve spring lifter comprising a lever, a fork formed at one end thereof, a pivotally mounted block carried by the forked end of the lever, said block being internally threaded, a feed screw adjustable through the block, and a fulcrum element carried by the lower end of the screw to engage the flange of a cylinder.

1,500,537. WATERPROOFING FOR CLOTH. NATHANIEL A. THOMPSON, Kansas City, Kans. Original application filed Mar. 8, 1923, Serial No. 623,725. Divided and this application filed Mar. 8, 1923. Serial No. 623,727. 4 Claims. (Cl. 134—17.)



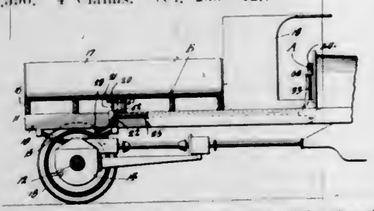
4. A process for making a water-proofing composition consisting of boiling 40 to 50 parts of heavy hydro-carbon oil with 5 to 10 parts rubber, adding 5 to 10 parts asphalt and then adding a filler of thirty to fifty parts.

1,500,538. BOLL-WEEVIL CATCHER. FRANK WILMOTH, Midlothian, Tex., assignor, by mesne assignments, to Standard Manufacturing Company, Dallas, Tex., a Corporation of Texas. Filed Oct. 4, 1922. Serial No. 592,318. 2 Claims. (Cl. 43—133.)



1. A machine of the class described consisting of a pan, a vertically disposed bracket securing the pan in place, a rod fastened in vertical position and to said bracket, a substantially U-shaped frame pivoted on said rod, beaters journaled on said rod movable in substantially a horizontal plane over said pan, contractile springs fastened to said frame and to said beaters, and means connecting said frame to the pan

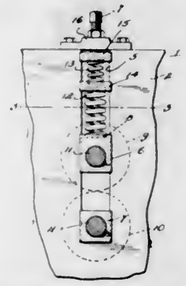
1,500,539. RECORD HOLDER AND EJECTOR. PHILIP F. ADAMS, Los Angeles, Calif. Filed June 7, 1923. Serial No. 643,721. 5 Claims. (Cl. 211—16.)



1. A record ejecting cabinet construction including a record compartment, a record ejector lever, a push rod pivotally connected to the record ejector lever, and compensating means for permitting a definite sliding movement of the push rod and a variable arcuate movement of the ejector lever, said compensating means comprising the pivot for connecting the push rod and ejector lever which may move in the direction of push rod thrust and also laterally, and a fixed abutment cooperating with a notch in the ejector lever.

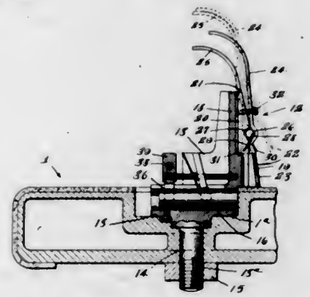
1,500,540. WINDOW LOCK. JOHN G. BERANGER, Cambridge, Mass. Filed Nov. 29, 1922. Serial No. 603,952. 5 Claims. (Cl. 292—33.)

1. A lock comprising a casing; parallel sliding bolts operable in said casing and adapted to project from the same when extended to operative position; means for drawing said parallel sliding bolts into said casing; rack and pinion mechanism for operating the last mentioned means; a single operating bolt; the pinion of said rack and pinion mechanism being carried by said single operating bolt; said bolt being adapted to be moved to disengage the pinion from the racks of said rack and pinion mechanism; and means to retain said single operating bolt in one position with the pinion disengaged from said racks.



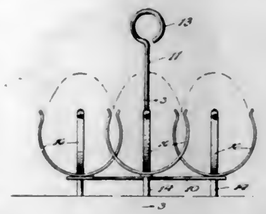
1,500,541. TRUCK SCALE. GEORGE A. BERNACHE, Northampton, Mass. Filed Nov. 2, 1922. Serial No. 598,590. 4 Claims. (Cl. 265—42.)

1. The combination with a motor vehicle chassis and a body secured thereto having a driver's cab, of a weighing mechanism associated with said chassis including an indicating portion mounted in the cab comprising a housing provided with a scale and an indicator movable over the scale, a shaft rotatable in the housing for supporting the indicator, a platform, means associating the



chassis with the platform, said platform being arranged to engage the lower surface of the body and adapted to be depressed by the body when the same is under load, a shaft extending longitudinally of the chassis, means connecting the platform and shaft for imparting movement to the shaft when the platform is depressed, a counter-shaft, means for imparting the movement of the longitudinal shaft to the counter-shaft, and means for operatively connecting the counter-shaft with the shaft supporting said indicator.

1,500,542. CORN-HUSKING MACHINE. EDWARD S. BLAUSER, Basil, Ohio. Filed Apr. 12, 1923. Serial No. 631,515. 1 Claim. (Cl. 130—5.)

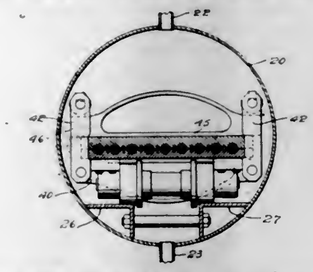


In a husking machine having unobstructed slots in its side walls, a pair of snapping rollers, upper and lower boxes engaged in the slots and in which the rollers are journaled, the upper boxes being movable in the slots, a pair of springs of unequal strength located in the slots, the lowermost springs being engaged with the uppermost boxes, plates interposed between the adjacent ends of the springs and movable with the lowermost springs to their fullest extent of depression, second plates upon the upper ends of the upper springs, and means for actuating the second plate to simultaneously contract both springs, as and for the purpose set forth.

1,500,543. SHIRT-IRONING MACHINE. PHILIP N. BRAUN, Syracuse, N. Y., assignor to The Prosperity Co. Inc., Syracuse, N. Y., a Corporation of New York. Filed July 23, 1920. Serial No. 398,508. 6 Claims. (Cl. 68—9.)

1. A shirt ironing machine comprising a lower pressing bed or buck, an upper pressing head movable toward and from the bed or buck, the pressing head being formed with a cutout at one end and a collar band holder comprising a base mounted on the upper face of the bed or buck in alinement with the cutout and having an upwardly extending part and clamping means carried by said part and comprising a member coacting with the edge face of the base to hold the collar band, said member including an upwardly extending handle, substantially as and for the purpose set forth.

1,500,544. ARTICLE CARRIER AND DISPLAY DEVICE. JACOB BROCKLEY, Newport News, Va. Filed Oct. 18, 1922. Serial No. 595,330. 2 Claims. (Cl. 65—12.)

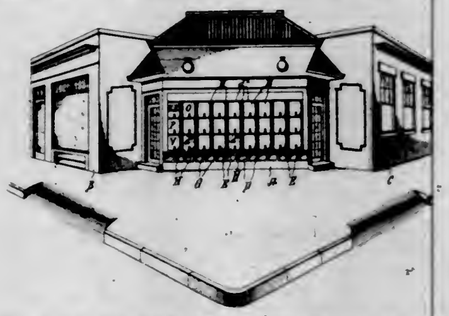


2. As a new article of manufacture, an article carrier including straight resilient sheet metal arms connected with each other to form a frame, pairs of crossed semi-circular resilient sheet metal clamping members carried by the arms to form article holders thereon, and a combined leg and fastening device extending through the arms respectively and each pair of said members securing the members fixed upon the arms and extending meneath the arms to cooperate with each other for sustaining the frame.

1,500,545. PROCESS OF BREAD MAKING. LEW E. BUFFINGTON, Crawfordsville, Ind. Filed Dec. 3, 1923. Serial No. 678,340. 2 Claims. (Cl. 99—10.)

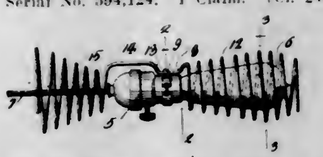
1. A process of making leavened bread, which comprises bringing a composition of ingredients consisting of lactic acid, ammonium phosphate, calcium acid phosphate, phosphoric acid, and pepsin into admixture and incorporation with the water, yeast, salt, sugar, lard, flour, and other materials of the dough batch, mixing, making up and baking the batch, without any fermentation period, and completing the bread making operation from start to finish in from one hour and forty minutes to one hour and fifty minutes; substantially as described.

1,500,546. PROCESS FOR THE MANUFACTURE OF ELECTRIC WIRES. HARRY B. BURLEY, Brookline, Mass., assignor to Boston Insulated Wire and Cable Company, a Corporation of Massachusetts. Filed Apr. 7, 1923. Serial No. 630,500. 6 Claims. (Cl. 18—59.)



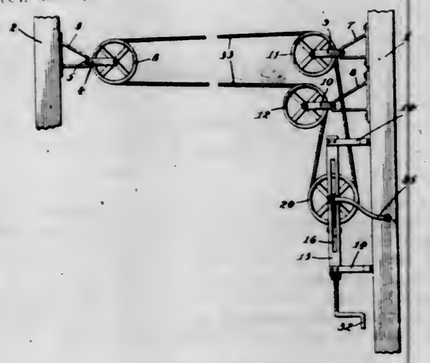
1. The process of manufacturing multi-conductor rubber insulated electric cable comprising the steps of applying a cylindrical layer of rubber compound to each of the conductors, semivulcanizing said rubber covered conductors, embedding the rubber covered conductors in a cylindrical body of rubber compound, enclosing the cable between two correspondingly grooved plates, and heating the plates and cable to vulcanizing temperature.

1,500,547. SYSTEM OF AND APPARATUS FOR RETAILING LIQUIDS. JOSEPH ANDREW CHAMBERS, New Orleans, La. Filed June 12, 1922. Serial No. 567,834. 2 Claims. (Cl. 211—8.)



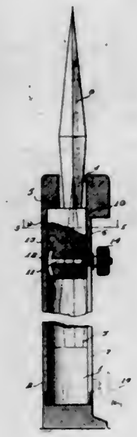
1. A vending station for liquids comprising a cabinet arranged with its outer face exposed to view of motorists entering the station, a plurality of containers mounted

in the cabinet with their forward ends exposed through the front face of the cabinet, individual means for each container at the forward end thereof for drawing off quantities of different fluids disposed in the separate



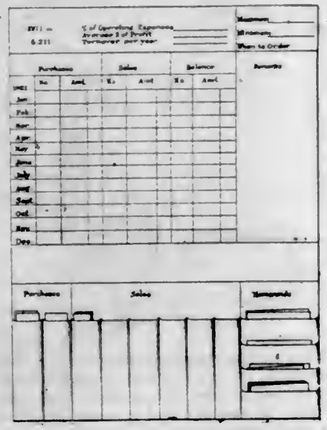
containers, and means at the inner end of each container for refilling the same without removing the containers from the cabinet and without disturbing the inter-relation of the containers.

1,500,548. TROUBLE-LIGHT FIXTURE. WILLIAM HENRY CLEMENT, Jr., Palacios, Tex. Filed Oct. 12, 1922. Serial No. 594,124. 1 Claim. (Cl. 240—102.)



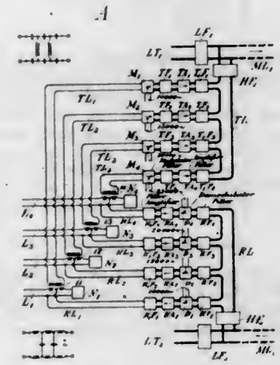
A device of the class described including a structure formed from a single strand of material bent so as to include an elongated body portion, a pair of coils one at each end of the body portion, said coils being alined with each other and offset from the body, the body portion being substntially straight and provided intermediate its ends with an offset, a clamp member fixed to said offset.

1,500,549. TIGHTENER FOR CLOTHESLINES. CLIFFORD S. CUDMORE, Sault Ste. Marie, Ontario, Canada. Filed June 29, 1923. Serial No. 648,612. 2 Claims. (Cl. 68—3.)



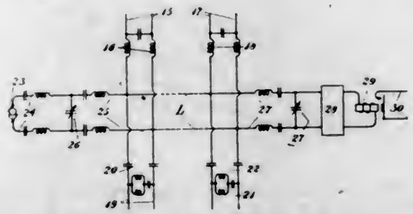
1. A tightener for clothes lines comprising a frame having slotted sides, a yoke slidably mounted within said frame, a shaft rotatably supported in said yoke and extending through said slotted sides, a pulley mounted on said shaft, a screw rotatably secured to the yoke and threaded through the frame, and means for turning said screw.

1,500,550. ERASER. LOUIS D'HONDT, Dedham, Mass. Filed Sept. 15, 1921. Serial No. 500,861. 1 Claim. (Cl. 120—39.)



In an instrument of the class described, a handle member having a longitudinally recessed flattened side, the said member having a longitudinal bore of which the said flattened side constitutes a wall, the said wall having a longitudinally extending slot, a head slidably adjustably mounted in the bore and having a flattened side coacting with the inner face of said wall, a blade carried by the head for projection through the outer end of the bore, the head having a notch in its surface diametrically opposite its flattened side, a stem passing diametrically through the head and having a terminal fitting in the notch therein, and a securing device mounted on the outer end of the stem and bearing against the flattened wall of the handle.

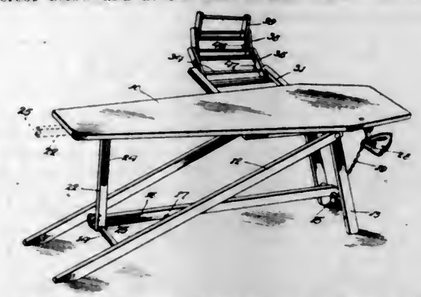
1,500,551. MEANS FOR PRODUCING PERPETUAL INVENTORIES. AARON P. ROBINS DRUCKER, Colorado Springs, Colo. Filed Jan. 14, 1922. Serial No. 529,244. 6 Claims. (Cl. 283—55.)



1. Means for maintaining a perpetual inventory of goods grouped into classes, comprising a series of record sheets each bearing indicia denoting one class only, each sheet being provided with spaces marked for the reception of data relative to total purchases and sales of goods in said class during a certain period of time, with similar spaces marked for the reception of data relative to the amount of goods in said class left in stock, and with spaces marked for the reception of data relative to the maximum and minimum amount of goods of said class to be kept in stock.

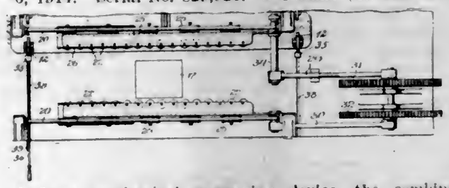
1,500,552. MULTIPLEX TRANSMISSION SYSTEM. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 17, 1919. Serial No. 304,791. 22 Claims. (Cl. 178—44.)

19. In a transmission system, a transmission line, means associated with said line whereby frequencies within a certain range may be transmitted over said line in both directions, and means associated with said line whereby frequencies above the voice range and within a range different from said first mentioned range may be transmitted over said line in one direction only.



1,500,553. HARMONIC SUPPRESSOR. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 27, 1919. Serial No. 326,737. 1 Claim. (Cl. 179—15.)

A telephone line arranged for the multiplex transmission of telephonic currents and of a current for signaling purposes, a selective circuit associated with the outgoing end of said line and tuned to be resonant to said signaling current, a second circuit tuned to be resonant to said signaling current, means in said second circuit for generating said signaling current, and a loose capacity coupling between said selective circuit and said second circuit.

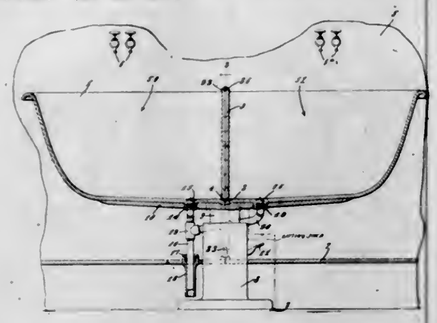


1,500,554. IRONING BOARD. LAWRENCE G. FAIRCHILD, Glenmary, Tenn. Filed Jan. 3, 1922. Serial No. 526,673. 4 Claims. (Cl. 68—10.)

1. The combination with a board, of a foldable clothes rack mounted on the under side of the board to extend laterally therefrom or to lie beneath the same, a collapsible support for the board hinged to the under side thereof below and at one side of said rack whereby to

extend across the folded rack and hold the same against movement when collapsed, and releasable means for retaining the support in collapsed condition.

1,500,555. MECHANICAL MASSAGING DEVICE. SAMUEL B. FLEMING, Chicago, Ill.; L. Florence Fleming, executrix of the will of Samuel B. Fleming, deceased, assignor, by mesne assignments, to Gardner Reducing Machine Company, Chicago, Ill. Filed Apr. 6, 1914. Serial No. 829,824. 3 Claims. (Cl. 128—57.)

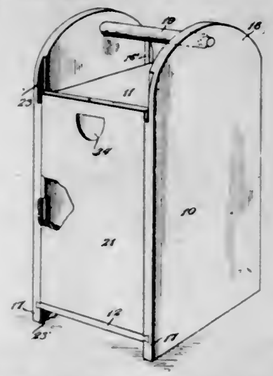


3. In a mechanical massaging device, the combination of a base, standards projecting from said base, roller ssupports mounted on said standards, means for adjusting said supports vertically a series of rollers carried by said supports, and means for reciprocating said supports.

1,500,556. VALVE-OPERATING MEANS FOR INTERNAL-COMBUSTION ENGINES. WILLIAM M. GOODWIN, Central Square, N. Y. Filed Mar. 5, 1919. Serial No. 280,853. 4 Claims. (Cl. 123—90.)

3. In combination with a cam shaft and a self closing valve of an internal combustion engine, a plunger, a rocking member pivoted to the plunger and provided with a contact face engaging the cam, said contact face passing through the axis of movement of said rocking member, and means for transmitting motion from the plunger to the valve.

1,500,557. BATHTUB. HENRY GORMAN, Manchester, N. H. Filed Jan. 6, 1922. Serial No. 527,483. 1 Claim. (Cl. 68—31.)

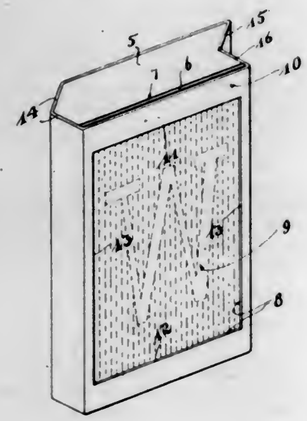


In a device of the class described, a receptacle; a vertically slidable gate in the receptacle, a jack carrying the receptacle; and means for anchoring the gate against movement with respect to the receptacle whereby when the receptacle is raised by the jack, the gate will be seated in the receptacle.

1,500,558. STREET SWEEPER. CARL F. GREINER and ANDREW W. AITKEN, Springfield, Ohio, assignors to The Springfield Motor Sweeper Company, Springfield, Ohio, a Corporation of Ohio. Filed May 29, 1922. Serial No. 564,295. 5 Claims. (Cl. 15—84.)

4. In a street sweeper, a hopper, an inclined conveyor extending from the ground to a point near the forward upper portion of said hopper, and a rotary winged discharging device at the upper end of said conveyor to discharge the sweepings therefrom rearwardly into said hopper.

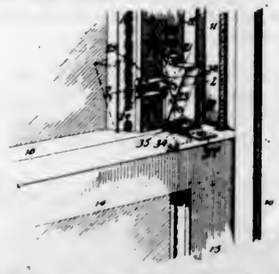
1,500,559. DYNAMITE BOX. LAURENCE HAMMOND, Spangler, Pa. Filed Sept. 13, 1923. Serial No. 662,490. 4 Claims. (Cl. 217—4.)



1. A dynamite box including a box body having side walls continued to form legs extending beneath the box body as well as wings upstanding from the box body, a handle extending between said wings, and a vertically movable door gravitating to normally close the box body.

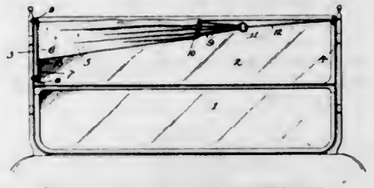
1,500,560. RADIATOR-TUBE JOINT. ALBERT E. L. HENDERSON, Charlotte, N. C. Filed Apr. 9, 1921. Serial No. 460,135. 2 Claims. (Cl. 285—56.)

2. In a radiator for automobiles, etc., a casing wall, a tube opening therein, a groove with a curved wall surrounding the tube opening but spaced therefrom to leave a web between the groove and the tube opening, and a tube extending through the opening and having its end turned or crimped into contact with the curved wall of said groove, and abutting against the web which is bent outwardly so that the tube end and web interlock, the tube end engaging said wall and web under yielding pressure.



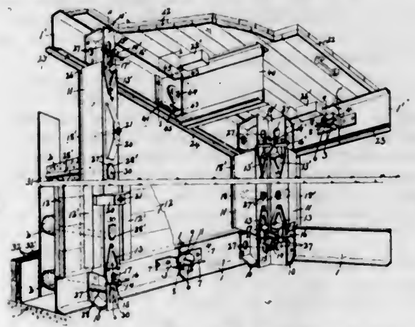
1,500,561. CHARACTER-HOLDING DEVICE. HARRISON H. HOOD, Los Angeles, Calif., assignor to Thinmeway Titles, Inc., Hollywood, Calif. Filed Mar. 21, 1923. Serial No. 626,649. 4 Claims. (Cl. 95—85.)

1. In a character-holding frame-structure, a central portion being bent in form of a V, other portions extending from the terminations of the V-portion practically parallel, the parallel portions having proportionally large sight-openings in alignment in the opposite parallel portions, and other portions extending from the parallel portions bent upon the parallel portions somewhat inwardly to be practically parallel to the V-portions.



1,500,562. LOCK FOR WINDOW SASHES, ETC. HERMAN HOPF, Buffalo, N. Y. Filed July 31, 1922. Serial No. 578,563. 6 Claims. (Cl. 292—342.)

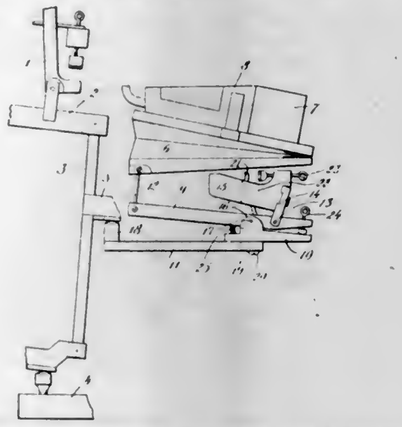
1. A locking device for relatively movable members comprising a holder adapted to be mounted on one of said members, a stop removably mounted on said holder and having an inclined face adapted to be engaged by the other member for preventing relative movement of said members, and a guide which extends laterally from said holder and upon which said stop may be moved for carrying the same out of the path of said opposing member,



said guide having a horizontal guideway which is T-shaped in cross section and said stop having a T-shaped arm which runs in said guideway.

1,500,563. ANTIGLARE DEVICE FOR AUTOMOBILES. EDWARD B. HOWELL, Butte, Mont. Filed Aug. 11, 1923. Serial No. 656,858. 6 Claims. (Cl. 296—97.)

1. In combination with an automobile wind shield: a guide at one end thereof; a flexible collapsible curtain, one end of which is in sliding engagement with said guide; and means acting on the other end of the curtain to draw the curtain endwise; said means serving to hold the curtain in an extended or collapsed condition.

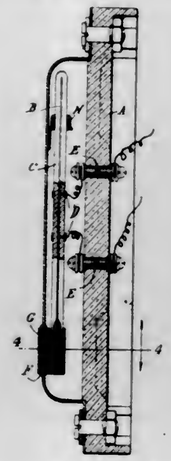


1,500,564. CONCRETE BUILDING FORM. PAUL J. HUEBER, Syracuse, N. Y. Filed June 6, 1923. Serial No. 643,742. 15 Claims. (Cl. 25—131.)

2. A temporary form for concrete buildings including a girder having a substantially flat inner face next to the wall to be formed and provided with a bracket projecting from its opposite face, a post having its lower end resting upon the bracket, and cooperative means on the bracket and post for holding said post against lateral movement on the bracket.

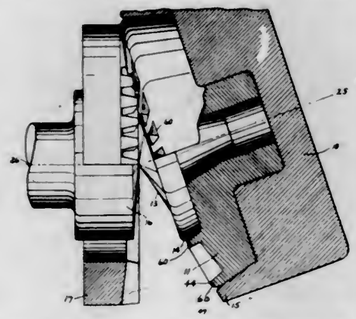
14. In a temporary form for concrete buildings, a horizontal footing-course, a girder supported edgewise upon the footing-course, and having a substantially flat inner face adjacent one side of the wall, upright posts supported at their lower ends upon the upper edges of the girders and provided with substantially flat inner faces co-incident with that of the girder, couplings connecting the lower ends of the posts to the girder, stop flanges projecting from opposite sides from the inner faces of the posts, means for supporting the upper ends of the post against lateral movement, panels movable into and out of the spaces between the posts and adapted to rest against said stop flanges when adjusted for use, stop members on the outer faces of the posts movable into and out of engagement with said panels for holding the latter against the stop flanges when adjusted to one position and for releasing the panels when adjusted to another position, upright stop plates directly opposite the posts and in spaced relation thereto, tie rods extending loosely through registering openings in each set of opposed posts and plates, spacing sleeves loosely mounted upon the tie rods between each post and its corresponding plate, devices movable on the tie rods for clamping the plate against the adjacent end of the steel and for simultaneously forcing the sleeve endwise against the inner faces of the posts, panels abutting against the outer faces of the plates, and devices movable on the tie rods for clamping said panels against plates when moved to one position and for releasing said panels when moved to one position and for releasing said panels when moved to another position.

1,500,565. PLAYER PIANO. JOSEPH P. HULDEN, New York, N. Y., assignor to The Unit Player Action Co., a Corporation of New York. Filed June 23, 1920. Serial No. 391,080. 6 Claims. (Cl. 84—68.)



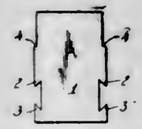
1. In a player-piano, the combination with a striker pneumatic and a piano-action including an abstract, of an operative connection between said parts comprising an arm fulcrumed intermediate its ends in a fixed support, a rigid element connecting the rear end of the arm with the movable wall of the pneumatic, a co-acting member disposed under the forward end of said arm and pivotally attached thereto, a second arm having a slot in its forward end and having its rear end acting on the abstract, a fastener entering the slot and attaching the last mentioned arm to the underside of the intermediate member to permit of radial adjustment about the point of attachment, whereby the position of said arm may be adjusted as required for action on the abstract.

1,500,566. THERMOSTAT. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Apr. 18, 1922. Serial No. 555,173. 8 Claims. (Cl. 200—141.)



4. A thermostatic control-device comprising an enclosure; a thermostat within said enclosure, an electric

contact controlled thereby, a heat insulated temperature-sensitive element engaging said thermostat and having



a portion exposed to the outside atmosphere, whereby the thermostat is made responsive to temperature changes outside of the enclosure.

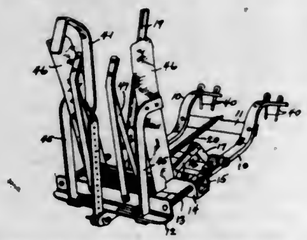
1,500,567. DIE FOR ROLLING GEARS. HAROLD NAPIER ANDERSON, Cleveland, Ohio. Filed July 26, 1920. Serial No. 399,043. 12 Claims. (Cl. 80—16.)

1. A die for rolling teeth on gears, having flat faced teeth formed on a curved base.

1,500,568. UNIT SHINGLE. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Company, a Corporation of New Jersey. Filed Mar. 23, 1922. Serial No. 545,954. 2 Claims. (Cl. 108—7.)

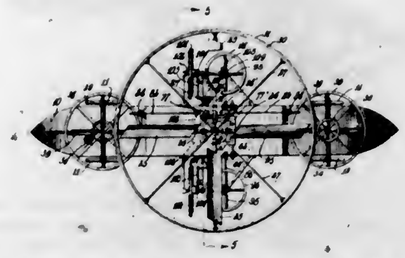
1. Prepared roofing shingles adapted to be laid in alternative positions in overlapping courses to form a roof, each unit comprising a substantially oblong shaped body having a pair of hooks indented in opposite parts of each of the sides of one of its end portions, which hooks when the units are laid in one position, are adapted to interlock with corresponding hooks of the laterally adjacent units of the next lower and upper courses respectively, and having its other end portion reduced in width to form a shoulder in opposite parts of each of the sides at substantiallip the distance from the narrower end that the unit is intended to be exposed when laid in reversed position.

1,500,569. CONNECTING JOINT. WILLIAM T. BARNHILL, Seattle, Wash. Filed Jun. 28, 1924. Serial No. 689,047. 2 Claims. (Cl. 238—241.)



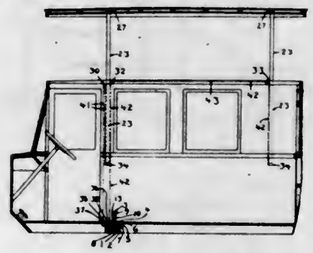
1. A joint comprising a curved socket opening to the end thereof and having dove-tailed recesses in the body portions at opposite sides of the socket and a second member having a curved tongue removably fitted within the socket of the first member and having dovetailed extensions at opposite sides of the tongue adapted to fit within the dovetailed recesses.

1,500,570. TROUSERS. BARTHOLOMEW J. BODNAR, Astoria, N. Y. Filed Aug. 10, 1923. Serial No. 656,707. 4 Claims. (Cl. 2—231.)



1. In combination with a pair of trousers, reinforcing and crease retaining strips arranged in rows extending up the legs of the trousers, said strips being arranged with their vertical median lines at the points where the trousers are creased and having their adjacent edges spaced from one another.

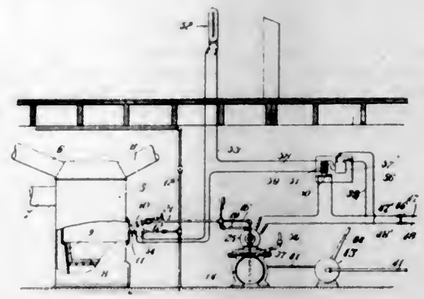
1,500,571. METHOD AND APPARATUS FOR SIMULTANEOUSLY FORMING AND HEAT TREATING SHOVELS. FRANCIS C. BRANDENBURG, Piqua, Ohio, assignor to The Wood Shovel and Tool Company, Piqua, Ohio, a Corporation of Ohio. Filed Jan. 17, 1921. Serial No. 437,764. 18 Claims. (Cl. 266—6.)



1. The method of heat-treating a shovel, which comprises heating it and immersing it in a quenching bath, immediately thereafter, confining a comparatively narrow zone, including the cutting edge, in a clamping device which is also submerged in the bath, whereby said zone is held until the metal cools in the form it is required to have, the remaining submerged portions being left unconfined while the cooling takes place.

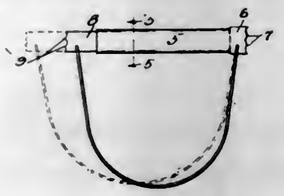
1,500,572. HELICOPTER. WILLIAM BROWN, New York, N. Y. Filed Aug. 28, 1922. Serial No. 584,673. 4 Claims. (Cl. 244—19.)

1. A helicopter flying machine comprising one or more rotary sustaining elements each having a series of adjustable blades, turbine wheels operatively connected to said rotary elements to drive the same, pipes for directing steam jets on said turbine wheels, valves on said pipes, and a common means for controlling said valves and adjusting said blades.



1,500,573. AUTOMATIC ADJUSTABLE AUTOMOBILE CAMPING TOP. LOUIS B. CASSELL, Decatur, Ill. Filed May 28, 1923. Serial No. 641,830. 3 Claims. (Cl. 296—23.)

1. In an automobile body, the combination of an automatic adjustable camping top therefor having lifting and supporting means concealed within the walls and beneath the floor of said body, said means comprising vertical supporting members carried by said top and slidably mounted in fixed guides; chains or cables connected to said supporting members, spools rotatably mounted beneath the floor of said body upon which said chains or cables are adapted to be wound to lift said camping top, ratchet means for rotating said spools and a manually operable dog for holding said spools against rotation in the opposite direction, said camping top being adapted automatically to return by gravity to its closed position when said dog is released from engagement with said ratchet means.



1,500,574. OIL-BURNING SYSTEM. FRANK RYERSON CRANE, Jr., Chicago, Ill., assignor to Ryerson Crane, Inc., Chicago, Ill., a Corporation of Illinois. Filed Jan. 27, 1922. Serial No. 532,140. 2 Claims. (Cl. 158—36.)

1. A system of the character described comprising an oil spraying burner; a tank containing a liquid fuel; an air pump connected to the tank to pump air into the tank to produce pressure to move a liquid therefrom and to serve as a reservoir of air for the burner; a pipe leading from the bottom of the tank to the burner; another pipe leading from the top of the tank to supply air to the burner and an oil supply pipe connected to the tank in combination with a valve movable to connect

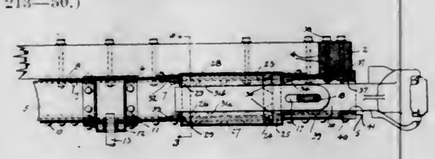
the intake of the pump to said tank to exhaust air therefrom to fill the tank with oil when said supply pipe is open and alternatively movable to close said air connection and to connect the intake port of the pump to another source of air supply and to connect the discharge port of the pump to said tank.

1,500,575. POCKET PENCIL HOLDER. DAVID F. CURTIN, Chicago, Ill. Filed Feb. 1, 1923. Serial No. 616,435. 3 Claims. (Cl. 2—151.)

1. A pocket pencil holder comprising a sleeve having one end pinched to form a flattened head, teeth integrally formed on the outer end of said head, a bar telescoped into said sleeve, teeth formed on the outer end of said bar, and a bow spring having the ends thereof connected to said flattened sleeve head and to the outer end of said bar to hold said bar and sleeve extended with respect to one another.

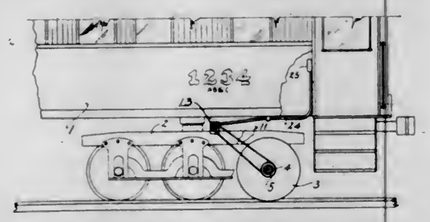
1,500,576. POCKET PROTECTOR FOR CHECKS AND THE LIKE. JOAQUIN CUSI, Buenos Aires, Argentina. Filed May 1, 1923. Serial No. 635,834. 2 Claims. (Cl. 101—19.)

1. A protector for checks and other documents comprising an enclosing casing, a series of guiding housings disposed therein, a vertically movable disc in each housing, a series of perforating devices projecting downwardly from each disc, the devices of each disc differing in disposition from those of the other discs to produce a plurality of different characters or signs, a spring encompassing each series of devices, a member arranged beneath said casing but spaced therefrom to permit the introduction of a document between said casing and member and having openings in line with the perforating



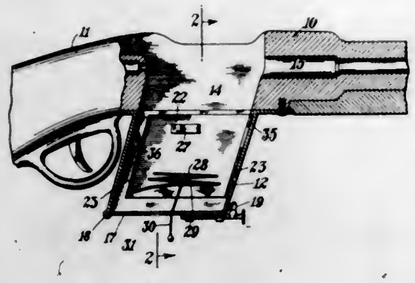
devices, a member movable longitudinally of the casing adapted to operate the different discs to perforate a document with different characters, there being openings in the casing to permit said member to contact with the different discs and means for properly positioning a document below the different series of perforating devices.

1,500,577. HAT-BRIM CONSTRUCTION. HENRY DIAMOND, Brooklyn, N. Y., assignor, by mesne assignments, to Venus Hat Co. Inc., New York, N. Y., a Corporation of New York. Filed May 10, 1923. Serial No. 638,046. 3 Claims. (Cl. 2—192.)



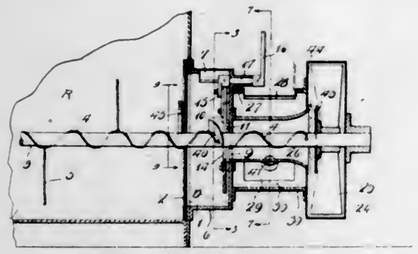
1. The method of making a hat brim which consists in forming an annular blank strip of approximately double the width of the brim, placing a layer of paste on one side portion of said blank, placing a sheet of backing material on the said paste, then drying the said paste placing a layer of cement on one side of said backing, and then folding the other side portion of said blank on the said cement.

1,500,578. DRAFT ATTACHMENT FOR RAILWAY CARS. GEORGE BINET DOREY, Montreal, Quebec, Canada, assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 30, 1921. Serial No. 525,838. 3 Claims. (Cl. 213—50.)

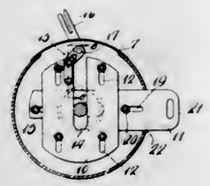


1. In a railway car, the combination with channel shaped draft sills, of upper and lower plates extending from sill to sill and secured to the flanges of the respective draft sills, each of said plates having front and rear draft gear abutments formed integrally therewith.

1,500,579. TACHOMETER DRIVE. WILLIAM G. EAGER, Valdosta, Ga. Filed Aug. 6, 1923. Serial No. 656,068. 4 Claims. (Cl. 105—101.)



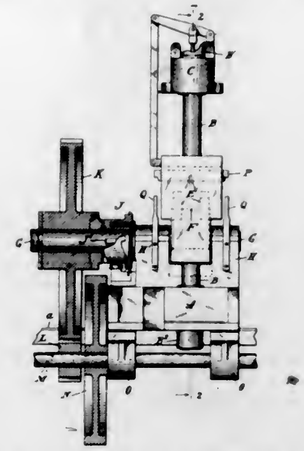
1. In a tachometer drive, a multi-groove pulley of uniform diameter mounted on the car wheel axle, a driven pulley mounted adjacent to the truck center, a drive connecting said pulleys, and a flexible drive shaft connecting said transmission pulley and a tachometer, substantially as described.



1,500,580. MAGAZINE FEEDING DEVICE. MATTEO FERERRO, Raton, N. Mex. Filed Oct. 8, 1923. Serial No. 667,097. 5 Claims. (Cl. 42—50.)

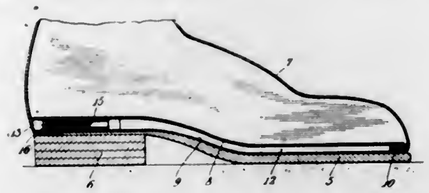
1. In a rifle, a magazine, a compound cartridge clip in said magazine presenting two clip holding members arranged side by side, one of said members being collapsible.

1,500,581. FUEL-FEEDING MECHANISM FOR FURNACES. CHARLES I. FILSON, Cleveland, Ohio. Filed Sept. 1, 1923. Serial No. 660,550. 12 Claims. (Cl. 302—37.)



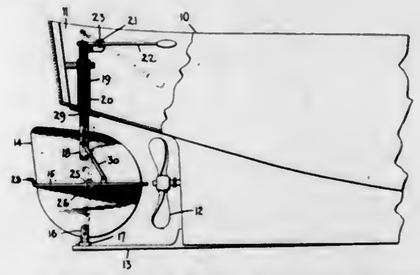
1. A fuel feeding mechanism comprising a fuel reservoir a horizontally disposed conveyor shaft arranged in said reservoir, and having one end projecting outwardly of the reservoir, a suction fan carried by the outer end of said shaft, a housing enclosing the fan and the projecting portion of said shaft, a fuel feed control arranged in said housing and said housing having air inlets between the fan and fuel control.

1,500,582. PRESS. RICHARD W. FUNK, Bellefonte, Pa. Filed Nov. 25, 1919. Serial No. 340,582. 7 Claims. (Cl. 78—38.)



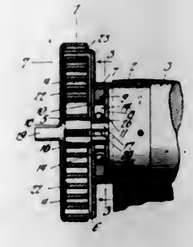
1. In combination in a power press, stress rods, a base and a fixed head held in fixed relation by said stress rods, a movable head supported by and guided by said rods, a driving shaft between the base and movable head carrying an eccentrically mounted barrel adapted to raise the moving head and a pillow block

between said eccentric barrel and the approximate side of the movable head with a bearing transverse or in a plane normal to the axis of movement of the press



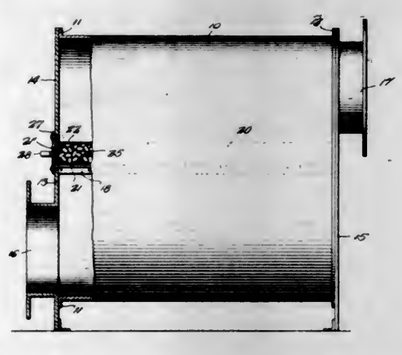
head, said bearing presenting a relatively large reciprocating wearing surface with respect to the wearing surface on the eccentric barrel.

1,500,583. PNEUMATIC SOLE. LUDWIG GLANZER, Winkler, Kans. Filed Dec. 9, 1922. Serial No. 605,766. 2 Claims. (Cl. 149—29.)



2. An inner sole for shoes comprising an integral rubber body shaped to fit the shoe, said body being solid at the heel and chambered throughout the remaining portion, and an air inlet valve fixed in said heel portion extending lengthwise and centrally thereof above the lifts and adapted to deliver air to the mentioned chamber.

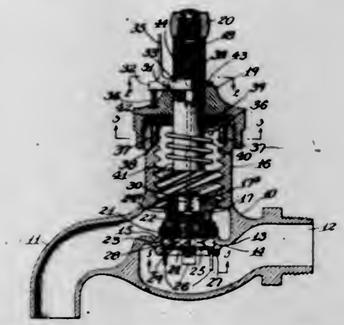
1,500,584. RUDDER. BERTRON G. HARLEY, Arkendale, Va. Filed Apr. 14, 1923. Serial No. 632,028. 6 Claims. (Cl. 114—145.)



4. In combination in a boat, a propeller, a composite rudder adapted to be acted upon by the water currents forced therengainst by said propeller comprising vertically and horizontally pivoted planes, and means for adjusting the horizontally pivoted plane to reverse the direction of motion of the boat without the reversal of said propeller.

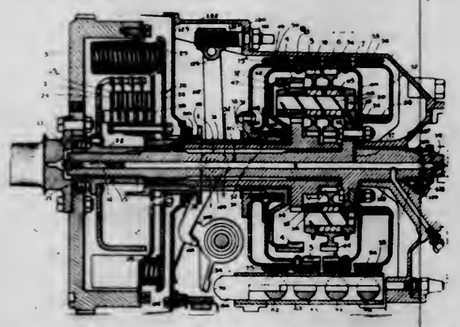
1,500,585. SPRING ROLLER. EDGAR HAYSLETT, South Bend, Ind. Filed Aug. 15, 1921. Serial No. 492,411. 3 Claims. (Cl. 156—36.)

2. A device of the character described comprising a casing having a tubular extension for the reception of one end of a shade roller, said casing having a centrally disposed aperture in the end thereof; radially extending and oppositely disposed recesses formed in the side walls of said casing central aperture, said recesses being provided with lateral closure means, the side walls of said casing central opening being formed with oppositely disposed and off-set recesses inwardly of the first named recesses; a spring coiled within said casing and having one end thereof anchored within the casing; a stub shaft disposed in the casing central opening and having a longitudinal slit therein, the inner end of said spring being anchored within said slit, that portion of said stub shaft which is arranged within said central opening having opposite recesses arranged for cooperation with the last named recesses for the reception of detent members normally located within the first named recesses and movable therein.



1,500,586. AIR FILTER. ANDERS JORDAHL, New York, N. Y. Filed Feb. 10, 1923, Serial No. 618,203. Renewed Jan. 24, 1924. 4 Claims. (Cl. 183—46.)

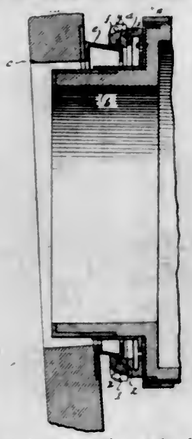
1. In a device of the class described, the combination of a cylindrical casing having a horizontal axis, heads secured to the opposite ends of said casing and provided with supporting members, one of said heads being provided with an inlet aperture having its lowest portion substantially in alignment with the lowest portion of said casing, the other head being provided with a discharge aperture having its highest portion in substantial



alignment with the highest portion of said casing, and a filtering member slidingly mounted within said casing along the axial line thereof, and removable from the interior of said casing through one of said heads.

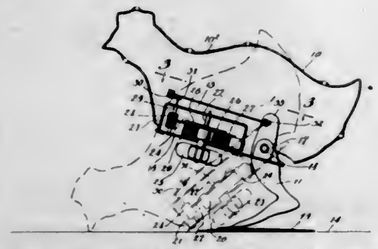
1,500,587. AUTOMATIC SAFETY VALVE. OTTO C. LARSON, Brooklyn, N. Y. Filed Feb. 28, 1923. Serial No. 621,753. 11 Claims. (Cl. 67—115.)

1. A valve device of the class described comprising a valve body, a valve element movably mounted therein and adapted to control the communication through the body of the valve device, a supplemental pressure actuated valve supported by said valve element, and a catch device for retaining said valve element in an open position, said supplemental valve cooperating with the catch device to move the same into operative position.



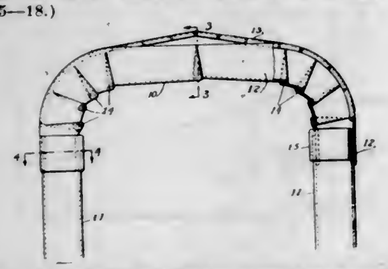
1,500,588. POWER TRANSMISSION. ALPHONSE JOSEPH LAVOIE, Montreal, Quebec, Canada. Filed Jan. 4, 1922. Serial No. 526,957. 10 Claims. (Cl. 74—34.)

1. In a power transmission, a transmission shaft, a spider rigid therewith and having a plurality of shafts forming gear bearings, gears for forward and reverse movements on said shafts and non-reciprocable, a central gear shaft and gears of different diameters engaging the aforesaid gears and fixed in respect to the latter and the longitudinal position, a sleeve splined to said central gear shaft and therewith encircling said transmission shaft, internal gears engaging said forward and reverse gears, means for arresting said internal gears and a driven member operatively connecting and disconnecting said transmission shaft and sleeve.



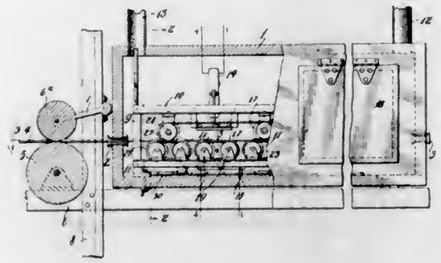
1,500,589. GASKET FOR ROTATING KILNS. JOHN L. LUNDBERG, Alpena, Mich., assignor to Huron Industries, Inc., Alpena, Mich., a Corporation of Michigan. Filed May 29, 1922. Serial No. 564,355. 10 Claims. (Cl. 286—7.)

1. In a joint for a rotating cylinder, the combination of a stationary member provided with a mouth, a rotating cylinder body having one end adjacent the mouth of said member and a gravity pressed gasket arranged



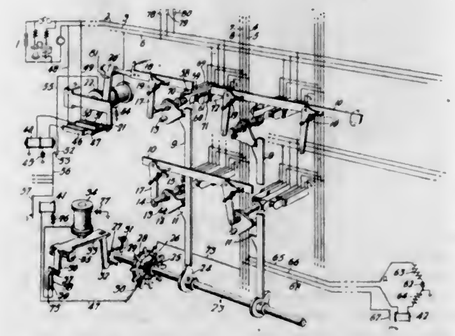
to seal the joint between the end of the cylinder and the mouth.

1,500,590. FIGURE TOY. LOUIS MARX, New York, N. Y. Filed Dec. 19, 1923. Serial No. 681,611. 4 Claims. (Cl. 46—40.)



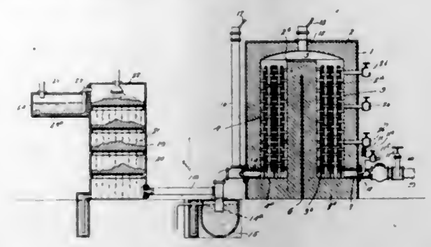
1. A toy fowl comprising a body member formed in representation of a fowl, a plurality of leg members, the said body member being mounted on the leg members for oscillating movement thereon between a substantially horizontal or normal body position and a downwardly inclined position with the beak of the fowl adjacent a support such as the ground on which the toy is placed, and mechanism carried by the body member and connected to the leg members for oscillating the body member relatively to the leg members in simulation of an eating or pecking action.

1,500,591. CAR-VESTIBULE DIAPHRAGM. HARRY U. MORTON, Chicago, Ill., assignor to Morton Manufacturing Company, a Corporation of Illinois. Filed Jan. 17, 1924. Serial No. 686,729. 6 Claims. (Cl. 105—18.)



3. A car vestibule diaphragm comprising a roof section and two leg sections and pockets on the inner side of each end of the roof section adapted to receive the upper ends of the leg sections.

1,500,592. DRYING APPARATUS. FREDERIC P. REED, East Orange, N. J., assignor, by direct and mesne assignments, to Waterford Art Papers, Inc., Waterford, N. Y., a Corporation of New York. Filed July 1, 1922. Serial No. 572,118. 3 Claims. (Cl. 34—48.)

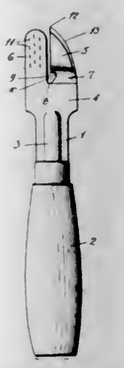


1. In a drying apparatus for drying paper web or similar material, the combination with a heat chamber and means for forcing air into said chamber, of means for feeding the web to be dried into said chamber, means located at both the upper and lower portions of said chamber for supplying heat, said chamber being substantially enclosed except for the ingress and egress openings for the web whereby a high temperature is maintained, and means for guiding the web within and through the chamber, said guiding means so constructed and arranged as to likewise agitate the air and cause circulation thereof through the pores of the web to be dried.

1,500,593. CROSSBAR LINE SWITCH. CHARLES D. RICHARD, New Brighton, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 18, 1921. Serial No. 462,257. 9 Claims. (Cl. 179—27.5.)

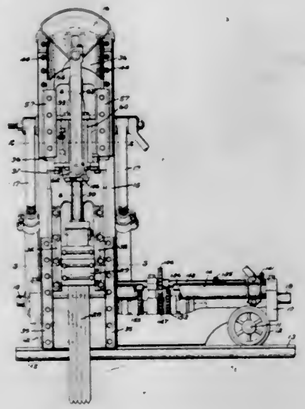
1. In a switch, the combination of contact springs, a plunger for operating said contact springs, a pivoted support in which said plunger is slidably mounted, a trunk bar adapted to engage and rotate said pivoted support to position said plunger in operable relation to said contact springs, upon longitudinal movement in one direction of said trunk bar, a line bar arranged transversely to said trunk bar and an arm mounted on said line bar adapted to operate said plunger upon operation of said line bar.

1,500,594. GASEOUS FUEL AND PROCESS OF PRODUCING SAME. JAMES R. ROSE, Edgeworth, Pa., assignor to Carbo-Oxygen Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Aug. 13, 1917. Serial No. 185,977. 5 Claims. (Cl. 48—198.)



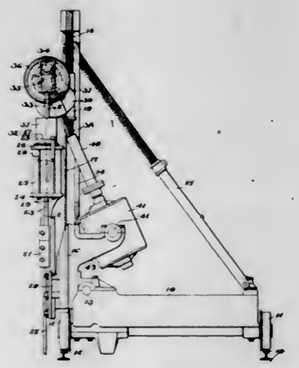
2. The process of producing gaseous fuel which comprises subjecting a mixture of hydrogen and natural gas admitted separately to a chamber containing porous refractory material heated to a temperature not materially lower than 1600° F.

1,500,595. FITTING FOR DURALUMIN CONSTRUCTIONS. ADOLF ROHRBACH, Charlottenburg, Germany. Filed Mar. 20, 1924. Serial No. 700,618. 2 Claims. (Cl. 244—31.)



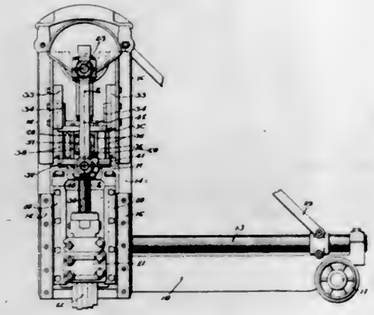
1. Fittings, or the like, attached to duralumin, to be employed in the construction of aircraft, etc., wherein the metals which are in contact with each other, are separated from each other by an intermediate layer of such metal that the generated electric current has a destructive effect upon the interposed plate.

1,500,596. CAN OPENER. THOMAS H. ROSS, Brooklyn, N. Y., assignor, by mesne assignments, to Arcas Brass and Iron Company, Inc., New York, N. Y., a Corporation of New York. Filed May 9, 1923. Serial No. 637,685. 1 Claim. (Cl. 30—3.)



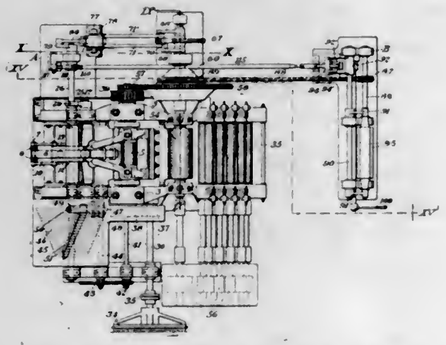
A can opener having a bifurcated end forming a straight shank portion and a blade portion offset laterally from the shank portion, said portions terminating substantially opposite each other and connected by a diagonally disposed web, said web having a fulcrum notch on its under side, the notch having two angularly disposed faces, one of which slopes upwardly from the portin of the web adjacent the shank to form a guide surface, and the other of which extends downwardly from the first face to the back of the blade to form an abrupt shoulder.

1,500,597. STONEWORKING MACHINE. ALBERT BALL, Claremont, N. H., assignor, by mesne assignments, to Sullivan Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed June 1, 1912, Serial No. 701,001. Renewed Mar. 14, 1921. Serial No. 452,226. 30 Claims. (Cl. 262—18.)



1. In a machine of the class described, the combination of a crank-shaft, a cylinder comprising two heads, a pair of connecting rods disposed on opposite sides of said cylinder, connected directly to said crank-shaft and to the further cylinder head, and a tool-actuating piston mounted to reciprocate within said cylinder.

1,500,598. STONEWORKING MACHINE. HENRY H. MERCER, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 27, 1918. Serial No. 236,894. 24 Claims. (Cl. 262—18.)

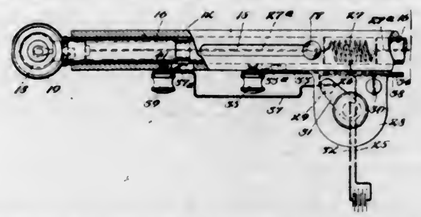


1. The combination with a power transmitting mechanism subjected to repeated shocks and including a single cylinder and a single piston therein cooperating to cushion said shocks, of means including a bypass passage adapted to interconnect the chambers at opposite sides of the piston in the cylinder for causing a unidirectional flow of air through said chambers to prevent excessive temperatures in the latter.

1,500,599. LUBRICATOR. HENRY H. MERCER, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 27, 1918. Serial No. 242,261. Renewed Dec. 22, 1923. 36 Claims. (Cl. 184—18.)

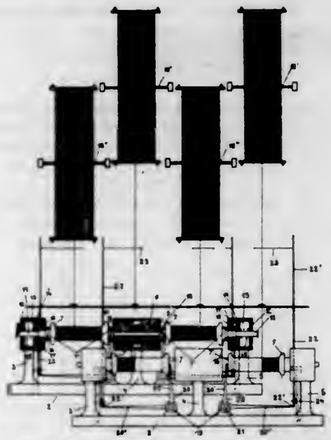
29. The combination with a cylinder having one head provided with a tubular extension, and a piston in said cylinder having an extended rod reciprocable in said tubular extension, of means for lubricating and cooling said parts comprising an opening in the end of said cylinder opposite said extension, and an opening in said tubular extension, and a check valve controlling one of said openings.

1,500,600. SHEARS. FLORENCE C. BIGGERT, Jr., Crafton, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 14, 1923. Serial No. 632,040. 27 Claims. (Cl. 164—43.)



1. In a method of shearing, the steps consisting in continuously moving the material to be sheared, moving a shearing member on each side of said material alternately in the direction of movement of said material and in the opposite direction, normally concomitantly producing relative movement of said shearing members toward and from each other transversely of the path of travel of said material, without causing said members to intersect said path, and periodically increasing the amount of said relative movement to cause said shearing members to effect shearing of said material, substantially as described.

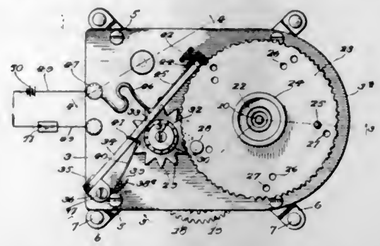
1,500,601. TRAFFIC SIGNAL FOR MOTOR VEHICLES. HARRY L. BREWSTER, Somersworth, N. H. Filed Nov. 29, 1922. Serial No. 603,968. 1 Claim. (Cl. 177—327.)



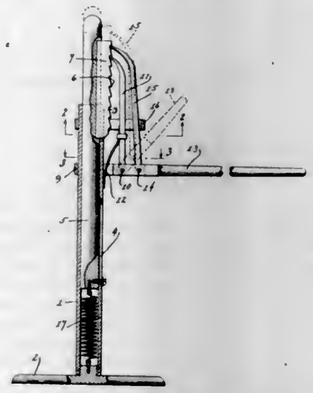
A traffic signal comprising an insulating guide, means for attaching it in a substantially horizontal position

to a motor vehicle dash, an inner terminal attached to an inner portion of the guide, an outer terminal attached to an outer portion of the guide, a conducting slide adapted to be manually projected and retracted in the guide and provided with an electric lamp at its outer end, the slide being formed to continuously contact with said inner terminal and provided with a recess which prevents its contact with the said outer terminal only when the slide is retracted, a battery, a conductor connecting the battery with the lamp, and including a portion movable with the slide and a loose portion con-

forming to movements of the slide, means including conductors, and a switch whereby either of said terminals may be selectively connected with the battery and the other terminal disconnected therefrom, the arrangement being such that when the outer terminal is connected with the battery, the lamp is lighted by the projection of the slide to serve as a direction signal, and extinguished by the retraction thereof, and when the inner terminal is connected with the battery, the lamp is lighted in all positions of the slide, so that it may serve as a parking signal when the slide is retracted, and a traffic signal when the slide is projected.



1,500,602. WINDING FRAME. XAVER BRÜGGER, Horgen, Switzerland. Filed Apr. 24, 1922. Serial No. 556,213. 3 Claims. (Cl. 242—44.)

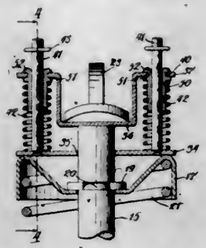


1. In a winding machine, a driven shaft having a friction cone at both ends, an alined yieldingly held friction cone opposite each end, and a bobbin having oppositely coned ends arranged to engage the cones on the driven shaft and the alined friction cones.

1,500,603. ROTARY CIRCUIT-CONTROLLING DEVICE. CLARENCE W. BURGER, Washington, D. C. Filed Feb. 20, 1922. Serial No. 537,931. 15 Claims. (Cl. 178—113.)

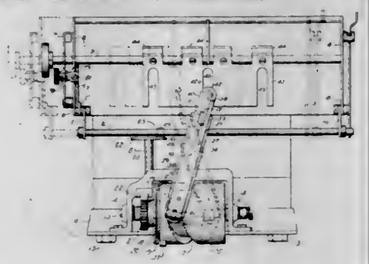
1. In a device of the class described, the combination with a spring motor comprising spaced movement plates and clockwork having shafts extending outside of said plates, of a contact drum and gear rigidly attached thereto loosely mounted on said shaft and bodily removable therefrom, without disturbing any of the other parts, said gear, when the drum is in operative position, being in mesh with one of the clockwork gears.

1,500,604. JACK. JOHN CENDER, Foosland, Ill. Filed Aug. 2, 1923. Serial No. 655,276. 2 Claims. (Cl. 254—108.)



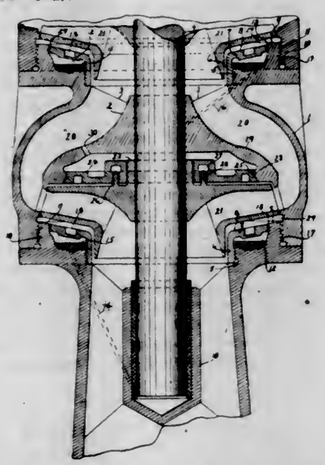
2. A jack of the class described comprising a tubular standard provided with a vertically extending slot at its upper end, and a longitudinally extending slot at its intermediate portion, a cylindrical member slidably mounted therein, a rack bar on the upper end of said cylindrical member and adapted to be in sliding engagement with the first mentioned slot, a pin associated with the lower end of said cylindrical member and extending through said longitudinal slot for preventing the rotary movement of said cylindrical member in said tubular standard, a bracket extending from said standard, a transverse pin carried by the outer end of said bracket, a pawl pivoted on said pin, and adapted to engage said rack bar, means for normally holding said pawl in engagement with said rack bar, a lever fulcrumed on said pin, and a lifting pawl pivoted on said lever and adapted to engage said rack bar above said first mentioned pawl, a guide carried by said standard for said pawl, and means associated with said tubular standard and the lower end of said cylindrical member, returning said cylindrical member to its normal position when said pawls are released from engagement with said rack bar.

1,500,605. SILENCER FOR GAS-ENGINE VALVE MECHANISM. GEORGE HENRY CHARNOCK, Buffalo, N. Y. Filed Aug. 17, 1923. Serial No. 657,971. 5 Claims. (Cl. 123—90.)



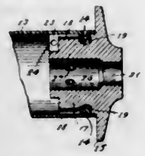
1. A silencer for a gas engine valve mechanism having a valve stem, a rocker arm for opening the valve and a spring for closing the valve, comprising two cross pieces

one of which is adapted to operate on said spring and the other adapted to operate on said arm, a guide sleeve



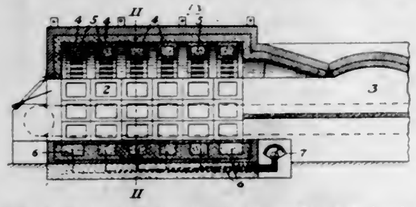
arranged on one of said cross pieces, a guide pin sliding in said sleeve and connected with the other cross piece, and a spring interposed between said cross pieces.

1,500,606. ADDING MACHINE. THOMAS E. CHERRY, Boston, Mass. Filed Aug. 24, 1921. Serial No. 494,998. 18 Claims. (Cl. 235—58.)



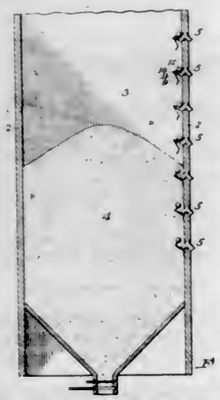
1. An adding-machine comprising, in combination, a rotary platen; a movable carriage therefor; manually operated mechanism for rotating the platen step-by-step; and carriage reciprocating mechanism including a carriage cam, a lever oscillated by said cam, a lever-engaging member on the carriage, and connections between said cam and the platen-rotating mechanism whereby the cam is rotated step-by-step to reciprocate the carriage.

1,500,607. PUMP. DAVID J. CONANT, San Jose, Calif. Filed Mar. 22, 1922. Serial No. 545,736. 5 Claims. (Cl. 103—102.)



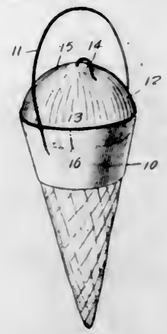
1. A pump bowl having a discharge opening, an upstanding flange arranged thereon and spaced a distance from said opening, and a neck portion removably mounted in said discharge opening and flaring outwardly to a point adjacent said flange to form a pressure chamber.

1,500,608. SHADE ROLLER. THOMAS DIGNEY, Bridgeport, Conn. Filed Mar. 28, 1922. Serial No. 547,412. 3 Claims. (Cl. 156—36.)



1. In a shade roller, the combination of a cylindrical roller member, flanged end-members inserted and secured in the ends of said roller member, the flanges abutting the end-edges thereof, one of said end-members having an axial hole extending from its inner end, and a series of radial passages having a pocket portion extending from the outer surface in spaced relation to the inner end of said end-member and a reduced portion extending into communication with said axial hole, a shaft mounted in the roller and extending at one end into said axial hole, and provided within said hole and in line with said radial passages with a notch cut therein, sliding pawls engaged in said radial passages and including a shouldered portion seating in said pocket portion and a reduced portion extending through said reduced portion of the passages and adapted to engage said notch of the shaft, and a torsional spring secured at one end to said shaft and at its other end to one of said end-members.

1,500,609. ANNEALING LEER. HENRY L. DIXON, Dormont, Pa., assignor to H. L. Dixon Company, Carnegie, Pa., a Corporation of Pennsylvania. Filed Mar. 28, 1921. Serial No. 456,218. 4 Claims. (Cl. 49—46.)



4. A glass annealing leer of the muffle type, having a resistance material in the walls of its heating chamber, said material being of different conductivity in different portions of the furnace, substantially as described.

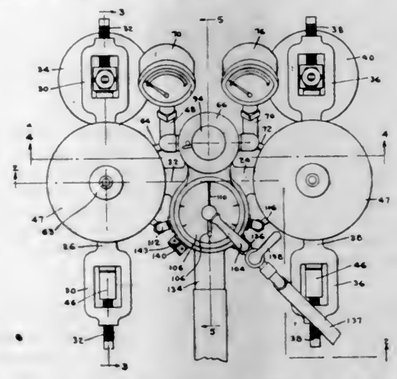
1,500,610. EXPLOSION-PREVENTING DEVICE. ROWAN T. F. DODDS, Stratford, Ontario, Canada. Filed Mar. 27, 1922. Serial No. 547,276. 3 Claims. (Cl. 98—26.)

1. In an explosion preventing apparatus, walls enclosing a working area adapted to receive material producing dust having explosive properties whereby a dust laden area is established, an angular ventilator in one of said walls, and means operated by the material being handled for automatically closing said ventilator as the material being handled reaches the level thereof, substantially as described.

1,500,611. CARRIER FOR ICE-CREAM CONES AND THE LIKE. WALTER L. EWEN, Aurora, Ill. Filed Feb. 8, 1922. Serial No. 534,987. 3 Claims. (Cl. 229—1.5.)

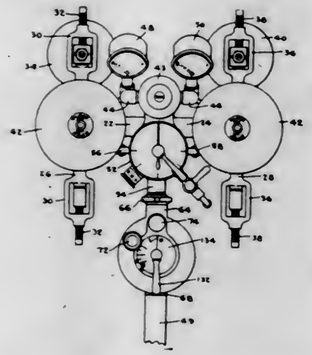
1. An article for the purpose described comprising a hollow body with a tapering interior and a cover with a circular flange at its bottom that fits the interior of such body, the cover above such flange being dome-shaped and the flange being notched or slit from its bottom edge upward.

1,500,612. LOOSE-LEAF HOLDER. WILLIAM S. GILKEY, deceased, by Virginia K. Gilkey, Cleveland Heights, Ohio, and the Guardian Savings & Trust Company, Cleveland, Ohio, a Corporation of Ohio, executors, assignors to the W. S. Gilkey Printing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 20, 1923. Serial No. 669,864. 1 Claim. (Cl. 129—5.)



A loose leaf holder comprising a platen member adapted to receive superposed sheets thereon; pins upstanding from one marginal edge portion of the platen to engage through apertures in the sheets and hold the latter in position; and a spring clip for each pin, each clip comprising an elongated resilient arm pivoted at one end to the platen at the marginal edge portion thereof and extending along said portion in proximity to the edges of the sheets fitting over the pins, each clip having on its free end a laterally offset portion arranged to overlap the superposed sheets and having an elongated slot to receive the adjacent pin therethrough, said free end and offset portion of each clip being adapted to be raised from the sheets and the clip being adapted to be swung about its pivot away from the pin to free the sheets for removal and substitution.

1,500,613. FISH-STRINGING DEVICE. RUSSELL L. HALLOWAY, Nevada, Iowa. Filed Aug. 30, 1923. Serial No. 660,200. 2 Claims. (Cl. 224—7.)



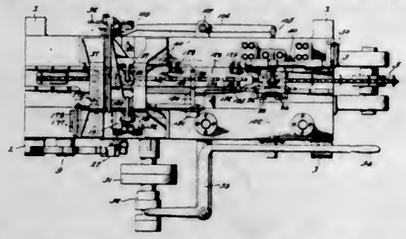
2. A fish stringing device comprising a chain, a needle having an eye which is attached to one end of the chain, a hook loosely mounted upon the eye and slidably receiving the chain, said needle serving as a handle to move the hook longitudinally of the chain, and a hook attached to the opposite end of the chain and adapted to engage within a selected link of the chain near such opposite end.

1,500,614. ANÆSTHETIZING APPARATUS. JAY A. HEIDBRINK, Minneapolis, Minn. Filed Nov. 17, 1921. Serial No. 515,782. 7 Claims. (Cl. 128—203.)

1. An anæsthetizing apparatus having a mixing chamber, means for supplying thereto from independent sources of supply a plurality of gases under pressure, an inhaler, a gas-bag adapted to communicate with and be shut off from said inhaler and said mixing chamber, and a single shiftable valve whereby the mixed gases may be delivered to said inhaler alone or to both said inhaler and said gas-bag.

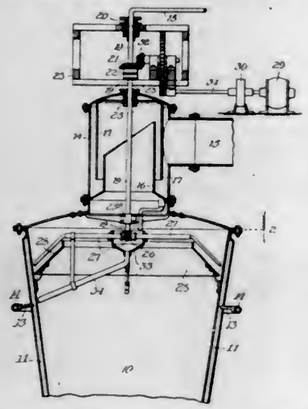
1,500,615. ANÆSTHETIZING APPARATUS. JAY A. HEIDBRINK, Minneapolis, Minn. Filed Nov. 19, 1921. Serial No. 516,333. 8 Claims. (Cl. 128—203.)

1. An anæsthetizing apparatus comprising an inhaler, a head member with which said inhaler is connected, an ether receptacle attached to said head member, means for supplying gaseous medium to said head member, a tube extending down into said receptacle and a shiftable valve in said head member having ports so arranged that the valve when in one position causes all of the gaseous medium to pass directly from said head member to said inhaler and when in another position causes a portion of the gaseous medium to pass directly from said head member to said inhaler, and the remaining portion of the gaseous medium to pass directly through the upper portion of said ether receptacle before passing to said inhaler and when in another position causes a portion of the gaseous medium to pass directly through the upper portion of said receptacle, and another portion of the gaseous medium to pass down said tube into the ether in said receptacle before passing to said inhaler.



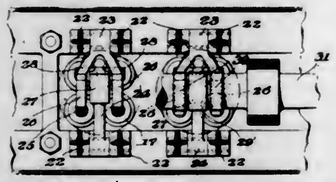
1,500,616. TENSION RING. CLARA A. HENLEY, Waterloo, Iowa. Filed Mar. 16, 1923. Serial No. 625,623. 2 Claims. (Cl. 66—17.)

1. In a device of the character described, a ring, said ring being provided with a raised portion on one side having grooves of various sizes formed therein, a spring band secured to said ring and having a longitudinal recess therein for receiving said enlarged portion of the ring, and means for tensioning a thread between said ring and said band and in said grooves as and for the purpose indicated.



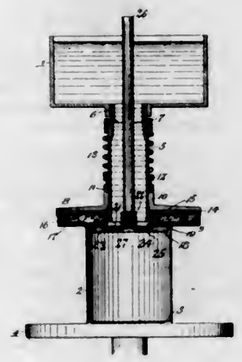
1,500,617. BOX-HINGING MACHINE. HENRY HERMANI, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Sept. 16, 1921. Serial No. 501,174. 25 Claims. (Cl. 29—11.)

25. A box assembling and hinging machine comprising means for producing successive box assemblies, each consisting of a body provided with a hinge pintle and a top provided with a hook loosely engaged with the pintle and moving the assemblies successively to a clenching station, and means at that station for locating a box body for clenching, a hinge hook clenching jaw, a plunger for operating the jaw, means for moving the plunger, a closing lever located at a station subsequent to the clenching station, a curved arm carried by the lever, a box



engaging member carried by the arm, and means interconnected with the operating mechanism of the clencher plunger for operating the lever.

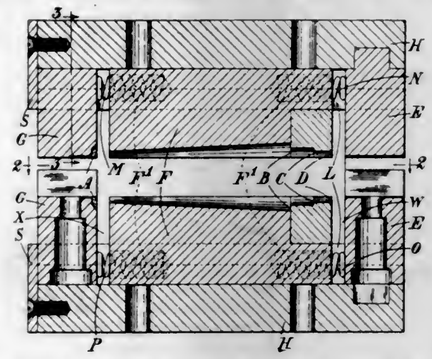
1,500,618. ART OF DEALCOHOLIZING LIQUIDS. HERMAN HEUSER, Evanston, Ill. Filed June 1, 1920. Serial No. 385,701. 3 Claims. (Cl. 195—1.)



1. In evaporating apparatus, a vertical pan of circular section, a rotatable liquid supply pipe depending centrally thereinto and terminating near its top, radial distributing arms secured to the admission pipe near its end and communicating therewith, said pipes terminating adjacent the wall of the pan and discharging upon its inner surface, means for rotating the admission pipe with the attached distributing pipes to distribute liquid uniformly in a continuous flowing film over the wall of the pan, and shielding means disposed below the ends of the distributing pipes and spaced from the wall of the pan to permit passage of the film of liquid thereon.

1,500,619. HYDROCARBON MOTOR. LEWIS C. HILL, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 22, 1920. Serial No. 353,198. 6 Claims. (Cl. 123—90.)

1. In combination in a hydrocarbon motor, two sets of valves, a Y-shaped rocker arm adapted to operate one of the sets of valves, a T-shaped rocker arm adapted to operate the other set of valves, and a cam shaft adapted to operate both said arms, the stem of the T-shaped arm fitting between the branches of the Y-shaped arm.



1,500,620. RECEPTACLE-FILLING MACHINE. CLARENCE A. HOY, Buffalo, N. Y., assignor to Peerless Husker Company, a Copartnership, Buffalo, N. Y. Filed May 29, 1918. Serial No. 237,308. 6 Claims. (Cl. 226—124.)

5. A filling machine comprising a main reservoir, and a discharge device for controlling the flow from said main reservoir, said discharge device comprising a combination valve, displacement and spreader member, comprising a substantially flat disc, having an annular seating surface on its upper face, a vent tube leading from said combination member for the escape of the air displaced from the can by the flowing in of the liquid, a passage for the liquid from said main reservoir to the upper face of said combination member, and a sealing member having a flat, annular lower sealing surface of considerable extent, said sealing member being vertically reciprocable, and said sealing surface having a portion for engaging the seating surface on the upper face of said combination member, and having a flat, annular seating surface of considerable extent extending beyond said combination member, whereby said discharge member may be used with various sizes of cans without accurately centering said cans with respect to said discharge controlling means, and means for bringing the edge of the can into sealing engagement with said extended annular sealing surface, to lift said sealing member, to permit the flow of liquid from said main reservoir, over said spreader member, between said seating surface and said sealing surface, said combination member being readily detachable and replaceable, whereby displacement discs of various sizes may be used to vary the displacement.

1,500,621. MEANS AND METHOD FOR PREPARING RUBBER GOODS FOR VULCANIZATION. JOHN HUBBARD, Seven Kings, England, assignor of one-half to Arthur Philip Crouch, London, England. Filed Sept. 12, 1922. Serial No. 587,719. 5 Claims. (Cl. 18—55.)

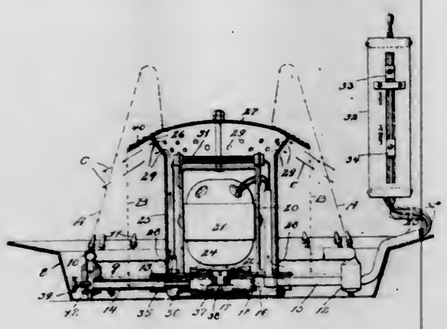
4. A method of moulding a plastic mass into a body whereof the shape changes abruptly at places, and simultaneously covering it with a layer of foil, comprising the steps of inserting the mass between two layers of foil, partially shaping the mass under an initial pressure in one direction in such a manner as to cause an excess of the mass and foil to collect at the places of abrupt change of shape, applying full shaping pressure on the said excess of the mass and foil in a direction transverse to the first direction whilst maintaining the said initial

pressure, and then increasing the initial pressure to its full amount in the first direction for shaping the mass and foil in the required final form.

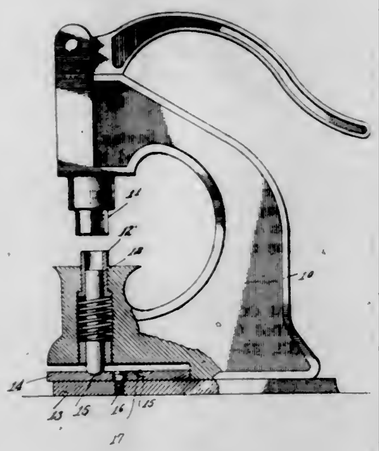
1,500,622. RADIATOR CAP FOR MOTOR VEHICLES. ORMOND E. HUNT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 18, 1919. Serial No. 291,051. 3 Claims. (Cl. 220—32.)

1. A motor vehicle radiator having a filler mouth, a cap therefor, an arm rigidly secured to the cap and extending into the mouth, a pivotal connection between the free end of the arm and the inner part of the mouth, said arm being shaped to permit the cap to open on said pivotal connection away from the mouth, and yielding means for pressing the cap against the end of the mouth.

1,500,623. BEAM COMPASS. HOBERT J. HURD, Plainfield, N. J. Filed Oct. 25, 1920. Serial No. 419,226. 4 Claims. (Cl. 33—158.)



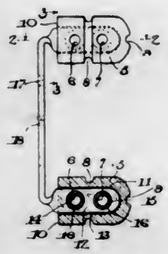
1. A beam compass comprising a beam, a marker mounted thereon, a yoke straddling said beam and having slots near its ends, a pivot pin mounted in said slots, and a spring bearing plate interposed between said beam and said pivot pin and having tongues slidable in said slots.



1,500,624. APPARATUS FOR CONDITIONING AIR. CLARENCE B. INGERSOLL, Chicago, Ill. Filed July 17, 1922. Serial No. 575,716. 2 Claims. (Cl. 261—115.)

1. In an apparatus of the class described, an open topped container for a body of liquid, a heater for the liquid held in said container, a plurality of nozzles, a

pump for forcing the heated liquid through said nozzles to rise in jets above said body, a canopy for receiving said jets, means associated with the canopy for returning said jets to said body in the form of a film-like cataract, means for inducing a current of air to traverse said cataract and jets and means for heating said air and liquid.

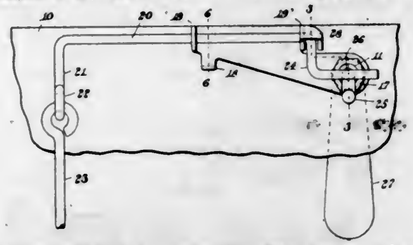


1,500,625. RIVETING MACHINE. CHRISTIAN J. JOHNSON, Colfax, Wis. Filed Apr. 3, 1923. Serial No. 629,640. 4 Claims. (Cl. 218—1.)

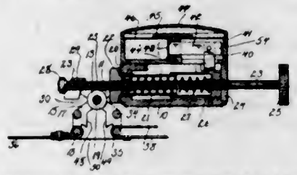
1. A riveting machine including an anvil supporting frame, the anvil projecting below the lower side of the frame, and a rotatable disk mounted beneath the lower end of the anvil and having a circular series of depressions of different depths for successively receiving the lower end of the anvil to raise and lower the anvil.

1,500,626. SUPPORTING INSULATOR. WILLIAM D. KYLE, Milwaukee, Wis. Filed July 22, 1922. Serial No. 576,758. 3 Claims. (Cl. 173—28.)

3. In a line conductor support, the combinatalon of a block of insulating material provided with spaced transverse wire-receiving openings, an annular wire-receiving groove lying in a plane between said openings, a wire receiving groove at the head end of said block, and a centrally disposed longitudinally extending slot, an attaching member having a part mounted in said slot with openings registering with said transverse openings and of greater diameter than said openings, and insulating material surrounding the edges of the openings in said member.



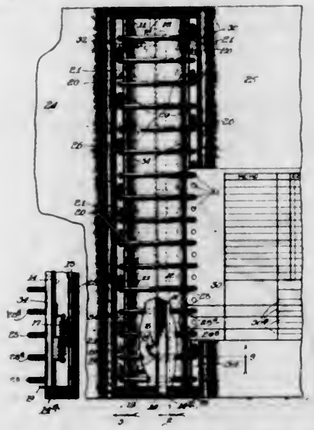
1,500,627. METHOD OF AND MEANS FOR MAKING SPRING-BEARD KNITTING NEEDLES. JOHN LAWSON, Pawtucket, R. I., and EVERETT A. QUINT, New Brunswick, N. J., assignors to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed July 24, 1923. Serial No. 653,457. 5 Claims. (Cl. 163—2.)



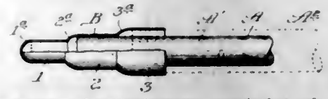
1. That process of making a spring beard needle comprising reducing a wire to a plurality of diameters, including a maximum diameter at the lower end and a minimum diameter at the upper end, forming the beard at the smaller end, bending the larger end at substantially right angles to provide material for an enlarged butt, pressing the needle blank so as to flatten the stem and the butt, and thereafter accurately removing the surplus metal from the butt, thereby providing a butt adapted to fit the cam groove with a close running fit.

1,500,628. VALVE-OPERATING DEVICE. FREELAND D. LESLIE, Milton, Mass. Filed Dec. 21, 1920. Serial No. 432,352. 4 Claims. (Cl. 4—67.)

1. In a device of the class described, a plate having lateral ears and an opening at one side of said ears; a rod mounted to oscillate in said ears and having at one end a valve operating arm and at the opposite end, adjacent one of said ears, an L-shaped arm the outer end portion of which is straight and parallel with said rod; a tubular member mounted in said opening and adapted to extend through the wall of a tank, said member having an outer head integral therewith; a spindle mounted in said tubular member having formed integral therewith an offset straight inner end normally below the axis of said spindle and midway of the straight portion of said L-shaped arm; and means for oscillating said spindle in either direction to cause the offset portion of said spindle to engage the straight portion of said L-shaped arm and move said rod about the axis.

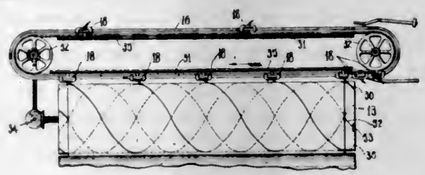


1,500,629. SPHYGMOMANOMETER. LOUIS H. LEVY, New Haven, Conn. Filed Nov. 14, 1923. Serial No. 674,683. 6 Claims. (Cl. 73—44.)



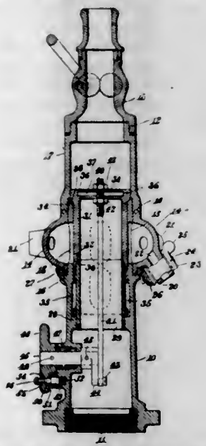
1. A sphygmomanometer, comprising an arm-band, two arms connected respectively to the ends of said band, means pivotally mounting said arms, a casing with which one arm is rigidly secured, a screw-stem slidably mounted in said casing, means operatively connecting said stem with the other arm, a slide in said casing, means operatively connecting said stem with the other arm, a slide in said casing and adapted to be actuated by movement of said stem, and indicating means associated with said slide whereby tension applied to said band will be indicated by said indicating means.

1,500,630. LOOSE-LEAF BINDER. ARTHUR J. LLOYD and GEORGE A. OLSEN, Chicago, Ill., assignors to Accounting Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 19, 1923. Serial No. 681,570. 3 Claims. (Cl. 129—17.)



1. A loose-leaf binder comprising in combination, a pair of channel shaped members having their flanges projecting rearwardly and with two of the flanges placed in contact with their free edges hingedly connected, a bar slidably mounted upon each of the free flanges, prongs carried by each bar projecting through slots in the web of the channel, said prongs curved concentrically to the axis of said hinge, said bars adapted to slide with movement of its carried prongs in said slots.

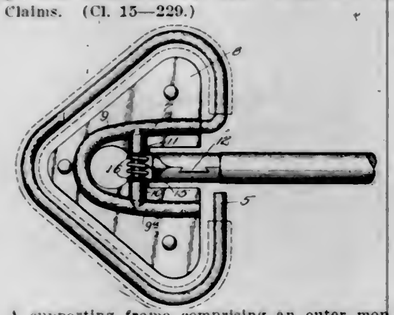
1,500,631. CURTAIN-ROD LEADER. NELLIE FORSMAN MANSURE, Chicago, Ill. Filed Sept. 7, 1920. Serial No. 408,486. 2 Claims. (Cl. 223—38.)



1. An article of manufacture, consisting of a thimble comprising a plurality of cylindrical socket sections of successively reduced size, each cylindrical section having substantially parallel walls and being joined to the adjacent section by tapering walls, the small end section having a closed tip.

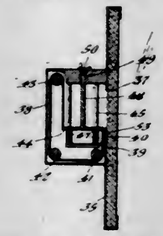
1,500,632. METHOD AND APPARATUS FOR CUTTING BIAS STRIPS. MELVON A. MARQUETTE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 4, 1920. Serial No. 401,277. 9 Claims. (Cl. 164—17.)

1. The method of cutting bias strips from a relatively long sheet of fabric, consisting in supporting the fabric on a moving surface, making repeated bias cuts from edge to edge of the fabric by passing a cutting member across the moving surface at right angles to its direction of movement, and removing from the surface the bias strips thus cut.



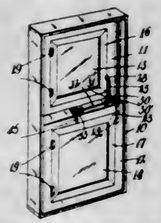
1,500,633. FIRE-HOSE NOZZLE. WILLIAM J. MARSHALL, East Boston, Mass. Filed Aug. 14, 1923. Serial No. 657,340. 12 Claims. (Cl. 299—148.)

1. In a device of the class described, the combination of a casing having lateral ports; a valved nozzle on one end of said casing; a hollow member surrounding said casing opposite said ports and provided with a plurality of discharge openings; a tubular member fitting the inner



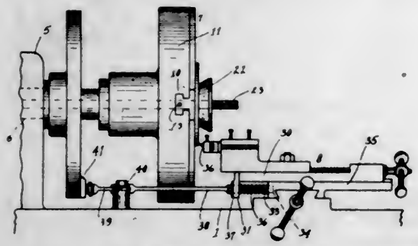
wall of said casing and provided with ports adapted to register with the casing ports; and a crank within said casing for moving said tubular member endwise.

1,500,634. MOP FRAME. JACOB A. MEINHARDT, Chicago, Ill. Filed Jan. 24, 1923. Serial No. 614,594. 4 Claims. (Cl. 15—229.)



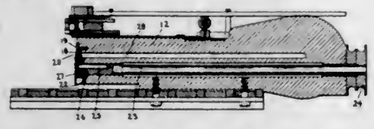
1. A supporting frame comprising an outer mop supporting loop, a second loop formed integrally therewith and located entirely within the mop supporting loop, a bearing plate secured to the internal loop of the frame and having its periphery terminating adjacent said outer loop and spaced therefrom to permit free movement of the mop on said outer loop, the inner and outer loops and the bearing plate being in substantially the same plane, and a handle support secured to said bearing plate.

1,500,635. THEFT DETECTOR FOR AUTOMOBILES. JOSEPH J. MICHALSKI, Buffalo, N. Y. Filed June 29, 1923. Serial No. 648,481. 10 Claims. (Cl. 40—22.)



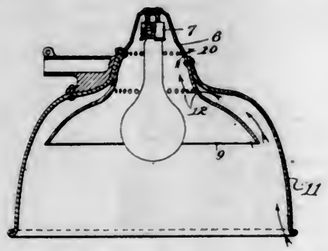
10. A theft detector for a vehicle windshield or the like, comprising a pair of contrasting complementary detecting members applied to the windshield and visible through the same, one of said members being detachably mounted on the latter and arranged to render the other detecting member inoperative when the former is in its operative position.

1,500,636. WINDOW-LOCKING ARRANGEMENT. JOSEPH PERZESZTY, New York, N. Y. Filed May 8, 1922. Serial No. 559,136. 4 Claims. (Cl. 20—48.)



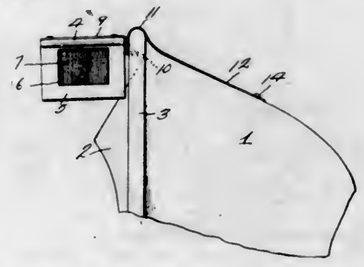
1. A window comprising upper and lower sliding sashes, and supplementary pane carrying sashes each movably mounted in said sliding sashes and enclosed on all sides by the latter, and a unitary means for locking all of said sashes.

1,500,637. GROOVE-CUTTING MACHINE. OSCAR PILLAR, Oakland, Calif., assignor to Vacuum Groove Piston Ring Corporation, Oakland, Calif., a Corporation of California. Filed Apr. 5, 1922. Serial No. 549,951. 1 Claim. (Cl. 82—19.)



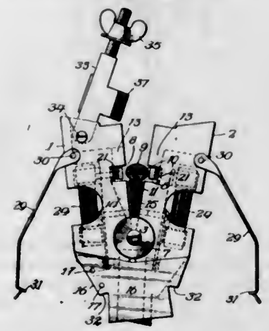
In a machine as disclosed, a chuck shaft, a chuck on said shaft for holding the piston ring, a lathe tool holder, a plate secured to the end of the longitudinal slide of said tool holder, a spring engaging said tool holder and said plate for holding said slide in position with the tool in said holder in engagement with the side of the ring, a pitman connected at one end to said plate, and a cam lever connected to the other end of said pitman, and a cam on said chuck shaft for engaging said cam arm to move said slide to withdraw said tool for a short interval from the ring to form a short break in the continuity of the groove cut in the ring by said tool.

1,500,638. CUTTING MECHANISM. ALBERT F. PRESTON, deceased, late of Boston, Mass., by John Abbott, Winchester, and Alfred Benson White, Brookline, Mass., administrators. Original application filed May 18, 1916, Serial No. 98,342. Patent No. 1,383,023, dated June 28, 1921. Divided and this application filed Apr. 21, 1921. Serial No. 463,292. 5 Claims. (Cl. 164—47.)



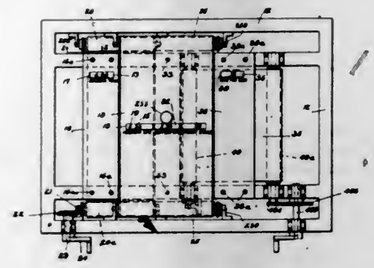
1. A cutting apparatus comprising a movable cutter or blade having a curved cutting edge, the projection of which on the cutting plane is curved and a complemental cutter for holding the stock against the thrust of said cutting edge and at one side of the path thereof.

1,500,639. ELECTRIC LAMP. JOHN J. REKAR, Los Angeles, Calif. Filed Feb. 12, 1923. Serial No. 618,500. 3 Claims. (Cl. 240—1.)



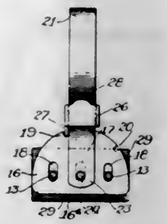
1. In an electric lamp the combination of a parabolic reflector having ports in the upper part thereof; a bell-shaped dome secured to the top of said reflector having ports therein; a bulb socket mounted in said dome; and a canopy secured to the bottom of said dome, said canopy surrounding said reflector and being spaced from the bottom of the reflector and projecting below the same, said canopy having the inner surface of the walls thereof which project below the reflector adapted to reflect rays from a bulb in the socket, whereby currents of heated air pass out of the dome and prevent cold air from striking the light bulb.

1,500,640. AUTOMOBILE HEADLIGHT ATTACHMENT. DAVID A. RITCHIE, Centralia, Ill. Filed May 24, 1923. Serial No. 641,145. 1 Claim. (Cl. 240—46.)



The combination with an automobile headlight comprising a casing, a lens carried by said casing, a rim carried by said casing, of an inverted horizontally and longitudinally disposed U-shaped member forwardly of the lens and having its sides diverging downwardly and provided with openings, differently colored transparent members in said openings, a supporting bracket for the U-shaped member, said supporting bracket comprising an arm detachably connected to the upper side of the casing rearwardly of the rim, the forward end of said arm being bent upon itself to form a downwardly and rearwardly extending clamping arm for clamping over the rim, said rim clamping arm terminating in an upwardly and forwardly extending arm, said upwardly and forwardly extending arm being attached to the U-shaped member, said supporting bracket being formed from a single piece of material.

1,500,641. ELECTRICAL CONNECTER. GUY O. SABOURIN, West Brighton, N. Y., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 1, 1920. Serial No. 413,992. 8 Claims. (Cl. 173—340.)

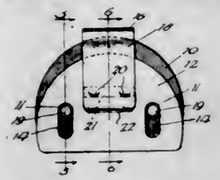


1. An electrical connecter comprising two blocks which are pivoted upon each other and which when open present an opening to receive and align a cable comprising two conductors, and two opposed knife contacts arranged in the blocks in position to cut into the cable and connect with the conductors thereof respectively when such blocks are brought together.

1,500,642. TIME AND COST CALCULATOR. HARRY SALDINGER, Chelsea, Mass. Continuation of application Serial No. 405,149, filed Aug. 21, 1920. This application filed Aug. 9, 1922. Serial No. 580,644. 2 Claims. (Cl. 235—86.)

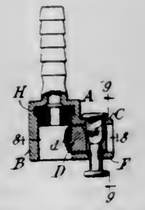
2. A calculating machine comprising a frame, a plurality of pairs of spools journaled in bearings on the frame, a plurality of ribbons engaged with said spools, there being one ribbon for each pair of spools, means for manually moving a spool of each pair to wind up an end portion and unwind the opposite end portion of either ribbon, one of said ribbons constituting a screen ribbon having a sight-opening, another constituting a price ribbon which is movable in a path at right angles with the path of the screen ribbon, and another constituting a time ribbon which is movable in a path parallel with the path of the screen ribbon, and compensating mechanisms associated with the spools, and organized to compensate for the diametrical variations caused by the winding and unwinding of the ribbons, and to automatically take up the ribbons, each of said compensating mechanisms including a smaller gear attached to a spool shaft, a larger gear meshing with the smaller gear, a fixed stud supporting the larger gear, and a spring connecting the stud with the larger gear.

1,500,643. CUTTER HOLDER. OSCAR L. SCALBOM, Glenview, Ill. Filed Nov. 24, 1922. Serial No. 603,085. 22 Claims. (Cl. 30—25.)



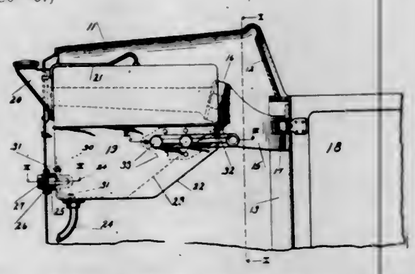
1. A cutter blade holder embodying cooperating members between which the blade is held, a handle detached from the members, means of co-operating with the handle for causing the said members to clamp the blade, the cutting edge of said blade projecting beyond the members, and means adapting one of the members to be projected beyond the cutting edge of the blade.

1,500,644. CUTTER HOLDER. OSCAR L. SCALBOM, Glenview, Ill. Filed Aug. 3, 1923. Serial No. 655,411. 15 Claims. (Cl. 30—25.)



1. A cutter blade holder embodying two co-operating blade clamping members, means for maintaining the members in operative relation, means for causing the

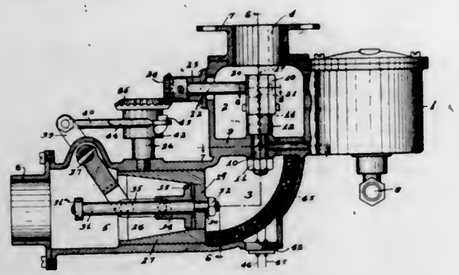
members to exert a clamping action upon the blade, the first recited means embodying provisions adapting one of



said members to be projected beyond the cutting edge of the blade, and means for locking the said member in its said projected position.

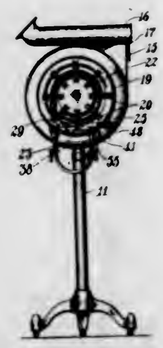
1,500,645. QUICK-ACTING PUMP COUPLING. MAXIMILIAN CHARLES SCHWEINERT, New York, N. Y., and HENRY PHILLIP KRAFT, Ridgewood, N. J. Filed May 20, 1921. Serial No. 471,242. 6 Claims. (Cl. 285—150.)

6. A pump coupling or the like, having an enlarged body portion formed with a recessed lateral extension or offset, a movable dog in said recess adapted to engage a threaded member to hold the coupling thereon, and a spring-pressed plunger acting to normally hold the dog in engaging position, the spring being arranged between one end of the plunger and the exterior of the extension.



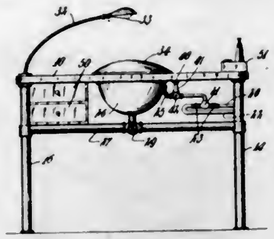
1,500,646. MOTOR VEHICLE. FABIO SERGARDI, East Orange, N. J., assignor to Willys Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 18, 1920. Serial No. 431,758. 18 Claims. (Cl. 280—5.)

1. In a motor vehicle, the combination of a body including a cowl and a dash, a fuel tank within the cowl, a removable pin carried by the dash and adapted to support the front of the tank, arms extending from the rear of the tank, pins projecting through said arms, and means adapted to support said pins.



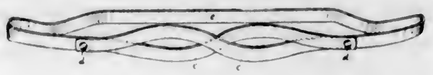
1,500,647. CARBURETOR. ALFRED SHACKLETON and NILS RYERSEN, Chicago, Ill. Filed Sept. 27, 1920. Serial No. 413,024. 4 Claims. (Cl. 261—50.)

1. In a carburetor, a mixing chamber, means for admitting air thereto, an upright standard in said chamber having a cavity therein, a fuel supply conduit leading to said standard, a fuel duct leading through said standard from said conduit to said cavity, a round plug occupying said cavity, said plug having a groove therearound in position to register with said duct, the bottom of said groove forming a spiral concentric with said plug, a lug in said groove between the shallowest and deepest parts thereof contacting with the wall of said cavity, and a fuel outlet leading from said cavity to the top of said upright, whereby rotating the plug through nearly a complete revolution will change the delivery capacity of the standard from one extreme to the other.



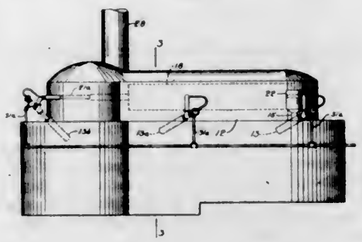
4. In a carburetor, a vertical mixing chamber, a horizontal air inlet, an air chamber connecting said air inlet and mixing chamber, a slidable air controlling valve between said air inlet and said air chamber, a rotatable fuel controlling valve in said mixing chamber, and mechanism connecting said valves for simultaneous operation, said mechanism including a vertical stub shaft rotatably mounted on the air inlet wall, and a horizontal shaft journalled in the wall of the mixing chamber.

1,500,648. HAIR-DRIER-HEATER IGNITION DEVICE. LEO B. SIMONSON, New York, N. Y. Filed July 13, 1923. Serial No. 651,282. 2 Claims. (Cl. 67—201.)



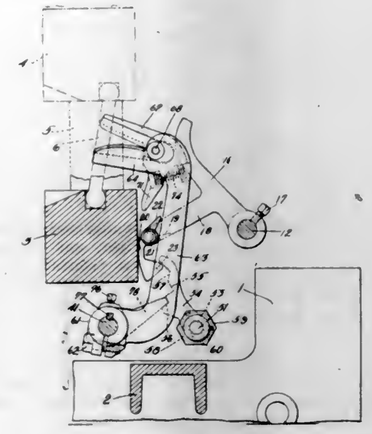
1. In a device of the class described, a burner, a bar hinged at one end adjacent said burner to swing vertically toward and away from said burner, a stud on which said bar is hinged, said stud having a socket formed therein, a pyritic ignition device carried by the other end of said bar, a trigger element on said bar a short distance from the hinged end thereof for operating said ignition device, and an arm element fulcrumed on the said bar adjacent the hinged end thereof and having on one end a tooth adapted to releasably engage in said socket to hold the bar in position with the free end thereof adjacent the said burner while the said trigger element is being worked.

1,500,649. MANICURING TABLE. LEO B. SIMONSON, New York, N. Y. Filed July 13, 1923. Serial No. 651,283. 2 Claims. (Cl. 45—31.)



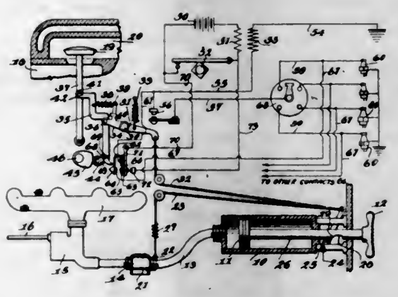
1. In a manicuring table, a basin set therein, a removable cushioned cover for said basin, a water supply pipe leading to said basin, a valve on said pipe, and means for automatically opening and closing said valve upon insertion or removal of said cover, said means including a bar slidable in the table and having a cam end projecting into the basin, said cam being in the path of movement of said cover as the latter is placed on the table in position covering said basin and being adapted to be engaged by the said cover to move the said bar, and operative connections between the bar and valve.

1,500,650. VEHICLE BUMPER. HENRY LUND SMITH, Paterson, N. J. Filed Oct. 2, 1920. Serial No. 414,284. 6 Claims. (Cl. 293—55.)



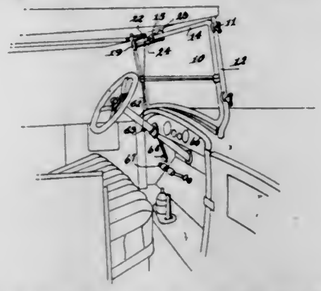
1. A vehicle bumper including a pair of coacting elongated impact members projecting in opposite directions and each having reverse bends formed up and down and each member intersecting the other between two adjoining bends thereof.

1,500,651. GLASS-MAKING APPARATUS. WILLIAM R. SMITH, Buffalo, N. Y. Filed Jan. 28, 1920. Serial No. 354,619. 6 Claims. (Cl. 49—54.)



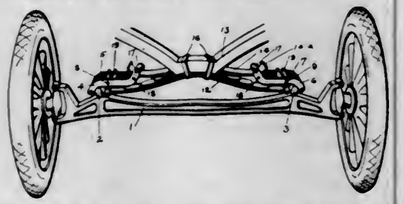
1. A glass-making apparatus comprising a closed tank formed to confine a body of molten glass, an elongated tubular melting twyer extending through the wall of the tank, the inner end of the twyer constituting a burner located within the tank above the bottom thereof, means for admitting gas and air under pressure to the outer end portion of the twyer, and means for delivering glass materials to the flame resulting from combustion at said burner, so that said materials may be projected into the tank, melted by the burner flame and accumulated in a molten condition in the tank below said burner.

1,500,652. WIRE-FILLING CUTTER FOR WIRE-FABRIC LOOMS. WILLIAM S. SOUTHWICK, Clinton, Mass., assignor to Wickwire Spencer Steel Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1921. Serial No. 449,836. 10 Claims. (Cl. 139—264.)



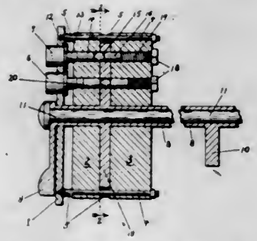
4. In a loom organized for weaving wire fabric and provided with an automatic filling replenishing mechanism, including automatic tension means for positively and successively positioning the uncut ends of the wire filling, a wire filling cutter mechanism comprising a feeler-timed oscillating shaft, a bunter mounted thereon, a second oscillating shaft, connections between said two shafts for operating the second shaft in one direction, yielding means for operating the second shaft in the opposite direction, an arm carried by the second shaft and provided with a wire filling cutter, means for holding the second shaft in position due to the operation of the first shaft and said yielding means, and means for operating said bunter to unlock the said mentioned holding means.

1,500,653. ENGINE STARTER. WALTER J. SPIRO, White Plains, N. Y. Filed Jan. 2, 1923. Serial No. 610,217. 15 Claims. (Cl. 123—180.)



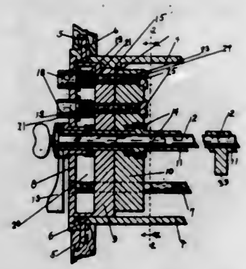
1. In an engine starter, means for charging an ignition chamber with a gaseous fluid under pressure, intake and exhaust valves for said chamber, ignition means therefor, controlling cams of said valves, and a lifter member controlled by one of said cams and the charging means for successively engaging a portion of one of said valves, lifting the same, releasing the valve, and controlling the ignition means.

1,500,654. WINDSHIELD CLEANER. WALTER J. SPIRO, White Plains, N. Y. Filed Jan. 2, 1923. Serial No. 610,218. 13 Claims. (Cl. 15—255.)



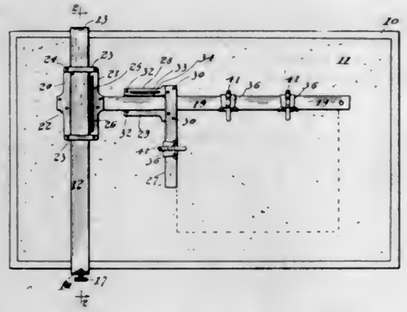
1. In a windshield cleaner, a manually operable member, a movable arm carrying a wiper, and actuating means between said member and arm shiftable at its actuating connection with the arm to reverse the direction of drive thereof by successive operations of said member in one direction.

1,500,655. SHOCK ABSORBER. FRANKLIN S. SPRINGSTEAD, Rochester, N. Y. Filed Jan. 18, 1923. Serial No. 613,512. 2 Claims. (Cl. 269—19.)



1. A shock absorber associated with an axle and chassis, a supporting spring for said chassis, a lever pivoted on a support formed on the axle at the outer end ereeof, a short spring interposed between the chassis and the long chassis supporting spring, said lever being pivoted to the short spring at the inner end of the lever and to the long supporting spring at an intermediate point of the lever, said springs being attached to said chassis, said short spring having an upturned end, a roller carried on the lever under which said spring engages, said upturned end engaging with said roller on the rebound of the car and limiting the upward movement thereof.

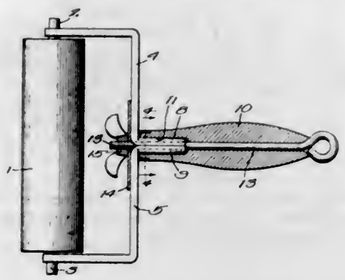
1,500,656. PERMUTATION LOCK. OTTO H. STOLBERG, San Francisco, Calif. Filed Nov. 29, 1920. Serial No. 426,939. 10 Claims. (Cl. 70—54.)



1. A permutation lock provided with a rotating shaft and a plurality of plates having registering perforations, one of said plates secured to said shaft and rotatable therewith, sectional stems in said perforations, push buttons having stub stems projecting into said perforations and adapted to push those stems into position with their sectional divisions in and out of register with the dividing planes of said plates, thereby controlling the rotation of said rotatable plate.

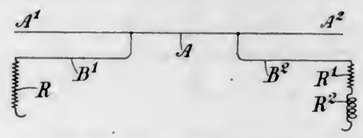
1,500,657. PERMUTATION LOCK. OTTO H. STOLBERG, San Francisco, Calif. Filed Mar. 27, 1922. Serial No. 546,967. 6 Claims. (Cl. 70—54.)

1. A permutation lock, comprising a casing, two plates, being a front plate and a middle plate spaced apart and fixed in said casing against oscillation, an oscillable shaft in said casing, a back plate fixed to said shaft and oscillable therewith, co-acting means in said middle and back plates adapted to lock said back plate in an inoperative position and means to release said locking means.



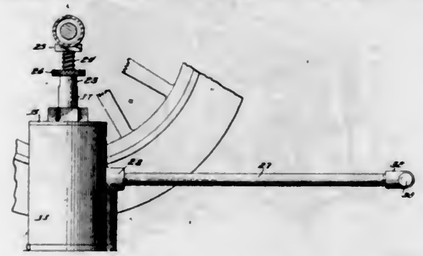
1,500,658. FEED GAUGE FOR PRINTING PRESSES. JOHN M. STEMIC, Chicago, Ill. Filed Sept. 5, 1918. Serial No. 252,745. Renewed Dec. 10, 1923. 9 Claims. (Cl. 101—413.)

1. A device for the purpose described comprising in combination a gauge bar, the ends of which are of a thickness spacing the intermediate portion of the gauge bar from the platen and project at an angle adapting said ends to embrace the edges of the platen of a printing press, and a screw for tightly clamping the gauge bar in its operative position to the platen.



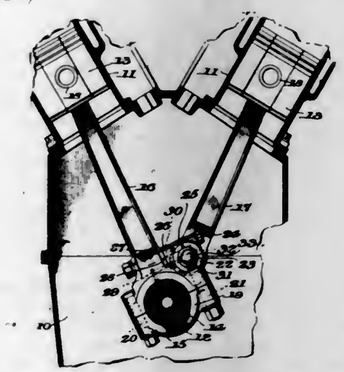
1,500,659. ROLLER. THOMAS W. SUDDARD, Two Rivers, Wis., assignor to The Hamilton Manufacturing Company, Two Rivers, Wis., a Corporation of Wisconsin. Filed Aug. 23, 1922. Serial No. 583,712. 6 Claims. (Cl. 91—62.5.)

1. A roller including a revoluble member carrying shaft portions upon opposite sides thereof; a ball between the sides of which said revoluble member is disposed and having openings in its ends in which said shaft portions are mounted to turn, said ball having a stem split lengthwise into sections and formed with a bore extending longitudinally thereof; a handle formed with a socket receiving said stem; a bolt passing lengthwise through the handle and through the bore of the stem; a washer having the mid portion of the ball interposed between it and the inner end of the handle and through which said bolt



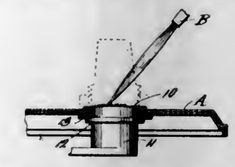
is passed; and a clamping nut upon the inner end of the bolt, the outer end of the bolt projecting through the outer end of the handle and there enlarged into a support engaging portion that also serves to limit the extent to which the nut may draw the bolt toward the revoluble member.

1,500,660. TELEGRAPH CABLE. HERBERT WATSON SULLIVAN, London, England. Filed Mar. 31, 1921. Serial No. 457,469. 4 Claims. (Cl. 178—63.)



1. In a telegraph system, the combination of a signal transmitting conductor, earthing apparatus located at an "above-water-station" and at least one other conductor extending lengthwise along and side by side with the said signal transmitting conductor, and electrically connected at one end to said apparatus and at the other end to the said signal transmitting conductor at a point between and remote from the ends thereof, said conductors being enclosed within a protective covering, substantially as set forth.

1,500,661. PNEUMATIC LIFTING JACK. OSCAR J. SUNDSTRAND, Rockford, Ill., assignor of one-half to Henry Lee Smith, Chicago, Ill., and one-half to Edward G. Peterson, Rockford, Ill. Filed Dec. 24, 1921. Serial No. 524,803. 3 Claims. (Cl. 138—9.)

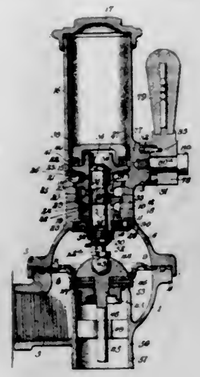


1. A portable jack of the character described, comprising a cylindrical body one end of which forms a base on which the body rests in the operative position, a piston in the cylinder having a jack extending from the opposite end thereof, the piston being adapted to be raised by fluid pressure in the cylinder and lowered by exhaust of said pressure, a fluid-pressure supply pipe connected to the body and disposed in a plane at substantially right angles to the longitudinal axis of said body, a handle on the outer end of said supply pipe, and means on the body for holding it from rolling when positioned on one side with its handle upright.

1,500,662. HYDROCARBON MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 4, 1920. Serial No. 408,235. 13 Claims. (Cl. 74—17.)

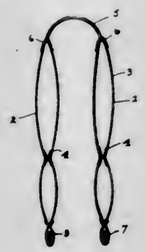
11. In a hydrocarbon motor, the combination with a crank shaft, of a connecting rod mounted thereon, a trunnion block bolted to said connecting rod, and a second connecting rod hinged on said trunnion block, said first connecting rod and said block having communicating oil passages to carry oil to the second connecting rod.

1,500,663. METHOD AND MEANS FOR REPLACING BATTERY POSTS AND THREADS. JOSEPH CLOPTON BALL, Kinsale, Va. Filed Jan. 6, 1923. Serial No. 611,191. 8 Claims. (Cl. 204—29.)



1. The method of replacing mutilated storage battery posts consisting of sawing off the worn battery post close to the battery jar cover, placing a mold around the remaining portion of the post, placing molten metal in the mold, and removing the mold after the metal has become solidified.

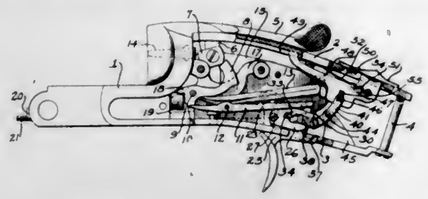
1,500,664. FLUSHING DEVICE. THOMAS ROBERT BEGGS, New York, N. Y., assignor to The Beggs Engineering Company, Incorporated, Hartford, Conn. Filed June 30, 1920. Serial No. 393,092. 29 Claims. (Cl. 137—93.)



27. A flushing valve comprising a hollow body member, a yieldable member dividing the body member into superposed chambers, one of which has a flushing outlet, means for connection with the service pipe, a valve for the outlet carried by the yieldable member, a third chamber arranged vertically and carried by the body member, a passage between the third chamber and the higher one of the first two chambers, a vertically movable valve in the passage, a valve structure carried by the yieldable member and movable in the third chamber,

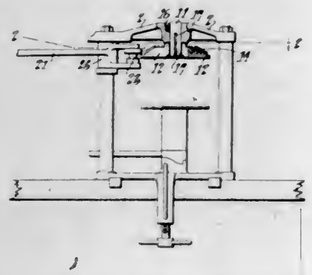
a plunger also movable in the third chamber above the valve structure, an outlet chamber having a duct leading to the third chamber, another duct leading from the outlet chamber to the flush bowl, a manually operable plunger adapted when actuated to move the vertically

movable valve in the passage, a duct leading from the third chamber to the lower one of the superposed chambers, said outlet chamber being controlled by the manually operable plunger to place the upper one of the superposed chambers into communication with the outlet chamber.



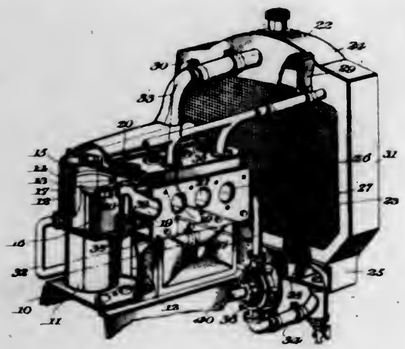
1,500,665. LIFE PRESERVER. ALBERT BLANKENHAGEN, Akron, Ohio, assignor to A. E. Bauman, Akron, Ohio. Filed May 27, 1922. Serial No. 564,011. 4 Claims. (Cl. 9—17.)

1. A life preserver comprising in combination a plurality of independently inflatable fluid containers each formed of a single sheet of flexible material connected together along its edges and at intermediate points, a plurality of elastic straps connecting the containers in spaced relation, a plurality of looped elastic straps secured to the free ends of the containers, and a belt fitting into the looped straps for attaching the containers to the body of the wearer.



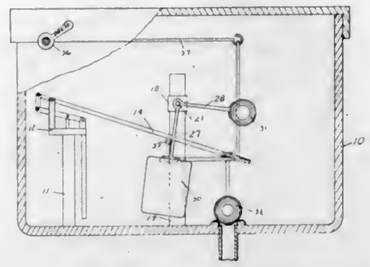
1,500,666. TRIGGER MECHANISM FOR GUNS. FRANK BOSTLEY, South Williamsport, Pa. Filed June 8, 1923. Serial No. 644,126. 6 Claims. (Cl. 42—42.)

4. In a trigger mechanism for double-barreled guns, a pair of sears, one for each barrel, said sears having inwardly projecting lugs, a pivotally mounted trigger having a block for engaging said lugs successively upon a continuous pull of the trigger to operate the respective sears, a pivotally mounted lever connected by a link to said block, said lever being adjustable to one extreme position to adjust the block so that the left hand sear will be operated first and adjustable to the other extreme position to adjust said block so that the right



hand sear will be actuated first, and means on said lever operating as a safety lock when the lever is adjusted to intermediate position.

1,500,667. SPRING PIN. FRANK W. BURPEE, Chicago, Ill. Filed Nov. 20, 1922. Serial No. 602,242. 2 Claims. (Cl. 64—66.)

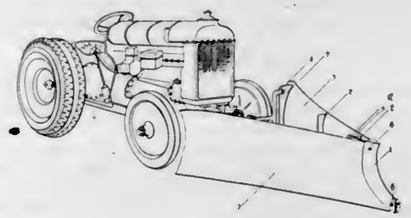


1. A pin, one end of which is secured in a support to project the other end therefrom, the outwardly projecting end of the pin being lengthwise split with the plane of the split normal to the direction of the applied strain.

1,500,668. HYDROCARBON MOTOR. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 29, 1918. Serial No. 231,503. 30 Claims. (Cl. 123—170.)

1. The combination with a hydrocarbon motor having separated water jackets, of two separate radiator parts, and connections defining separate paths of circulation through each jacket and one of the radiator parts.

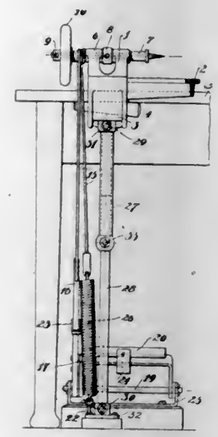
1,500,669. VALVE-CONTROL MECHANISM FOR CONTAINERS. HERMAN R. CUNNINGHAM, Glendale, Calif. Filed Dec. 21, 1922. Ser. No. 608,206. 9 Claims. (Cl. 137—104.)



7. In a flush tank, a container, a water inlet, an outlet, an overflow pipe, a valve for controlling said water inlet, a lever for operating said valve, a float in said container mounted on the overflow pipe, a second float mounted in said container above the first float, means movable by the first mentioned float for engaging the lever to hold the valve closed when the floats are in one position, the weight of said lever acting to hold the valve open when the floats are in another position, said means having a sliding engagement with the lever while the floats are passing from one position to another.

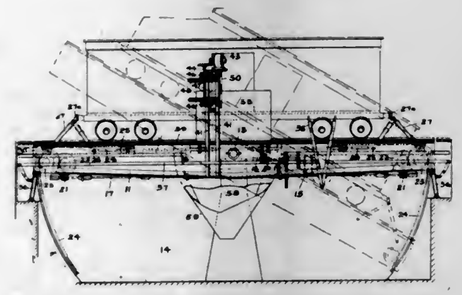
1,500,670. MAKING DILUTE PERMANENT TURBID EMULSIONS. MELVIN DE GROOTE, Pittsburgh, Pa. Filed Mar. 17, 1923. Serial No. 625,899. 15 Claims. (Cl. 99—11.)

9. In a new article of manufacture, a substantially clear syrup for making turbid acidulated sweetened beverages, containing sugar syrup, an acid and a water insoluble liquid having an index of refraction approximating that of the syrup, said liquid being in sufficiently fine dispersion to remain in permanent suspension, substantially as described.



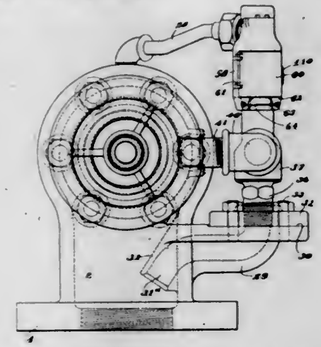
15. That step in the process of making a syrup to be used in the manufacture of turbid acidulated sweetened beverages, which consists in dispensing in a sugar syrup a water insoluble liquid to a sufficiently fine dispersion to remain in permanent dispersion therein and to produce a turbid appearance upon dilution to the final beverage, substantially as described.

1,500,671. SNOWPLOW. KENNETH W. CONOVER, Belmar, N. J., assignor to Edward H. Thomson, Bradley Beach, N. J. Filed Jan. 10, 1923. Serial No. 611,906. 5 Claims. (Cl. 37—44.)



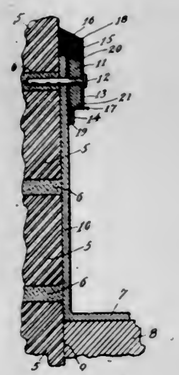
1. A snow plow including a frame, a point rigidly mounted thereon and having diverging side members, bracing means extending transversely between the side members, side wings extending at their forward ends between said side members and pivoted directly to said bracing means to be swingingly connected with the point thereby, and means coacting between the side wings and the frame for adjustably spreading said wings.

1,500,672. PORTABLE TREADLE LATHE. HENRI COULLERY, La Chaux-de-Fonds, Switzerland. Filed Mar. 22, 1922. Serial No. 545,873. 2 Claims. (Cl. 74—14.)



1. In a portable treadle lathe, a head stock, a floor-engaging base, a rotary spindle carried by the head stock, driving means for said spindle partially supported upon the base and extending to the spindle, means for clamping the head stock to a support, and adjustable means connecting the head stock with the base constituting spacing means permitting the attachment of the clamping means for the head stock to supports of varying elevations, the base remaining in engagement with a floor.

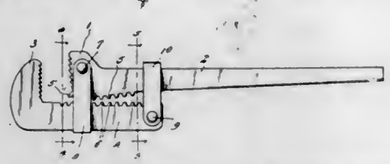
1,500,673. CAR-UNLOADING DEVICE. FREDERICK W. COWIE, Montreal, Quebec, Canada. Filed Dec. 13, 1920. Serial No. 430,296. 40 Claims. (Cl. 214—47.)



1. In a car unloading device, a rockable platform supported above a pit of a size to receive the ends of the platform during rocking movement thereof, vertically disposed racks positioned in the pit at opposite ends of the platform, pinions carried by the platform meshing with said racks, and driving means for the pinions.

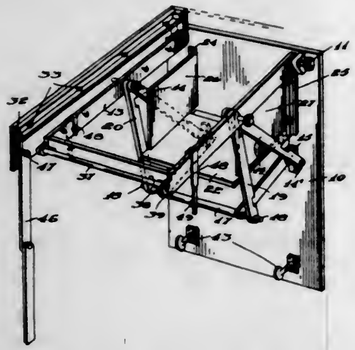
1,500,674. SAFETY VALVE. PHILIP G. DARLING, Bridgeport, Conn., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed July 2, 1921. Serial No. 482,047. 23 Claims. (Cl. 137—53.)

1. A safety valve device comprising a casing, a valve seat therein, a main valve cooperable with said seat and normally held to the seat by fluid pressure, a fluid motor independent of said casing, and means actuated by the fluid motor after a predetermined interval of operation thereof for relieving the seating pressure on the main valve.



1,500,675. ROOF FLASHING. SHERWOOD BADGER FAISON, Cincinnati, Ohio. Filed Apr. 6, 1923. Serial No. 630,332. 4 Claims. (Cl. 108—26.)

1. As an article of manufacture, a roof-flashing fastening and re-inforcing strip comprising a filler or core of wood or the like and a metal sheathing or covering encompassing the said filler or core.

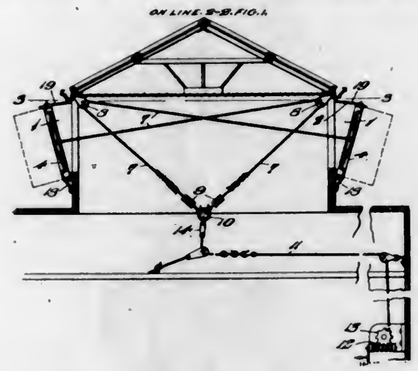


1,500,676. PIPE WRENCH. EMIL R. FRANK, Sioux City, Iowa. Filed Jan. 6, 1923. Serial No. 611,000. 3 Claims. (Cl. 81—134.)

1. In a wrench of the class described including an inner and an outer jaw member, each having a longitudinally extending shank formed thereon, a strap connection between the inner jaw and the shank of the outer jaw, said strap being pivotally secured to the inner jaw, and loosely engaging over the shank of the outer jaw for permitting of a relative sliding movement between the jaws, and also permitting of a swinging movement of the inner jaw with respect to the outer jaw, teeth formed upon the adjacent surfaces of the shanks of the jaws adapted for inter-meshing when the inner jaw is swung upon its pivot, and means for limiting the swinging movement of the inner jaw with respect to

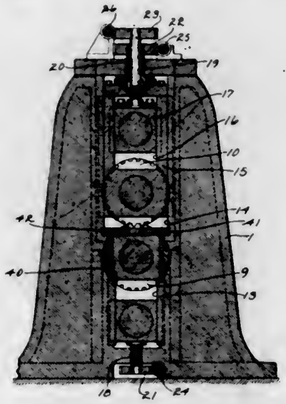
the outer jaw whereby the relative swinging movement between the jaw members provides for increased gripping action of the jaws on the work in use.

1,500,677. COLLAPSIBLE CLOTHES CABINET. JOHN HENRY HYAMS, Chicago, Ill. Filed June 19, 1922. Serial No. 569,284. 1 Claim. (Cl. 45—118.)



A collapsible clothes cabinet comprising a back board, a casing pivotally secured to the back board, a suitable frame within the casing, supporting links pivotally secured intermediate of the casing and similarly secured at their other ends to anchoring posts on the back board, supporting links pivotally secured with the first links on the casing, and adapted to support a clothes rod, cross supporting links pivotally engaging the clothes rod and the anchoring post, a shoulder intermediate of the back board, a shelf hingedly mounted on said shoulder, a pair of vertical members mounted on the back board above and coinciding with the ends of said shoulder, side walls hingedly attached to the vertical members designed to form a hat receptacle, foldable auxiliary supporting legs pivotally mounted on the casing, means for holding said legs in collapsed position, a U-shaped auxiliary suspending member for the casing, a plurality of hook members around the top of the casing, a curtain for said device, a plurality of orifices in the curtain designed to engage with said hooks, and means to hold the device from a wall or the like.

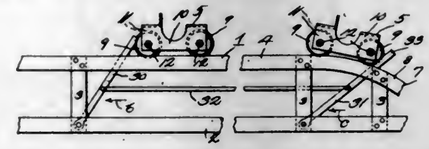
1,500,678. SKYLIGHT. ARTHUR R. KONSALIK, Philadelphia, Pa. Filed Dec. 31, 1923. Serial No. 683,540. 4 Claims. (Cl. 108—16.)



1. A skylight construction of the character stated, comprising a supporting structure having a vertically disposed wall, a frame projected therefrom including a downwardly sloping top and vertical sides, the outer edges of which sides incline from the juncture of the frame with said wall upwardly and outwardly, pintles inclined upwardly and outwardly and arranged at the frame outer corners in parallelism with the said inclined edges, an outwardly opening laterally movable cover section carried by each pintle each cover section having an inner

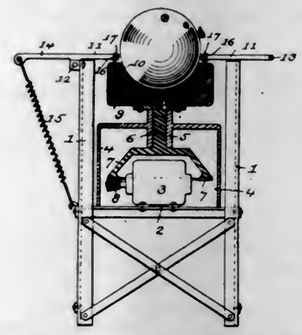
inwardly deflected flange, a central, substantially T-shaped outwardly inclined member for said frame, positioned centrally of said inclined pintles, against which

central member, the inner flanged terminals of each cover section abut in closed position and means common to each cover section for maintaining the latter in closed position.



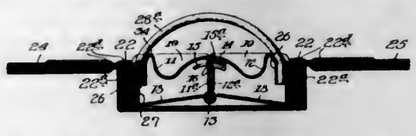
1,500,679. CALENDER. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed July 29, 1921. Serial No. 488,263. 15 Claims. (Cl. 18—2.)

8. In a calender construction the combination of four calender rolls arranged one over the other, a frame, a movable support in the frame to hold the two upper rolls, a support within and movable alone as well as with the movement of the first support, a movable support for the lowest roll and a fixed support for the other roll, means to rotate said rolls, and mechanism acting through said supports to move the two upper rolls together, the upper roll alone, or the lower roll alone, while the rolls are rotating.



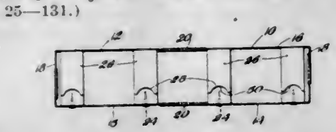
1,500,680. AUTOMOBILE STAND. JOSEPH MILLER, Fostoria, Ohio. Filed May 10, 1922. Serial No. 559,815. 1 Claim. (Cl. 254—88.)

An automobile stand comprising a frame, spaced rails carried by said frame in a horizontal position and in parallel relation, said rails adjacent one end of the frame inclining downwardly and outwardly, wheel supported axle engaging carriages mounted on the rails and adapted to engage the axles of an automobile, a lever pivoted adjacent the inclined ends of the rails and adapted to cooperate with the carringe for engaging the rear axle and moving said carriage longitudinally on the rails, upwardly extending curved members carried by the lower ends of the inclined ends of the rails and adapted to engage the carriages and limit their movement in one di-



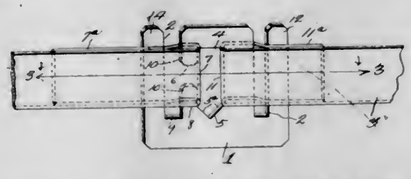
rection, and lever means operable from the other end of the frame and cooperating with the first named lever and forming means whereby said first named lever may be moved, said lever means being foldable to a position below the rails and extensible to a position above the rails.

1,500,681. MACHINE FOR CLEANING BALLS. BOHUMIL R. MUDRA, Chicago, Ill. Filed Jan. 14, 1922. Serial No. 529,351. 8 Claims. (Cl. 15—21.)



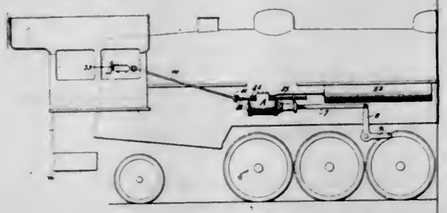
3. In a ball cleaning machine of the type described, the combination of a main frame, a vertical shaft journalled in said frame, means for imparting rotation to said shaft, a cleaning head mounted on the upper end of said shaft and provided with a concave cleaning recess in its upper surface, a holding frame pivoted at one side of the main frame and having a central ring adapted for supporting engagement with a ball to be cleaned or polished, and a balancing means for said holding frame.

1,500,682. LOOSE-LEAF BINDER. GEORGE A. OLSEN, Chicago, Ill., assignor to Accounting Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 19, 1923. Serial No. 681,571. 5 Claims. (Cl. 129—17.)



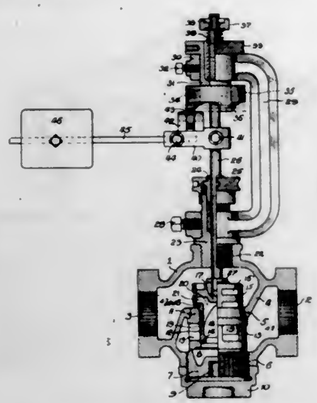
1. A loose-leaf binder comprising in combination, co-acting channel and L-shaped members, each channel-shaped member hinged to a like member and each L-shaped member enclosing the open back and ends of its co-acting channel-shaped member, one of each of said co-acting members having openings, the other thereof having tongues inserted in said openings and bent to retain the co-acting members together, and front and back covers hingedly connected to said L-shaped members.

1,500,683. APPARATUS FOR FORMING HOLLOW CONCRETE WALLS. WILLIAM A. OTTERSON, Boston, Mass. Filed Sept. 8, 1922. Serial No. 586,982. 2 Claims. (Cl. 25—131.)



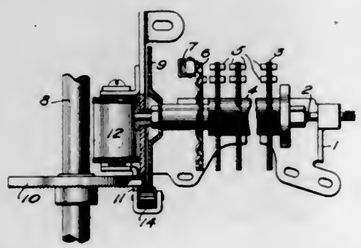
1. An apparatus for forming hollow concrete walls comprising sheet metal members, each having a side portion and an end portion, each of the members having inturned flanges adapted to embrace a portion of a cooperating member and causing the two members to telescope on one another, to permit the assembled form to be expanded or contracted both laterally and longitudinally, a series of wedges secured to the side portions of certain of the members, and cooperating wedges loosely inserted in the forms and interposed between the first mentioned wedge members and the opposite side of the form, the withdrawal of the sliding wedge members permitting the collapse of the form laterally.

1,500,684. BUCKLE FOR COTTON BALES. HENRY NATHANIEL PATRICK, Mineola, Tex. Filed Aug. 21, 1923. Serial No. 658,558. 1 Claim. (Cl. 24—23.)



A bundle tie formed from a single piece of metal substantially rectangular shaped, recesses extending inwardly adjacent the ends of the plate so as to form arms in parallel relation to each other at the ends of the plate, a centrally disposed aperture in the plate and in parallel relation to recesses adjacent the ends of the plate and having a passage of communication with one of said recesses thereby forming a bight engaging arm and bight engaging lugs spaced from each other and in parallel relation to the arms at the ends of the plate, one end of said centrally disposed aperture being V-shaped, thereby forming means for guiding the bights into alinement and maintaining said bights in alignment.

1,500,685. POWER REVERSE GEAR. MONTAGUE H. ROBERTS, Englewood, N. J., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed February 26, 1921. Serial No. 448,044. 5 Claims. (Cl. 121—41.)

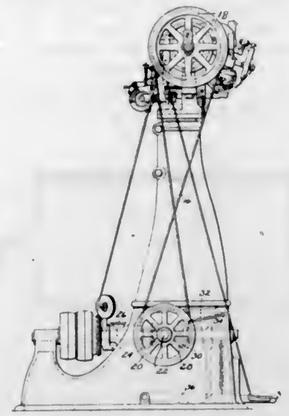


1. In a power reverse gear, the combination of a cylinder, a piston, a controlling valve, a shaft operatively associated with the valve, a nut movable with the piston, said shaft having threaded engagement with the nut, and stop means on the shaft for limiting the movement of the shaft and through it the movement of the piston.

1,500,686. VALVE. JOSEPH M. SULLIVAN, Detroit, Mich. Filed Feb. 21, 1921. Serial No. 446,832. 10 Claims. (Cl. 37—161.)

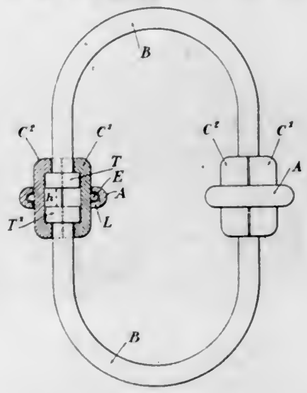
9. A feed water valve for boilers adapted to be operated by a thermostat and comprising a normally seated valve, a valve rod, a spring for unseating said valve, a cam member, and a weighted arm attached to said rod, and cooperating with said cam member in maintaining said valve closed and adapted to be moved by the thermostat to permit said spring to unseat said valve, said arm when moved imparting rotary movement to the rod and valve.

1,500,687. POWER-TRANSMITTING MECHANISM. HERBERT B. TAYLOR, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1921. Serial No. 525,588. 3 Claims. (Cl. 74—7.)



1. In combination, a pair of rotatable shafts having their axes angularly disposed, a crown gear carried by one of said shafts and rotatable therewith, a spur gear carried by the other of said shafts and rotatable therewith, a pinion jointly engageable with said crown gear and said spur gear, said pinion being normally engaged with but one of said gear members, and an electromagnet for moving said pinion into engagement with the other of said gear members.

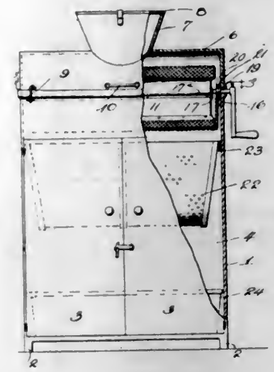
1,500,688. INSEAM SEWING MACHINE. LAURENCE E. TOPHAM, Swampscott, Mass., assignor by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 27, 1916. Serial No. 133,614. 10 Claims. (Cl. 112—35.)



1. A sewing machine having, in combination, a hook needle, a looper for laying a loop of thread on the needle,

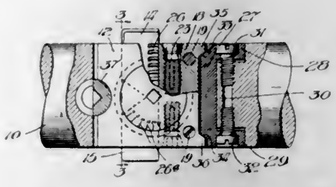
actuating mechanism for the needle, and mechanism actuated from the needle actuating mechanism for modi-

fying the motion transmitted to the needle by its actuating mechanism during the last stitch cycle to cause the needle to miss the loop.



1,500,689. FASTENING FOR ELECTRIC INSULATOR. MAURICE TRÈVE, Paris, France. Filed Apr. 18, 1922. Serial No. 554,432. 1 Claim. (Cl. 287—113.)

A detachable fastening device for suspensions of electric insulators comprising two coaxial hanging members provided with a head at their corresponding ends, two semicylindrical half-shells forming together a recess in which the heads of the supporting members are retained, the heads being able to slide axially in said recess, a stud on the outer surface of each half-shell and a ring adapted to surround the two half-shells and having along its whole inner periphery an annular groove of constant cross section for receiving said stud, the ring having in one of its inner edges only one notch through which each of the said studs is adapted to pass successively when mounting the fastening device.

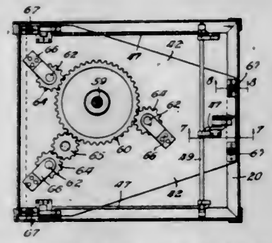


1,500,690. CATCHUP-MAKING MACHINE. MARK A. VILLIAMO, New Castle, Pa. Filed Nov. 15, 1923. Serial No. 674,867. 2 Claims. (Cl. 146—174.)

2. A catchup making machine comprising a casing, a hinged cover carried by the upper end of said casing, a hopper carried by said cover, a cover for said hopper, a screen detachably supported within the casing, a crushing member rotatably mounted between the screen and cover, a sieve disposed below the screen, a handle

member carried by the rotatable crushing member, a receptacle disposed within the casing below the sieve, said sieve and receptacle being removable from the casing through the side thereof.

1,500,691. BORING BAR AND THE LIKE. ALAN E. VOSBURG and ROBERT B. WHITNEY, Detroit, Mich., assignors to Arthur V. Hannifin, Chicago, Ill. Filed Feb. 6, 1922. Serial No. 534,622. 7 Claims. (Cl. 77—56.)

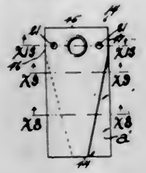


1. In a boring bar the combination of a bar having a transverse slot, an abutment block seated in one end of said slot and provided with two points of abutment separated from each other transversely of the bar, means for adjusting and securing the abutment block transveresely of the bar, a tool block seated within the transverse slot aforesaid and having two supporting points adapted to engage the supporting points of the abutment block, a pair of cutting tools within the tool block and projecting therefrom, means for adjusting the amount of projection of said tools with respect to the tool block, means for securing the tools within the tool block, there being a perforation extending transversely of the bar at right angles to the slot aforesaid, a wedge pin extending through said perforation and having a wedging shoulder adapted to engage the front end of the tool block, means for compelling said shoulder to wedge against the tool block to thereby establish a third point of support for the tool block, and there being a mutilation notch in the pin for the purpose specified, substantially as described.

1,500,692. SCRUBBING MACHINE. GEORGE H. WAGONER, Chicago, Ill., assignor of one-half to Mortimer H. Swafford, Chicago, Ill. Filed May 11, 1921. Serial No. 468,629. 13 Claims. (Cl. 15—8.)

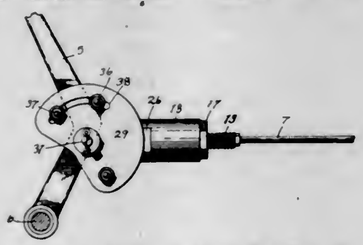
7. A scrubbing machine comprising a frame, a group of rotary brushes mounted in the lower portion of said

frame, squeegees disposed on opposite sides of said group, an elongated suction nozzle connecting the rear ends of



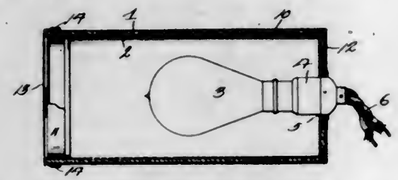
said squeegees in rear of said brushes, and means for producing a suction in said nozzle.

1,500,693. PISTON-RING JOINT. ROBERT BINGHAM WASSON, Cranford, N. J. Filed May 23, 1923. Serial No. 640,887. 4 Claims. (Cl. 74—109.)



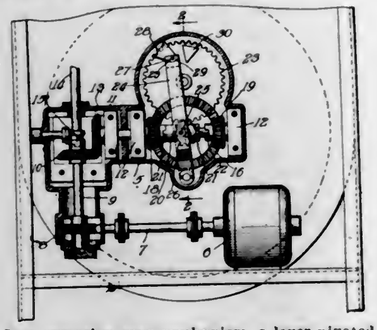
1. A split piston ring constructed to exert radial outward pressure, the ends of the ring provided with recesses, in combination with an expandible stopper, having portions within said recesses, the expansion of the stopper sealing the gap of the ring.

1,500,694. VARIABLE-FLUID-SUPPLYING DEVICE. AUSTIN C. WHIDDEN, Los Angeles, Calif. Filed Sept. 24, 1923. Serial No. 664,485. 13 Claims. (Cl. 277—18.)



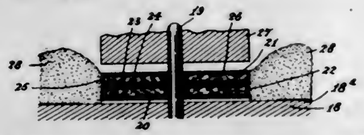
1. The fluid controlling appliance set forth comprising valves adapted to discharge through a single outlet; a reversely thickened wedging block having an intermediate thin portion interposed between and connected to operate said valves; and a lever for actuating said block to open and close said valves.

1,500,695. AUTOMATIC BRAKE-ROD TAKE-UP. RAYMOND T. WHIPPLE, San Francisco, Calif. Filed Dec. 4, 1922. Serial No. 604,884. 3 Claims. (Cl. 188—196.)



3. In a device of the character described, the combination of a pedal adapted to be oscillated, a brake rod extending in a substantially horizontal plane from said pedal, a take up sleeve threadedly engaged on said brake rod, a gear loosely mounted on said take up sleeve, a spring clutch on said sleeve and having a bent end engaging said gear, a plate pivotally mounted on said brake pedal at a point remote from the pivotal point of said brake pedal, teeth formed on the face of said plate and adapted to engage said gear, movable stops secured to said plates for the purpose of limiting the amount of movement of said plates with respect to said pedal, substantially as and for the purpose specified.

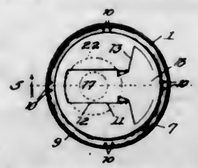
1,500,696. FOOT WARMER. HARRY F. WHITE, Denver, Colo. Filed Nov. 9, 1922. Serial No. 599,853. 1 Claim. (Cl. 219—45.)



A foot-warmer, said warmer comprising a cylindrical metallic casing, a heating element disposed in said metallic casing, an asbestos heat insulating covering surrounding the metallic casing and of greater length than the metallic casing, a removable cover carried by one end of the metallic casing, a handle member carried by the removable cover, a fabric casing covering the heat insulating material, and a removable fabric cover carried by one end of the fabric casing and registering with the first mentioned removable cover and housing the handle member.

1,500,697. REVERSING GEARING. FRANK V. WIDGER, Chicago, Ill. Filed Jan. 30, 1922, Serial No. 532,558. Renewed Dec. 10, 1923. 4 Claims. (Cl. 74—50.)

1. In a reversing gear mechanism, a lever pivoted at its lower end and disposed uprightly, a double throw clutch operated by the lever limiting the movement thereof in both directions from its vertical position, a weight pivoted at the upper end of the lever, and rotatable means for directly engaging and throwing the weight at one side of the lever or the other to cause its clutch reversing movement.

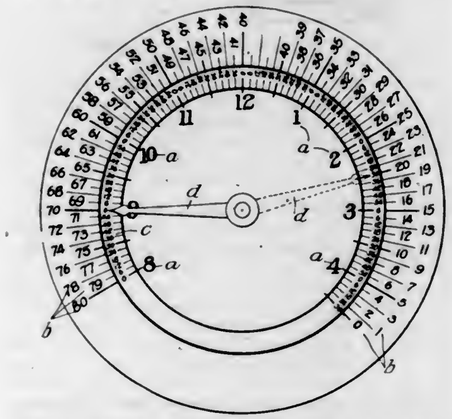


1,500,698. PHONOGRAPH RECORD AND PROCESS OF MAKING THE SAME. ALFRED WIEHL, Brooklyn, N. Y. Filed Apr. 10, 1920. Serial No. 372,770. 10 Claims. (Cl. 18—48.4.)

1. A phonograph record comprising the usual disc adapted to accommodate on both of the opposite parallel sides reproduction convolutions extending from the outer portion to a point approaching the centre, a central section

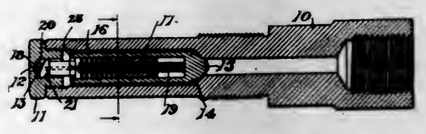
consisting of a plurality of layers of different materials so as to make said central section specifically lighter than said outer portion, the parts of said central section being integrally consolidated with said outer portion.

1,500,699. SEPARABLE FASTENER. ANDREW S. WITWER, Joliet, Ill. Filed Jan. 19, 1924. Serial No. 687,206. 4 Claims. (Cl. 24—224.)



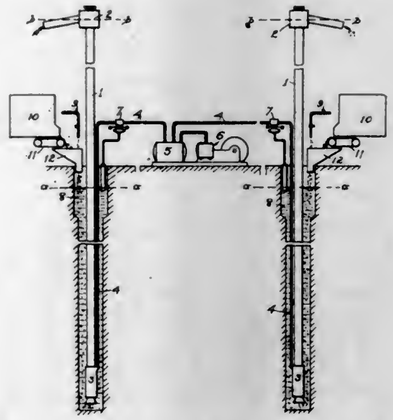
2. A device of the character set forth, comprising a single plate containing a stud-receiving opening therethrough enlarged at one end with stop-forming portions at said opening provided with camming surfaces in the rear of the stop-forming surfaces of said portions, and a spring tongue located adjacent said opening and extending throughout its length substantially within the plane of said plate, said tongue throughout its length being substantially straight, whereby the free end of the spring is required to be moved in a direction away from said stop-forming portions in the movement of the stud against said camming surfaces to interlocked position relative to the plate, and a substantially thin construction of device may be provided.

1,500,700. METHOD OF VULCANIZING. ERNEST BLAKER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 6, 1922. Serial No. 573,237. 9 Claims. (Cl. 18—53.)



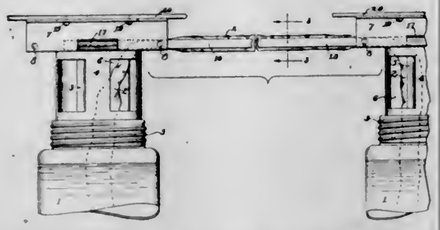
1. The method of vulcanizing a hollow article which comprises enclosing the article in a mold, mixing with the air in said article an innocuous fluid under pressure while preventing escape of said air and said fluid, such escape being prevented for such time as to produce a substantially complete diffusion of said air and fluid, then permitting a part of the mixture to escape to dispose of a part of said air, shutting off said escape, and vulcanizing said article while it is thus rid of air.

1,500,701. TIME-CLOCK DIAL. HERMAN B. BLANKÉ, Chicago, Ill. Filed May 23, 1923. Serial No. 640,816. 3 Claims. (Cl. 58—127.)



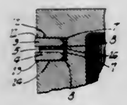
1. A non-rotating clock dial for use of timekeepers where a working day is less than twelve hours, said dial having an hour scale representing the usual hourly divisions and having a second scale consisting of decimal divisions of an hour and numerals equal to the total of such divisions in a normal working day located opposite to the beginning point of a normal working day and decreasing by decimal parts of an hour so that the zero point will come opposite to the end of a normal working day, the second scale having an interval for recess in which said numerals are omitted so that the first numeral after the recess period is the same as the last one before such recess period.

1,500,702. OIL INJECTOR. PETER EIDUCK, San Francisco, Calif. Filed July 2, 1923. Serial No. 649,049. 5 Claims. (Cl. 299—120.)



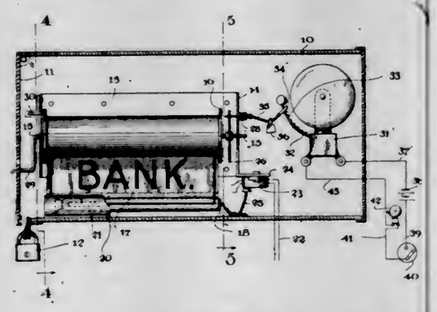
1. A fuel injector comprising a casing having a fuel inlet at one end and a small opening at the opposite end for the discharge of fuel, telescopic sleeves in said casing, a valve on the outer end of each sleeve, a seat for one of said valves adjacent the discharge orifice, a seat for the other valve within the casing, and spring means within said sleeves for pressing them apart to cause the valves to be seated, the valve adjacent the discharge orifice forming a regulating valve and the other valve forming a check valve.

1,500,703. CONTROL SYSTEM FOR AIR LIFTS. WILLIAM H. ELBELT and CHARLES H. BROOKS, Hurley, N. Mex. Filed May 15, 1922. Serial No. 561,079. 4 Claims. (Cl. 103—16.)



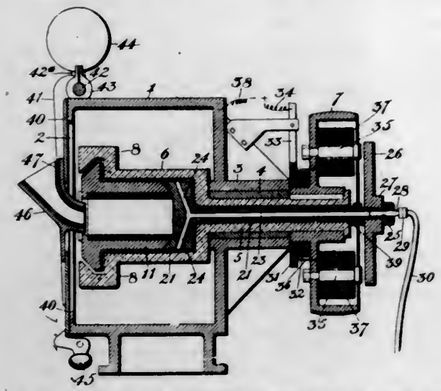
1. In combination with a well having a pit, a well tube extending therein, and provided with air lift means and a compressed air supply line therefor, a valve in said compressed air line adapted to gradually vary the supply of air from said line to the air lift means, a submergence chamber opening at its lower end into the well pit in such manner that air is entrapped and compressed in said chamber by liquid in the well pit, and pneumatic operating means for said valve connected to said chamber and operated by changes of pressure therein to gradually increase the flow of compressed air through said valve as the submergence of the well increases and to gradually decrease the flow of compressed air through said valve as the submergence of the well decreases, so as to tend to maintain approximately constant submergence.

1,500,704. CIGAR MOISTENER. ARTHUR C. HERTHEL, St. Louis, Mo. Filed Sept. 14, 1920. Serial No. 410,295. 16 Claims. (Cl. 131—30.)



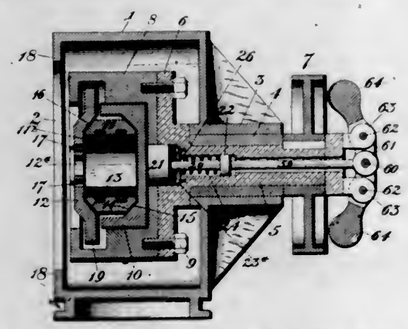
16. A humidifier of the class described, comprising a wick having the intermediate portion thereof extended in a horizontal plane and the opposite end portions thereof depending in angular relation with respect thereto, means for sustaining the intermediate portion of said wick in its extended position, and means for supplying moisture to the opposite ends of said wick.

1,500,705. PISTON RING. WILLIAM R. HESLEWOOD and HARRY F. MOCINE, Oakland, Calif., assignors to M. & H. Piston Ring Co., Oakland, Calif., a Corporation of Nevada. Filed Feb. 20, 1922. Serial No. 537,690. 12 Claims. (Cl. 74—109.)



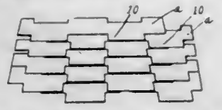
11. A spring for a packing ring, comprising an annular body provided with corrugations and with angular packing ring seats on the high points of these corrugations.

1,500,706. SIGNAL. BYRD B. ISOM, near Acton, Tenn. Filed Apr. 5, 1922. Serial No. 549,804. 3 Claims. (Cl. 177—329.)



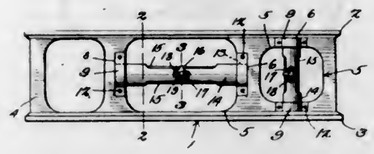
1. In a device of the kind described, a roller, a curtain wound on said roller, a weight at the lower end of said curtain tending to unwind the same, journals on the ends of said roller, arms supporting said journals, a disc fixed on one of said journals and provided with a series of openings adjacent its periphery, a pin projecting through one of the arms and engaging in one of the openings to hold the roller from rotation, and electrically operated means for withdrawing said pin including an electrically operated audible signal and a mechanical connection between said audible signal and the pin.

1,500,707. CENTRIFUGAL CASTING MACHINE. WALTER T. JANNEY, Philadelphia, Pa. Filed July 5, 1922. Serial No. 573,019. 9 Claims. (Cl. 22—65.)



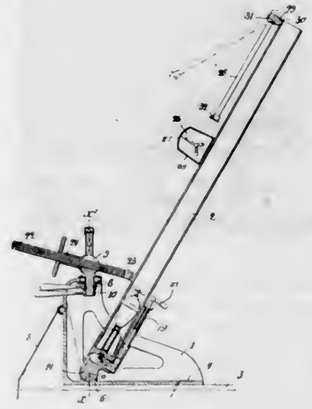
5. In a centrifugal casting machine, a revoluble basket; a mold carried thereby and movable relatively thereto; a ram for pressing the mold into operative engagement with the basket; an armature attached to the ram; and electromagnets cooperating therewith to press the ram toward the mold.

1,500,708. CENTRIFUGAL CASTING MACHINE. WALTER T. JANNEY, Philadelphia, Pa. Filed Aug. 7, 1922. Serial No. 580,162. 15 Claims. (Cl. 22—65.)



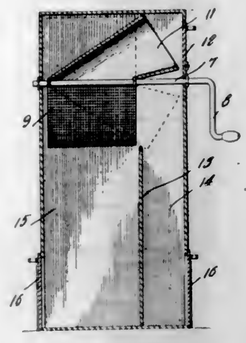
1. The combination with a mold of a cup-shaped guide for loosely receiving the same and forming a closure for one end thereof; a rigidly held lid for closing the other end of the mold, the cup being spaced from the lid and movable relatively thereto; and means for yieldingly pressing the cup and mold and lid into engagement with each other.

1,500,709. SHINGLE. CHARLES L. KELLER, Wyoming, Ohio, assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed Oct. 6, 1919. Serial No. 328,627. 2 Claims. (Cl. 108—7.)



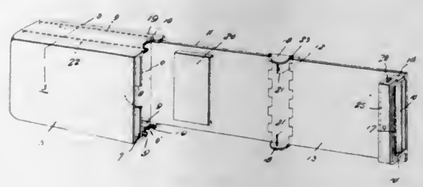
1. A roofing formed from shingle strips comprising body portions with the side edges as distinguished from the ends cut so as to form alternate extensions, and interlying spaces of a character to leave exposed a panel-like portion of roofing beneath, said extensions and spaces being formed so that the extensions are of different width from the spaces, and the one side edge of the strip having projections opposite the spaces on the other side edge and of equal size thereto, and said strips laid in overlapping courses so that the extensions are in staggered relation with each other.

1,500,710. LEVEL. JAMES M. KELLY, Portland, Oreg. Filed Nov. 5, 1921. Serial No. 513,127. 1 Claim. (Cl. 33—211.)



A level comprising an I-shaped body portion having an opening through the central part of its web, there being shouldered recesses formed in said web at opposite ends of said opening, respectively, a tube having a sight opening intermediate its ends, a spirit glass positioned in said tube to be viewed through the sight opening, blocks slidingly fitting the ends of the tube and having reduced tongues shaped to seat in the shouldered recesses respectively whereby said tube and blocks may be laterally withdrawn from said recesses, and fastening elements rigidly securing said blocks to said body portion.

1,500,711. INFANTRY CANNON. THÉODORE LAFITTE, Paris, France. Filed Jan. 8, 1923. Serial No. 611,517. 5 Claims. (Cl. 89—1.)

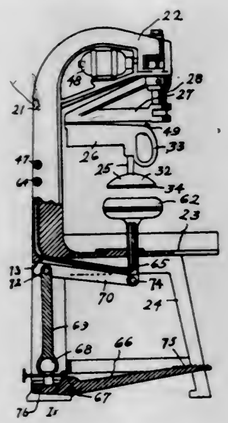


1. A cannon comprising a carriage, a cannon tube movable in all directions upon this carriage about its lower end in the form of a universal joint and an adjustable connecting member connecting the cannon with the upper part of the carriage, a pivot through the medium of which the connecting member is connected with the carriage and adjustable means for locating the axis of this pivot and maintaining the same according to a vertical line which is exactly above the centre of the lower universal joint with the purpose of allowing the cannon to revolve about a vertical axis whatever the inclination of the base of the carriage may be.

1,500,712. ASH SIFTER. JOSEPH J. MCCARTHY, Cincinnati, Ohio. Filed Apr. 23, 1924. Serial No. 708,464. 3 Claims. (Cl. 83—60.)

1. A sieve including a housing, a partition dividing the housing into compartments, a shaft extending through the upper portion of the housing, a sieving element supported by the shaft, a chute housing in the upper portion of the sieving element, said chute adapted to direct material to the sieving element when the sieving element is in its active position, and said chute adapted to receive material from the sieving element and deliver the material to one of the compartments when the sieving element is in its inactive position.

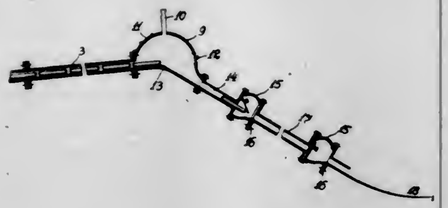
1,500,713. POCKET CHECK AND PASS BOOK CARRIER. LLOYD N. MOWRY and EDWARD LOVIG, St. Petersburg, Fla. Filed July 7, 1923. Serial No. 650,065. 3 Claims. (Cl. 281—19.)



3. In a carrier for pass and check books, a receptacle, a plate member mounted for sliding movement within said receptacle, another plate member separated from and hingedly secured to said first mentioned plate member and also mounted for free sliding movement within the receptacle when folded to a position parallel with said first mentioned plate member, and means carried by said plate members for supporting a check book, the hinged connection between said plate members affording a closure for the open end of the receptacle when said plate members are folded and extended within the receptacle.

1,500,714. GARMENT PRESS. YOBIE NAKANISHI, Los Angeles, Calif. Filed June 19, 1922. Serial No. 569,398. 2 Claims. (Cl. 68—9.)

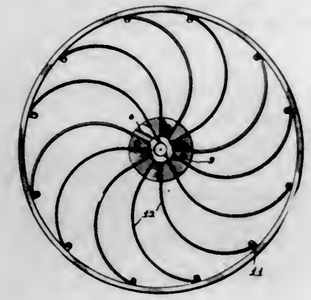
1. In a garment press, the combination with a standard and a table supported thereby, and pressing members carried thereby and movable relative to one another, and one of said pressing members being disposed beneath the other, of a standard for the lowermost pressing member arranged to slide relatively through the table, a lever pivotally connected to the pressing member standard, a foot lever pivotally mounted in the main standard, a fulcrum block adjustably secured to the foot



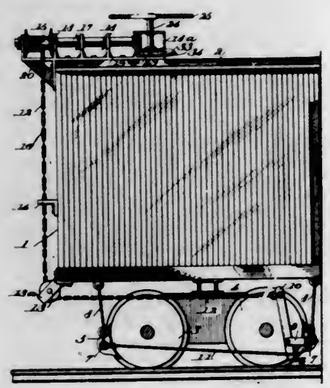
lever and on the relatively shorter arm thereof, a link lever having one extremity pivotally connected to the first-named lever and having the opposite extremity in

engagement with the fulcrum block, and means for adjusting the fulcrum block to and from the fulcrum point of the foot lever.

1,500,715. APPARATUS FOR THE TREATMENT OF SOLID SUBSTANCES IN A GASEOUS ATMOSPHERE. ALADÁR PERCZEL, Ujpest, Hungary. Filed Aug. 2, 1923. Serial No. 655,383. 10 Claims. (Cl. 23—3.)



1. In an apparatus for the treatment of solid substances in a gaseous atmosphere, the combination of a tubular vessel, a conveying device arranged in front of the one end of said tubular vessel and in the vertical plane passing through the axis of said tubular vessel, and means on that conveying device exerting a pressure in a direction parallel to the axis and towards the other end of the said tubular vessel.

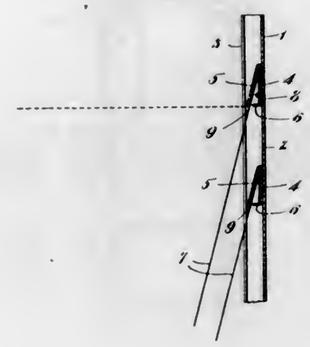


1,500,716. AUTO WHEEL. WILLIAM POPENDICK, Decatur, Mich. Filed Oct. 11, 1922. Serial No. 593,743. 1 Claim. (Cl. 301—84.)

In a hub for wheels having metallic spokes, hub sections, each of said hub sections including spaced fingers formed with inclined side walls, said sections adapted to be moved into engagement with each other and the fingers of one section positioned between the fingers of the opposed section, said spokes having their inner ends posi-

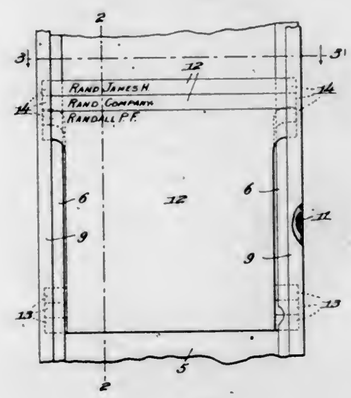
tioned between the adjacent fingers of the hub to hold the fingers in position, and a tubular member providing a bearing positioned in the hub section.

1,500,717. BRAKE. WILLIAM JOSEPH QUINN, Pottsville, Pa. Filed Aug. 23, 1923. Serial No. 659,012. 1 Claim. (Cl. 74—120.)



In a braking device for railroad cars, operating means for the brakes and comprising a plate secured to the top of the car and having an end projecting beyond the end of said car, spaced vertical standards formed integrally with the plate, bearings mounted in said standards, a shaft supported by said bearings, a spool rigidly connected with the shaft and located between the standards formed at the projecting end of the plate, a gear mounted on the inner end of said shaft, a vertical shaft mounted for rotation on the inner end of the plate provided with a gear in mesh with the gear on the horizontal shaft, a ratchet wheel connected with the vertical shaft, a pawl engaging the ratchet wheel for locking the vertical shaft against rotation.

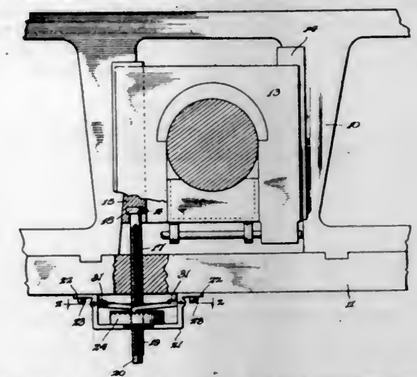
1,500,718. INDEX. JAMES H. RAND, North Tonawanda, N. Y. Filed Apr. 24, 1920. Serial No. 376,276. 4 Claims. (Cl. 129—16.)



2. An index, including a holder having a depending front lip and a transverse supporting lip, and a card for engagement in the holder having a fold formed therein to

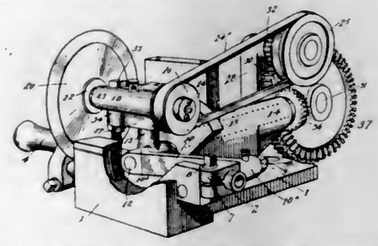
set off a retaining margin for engagement with the supporting margin and having a crease providing a hinge and setting off an intermediate portion, said intermediate

portion being substantially coextensive with the front lip on the holder and the hinge lying below the edge of the lip when in place.



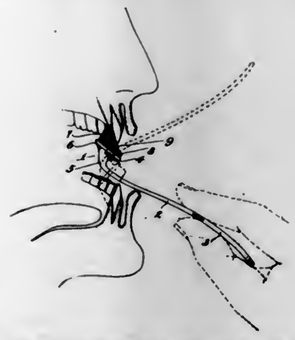
1,500,719. CARD INDEX. JAMES H. RAND, North Tonawanda, N. Y. Filed June 11, 1921. Serial No. 476,733. 9 Claims. (Cl. 129—16.)

5. An index frame comprising a back and two parallel inwardly extending flanges at each side, one in front of the other, forming two pairs of opposed channels, the outer flanges being narrower than the inner flanges.



1,500,720. LOCOMOTIVE DRIVING BOX. EDWARD W. RAWDON, Akron, Ohio. Filed Oct. 8, 1923. Serial No. 667,278. 6 Claims. (Cl. 105—81.)

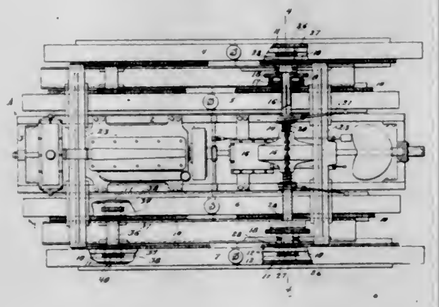
1. The combination with a journal box, a pedestal mounting the box and including a pedestal binder, and means interposed between the box and pedestal and adjustable for taking up forward and rear play of the box, of rotatable adjusting means for said first mentioned means



coacting with the binder, and ratchet mechanism carried by the binder for locking said adjusting means against counter rotation.

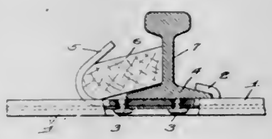
1,500,721. CUTTER HEAD FOR CIGARETTE MACHINES. RICHARD E. ROSEWARNE, Covington, Ky., assignor of one-half to Edward F. Peters and William Peters, both of Cincinnati, Ohio. Filed Apr. 3, 1922. Serial No. 549,349. 10 Claims. (Cl. 131—37.)

1. In a severing device for severing into sections continuously moving material, a cutting knife, a mounting for such knife, and means to swing the knife in an orbit transverse and in a plane parallel with the line of travel of the material to be severed, with the orbital center of the knife in alignment with the line of travel of the material.



1,500,722. TOOTHBRUSH. RALPH R. ROUSH, Columbus, Ohio. Filed Apr. 29, 1921. Serial No. 465,455. 1 Claim. (Cl. 15—167.)

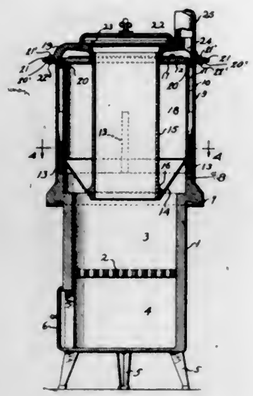
A tooth brush comprising a handle and a brush head, the brush head having a shank the axis of which projects from the plane of the back thereof substantially



at right angles thereto and a handle bent from the outer extremity of said shank in a broad curve lying in a plane substantially parallel to the plane of the back, and a brush on the front of said head having substantially the whole of its brushing surface inclined to the plane of the face of the brush head and toward the handle.

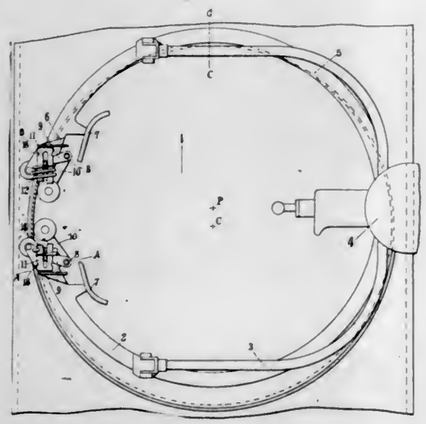
1,500,723. TRACTOR. ROBERT E. ROY, Santa Rosa, Calif. Filed May 24, 1920. Serial No. 383,679. 9 Claims. (Cl. 180—8.)

1. In a tractor a main frame, a pair of steppers arranged on each side of the frame, a driving shaft extending crosswise of the frame, two pairs of gears on each end of the shaft, one gear of each pair being of larger diameter than the adjacent gear, a pair of rack members on each stepper, one rack engageable with the small gear of each pair, and one engageable with the large gear of each pair, said rack members being mutilated and one being arranged above the other.



1,500,724. TRAMROAD. LEONARD SARGEANT, Fairmont, W. Va. Filed Oct. 5, 1922. Serial No. 592,614. 7 Claims. (Cl. 238—10.)

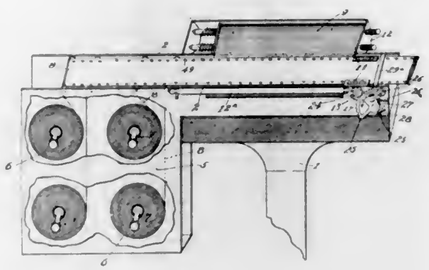
2. A tram road comprising a tie I-shaped in cross section, a rail having a base, a plate secured in the channel of the tie and having an end embracing the rail base on one side and a loop on the other side of the rail, and means in the loop for firmly holding the rail in the embrace of the plate.



1,500,725. HEATING STOVE. GEORGE G. SCARBOROUGH, Girdletree, Md. Filed Feb. 20, 1924. Serial No. 694,145. 2 Claims. (Cl. 126—73.)

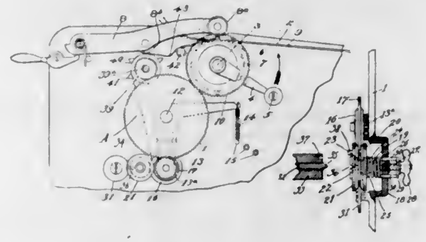
1. In a self-feeding stove, the combination with an outer shell and an inner shell arranged therein and spaced therefrom, said inner shell being provided with an inclined bottom having a central opening, of a fuel magazine arranged within said inner shell and terminating substantially in alinement with the bottom of said inner shell, means for supporting said fuel magazine,

a top having an outer flange to engage said outer shell and an inner flange to receive said fuel magazine, and a cover for said magazine resting on said top.



1,500,726. GUN MOUNTING. FREDERICK WILLIAM SCARFF, London, England. Filed Mar. 20, 1923. Serial No. 626,369. 15 Claims. (Cl. 89—40.)

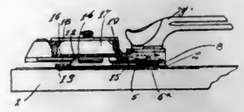
1. In a gun mounting, a ring rotatable in azimuth means for mounting a gun on said ring, means including a cam track for providing a graduated resistance or assistance, to rotation of said ring, said means being operative throughout the whole range of movement of said ring and providing a unidirectional effect tending to counterbalance wind pressure on the gun due to its angular position relative to the direction of movement of the mounting.



15. In an energy storing and releasing device comprising a compression spring positioned between two movable abutment pins, a guide tube for said spring having slots in which said pins move, and means adapted to be fixed to said tube permitting the passage of said pins but preventing the passage of the ends of said spring.

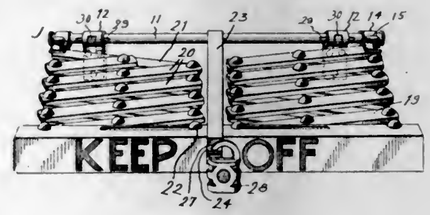
1,500,727. FLAT-BED MANIFOLDING TYPEWRITER. JOHN Q. SHERMAN and ALBERT W. METZNER, Dayton, Ohio; said Metzner assignor to said Sherman. Filed Sept. 21, 1920. Serial No. 411,783. 28 Claims. (Cl. 197—126.)

1. In a manifolding typewriter, of the type having a flat bed and a movable typewriter mechanism, means for supplying webs of paper having successive holes punched therein, in a loose condition, and a rotary feed pin device adapted to readily and easily engage in said holes to feed the paper in alignment, and a clamping device for the paper adapted to enforce a tight condition thereof on the platen and means for releasing said clamping device during the operation of the feed pin device.



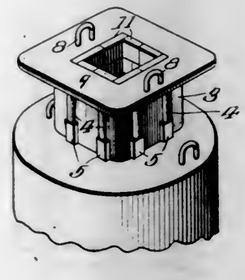
1,500,728. MANIFOLDING REGISTER. JOHN Q. SHERMAN, Dayton, Ohio. Filed Feb. 3, 1921. Serial No. 442,254. 24 Claims. (Cl. 282—16.)

9. In a manifolding register or the like, the combination of a feeding mechanism for feeding paper in a plurality of webs through said register, means for accumulating one of said webs within the machine for a record, after it has been so fed, and means for retarding the movement of said web to maintain a constant looseness of said web between said feeding mechanism and accumulating means, said accumulating mechanism being frictionally driven from the feeding mechanism, and said retarding means comprising a member engaging said record web, and driven from the feeding means and at the same speed therewith.



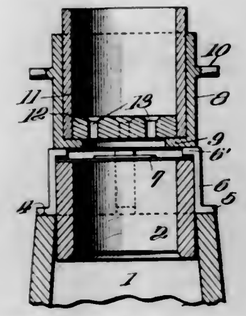
15. A rewind mechanism for a manifolding register or the like, comprising in combination, a direct driven friction disk, a pair of disks spring pressed toward each other, said friction disk being resiliently urged to a position of engagement between said spring pressed disks, a rewind roll and driving connection between the spring pressed disks and the said rewind roll.

1,500,729. MANIFOLDING TYPEWRITER. JOHN Q. SHERMAN and ALBERT W. METZNER, Dayton, Ohio; said Metzner assignor to said Sherman. Filed June 23, 1922. Serial No. 570,388. 8 Claims. (Cl. 197—126.)



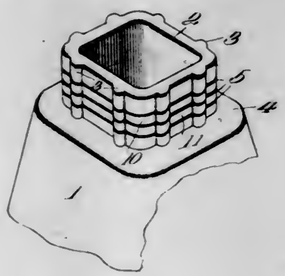
1. In a manifolding machine, the combination of a typewriter having its type bars faced with type in the form of pointed pins having the arrangement of the desired letter or symbol, a well for ink having a port and a pad movable as in the case of the ribbon holder in a typewriter to wipe the ink port of the well and project into interposition between the type face and the webs to be penetrated by the pins.

1,500,730. AUTOMOBILE FENDER. TOKUTA SHIMIZU, Los Angeles, Calif. Filed Nov. 16, 1923. Serial No. 675,160. 7 Claims. (Cl. 293—27.)



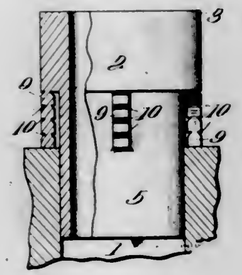
1. An automobile fender having a normal and an extended horizontal operative position, and a depending inoperative position, means for locking the fender in its operative positions, and spring means to hold the fender in its horizontal operative positions.

1,500,731. POURING POT FOR FEEDERS AND INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Dec. 8, 1923. Serial No. 679,379. 5 Claims. (Cl. 22—147.)



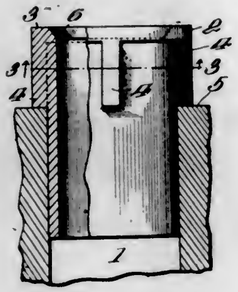
1. A pouring pot comprising a metallic body portion having an annular flange at its lower end to support a refractory lining and pouring plate.

1,500,732. POURING POT USED IN CONNECTION WITH HOT-TOP FEEDERS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Dec. 29, 1923. Serial No. 683,497. 20 Claims. (Cl. 22—209.)



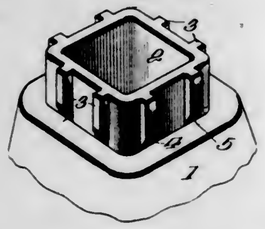
1. A pouring pot support comprising a frame adapted to support the pouring pot, and means carried by the frame for supporting the same on the mold.

1,500,733. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Dec. 29, 1923. Serial No. 683,498. 16 Claims. (Cl. 22—147.)



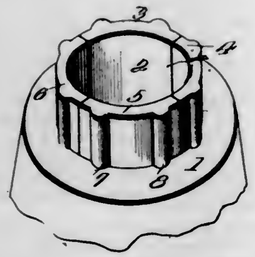
1. A feeder for ingot molds comprising a body portion constructed so that horizontal sections can be broken off.

1,500,734. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Dec. 29, 1923. Serial No. 683,499. 9 Claims. (Cl. 22—147.)



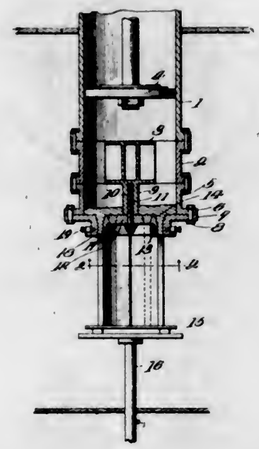
1. A feeder for ingot molds comprising a body portion having a shoulder and lugs carried by said shoulder for supporting the feeder in the mold.

1,500,735. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Dec. 29, 1923. Serial No. 683,500. 11 Claims. (Cl. 22—147.)



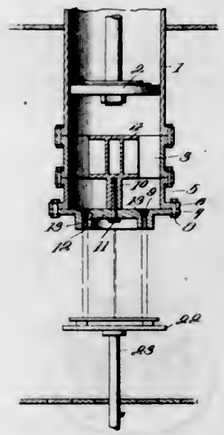
1. A feeder for ingot molds having a bore therethrough beveled at its upper end.

1,500,736. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Dec. 29, 1923. Serial No. 683,501. 6 Claims. (Cl. 22—147.)



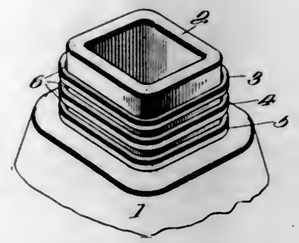
1. A feeder for ingot molds comprising a body portion having longitudinal ribs formed integral therewith and having wedge shaped lower ends.

1,500,737. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Dec. 29, 1923. Serial No. 683,502. 12 Claims. (Cl. 22—147.)



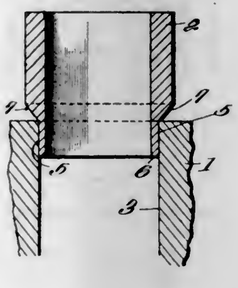
1. A feeder for ingot molds comprising a series of sections, the abutting walls thereof being so arranged as to prevent movement.

1,500,738. METHOD AND APPARATUS FOR MAKING SECTIONAL INGOT-MOLD FEEDERS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Dec. 29, 1923. Serial No. 683,503. 10 Claims. (Cl. 22—1.)



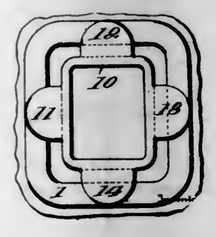
1. A method of forming sectional hot top feeders consisting in forcing the plastic material through a die and severing it into longitudinal sections as it passes from the die.

1,500,739. METHOD AND APPARATUS FOR MAKING INGOT-MOLD FEEDERS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Dec. 29, 1923. Serial No. 683,504. 10 Claims. (Cl. 22—1.)



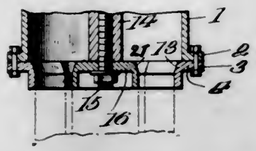
1. A method of forming sectional ingot mold feeders comprising a die and means for forcing plastic material through the die forming a section a number of which are adapted to form a complete ingot mold feeder.

1,500,740. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Dec. 29, 1923. Serial No. 683,505. 8 Claims. (Cl. 22—147.)



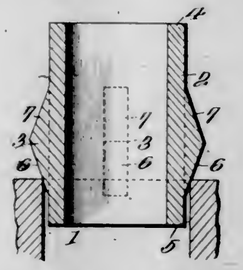
1. A feeder for ingot molds, comprising a body portion of refractory material with a series of fragile ribs extending around the same.

1,500,741. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 9, 1924. Serial No. 691,734. 10 Claims. (Cl. 22—147.)



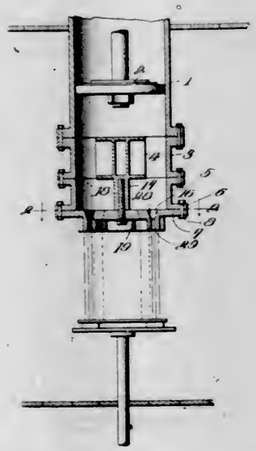
1. A feeder for ingot molds comprising a body portion having its outer periphery reduced towards its lower end.

1,500,742. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 9, 1924. Serial No. 691,735. 8 Claims. (Cl. 22—147.)



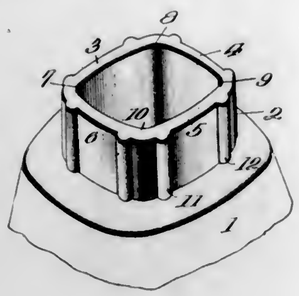
1. A feeder for ingot molds comprising a body portion adapted to enter the mold, supporting and strengthening means, extending a considerable distance beyond the body of the feeder.

1,500,743. CASTING FOR FEEDERS FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 9, 1924. Serial No. 691,736. 6 Claims. (Cl. 22—1.)



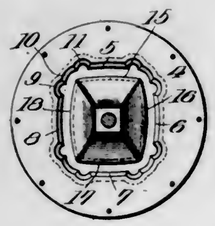
1. A casting for feeders for ingot molds comprising an outer member having outwardly bellied walls and an inner member having outer walls of a different contour.

1,500,744. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 9, 1924. Serial No. 691,737. 12 Claims. (Cl. 22—147.)



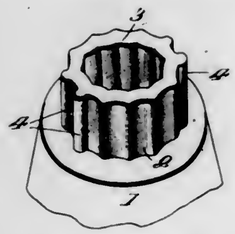
1. A reversible feeder for ingot molds comprising a body portion, ribs carried by the outer periphery of the feeder and having a tapering outer face.

1,500,745. CASTING FOR FEEDERS FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 9, 1924. Serial No. 691,739. 5 Claims. (Cl. 22—1.)



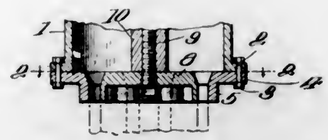
1. A casting for feeders for ingot molds, comprising an outer member having inwardly bellied walls oppositely arranged and an inner member having correspondingly arranged outer walls.

1,500,746. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 9, 1924. Serial No. 691,740. 3 Claims. (Cl. 22—147.)



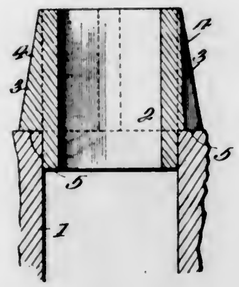
1. A feeder for ingot molds comprising four oppositely arranged, outwardly bellied walls connected by four oppositely arranged walls in a different arc of a circle and two integral ribs carried by the outer face of each of the bellied walls.

1,500,747. CASTING FOR FEEDERS FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 9, 1924. Serial No. 691,741. 4 Claims. (Cl. 22—1.)



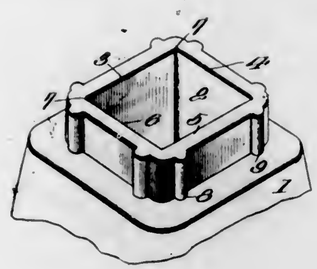
1. A casting for ingot mold feeders comprising an outer member having outwardly bellied walls connected by curved walls arranged in a different arc of a circle, and an inner member having outwardly bellied walls corresponding with those of the outer member.

1,500,748. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 9, 1924. Serial No. 691,742. 5 Claims. (Cl. 22—147.)



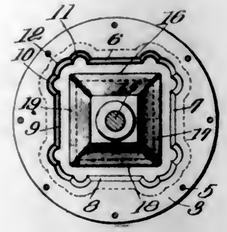
1. A feeder for ingot molds comprising a series of inwardly curved, oppositely arranged walls connected by outwardly curved oppositely arranged walls.

1,500,749. CASTING FOR FEEDERS FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 9, 1924. Serial No. 691,743. 7 Claims. (Cl. 22—1.)



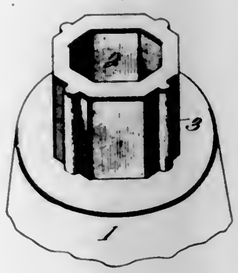
1. A casting for feeders for ingot molds having a series of curved walls.

1,500,750. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 15, 1924. Serial No. 693,090. 10 Claims. (Cl. 22—147.)



1. A feeder for ingot molds comprising a body portion and tapering ribs carried by the outer face of the body portion.

1,500,751. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 15, 1924. Serial No. 693,091. 2 Claims. (Cl. 22—147.)

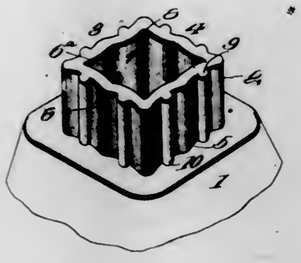


1. A feeder for ingot molds comprising a body portion having four straight oppositely arranged walls connecting four curved walls and a supporting rib carried by each of the four straight walls and each of the four curved walls.

1,500,752. CASTING FOR FEEDERS FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 15, 1924. Serial No. 693,092. 7 Claims. (Cl. 22—1.)

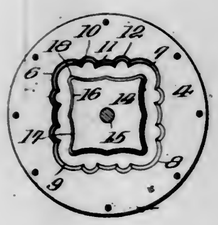
1. A casting for feeders for ingot molds, comprising an outer member having four oppositely arranged straight walls connected by curved walls.

1,500,753. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 15, 1924. Serial No. 693,093. 5 Claims. (Cl. 22—147.)



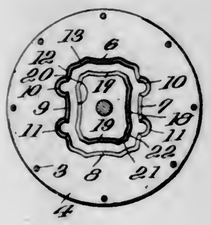
1. A feeder for ingot molds comprising eight walls bellied inwardly and connected by outwardly bellied walls.

1,500,754. CASTING FOR FEEDERS FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 15, 1924. Serial No. 693,094. 5 Claims. (Cl. 22—1.)



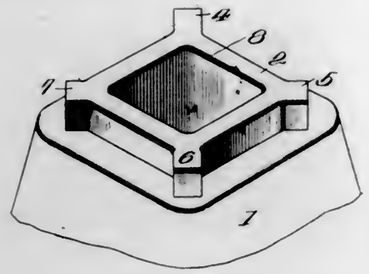
1. A casting for feeders for ingot molds comprising an outer member having eight walls, four opposite walls of which are provided with outwardly curved portions and an inner member having eight walls arranged parallel therewith.

1,500,755. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 13, 1924. Serial No. 693,095. 8 Claims. (Cl. 22—147.)



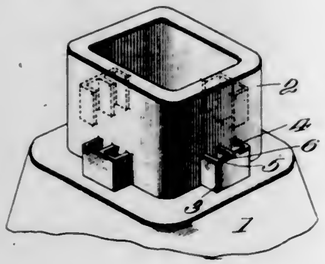
1. A feeder for ingot molds comprising a body portion having a series of walls, each of said walls having two inwardly bellied portions.

1,500,756. CASTING FOR FEEDERS FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 13, 1924. Serial No. 693,096. 6 Claims. (Cl. 22—1.)



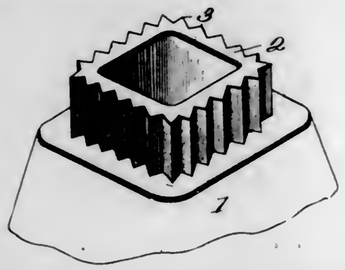
1. A casting for feeders for ingot molds comprising an outer member having four outwardly bellied walls arranged at the corners and connected by shorter outwardly curved walls and an inner member having walls of a different contour.

1,500,757. CASTING FOR FEEDERS FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 15, 1924. Serial No. 693,098. 5 Claims. (Cl. 22—1.)



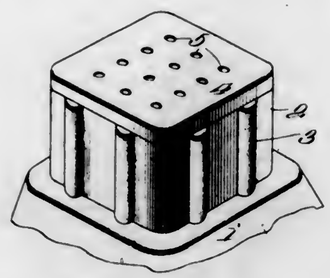
1. A casting for feeders for ingot molds comprising an outer member having inwardly bellied walls and an inner member having correspondingly shaped inwardly bellied walls.

1,500,758. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Feb. 15, 1924. Serial No. 693,099. 4 Claims. (Cl. 22—147.)



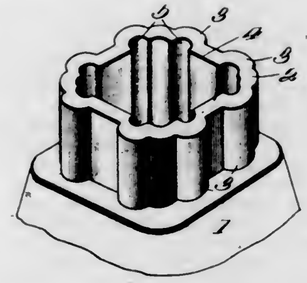
1. A hot top feeder for ingot molds comprising a portion having vertically disposed ribs at the corners and transversely scored.

1,500,759. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Apr. 24, 1924. Serial No. 708,681. 19 Claims. (Cl. 22—147.)



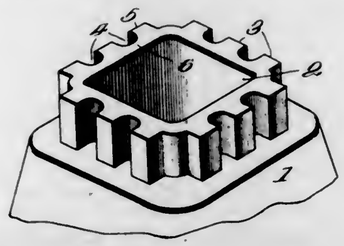
1. A feeder for ingot molds comprising a body portion having hollow supporting means.

1,500,760. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Apr. 24, 1924. Serial No. 708,682. 8 Claims. (Cl. 22—147.)



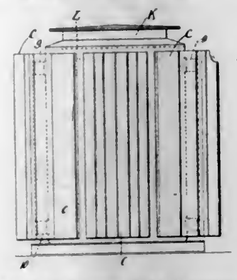
1. A feeder for ingot molds comprising a body portion having a large number of vertically disposed ribs on its outer face.

1,500,761. COVER FOR FEEDERS FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Apr. 24, 1924. Serial No. 708,683. 10 Claims. (Cl. 22—147.)



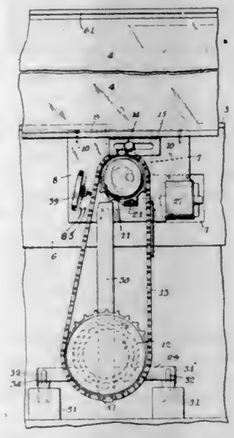
1. A cover for feeders for ingot molds comprising a body portion of refractory material adapted to rest upon the upper end of the mold and having means for preventing lateral movement thereon.

1,500,762. HOT TOP FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Apr. 24, 1924. Serial No. 708,684. 6 Claims. (Cl. 22—147.)



1. A hot top feeder for ingot molds comprising a body portion of refractory material having a series of vertically disposed grooves in its inner face.

1,500,763. HOT TOP FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Apr. 24, 1924. Serial No. 708,685. 6 Claims. (Cl. 22—147.)

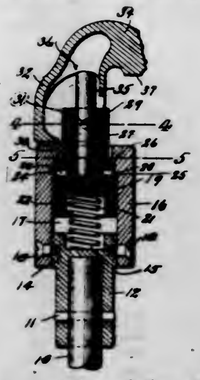


1. A feeder for ingot molds comprising a body portion having a series of rectangular connected ribs extending entirely around the same.

1,500,764. COOLING APPARATUS FOR TRANSFORMERS. LEWIS G. MCCLINTOCK, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Sept. 1, 1922. Serial No. 585,596. 5 Claims. (Cl. 257—190.)

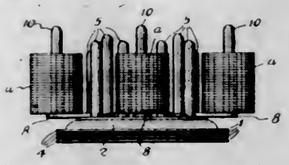
1. Cooling apparatus comprising a cooler adapted to be spaced from a tank and connected thereto said cooler comprising two complementary corrugated sheets spaced apart at the top and bottom by spacing rods and welded thereto, and the side edges of one plate being bent over and welded to the other plate.

1,500,765. ELECTRICALLY-OPERATED RAISING AND LOWERING MECHANISM FOR WINDOWS. HARRY EMERY NORWOOD, New York, and FRANKLIN G. NICKERSON, Brooklyn, N. Y., assignors to Perfect Window Regulator Company, New York, N. Y., a Corporation of Maine. Filed June 11, 1918. Serial No. 239,411. 17 Claims. (Cl. 268—4.)



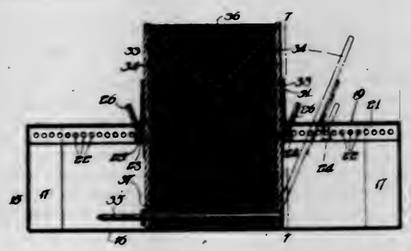
1. In an apparatus for raising and lowering windows, the combination with the window, of a wheel, a belt running on said wheel and directly connected with and supporting the window, a gear connected to and rotating with said wheel, a shaft carrying a pinion meshing with said gear, a gear wheel on said shaft, an electric motor whose shaft is directly geared to said gear wheel for rotating said gear wheel in either direction, and electrical controlling means for causing said motor to rotate in either direction by electric power so as to positively raise and lower the window by power applied by said motor.

1,500,766. BRAKE-HANDLE MECHANISM. JOHN M. READEY, St. Louis, Mo. Filed May 23, 1922. Serial No. 562,998. 6 Claims. (Cl. 74—115.)



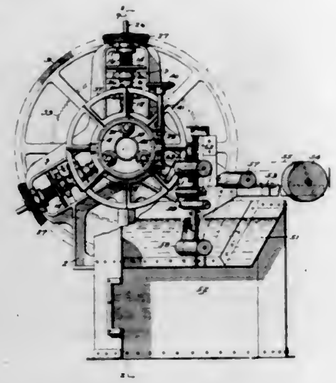
1. A brake handle mechanism comprising a brake staff housing, cooperating clutch members one of which is

movable in axial direction relative to the other member mounted therein, a brake handle secured to said relatively fixed clutch member, means for maintaining said



clutch members in operative relation, and means operable by said handle for disengaging said movable member from said relatively fixed member.

1,500,767. DEVICE FOR HOLDING PERFORATED GAME COUNTERS. LOUIS W. RICE, New York, N. Y. Filed Jan. 31, 1924. Serial No. 689,605. 5 Claims. (Cl. 46—55.)

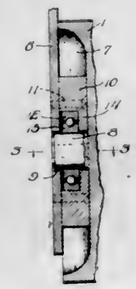


1. A set of stands for perforated game counters, each stand comprising a base and a plurality of posts rising therefrom to receive stacks of counters of different denominations, the posts being alike in all the stands of the set, each base being further provided with holes disposed in a circle with the posts, the number of holes between two posts in each stand being at least as numerous as the remaining number of stands in the set, the construction being such that any post will pass through any hole in nesting the stands.

1,500,768. LEDGER FOR MACHINE POSTING. WILLIAM A. RINGLER, Philadelphia, Pa., assignor to Globe Wernicke Co., Cincinnati, Ohio, a Corporation of Ohio. Filed June 10, 1922. Serial No. 567,491. 4 Claims. (Cl. 129—1.)

1. In a device of the character stated, a ledger support having side rails, follower blocks having means to interlock with said side rails and having members hinged thereto, and a ledger filing unit having backing members provided with means to receive said hinged members.

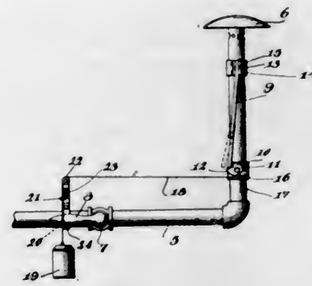
1,500,769. PIPE-WRAPPING MACHINE. LELAND S. ROSENER, San Francisco, and FRANK I. DOANE, Berkeley, Calif., assignors to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed June 27, 1922. Serial No. 571,198. 22 Claims. (Cl. 242—11.)



1. In a machine for wrapping cylindrical objects, a feed roller, means for adjusting said feed roller about an axis perpendicular to its axis of rotation, and means independent of said objects for rotating said feed roller.

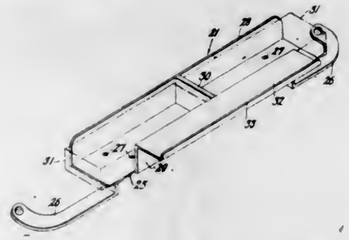
1,500,770. PROCESS OF RECOVERING LACTOSE OR MILK SUGAR FROM MILK OR WHEY. ROGER WM. RYAN, Oconomowoc, Wis., assignor to Carnation Milk Products Company, Seattle, Wash., a Corporation of Delaware. Filed Feb. 28, 1920. Serial No. 361,957. 2 Claims. (Cl. 127—31.)

1. In the process of recovering lactose from milk or whey which has been first partially clarified by the addition of alum and by then boiling, filtering and cooling the milk or whey; adding lime to the partially clarified milk or whey in sufficient quantity to neutralize acidity, and produce an excess of alkalinity, and then introducing carbon dioxide into the solution in sufficient quantity to neutralize the excess lime and precipitate the same together with the naturally occurring calcium and magnesium as carbonates.



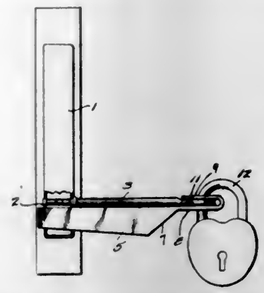
1,500,771. FLOOR-SANDING MACHINE. MAX L. SCHLUETER, Chicago, Ill. Filed Mar. 6, 1922. Serial No. 541,299. 2 Claims. (Cl. 64—36.)

1. In a machine of the character described, a horizontal rotatable cylinder, a supporting frame having at one side a thin flat vertical plate lying close to one end of said cylinder, the cylinder having in said end a central recess, a journal fixed to said cylinder at the axis there-



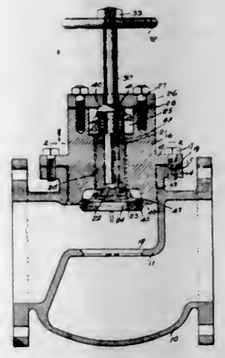
of and extending through said recess, a block fastened to the inner side of said plate and lying in said recess, said block having a pocket therein facing said plate and an opening to permit said journal to project into said pocket, and a ball bearing for said journal arranged in said pocket.

1,500,772. AUTOMATIC CUT-OFF FOR GAS APPLIANCES. GERHARDT F. SCHWARTZ, St. Louis, Mo. Filed Oct. 28, 1922. Serial No. 597,508. 3 Claims. (Cl. 67—116.)



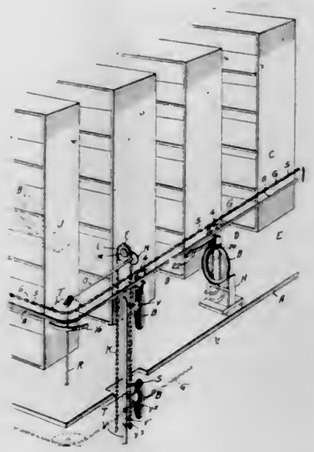
1. In a gas control for automatic appliances, the combination of a pilot burner, a valve for controlling the supply of gas to the burner, valve-closing means, a movable trigger, a flexible connection adapted to detachably engage the trigger and connected to the valve closing means for normally holding the latter in a potential condition, and a thermostat placed relatively to the burner and when heated in the path of movement of the trigger for preventing the movement of the trigger and the valve-closing means, said thermostat adapted to warp out of engagement with the trigger when cold and permit movement of the same.

1,500,773. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 15, 1921. Serial No. 452,433. 10 Claims. (Cl. 45—90.)



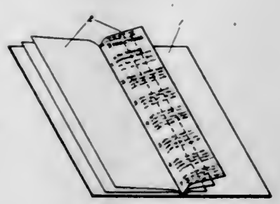
1. An accessory for a machine comprising typewriter mechanism, said accessory including a work-sheet holder having two compartments arranged in substantial alignment from side to side of the machine and separated from each other by a partition located centrally in the holder, and means for supporting the holder in front of and closely adjacent to the keyboard of the machine with the partition also located substantially centrally of the machine, so as to cause the compartments of the holder to be so positioned that a work-sheet can be conveniently withdrawn from either of said compartments for insertion into the machine.

1,500,774. KEY-RETAINING DEVICE. LESLIE M. SNODGRASS, Milwaukee, Wis. Filed July 16, 1923. Serial No. 651,885. 2 Claims. (Cl. 70—65.)



1. A key retaining device of the class described formed from a sheet of material bent upon itself from one end to an intermediate point so as to form a body adapted for insertion in a key hole, and further bent at the intermediate point to provide a slanting portion terminating in an apertured lip substantially co-planar with the upper edge of the body.

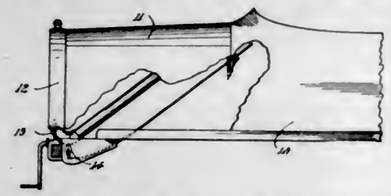
1,500,775. VALVE. CARL SONNER, New York, N. Y., assignor to Peter Berdar, Queens, N. Y. Filed Mar. 29, 1921. Serial No. 456,617. 1 Claim. (Cl. 251—47.)



In a valve, a housing having a beveled valve seat, a gland secured in the housing and having recessed ends and a screw threaded opening connecting the recessed ends the recess at the lower end of the gland being provided with a beveled valve seat within the same, a cap secured to the upper end of the gland and provided with an opening having its inner end enlarged to form a seat, an externally threaded sleeve in the threaded opening of the gland and having a polygonal longitudinal opening, the threaded portions of the sleeve and gland being of the same length, a valve loosely mounted on the lower end of the sleeve and having beveled upper and lower seating surfaces adapted to alternately engage the valve seats of the housing and gland, a valve stem mounted in the cap and having a polygonal inner end engaging in the polygonal opening of the stem, an annular shoulder fixedly secured to the valve stem having an outer face adapted to seat on the seat of the cap, a collar plate resting on the bottom of the upper recess of the gland and through which the valve stem passes, a collar loosely mounted on the valve stem below said annular shoulder, roller bearings between the collar and the shoulder, and a coil spring surrounding the valve stem between the collar and collar plate.

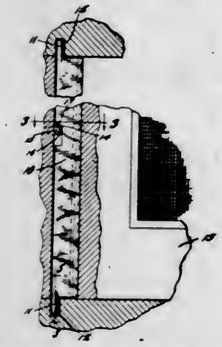
1,500,776. CONVEYER SYSTEM. HENRY W. SPOONER, Brooklyn, N. Y. Filed Jan. 10, 1921. Serial No. 436,047. 16 Claims. (Cl. 214—1.)

1. A conveying apparatus for tires including in combination an elevator for lifting the tires in succession to a determined level, a conveyer comprising a set of hooks traveling horizontally at approximately said level, means for discharging the tires from said elevator to said hooks with the tires parallel to the line of travel of the hooks, means for turning said tires to the transverse position, and means for discharging the tires while in such position.



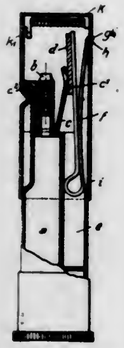
1,500,777. PERMANENT TEST AND PRACTICE FORM. PAUL R. STEVENSON, Columbus, Ohio. Filed Feb. 10, 1922. Serial No. 535,481. 19 Claims. (Cl. 35—12.)

1. In a device of the character described, a permanent form comprising a list of exercises, a permanent form comprising answers to said exercises and a means engageable with either of said forms, said means being adapted to receive the written answers to questions of the first-named form and to register said written answers with the correct answers of the second form.



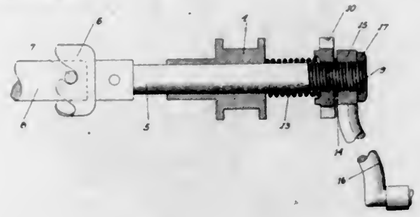
1,500,778. VALVE-OPERATING MEANS. JOHN G. TARWATER, Warrenton, N. C. Filed Aug. 29, 1923. Serial No. 659,999. 2 Claims. (Cl. 137—139.)

1. The combination with an automobile having a radiator provided with a drain cock and having a steering column; of a reach rod having one end connected to the drain cock and extending rearwardly alongside of said steering column, a support on said steering column wherethrough the reach rod passes, an operating



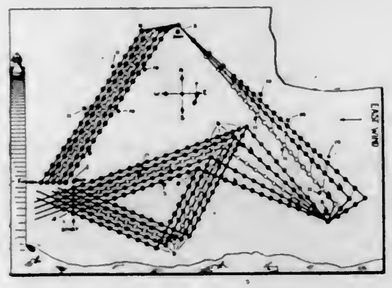
handle on the rear end of said reach rod, and a housing extending beneath said drain cock and having an escape opening therein out of alinement with the drain cock.

1,500,779. FLY-SCREEN SLIDE. WILLIAM ALFRED TAYLOR, Detroit, Mich. Filed June 11, 1923. Serial No. 644,683. 5 Claims. (Cl. 156—14.)



3. In a window screen support and guide, a stationary guide section adapted to be fitted in the groove formed in one stile of a screen frame, a movable guide section including a strip of sheet metal, means for hingedly supporting the sheet metal in a window frame to be received within a groove formed in the opposite stile of the screen frame, an arm formed integral with the hinged section and extending laterally therefrom, and means cooperating with the arm for securing the hinged section against movement.

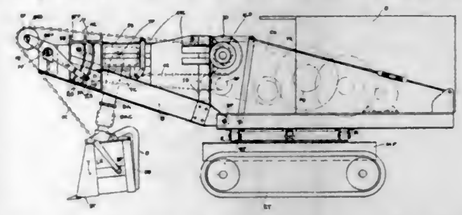
1,500,780. AUTOMATIC LIGHTER. HERMANN THORENS, Sainte-Croix, Switzerland. Filed Aug. 9, 1922. Serial No. 580,716. 4 Claims. (Cl. 67—7.1.)



1. An automatic lighter including a body, a burner in the body, a stop member on the body, a covering socket movable relatively to the body, a resiliently controlled and pivoted flap closing the outer end of the socket and opening upon relative movement of the socket and the body and upon contact with the member, and cooperative members carried respectively in the body and the socket for producing a spark for igniting the burner upon the said opening of the flap.

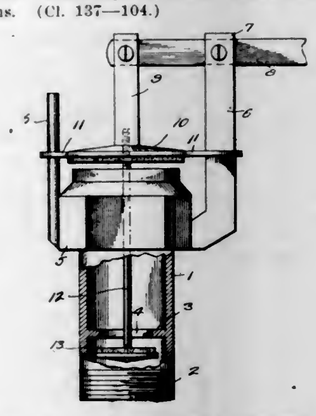
1,500,781. SAFETY DEVICE FOR ENGINE CRANKING. FRANCIS E. TURNER, Crescent City, Calif. Filed Jan. 29, 1923. Serial No. 615,560. 4 Claims. (Cl. 123—185.)

4. A safety cranking device for gas engines having a shaft adapted to be operatively engaged with the crank-shaft of the engine, comprising a handle member threaded onto said shaft, the threads running in the direction of normal rotation of the shaft, a stop member threaded onto the shaft inwardly of the handle member, ratchet teeth cut in the periphery of said stop member, a fixed pawl engaging the same, and a spacer ring having relatively small bearing area fitted on the shaft between the stop and handle members.



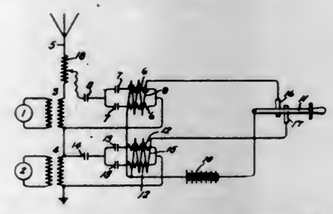
1,500,782. SAILING GAME. HARRY E. VEGIARD, Rochester, N. Y. Filed Feb. 12, 1923. Serial No. 618,708. 2 Claims. (Cl. 46—63.)

1. A sailing game comprising a chart of a triangular sailing course in combination with figures representing boats, said triangular course being pivoted into sections, each of said sections comprising a series of individual sailing courses terminating into a single turning point at the end of each section, a counter for determining successive positions of the boats on the individual sailing courses.



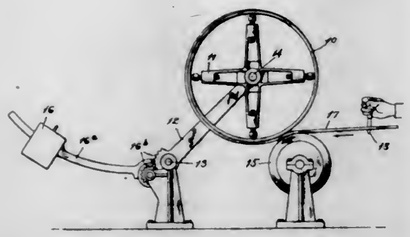
1,500,783. CRANE MECHANISM. CHARLES A. WEBER, Lorain, Ohio, assignor to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Oct. 15, 1920. Serial No. 417,093. 7 Claims. (Cl. 214—135.)

1. In a mobile crane mechanism, in combination with a boom, a hoist chain, a bucket member, said hoist chain being attached to the said bucket member to lift the same, an extension member for said boom, a pivot on the end of the said boom, said extension member being adapted to rock on the said pivot, a sheave on



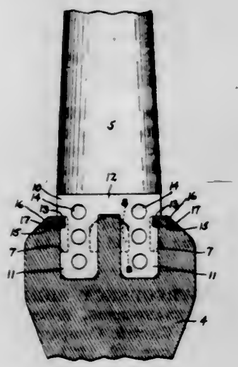
the outer end of the extension member, the other inner end of the extension member being adapted to be adjustably secured to the said boom.

1,500,784. FLOAT VALVE. HUBERT WIGZELL, Marathon, Tex. Filed Sept. 8, 1923. Serial No. 661,704. 2 Claims. (Cl. 137—104.)



1. A valve of the class described including a casing, a valve proper associated with one end of the casing, said valve proper including apertured wings, guide posts extending from the casing and penetrating the apertured wings, one of said guide posts being provided with a bifurcated end, a flont controlled lever fulcrumed in the bifurcated end of one of said posts, and a link connecting the adjacent end of said lever to said valve proper.

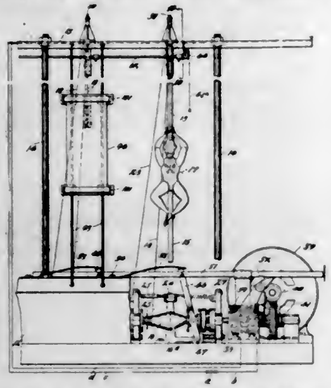
1,500,785. HIGH-FREQUENCY SIGNALING SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 29, 1921. Serial No. 496,229. 8 Claims. (Cl. 178—88.)



1. The combination in a high frequency signaling system of a transmitting circuit, two sources of high frequency current of different frequencies connected to said circuit, connections for practically suppressing at will the current delivered from either of said sources without disconnecting the source from the circuit and means for changing the tuning of the transmitting circuit at the same time that one of the suppressing connections is made or removed.

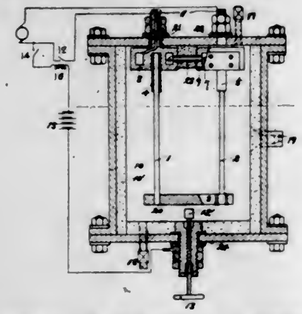
1,500,786. METHOD OF MAKING RUBBER TIRES. WALTER H. ALLEN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 8, 1920. Serial No. 379,720. 10 Claims. (Cl. 154—12.)

3. The method of building solid rubber tires which comprises winding upon a metal rim rubber stock in strip form in successive laminations, interrupting the longitudinal continuity of the grain of said strip stock before building it into the tire, without destroying the continuity of the strip as a whole, and vulcanizing said tire on the rim.



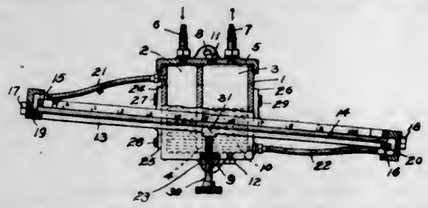
1,500,787. TURBINE ROTOR. ALBERT S. ANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 20, 1922. Serial No. 589,454. 4 Claims. (Cl. 253—77.)

1. A turbine rotor comprising a body having a bucket-receiving groove with overhanging walls, said walls being cut away to form a filling slot, buckets in said groove, a filling block which is located in said slot, said block being provided with transverse notches in its end walls, and axially extending means which are carried by the body and engage said notches to hold the block in place.



1,500,788. AMUSEMENT APPARATUS. HILMER S. ANDERSON, Belmont, Mass. Filed Apr. 2, 1923. Serial No. 629,377. 11 Claims. (Cl. 46—56.)

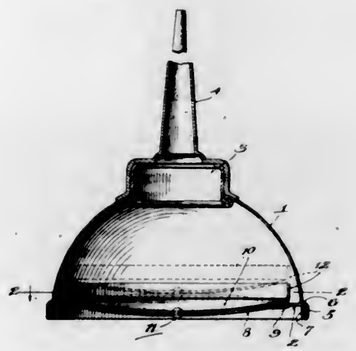
1. An amusement apparatus comprising, in combination, a supporting frame an upright guide thereon; a traveler movable on said guide; a conical winding drum having cable-engaging means; mechanism for rotating said drum; a cable normally having a loose non-winding connection with the drum, and connected with the traveler to raise the latter when engaged with the drum by said engaging means; manually operable cable-deflecting mechanism including a flexible pull member and a cable-guiding lever movable by the pull member to posi-



tively engage the cable with the said engaging means; and locking means adapted to lock the traveler in a raised position.

1,500,789. ELECTROMETALLURGICAL PROCESS FOR MANUFACTURE OF DUCTILE BODIES OF HIGH-FUSING METALS AND ALLOYS OF SAME. EIJI AOYAGI, Kyoto, Japan. Filed June 17, 1920. Serial No. 389,694. 12 Claims. (Cl. 148—10.)

1. A process for the manufacture of ductile rods from high-fusing metals, from their compounds or from a mixture of said metals and their compounds, which consists in heating rods made of the said substances hung vertically in a vessel containing neutral or reducing gas to a nearly molten state and then stopping heating as soon as the rods elongate to a proper length.

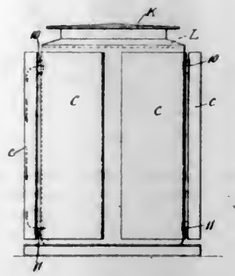


1,500,790. GAUGE. HERMAN BACHARACH, Pittsburgh, Pa., assignor to Bacharach Industrial Instrument Company, a Corporation of Pennsylvania. Filed Mar. 6, 1922. Serial No. 541,365. 11 Claims. (Cl. 73—31.)

1. In combination in a gauge, a pair of communicating pressure chambers containing a liquid and an inclined gauge glass mounted for relative vertical movement.

means for holding the chambers and glass in their various positions of relative adjustment, a connection from one chamber above the level of the liquid to the upper end of the glass, and a connection from the other chamber below the level of the liquid to the lower end of the glass.

1,500,791. OIL CAN. TOLLEF O. BAKKEN, Bode, Iowa. Filed Sept. 19, 1921. Serial No. 501,796. 1 Claim. (Cl. 221—48.)

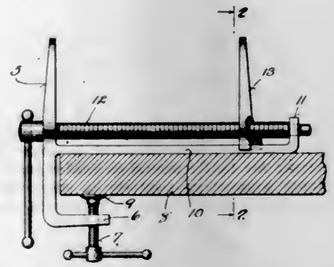


An oil can comprising a body of substantially semi-spheroidal shape having a bottom centrally and normally depressed for being sprung inwardly to expel the lubricant, and a cup-shaped member having a depressed bottom for normally nesting in the depressed bottom of the body and secured thereto at a single point whereby the first bottom may be flexed inwardly uninterrupted by reason of the attachment of the cup-shaped member and independently of any flexing of the second bottom.

1,500,792. COOP. SETH S. BARKER, Bloomfield, Iowa. Filed Nov. 14, 1922. Serial No. 600,905. 2 Claims. (Cl. 220—6.)

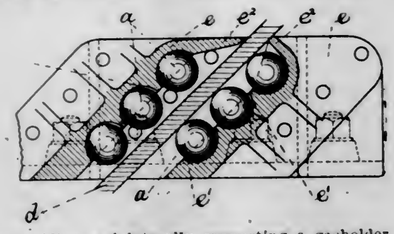
1. A coop of the character described, consisting of a bottom having corner and side recesses, a coop having side members formed with depending portions to engage said recesses to lock the coop to the bottom, truss members at the end and intermediate of the coop structure, and a door arranged below said truss members said ends having eyes to engage the outer vertical rims of the sides and when in upright position bearing against the top of the bottom while the depending portions of the sides have a locking engagement with the corner and side recesses of said bottom.

1,500,793. TRANSFORMER-COOLING MEANS. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Sept. 1, 1922. Serial No. 585,615. 6 Claims. (Cl. 257—191.)



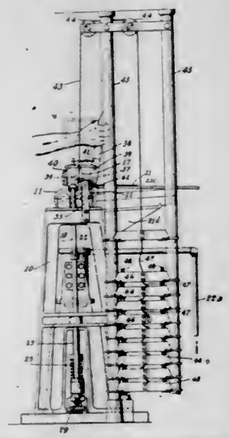
5. An auxiliary cooler for the oil of a transformer tank comprising parallel metal plates welded together along their meeting edges, spacer members welded between said plates at their ends and pipe connections welded to one of said plates for the circulation of oil between said tank and said cooler.

1,500,794. CATALYSTS. MAURICE ERNEST BOUVIER and EMILE BLANC, Lyon, France, assignors to Société Chimique des Usines du Rhône, Paris, France. Filed Sept. 14, 1923. Serial No. 662,757. 10 Claims. (Cl. 23—28.)



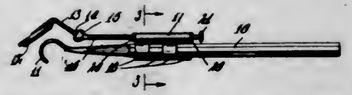
1. A process for the preparation of highly active catalytic agents by the incomplete reduction of an oxide of copper to which is added at any stage of the process an inorganic substance having an alkaline reaction.

1,500,795. CLAMP. JOHN H. BRAMHORST, Milwaukee, Wis. Filed Feb. 28, 1922. Serial No. 539,882. 1 Claim. (Cl. 144—303.)



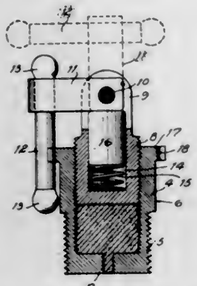
A clamp of the class described comprising a jaw having a bracket formed integral therewith, a screw rotatably mounted in the bracket, a second jaw in threaded connection with the screw, the intermediate portion of said bracket forming a track on which the second jaw is guided, each of said jaws having flat working faces and slanting rear faces to provide an upward taper and having a laterally projecting portion extending beyond a marginal edge of the track, and extension cross heads having sockets for removably mounting the same on said jaws and in binding relation thereto.

1,500,796. BEARING FOR THE GUIDANCE AND LATERAL SUPPORT OF GAS HOLDERS. ROLAND WYNN BROADHEAD, Elland, England. Filed July 11, 1922. Serial No. 574,331. 1 Claim. (Cl. 74—87.)



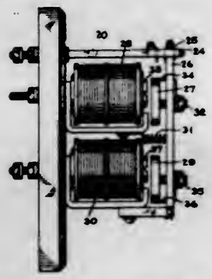
For guiding and laterally supporting a gasholder, and adjacent the guide rails therefor, revoluble bearing pieces without mechanical axles, and carriages mounted about said holder, having pocket-like cavities, each of approximately the same shape internally as the piece contained therein, with one opening only in said cavity, said cavity freely supporting a bearing piece aforesaid, for allowing the latter to spin within the same without being capable of movement of translation, substantially as herein set forth.

1,500,797. HOSE-WRAPPING MACHINE. CHARLES C. CADDEN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1922. Serial No. 542,030. 9 Claims. (Cl. 154—7.)



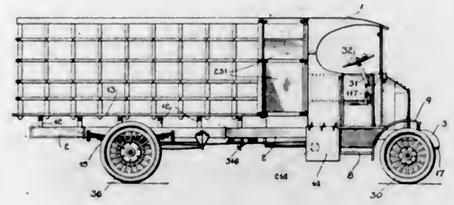
4. A hose-wrapping machine comprising means for supporting and rotating a hose mandrel, a work-contacting tension member for fabric wound on said mandrel, and a set of weights adapted successively to exert their force upon said tension member to increase its tensioning effect.

1,500,798. DENTAL INSTRUMENT AND MIRROR. ALCIBIADES CAMPODONICO, Lima, Peru.—Filed Apr. 12, 1924. Serial No. 706,102. 4 Claims. (Cl. 32—27.)



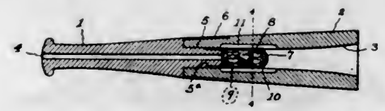
1. A device of the class described comprising a mirror, an arm on which said mirror is fixed, a support for said arm adapted to engage the shank of a dental instrument, and a ball and socket connection between said arm and its support.

1,500,799. LUBRICATOR. THOMAS CARDWELL, Sedalia, Mo. Filed Apr. 3, 1922. Serial No. 549,017. 3 Claims. (Cl. 184—48.)



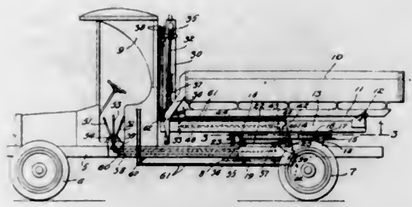
1. A lubricator comprising a cup having a series of circumferentially spaced notches in its exterior surface and an opening for the discharge of lubricant, a feed plug in the upper end of said cup, a lever having one end pivoted on the upper end of said feed plug, an operating handle slidably supported in the free end of said lever and adapted in the lowered position thereof to engage a notch in said cup, and a spring-supported plunger mounted in said plug below the pivoted end of said lever, said end of said lever having flat sides and a flat end, said plunger having a flat upper end adapted to abut flatwise against the flat surfaces of said lever in the upright and lowered positions thereof to yieldably hold the same in said positions.

1,500,800. ELECTROMAGNETIC SWITCH. EUGENE R. CARICHOFF and BENJAMIN W. JONES, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Original application filed Jan. 26, 1920. Serial No. 354,030. Renewed Jan. 6, 1922. Serial No. 527,520. Divided and this application filed Nov. 2, 1920, Serial No. 421,291. Renewed Mar. 22, 1924. 5 Claims. (Cl. 200—98.)



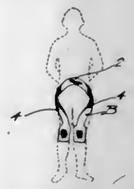
5. The combination in an electric switch of a switch member biased to one position, a "pick-up" electromagnet for controlling the movement of the switch member to another position against its bias and a "drop-out" electromagnet for governing the movement of the switch member to its biased position, each electromagnet having a substantially independent magnetic structure, the "pick-up" winding adapted to be short circuited so as to give the control of the movement of the switch member to the biased position to the "drop-out" electromagnet after an interval of time, an armature for the "pick-up" electromagnet, means for varying the position of the said armature so as to vary the said time interval, an armature for the "drop-out" electromagnet, and means for varying the position of the same so as to vary the value of current in the winding of the "drop-out" electromagnet at which the switch member will be permitted to return to the biased position.

1,500,801. MOTOR VEHICLES. OSCAR F. CARLSON, Chicago, Ill., assignor to Amalgamated Machinery Corp., Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1919. Serial No. 330,036. 11 Claims. (Cl. 180—67.)



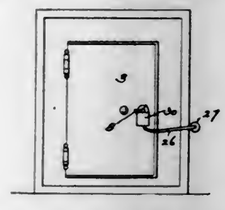
1. In a circulatory system for steam driven vehicles, the combination with the engine boiler and burner of a tank for the fuel supply, a fuel supply line from said fuel tank to the burner, a steam line between the boiler and the engine, an automatic pressure controlled valve in said fuel supply line, and a steam connection for subjecting said valve to the pressure of the steam to regulate the fuel supply to the burner thereby.

1,500,802. CIGARETTE HOLDER. CHARLES A. CHANTILIS, Bellevue, Ohio. Filed Feb. 10, 1922. Serial No. 535,570. 3 Claims. (Cl. 131—10.)



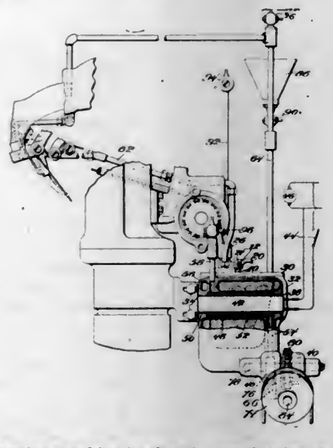
3. In a device of the character described, the combination of a mouth piece, a filter cap mounted thereon and provided with lateral openings, a filtering medium within the filter cap, and a tubular stem carried by the mouth piece and having interior walls adapted to close the lateral openings of the filter cap, said tubular stem being provided with an interior channel adapted to be brought into and out of registry with the lateral openings of the cap by a relative rotation of the tubular stem and cap.

1,500,803. DUMPING VEHICLE. HARDES M. COLBYSON, Minneapolis, and FRANK J. MUMM, St. Paul, Minn. Filed Feb. 17, 1922. Serial No. 537,187. 3 Claims. (Cl. 298—9.)



1. A dumping truck comprising a chassis, a rotatable supporting frame, rollers carried by the chassis, an annulus secured to the frame and traveling on said rollers, a tiltable dumping body supported by the frame, means for rotating the frame, a mechanism for tilting said body, said mechanism including a cable extending through said annulus centrally thereof and traveling against sheaves carried by the rotatable frame and the chassis.

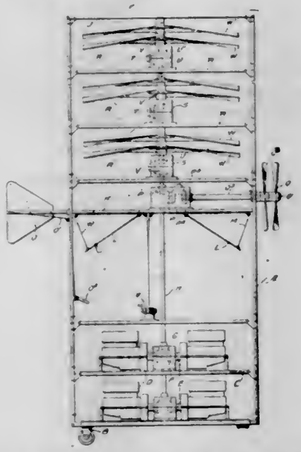
1,500,804. TROUSERS ATTACHMENT. ALEXANDER W. CRAWFORD, Carlinville, Ill. Filed Dec. 31, 1920. Serial No. 434,329. 3 Claims. (Cl. 2—126.)



1. A pair of trousers provided with tension elements extending from the rear upper portion of the trousers at points above the seat to points below the knees of the trousers, the upper and lower portions only of said tension elements being attached to the trousers.

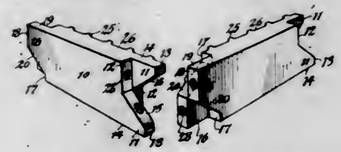
1,500,805. VAULT PROTECTION SYSTEM. JOHN J. DUFFIE, Berkeley, Calif. Filed Mar. 3, 1921. Serial No. 449,438. 10 Claims. (Cl. 177—314.)

1. In a vault protection system, a casing adapted to be attached to the vault door, a cable comprising a plurality of wires connected to the casing and extending across the jamb of the door to an anchorage whereby the door cannot be opened, a signal and means operative by the severing of the cable for operating the signal.



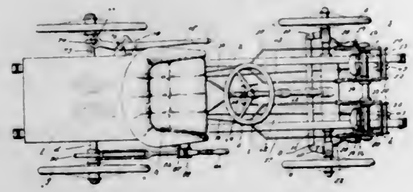
1,500,806. SEWING MACHINE. ANDREW EPPLER, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 14, 1920. Serial No. 373,944. 5 Claims. (Cl. 112—41.)

1. A sewing machine having, in combination, a frame, a wax pot mounted on the frame, fluid conducting means for conducting fluid in a circuitous path extending through the wax pot and to parts of the frame, a pump for caus-



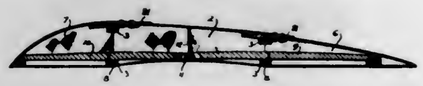
ing the flow of the fluid in the conducting means, a fluid reservoir for initially supplying fluid to the conducting means, a heating device embodied in the conducting means comprising a casing, and a heating element located within the casing and spaced slightly from the inner wall of the casing to cause fluid in the conducting means to flow in a thin film over the heating element.

1,500,807. HELICOPTER. DAVID A. FLANIGAN, Virgin, Utah. Filed May 31, 1923. Serial No. 642,548. 1 Claim. (Cl. 244—19.)



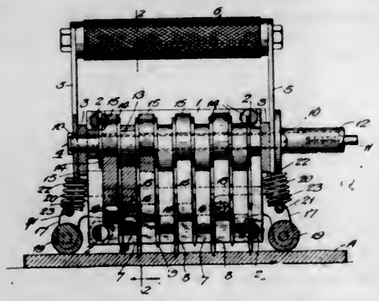
A helicopter consisting of a rectangular vertical frame, a motor supporting portion in the lower end of said frame, motors arranged in said lower end, a single driving shaft geared to be driven from said motors and extending throughout the height of said frame, a series of cases mounted in the upper end of said frame and forming bearings and guides for said driving shaft, a series of vertically disposed beveled gears mounted in said cases, a series of beveled gears meshing with said vertical gears and carried by the driving shaft, a series of gears also meshing with said vertical gears and mounted on sleeves, and a series of lifting blades carried by the driving shaft and sleeves and operated from said driving shaft.

1,500,808. BUILDING BLOCK. JOHN FUHRMANN, Buffalo, N. Y. Filed Nov. 10, 1922. Serial No. 600,062. 5 Claims. (Cl. 72—38.)



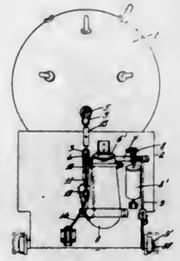
1. A building block comprising a body which is rectangular in cross section and which has one of its ends provided on one pair of diagonally opposite corners with longitudinally extending narrow tenons and on the other pair of diagonally opposite corners with long vertical rear faces, each of said narrow tenons having a short vertical front face, a longitudinal outer face which is flush with the adjacent horizontal face of the body and an inclined inner face which extends from the inner end of said short face to the inner end of the adjacent long rear face which is arranged in the same vertical plane, and the opposite end of said body being provided on one pair of diagonally opposite corners with comparatively wide tenons, and on the other pair of diagonally opposite corners with short rear vertical faces, each of said wide tenons having a comparatively high front face, a longitudinal outer face which is flush with the adjacent horizontal face of the body, and an inclined inner face which extends from the inner end of said high front face to the inner end of said short rear face.

1,500,809. FOOT-PROPELLED VEHICLE. ANTONY GIUFRI, Hartford, Conn. Filed Dec. 29, 1922. Serial No. 609,620. 18 Claims. (Cl. 208—36.)



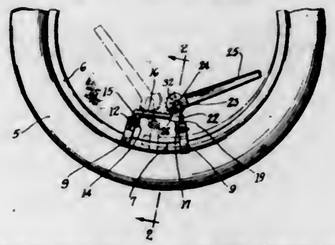
1. In a foot propelled vehicle, the combination with a frame, an axle journalled therein, and wheels thereon, a drive chain for said axle wrapped upon itself, and means for varying the extent to which said chain is wrapped about itself to thereby vary the turning power thereof.

1,500,810. AIRCRAFT-WING CONSTRUCTION. JONATHAN P. GLASBY, Jr., East Orange, N. J. Filed Nov. 19, 1920. Serial No. 425,117. 21 Claims. (Cl. 244—31.)



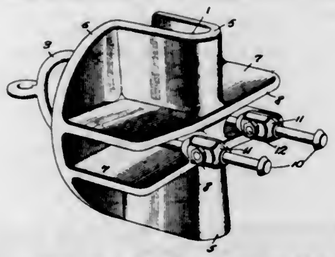
1. In wing construction for aircraft, a wing section stationary with respect to the body of the machine, a wing section adjustable relatively to said stationary section and a lever secured within said adjustable section and extending into said stationary section.

1,500,811. MEAT TENDERER. EZEKIEL GUGGENHEIM, Charlotte, N. C. Filed Oct. 23, 1923. Serial No. 670,267. 7 Claims. (Cl. 17—25.)



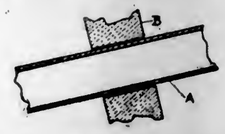
1. A meat tenderer comprising a frame, a plurality of plates slidable vertically in said frame and each having on its lower edge a plurality of piercing points, a shaft carried by the frame, means for rotating the shaft, and means operated from the shaft for reciprocating the plates vertically whereby a steak, over which the frame is moved, will be repeatedly pierced by the points of the plates.

1,500,812. SUBMARINE MINE AND SINKER. ALBAN LEWIS GWYNNE and ROBERT ALEXANDER STURGEON, Portsmouth, England. Filed June 3, 1921. Serial No. 474,783. 9 Claims. (Cl. 102—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



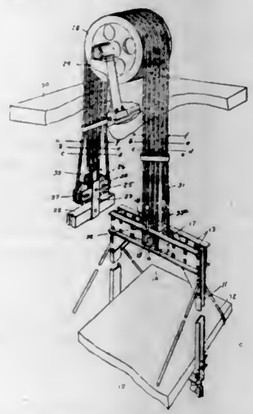
8. A submarine mine comprising a mine proper, a sinker and anchor, means for holding components together initially and gradually acting means for separating the mine from the anchor and for causing the anchor to have a negative buoyancy, said means being independent of the ordinary mooring cable restraint.

1,500,813. VEHICLE WHEEL-RIM JACK. EDMUND HARTUNG, Jersey City, N. J. Filed July 16, 1923. Serial No. 651,715. 1 Claim. (Cl. 157—1.)



A rim jack comprising a pair of rim clamps, hand bolts for drawing the members of each pair towards each other, a forked bracket engageable with one of said bolts, a rack engageable with the other bolt, said rack being operable in the bracket, a segment having teeth meshing with said rack, said segment being pivoted in the fork of said bracket, a handle lever integral with said segment, said segment having a concentric row of spaced openings, a spring actuated detent carried on said bracket engageable in any of the segment openings when brought into register, and means for restraining the action of said detent.

1,500,814. LINK INSULATOR. EDWARD M. HEWLETT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 14, 1921. Serial No. 500,490. 3 Claims. (Cl. 173—366.)



1. An insulator unit having a central or body portion provided with two interlinked passageways, a barrier wall extending in U-shape about one of said passageways, semi-circular flanges extending radially from the ends of said barrier wall, and two substantially parallel barrier walls disposed transversely of said U-shaped barrier wall and adjacent the sides of the second passageway and joined at their rear ends with said radial flanges.

1,500,815. BOILER BAFFLE AND METHOD OF CONSTRUCTING SAME. JOHN H. HINMAN, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 14, 1924. Serial No. 686,217. 15 Claims. (Cl. 25—157.)

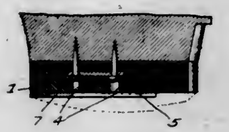
1. In a water tube boiler, the combination of water tubes, and a baffle having molded or cast portions provided with openings for said tubes proportioned so as to permit the tubes to move endwise relatively to the baffle without subjecting the baffle to strains.

1,500,816. CABLE EQUALIZER FOR ELEVATORS AND THE LIKE. JOHN W. HOBBS, Indianapolis, Ind., assignor to The Home Elevator Company, Indianapolis, Ind. Filed July 23, 1923. Serial No. 653,281. 6 Claims. (Cl. 187—1.)

3. A cable equalizing attachment for elevators, comprising a pair of blocks pivotally connected to said elevator, and a pair of cables adapted to pass partially about each of said blocks, one on each side thereof, said cables having their ends rigidly secured thereto whereby said blocks will act as an equalizing connection between each pair of cables.

1,500,817. HOLDER FOR PAPER-BOUND BOOKS. GRANT HOERNER, New York, N. Y. Filed Feb. 23, 1921. Serial No. 447,084. 3 Claims. (Cl. 129—38.)

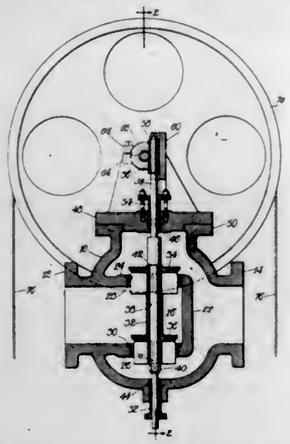
1. A holder for paper-bound books comprising a shallow box receiving the back of the book and preventing its twisting, said box having relatively narrow longitudinal



side walls or flanges and relatively wider end walls, and a longitudinal retaining strip held by the end walls beyond the outer edges of the side walls and passing between the pages of the book to hold it within the box.

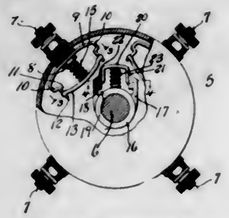
1,500,818. COOLING RADIATOR FOR TRANSFORMERS. SAMUEL HORELICK, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Sept. 1, 1922. Serial No. 585,606. 12 Claims. (Cl. 257—191.)

6. A radiator having opposite corrugated sides, the corrugations overlapping at the interior, sides of the corrugations joining one another at their ends to close their inner bends and end members secured to said radiator sides and forming a space extending across the closed ends of said corrugations and in communication with the space between said corrugated sides.



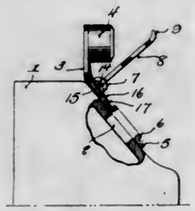
1,500,819. RUBBER HEEL. JAMES J. JOHNSON, San Francisco, and GEORGE E. JOHNSON, Fowler, Calif. Filed Aug. 24, 1922. Serial No. 584,010. 2 Claims. (Cl. 36—35.)

1. A resilient heel having a plurality of non-resilient elements embedded therein centrally between the attaching and outer faces and provided with a plurality of openings therein registering with corresponding openings extending to the outer and attaching faces of the heel, said non-resilient elements being arranged in parallel rows extending longitudinally of the heel.



1,500,820. VALVE. JOHN L. JONES, Birmingham, Ala. Filed June 2, 1922. Serial No. 565,364. 2 Claims. (Cl. 137—104.)

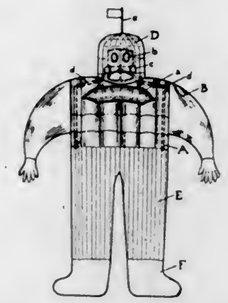
1. An automatic regulating float valve including a valve body having a valve seat therein, a valve adapted to engage said seat, a stem for supporting said valve and means on opposite sides of said valve for guiding said stem, a rack secured to said valve stem, a drum



wheel and pinion operatively connected with said rack and a float and counterweight connected to said drum for controlling the movements of said valve stem.

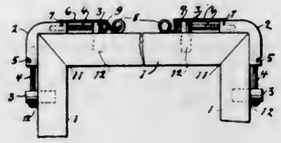
1,500,821. TIMER. ADAM W. KAUFMAN, Milwaukee, Wis. Filed Mar. 7, 1922. Serial No. 541,678. 2 Claims. (Cl. 200—26.)

2. A timer comprising a plurality of binding posts, disposed radially and each having a yoke secured to its inner end, said yoke having inwardly extending arms formed with stops at their inner ends, a contact member removably and slidably mounted on the arms of the yoke, a spring normally holding the contact member against the stops, and a rotor having a yieldable brush adapted to wipe the contact members successively.



1,500,822. OIL-HOLE CAP. ADAM W. KAUFMAN, Milwaukee, Wis. Filed Sept. 29, 1923. Serial No. 665,587. 4 Claims. (Cl. 200—19.)

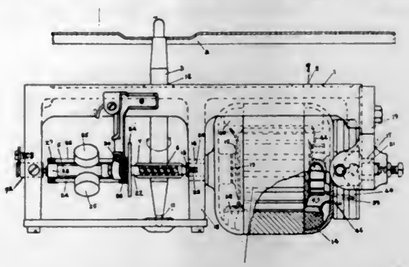
2. The combination of a timer casing having an oil hole therethrough and having a marginal flange surrounding said oil hole and a cover having a portion adapted to contact with said flange and closing said oil hole, and having laterally extending trunnions,



curved ears projecting outwardly from said timer casing and positioned upon the outer side of said trunnions and a flat spring slipped in place beneath the outer end of said cover.

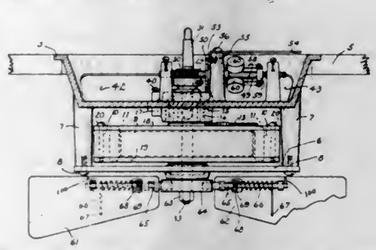
1,500,823. LIFE-SAVING DEVICE. ROBERT J. KEE, Ottawa, Ontario, Canada. Filed Mar. 19, 1923. Serial No. 626,186. 2 Claims. (Cl. 9—20.)

1. A head covering arched in front in shape in a forward direction from the face of the occupant, and containing a glazed opening of plate glass for each eye, and having for means of ventilation two telescopic tubes extending through the arched front of the head covering from side to side opposite the mouth and nostrils of the occupant, and containing automatic spring ends outside the head covering and one side opening in the inner tube and two side openings in the outer tube inside the head covering, one of these side openings of the outer tube further protected by a wire gauze which admits air but not water, and the openings on the outer tube are approximated to the opening on the inner tube by revolving the outer tube on the inner tube at the will of the occupant.



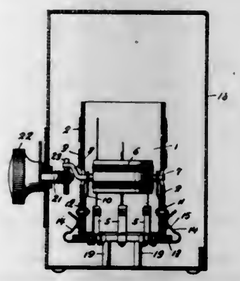
1,500,824. FRAME CORNER. CHARLES E. KLINE, Cedar Springs, Mich. Filed Mar. 26, 1923. Serial No. 627,931. 4 Claims. (Cl. 40—152.)

1. In combination with the sides and ends of a picture frame, metal corner pieces made with the inner surfaces positioned at an exact right angle and having a screw threaded hole in each end longitudinally of the bodies of the corner piece, standards set into openings made laterally into the edges of the sides and ends of the frame, said standards extending outwardly from the edges of the frame members and having a hole through the projecting end laterally for the free passage of a screw, and a screw passed through said opening and screwed into the longitudinal openings in the ends of the corner pieces.



1,500,825. ELECTRIC-MOTOR MECHANISM. GEORGE R. KUNKLE, Elyria, Ohio. Filed Dec. 16, 1921. Serial No. 522,755. 25 Claims. (Cl. 172—36.)

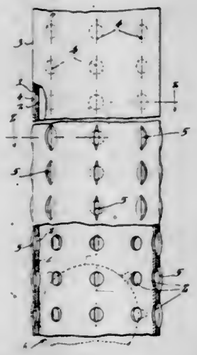
24. In a device of the class described, a motor, a pair of rotors for the said motor, a phonograph turntable driven by one of the rotors, a governor driven by the said rotor and means for retarding the speed of the



other rotor, said governor and said means maintaining the speed of the first rotor at a substantially constant rate.

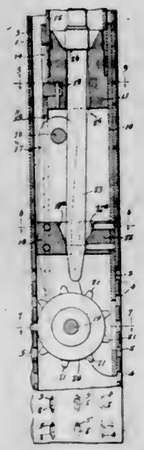
1,500,826. SPEED-REGULATED MOTOR. GEORGE R. KUNKLE, Elyria, Ohio. Filed Aug. 26, 1921. Serial No. 495,756. 2 Claims. (Cl. 172—36.)

2. In a phonograph motor, a pair of rotor elements therefor, both said elements being independently rotatable in opposite directions, an electrical winding on one of the said rotors adapted to be connected to an outside source of electrical current to energize the same, a phonograph turn-table directly connected to the other said rotor and rotatable thereby, and a speed governor driven by such rotor to prevent its speed from exceeding a predetermined speed, and a magnetic circuit energized by the said winding comprising both said rotors.



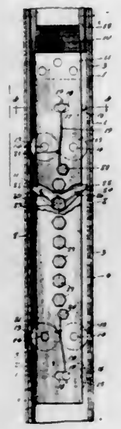
1,500,827. COIL SYSTEM. RALPH H. LANGLEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 22, 1922. Serial No. 576,767. 6 Claims. (Cl. 171—242.)

1. In an apparatus of the class described, the combination of a coil, a hollow cylinder upon which said coil is wound, a plurality of taps to said coil, a plurality of contact members connected to said taps and distributed around the periphery of one end of the cylinder and a holder for said coil having a plurality of contact mem-



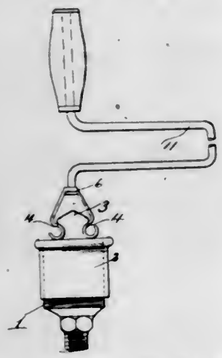
bers arranged in a circle and adapted to make contact with the contact members on the cylinder and thereby serve to hold the coil in a desired position and provide a readily detachable connection between the coil and an electrical circuit.

1,500,828. WELL SCREEN AND METHOD OF MAKING SAME. MAHLON E. LAYNE, Houston, Tex. Filed Apr. 19, 1923. Serial No. 633,083. 15 Claims. (Cl. 166—5.)



1. A well screen comprising an inner pipe having a plurality of perforations in its walls, and an outer pipe having a slit extending across each perforation with the wall of the outer pipe adjacent each slit pressed outwardly to widen the slits and form openings in the outer pipe communicating with the perforations in the inner pipe.

1,500,829. METHOD OF FORMING WELL SCREENS. MAHLON E. LAYNE, Houston, Tex. Filed Apr. 19, 1923. Serial No. 633,084. 6 Claims. (Cl. 29—163.5.)

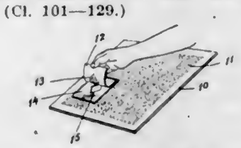


1. A method of forming well-screens, which consists of forming longitudinal rows of holes in a length of casing, positioning said casing within an outer casing, lowering into the inner casing a tool having a perforating element, manipulating the tool from outside the casing to engage said element with a row of said holes, and translating the tool to positively form screen apertures in the outer casing with the holes of the inner casing serving as means for guiding the perforator element during a perforating operation.

1,500,830. WELL-SCREEN-FORMING DEVICE. MAHLON E. LAYNE, Houston, Tex. Filed Apr. 19, 1923. Serial No. 633,085. 10 Claims. (Cl. 81—199.)

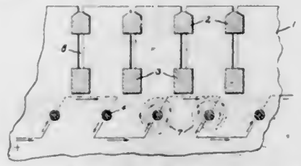
1. A well-screen forming device including a body adapted to be longitudinally translated in a double-wall well casing having longitudinal rows of holes in its inner wall, diametrically disposed toggle members carried by the body and adapted to extend beyond the wall of the inner casing when in horizontal position, said members cooperating with the walls of said holes during a longitudinal translation of the device to form screen apertures in the outer casing wall.

1,500,831. ATTACHABLE HANDLE FOR GREASE-CUP CAPS. ARTHUR E. LITTLE, Cleveland, Ohio. Filed Nov. 21, 1921. Serial No. 516,829. 2 Claims. (Cl. 81—125.)



1. In a device for rotating the cap of a grease cup, said grease cup provided with laterally extending engaging means, a revolvable handle, a plate upon the extremity of said handle, said plate extending at right angles thereto, the lateral sides of said plate inclined longitudinally and radially therefrom, said sides providing opposite resilient gripping means and engageable with said engaging means on said cap.

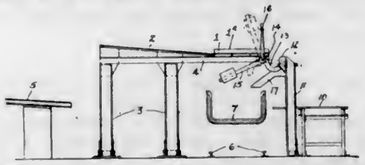
1,500,832. WIRE TIE FOR REENFORCING RODS AND BARS. RICHARD GIFFORD LUDWIK, Brooklyn, N. Y., assignor to Concrete Steel Company, New York, N. Y., a Corporation of Delaware. Filed May 28, 1923. Serial No. 641,824. 8 Claims. (Cl. 72—122.)



1. A tie for the junction of reenforcing bars, comprising a wire member having a loop adapted to one of said bars, a pair of loops continuous with the first named loop and adapted to a bar crossing the first; all of said loops being of substantially the same depth, and arms extending from said pair of loops and adapted to cross over and engage the bar adapted to the first-mentioned loop.

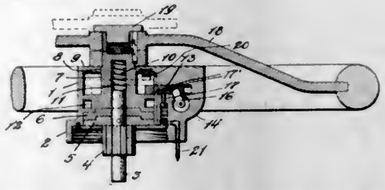
1,500,833. ART OF ORNAMENTING OR COATING. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 17, 1922. Serial No. 575,478. 1 Claim. (Cl. 101—129.)

The herein-described method which comprises applying a coating of colored rubber cement to a support, placing a stencil over said coating, placing a sheet of material over said stencil, causing adhesion of a definite area of the coating to said sheet through the stencil, and stripping off the sheet with the definite area section of the coating adhering thereto.



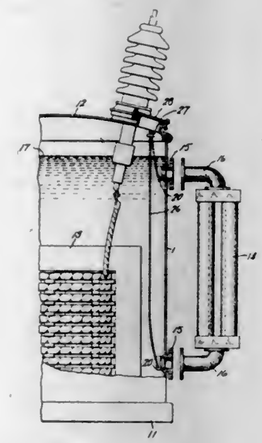
1,500,834. METHOD OF AND APPARATUS FOR MODIFYING THE CHARACTERISTICS OF ASYNCHRONOUS DYNAMO-ELECTRIC MACHINES. CAMPBELL MACMILLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 7, 1922. Serial No. 566,553. 8 Claims. (Cl. 172—120.)

1. In an alternating current motor of the induction type, the method of modifying the characteristics thereof which consists in artificially and uniformally saturating the normal flux path beneath the secondary winding.



6. A double squirrel cage secondary member for an induction motor having a distributed direct current winding beneath said squirrel cage windings and means whereby said direct current winding may be connected to an external direct current source.

1,500,835. BUNDLING TABLE. THOMAS J. MALONEY, Youngstown, Ohio. Filed July 12, 1923. Serial No. 651,076. 10 Claims. (Cl. 214—1.)

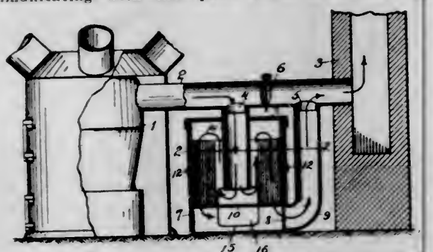


1. The combination of a table, and a series of members projecting horizontally beyond one edge thereof to form a pocket wherein articles from said table may be assembled, said members being transversely movable to drop such assembled articles when desired.

1,500,836. AUTOMOBILE LOCK. HENRY MAYER, St. Louis, Mo., assignor of one-half to Frederick Mayer St. Louis, Mo. Filed Dec. 27, 1921. Serial No. 524,967. 2 Claims. (Cl. 70—127.)

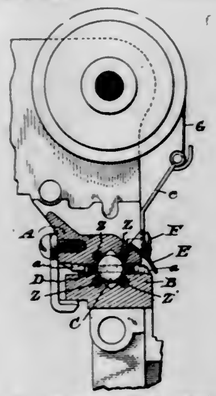
1. The combination with the steering-post, steering stem, steering wheel, and ignition circuit of an automobile of a shell disposed upon the steering post and having electrical connection with the ignition circuit, and means including a clutch-member disposed for movement within the shell for locking the steering wheel in and out of steering engagement with the stem and for breaking and closing the ignition circuit, said clutch-member being adapted to metallically contact with the shell and thereby short the ignition circuit when in wheel unlocking position.

1,500,837. INCASED ELECTRICAL APPARATUS. WALTER S. MOODY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 26, 1920. Serial No. 419,762. 1 Claim. (Cl. 220—1.)



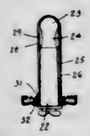
A casing for oil submerged electrical apparatus having detachable external radiators, said casing being provided with plugs inserted from the interior of the casing into the orifices in the casing wall through which the radiators connect when attached thereto, exterior devices for securing said plugs in place against the action of direct displacing forces when the radiators are detached, and means disposed within the casing for opening said orifices by withdrawing said plugs after said exterior devices are removed and the radiators are attached, said means being arranged to be manipulated from inside the casing.

1,500,838. HEATING ATTACHMENT FOR STOVE OR FURNACE PIPES. HENRY MILLER, Kansas City, Mo. Filed Mar. 23, 1922. Serial No. 546,102. 3 Claims. (Cl. 257—172.)



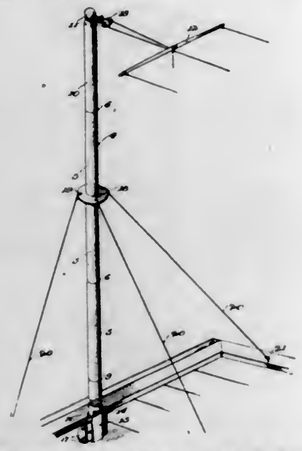
2. In a device of the kind described, the combination with a smoke pipe and a flue into which the pipe discharges, said pipe having two lateral openings and a

damper located in the pipe between said openings, of an upright drum having near its lower end a lateral discharge opening, a cup-shaped member in said drum having its bottom above said discharge opening and its upper end spaced apart from the upper end of said drum; the side walls of said cup-shaped member forming with the side walls of the drum one or more vertical passages communicating with the spaces above and below said



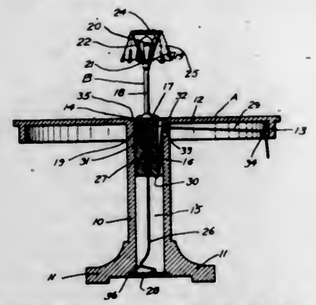
member, a vertical pipe extending through the top of said drum and communicating with its upper end with one of said lateral openings of said smoke pipe and extending into said cup-shaped member and having its lower end spaced apart from the bottom of the latter, and a pipe communicating at its ends respectively with said discharge opening and with the other lateral opening of said smoke pipe, substantially as set forth.

1,500,839. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 23, 1923. Serial No. 658,959. 13 Claims. (Cl. 197—69.)



1. A bearing for a typewriting machine comprising balls or rollers and rails between which the balls are mounted each provided with a plurality of wearing members with which the rails engage.

1,500,840. CASTER SOCKET. WILLIAM H. NOELTING, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed Mar. 26, 1923. Serial No. 627,780. 8 Claims. (Cl. 16—38.)

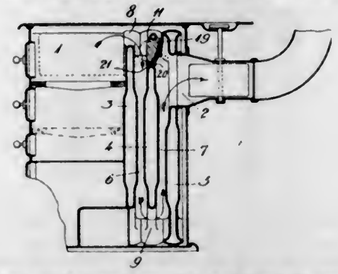


1. A caster stem socket comprising a tubular body portion longitudinally slitted to form an inwardly extending retainer integral at both ends with the body portion, said retainer having a twist imparted thereto.

1,500,841. AERIAL STANDARD. DELMAR PASKE, Newfane, N. Y. Filed Aug. 23, 1923. Serial No. 658,958. 2 Claims. (Cl. 20—99.)

1. A standard of the character described composed of sections, socket and tenon joints connecting said sections, a plate interposed between the adjoining members of one of said joints, brace wires extending from said plate, and a base member comprising clamping plates to receive the lower end of the standard, said plates having angular extensions for securing said member to a base.

1,500,842. TABLE LAMP. JARL O. PAULSON, Fargo, N. Dak. Filed Mar. 25, 1922. Serial No. 546,849. 8 Claims. (Cl. 240—4.)

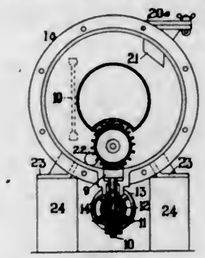


1. In combination with a table having a top and a hollow pedestal, an opening through said top communicating with said hollow pedestal, a member slidable within said pedestal having a portion of the same dimensions as said opening and forming a continuation to said top when in its upper position, a lamp mounted upon said slidable member adapted to be withdrawn into said pedestal upon the lowering of said slidable member, inclosure means for closing said top when the lamp is in its lowermost position.

1,500,843. COOKING STOVE. FRITZ ALBERT PETTERSSON, Halmstad, Sweden, assignor to Aktiebolaget Gjuterimaskiner, a Company Ltd., Halmstad, Sweden. Filed Nov. 21, 1922. Serial No. 602,444. 4 Claims. (Cl. 126—5.)

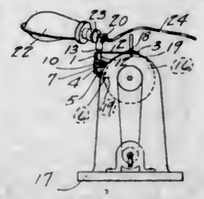
1. A cooking stove and water heater comprising,—a fireplace, a water heater located behind the fireplace and comprising front, intermediate and rear water containing elements spaced from each other to form vertical front and rear passages for the fire gases, a baking oven

located at one side of the fireplace, means around the oven forming passages for directing the fire gases over the top of the oven, thence down one side, and thence beneath the bottom thereof, means forming a passage for directing the said gases from beneath the oven to the said vertical rear passage between the intermediate and



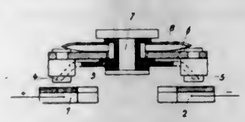
rear water containing elements, and control means for the fire gases comprising a damper for shutting off the flow of gases around the oven and a second damper for controlling the flow of gases through the said vertical front passage whilst the flow through the said vertical rear passage is uninterrupted.

1,500,844. OIL-SOLUBLE DYESTUFF. HERMANN PLAUSON, Hamburg, Germany. Filed Feb. 12, 1921. Serial No. 444,493. 7 Claims. (Cl. 260—69.)



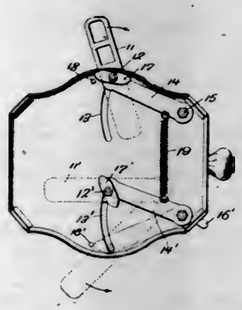
7. The process of preparing synthetic resins by condensation of resin components which includes the step of adding a diazo compound prior to complete condensation.

1,500,845. PROCESS AND APPARATUS FOR THE MANUFACTURE OF DISPERSOIDS. HERMANN PLAUSON, Hamburg, Germany. Filed Apr. 22, 1921. Serial No. 463,618. 10 Claims. (Cl. 259—107.)



1. A mill for producing colloidal solutions comprising a liquid-tight casing, a disintegrator of the beater type eccentrically mounted therein and adapted to rotate at a peripheral speed of at least 1500 metres per minute.

1,500,846. SEWING-MACHINE LAMP BRACKET. JAMES T. PRICE, Lincoln, Ill. Filed Oct. 8, 1923. Serial No. 667,190. 2 Claims. (Cl. 240—2.)

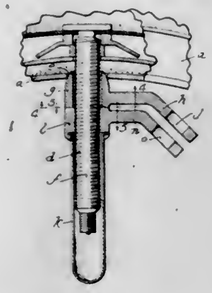


1. A bracket of the kind described, adapted for attachment to the arm of a sewing machine and for supporting an electric lamp in operative position at the front of the sewing arm, the said bracket comprising a top strip having anchor prongs adapted to embrace the spool spindle, a perpendicular connecting strip, an inwardly extended bottom strip, and a downwardly turned anchor tab; the said top and bottom strips having aligned holes adjacent the connecting strip, and a lamp supporting post rotatively mounted through the said aligned holes; and means for securing the bracket to the sewing machine arm.

1,500,847. ELECTRIC SWITCH FOR HEAVY ELECTRIC CURRENTS. MAX RALL and ROBERT MAIER, Stuttgart, Germany, assignors to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Feb. 10, 1922. Serial No. 535,550. 6 Claims. (Cl. 200—146.)

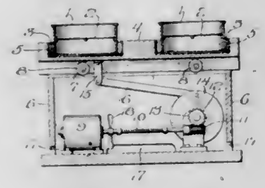
4. In an electric switch for heavy currents, the combination with spaced stationary contact members, of a conducting bridge adapted for perpendicular switching movements relative to said stationary contact members and comprising a spring-plate member provided with contacts for engagement with said stationary contact members, a rigid carrier member and contacts carried thereby for engagement with said stationary contact members, means mounting said carrier member upon said spring-plate member for vertical movement with respect to said spring-plate member and a spring arranged to press said carrier member toward said spring-plate member.

1,500,848. TURNOVER TOASTER. WILLIAM A. RANKIN and LUTHER E. HARDIN, Chicago, Ill., assignors to Edison Electric Appliance Company, Inc., a Corporation of New York. Filed Dec. 29, 1921. Serial No. 525,755. 10 Claims. (Cl. 53—5.)



1. A toaster comprising a heating element, a slice holder supported to swing away from the heating element to permit it to turn to present another side thereto, and means whereby when the slice holder is so swung it is automatically turned.

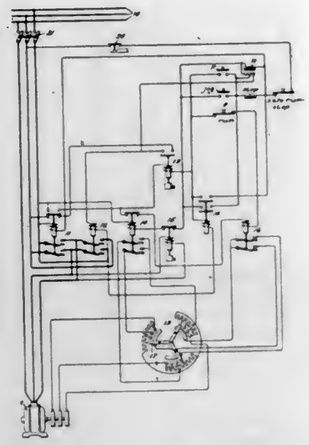
1,500,849. TIRE PROTECTOR. WALTER J. RUDOLPH, Chicago, Ill., assignor to Imperial Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 26, 1922. Serial No. 563,771. 2 Claims. (Cl. 70—122.)



1. In a tire protector, the combination with a supporting member through which the inflation valve of a tire extends, of a locking member associated with the valve and having an aperture therethrough, a locking

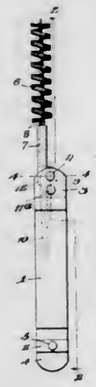
cap also provided with an aperture adapted to be brought adjacent the locking member while covering the valve and to be turned on the valve to bring its

aperture into register with that of the locking member and to prevent its removal while so turned, and a padlock adapted to engage the apertures.



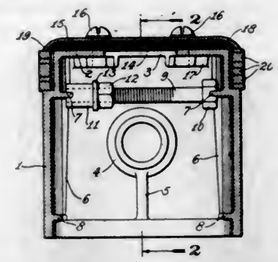
1,500,850. GRADING MACHINE FOR GRANULAR MATERIAL. DONALD B. RUSH, Villa Park, Ill., assignor to Robert W. Hunt Company, a Corporation of Delaware. Filed Jan. 9, 1924. Serial No. 685,153. 8 Claims. (Cl. 83—56.)

1. A machine of the character described comprising a support, a circular sieve resting loosely on said support, means for limiting the movement of the sieve relative to said support, means for reciprocating said support, and stops on said support in front of and behind the sieve and spaced apart a distance greater than the diameter of the sieve, said stops being arranged on opposite sides of a line passing through the center of the sieve in the direction of reciprocation, whereby the sieve will be given a step-by-step rotary movement as well as a shaking or jarring when said support is reciprocated.



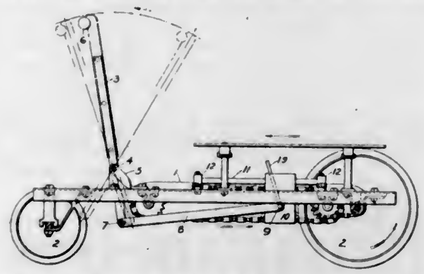
1,500,851. SYSTEM OF MOTOR CONTROL. CARL F. SCOTT, Yonkers, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 20, 1923. Serial No. 620,268. 12 Claims. (Cl. 172—179.)

1. The combination with an electric motor, of electroresponsive switch mechanism for connecting the motor to a source of supply for forward or reverse operation, master switch mechanism for controlling the said electroresponsive switch mechanism, connections whereby operating the said master switch mechanism causes the operation of said electroresponsive switch mechanism to disconnect the motor from the source of supply for forward direction of operation and connect the motor to the source of supply for reverse operation to produce a braking action, and a time element device set into operation responsively to the operation of said master



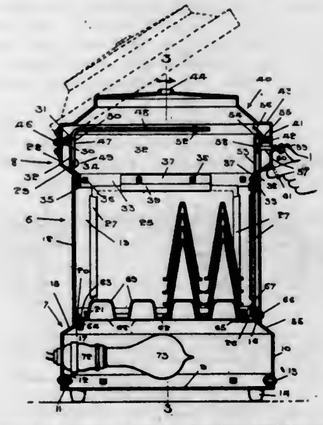
switch mechanism for automatically disconnecting the motor from the source of supply when the braking action has substantially ceased.

1,500,852. SPARK-PLUG CLEANER. CLARENCE A. SHEPHARD, Bridgeport, Conn. Filed Dec. 1, 1922. Serial No. 604,318. 6 Claims. (Cl. 7—16.)



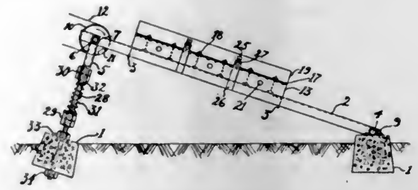
2. In a spark plug cleaner, a handle, a member having a shank provided with spaced sides and a back, a second member mounted between the shank sides and engageable with the back, means common to the shank and second member for independently and conjointly pivotally connecting each to the handle, and stop means for the two members.

1,500,853. PISTON. WILLIAM I. SHORT, Clayton, Mo. Filed Sept. 28, 1921. Serial No. 503,845. 12 Claims. (Cl. 74—108.)



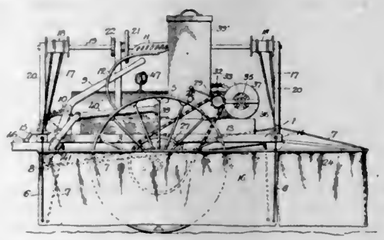
1. A trunk piston comprising, a continuous shell having a wrist pin bearing, and means for expanding said shell transversely of said bearing and diminishingly from its closed to its open end.

1,500,854. CHILD'S OCCUPANT-PROPELLED VEHICLE. FRED STARR, Oakland, Calif. Filed Oct. 28, 1922. Serial No. 597,483. 4 Claims. (Cl. 208—38.)



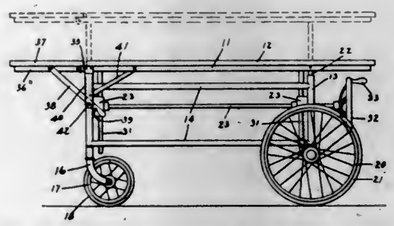
1. An occupant-propelled vehicle, comprising, in combination, a wheeled frame, an upstanding lever pivotally mounted on said frame, and adapted to be oscillated by the rider thereof, a chain and sprocket drive applied to the rear axle of said frame, and a connection between said lever and said chain whereby the oscillation of said lever rotates said chain, and means to reverse the direction of travel of said chain.

1,500,855. OVEN AND DISPLAY DEVICE. CHARLES GAINER TURNER, Atlanta, Ga. Filed July 20, 1921. Serial No. 486,304. 3 Claims. (Cl. 220—32.)



1. A container for pastry and other articles comprising a casing, a cover for the casing hinged to one wall thereof, a spring secured to said wall and having an arm extending away from said wall under the cover, the cover having a portion through which said arm is slidable, said arm serving to raise the cover, to yieldingly limit the opening movement thereof and to hold the cover open in inclined position, and a latch for holding the cover closed.

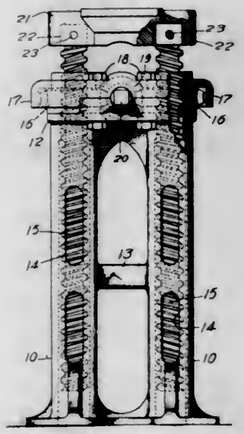
1,500,856. VIBRATING SCREEN. TIMOTHY D. WALSH, Los Angeles, Calif. Filed Feb. 5, 1921. Serial No. 442,728. 9 Claims. (Cl. 83—56.)



3. The combination with a support; of a frame pivotally mounted on the support and adapted to oscillate; a pillar mounted on said support and extending toward the frame; a spring carried by the pillar and resiliently supporting the frame at a distance from the pivot; a bumper mounted on said pillar to stop the frame on its upward movement; and an unbalanced rotor connected to the frame to vibrate it on its axis of oscillation.

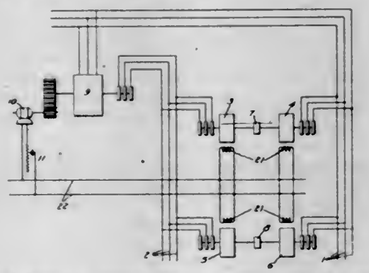
1,500,857. INSECT-DESTROYING MACHINE. ROBERT LEE WOODRUFF, Winder, Ga. Filed Sept. 14, 1922. Serial No. 588,129. 8 Claims. (Cl. 43—148.)

1. An insect-destroying machine, consisting of a main frame, adjustable side and end frames, aprons carried by said side and end frames and connected to the frame to form an entire closure around said frame, and means for distributing water on the cotton before passing under said aprons and means arranged in rear of said water distributing means for delivering poison under said aprons on the cotton.



1,500,858. STRETCHER. CHARLES S. WOODS, Indianapolis, Ind. Filed May 29, 1922. Serial No. 564,565. 3 Claims. (Cl. 254—6.)

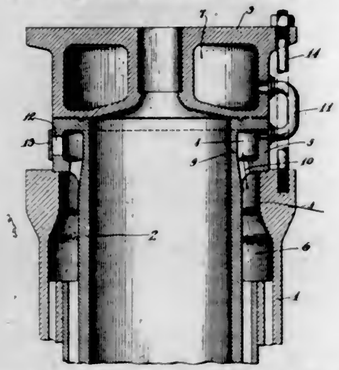
1. In a portable stretcher, the combination of a stretcher-supporting portable carriage framework including four tubular corner posts defining said framework, a rectangular stretcher positioned above the same and provided with an equal number of depending guides telescopically associated with said tubular corner posts, a pair of depending racks supported by and depending from



said stretcher, a gear associated with each rack, a worm and worm wheel for each gear, and a common shaft for actuating said worms for simultaneously moving said racks to elevate or lower the stretcher upon the framework.

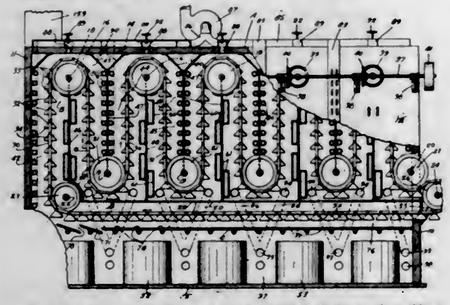
1,500,859. LIFTING JACK. CHARLES V. WRIGHT, Tamaqua, Pa. Filed Aug. 4, 1922. Serial No. 579,712. 1 Claim. (Cl. 254—92.)

A jack comprising two connected parallel tubular standards, screws situated in such standards, nuts for the respective screws swivelled to the standard each nut being a worm wheel, a worm lying between the wheels and a cross-bar extending between and connected with the screws that forms the bearing members for the object to be moved, a head connecting the two standards and a cap attached to such head and housing said wheels and worm and forming with the head bearings for the same.



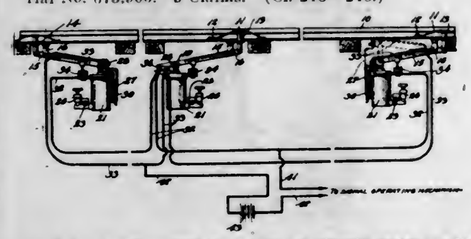
1,500,860. ELECTRIC CONTROL SYSTEM. SEIGO YO, Tokyo, Japan, assignor to General Electric Company, a Corporation of New York. Filed May 17, 1922. Serial No. 561,615. 5 Claims. (Cl. 172—239.)

1. An electric control system comprising in combination with a movable object, a pair of frequency responsive alternating current motors, driving means for said object differentially associated with said motors, a source of alternating current supply and electrical connections between said supply source and said motors including means for varying the frequency of the energy supplied to one of said motors to control the movements of said object.



1,500,861. CYLINDER AND HEAD CONSTRUCTION. EUGEN ZBINDEN, Winterthur, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 22, 1924. Serial No. 694,451. 3 Claims. (Cl. 123—173.)

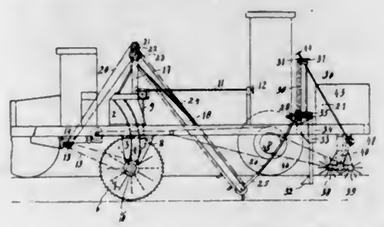
1. In an internal combustion engine, a cylinder water-jacket, a water-jacketed cylinder head having a stud-receiving flange at the end remote from the cylinder and ontside the cooling space of the head, a cylinder liner having an enlarged immediately accessible external flange on the top of which the cylinder head seats and which seats on the top of the outer wall of the cylinder water-jacket, said flange being provided with an annular cool-



ing chamber surrounding the hottest part of the cylinder and in communication with the cylinder water-jacket and external studs located outside the liner flange in the atmosphere and received by said stud-receiving flange and clamping the cylinder head to the cylinder liner and the cylinder liner to the outer wall of the jacket.

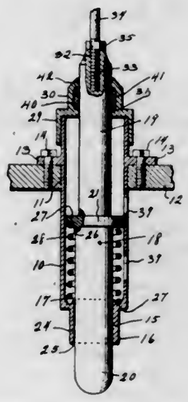
1,500,862. DRIER. SWAN G. BONAPARTE, St. Paul, Minn. Filed Apr. 13, 1922. Serial No. 552,281. 22 Claims. (Cl. 34—12.)

15. A drier comprising a casing having a plurality of vertically arranged chambers, continuous carriers passing successively through said chambers, a plurality of perforated pipes passing along the walls of said chambers, openings formed through said chambers at the upper portions thereof and suction means for simultaneously drawing moisture through said pipes and said openings in the chambers.



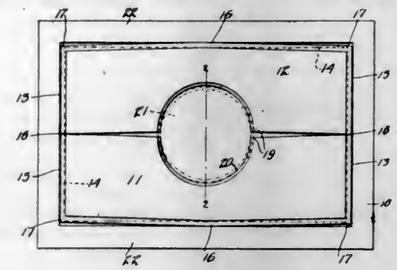
1,500,863. SIGNAL-CONTROL APPARATUS. JOSEPH H. DOWNS, Fort Wayne, Ind. Filed Nov. 20, 1923. Serial No. 675,900. 9 Claims. (Cl. 246—248.)

1. In a signal control apparatus, a circuit maker, a device disposed for actuation by a vehicle wheel to establish circuit to a signal mechanism, a circuit breaker connected



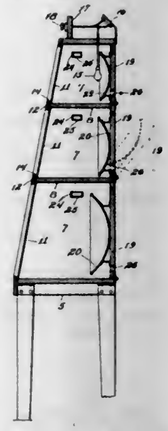
to control said signal circuit, means for actuating said breaker by the wheel of a vehicle, and means for retarding the movement of said circuit breaker to control the action of said circuit maker.

1,500,864. METHOD AND MACHINE FOR DIGGING IRRIGATION AND PLANTING FURROWS. JOAN J. M. ELIAS, Banjoemas, Java. Filed Dec. 12, 1922. Serial No. 606,467. 3 Claims. (Cl. 97—40.)



2. A soil working machine comprising a motor driven frame, a set of saw-disks mounted below the frame and arranged for vertical adjustment, beaters arranged between the saw-disks, coulters carried by the frame and arranged in the rear of the saw-disks and beaters and rotary rakes carried by the frame and arranged in the rear of the coulters said coulters and rotary rakes being also mounted for vertical adjustment, and means for independently driving the saw-disks and beaters and the said rotary rakes.

1,500,865. VALVE TAPPET. JOSEPH EUGENE FOSS, Florence, S. C. Filed June 14, 1922. Serial No. 568,313. 4 Claims. (Cl. 123—90.)

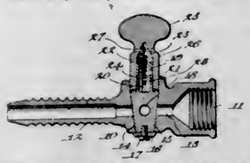


1. A tappet assembly for the valves of internal combustion engines embodying a tappet shell adapted to be secured in the shell receiving opening of the base of an engine and provided interiorly at the lower end thereof with an axial opening and an upwardly directed shoulder, a tappet having its lower end slidably engaged in said opening and slidably engaging the interior wall of the shell, a downwardly directed shoulder formed on said tappet, and a compression spring disposed intermediate the shoulders of the shell and tappet, the bore of the shell being unrestricted at its upper end to thereby permit removal of the tappet from the shell while the shell is in position in the base of the engine.

1,500,866. STOVE TOP. ISAAC L. FRANKEM, Indianapolis, Ind. Filed Aug. 13, 1923. Serial No. 657,123. 7 Claims. (Cl. 126—211.)

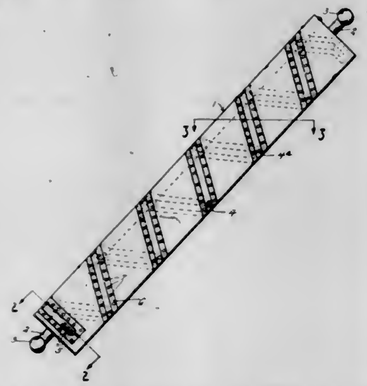
1. In combination a stove top having a rectangular opening over the fuel chamber, a ledge about the opening below the upper level of the stove top, a pair of reversible plates adapted to rest on the ledge and cover the rectangular opening over the fuel chamber, said plates being reduced in width approximately midway of their length to form a common fuel opening and being inclined toward each other at the ends so as to permit them to be straightened under the influence of heat without rising from said ledge, substantially as set forth.

1,500,867. MEANS FOR EXAMINING X-RAY PLATES AND THE LIKE. EDWARD T. GLOVER, Portsmouth, Va., assignor of one-half to Robert E. Glover, Portsmouth, Va. Filed Oct. 8, 1923. Serial No. 667,241. 3 Claims. (Cl. 40—132.)



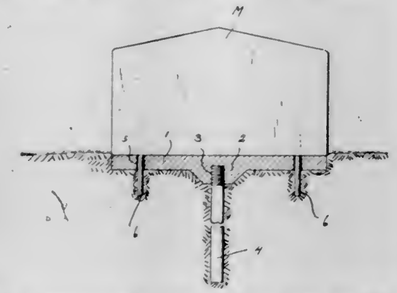
2. Means for examining single or groups of X-ray plates and the like comprising, in combination, a plurality of light boxes arranged side by side and in tiers, a cabinet in which said boxes are assembled so as to be adjustable as to size, a front for the cabinet including opal glass panels arranged on an inclined plane, means for securing the panels including means for positioning the plates, means for directing light rays through said panels, means for selectively illuminating the boxes, and air intake and exhaust provisions for the boxes.

1,500,868. GAS VALVE. GEORGE LOUIS GRADER, Brooklyn, N. Y. Filed Sept. 10, 1921. Serial No. 499,693. 1 Claim. (Cl. 251—165.)



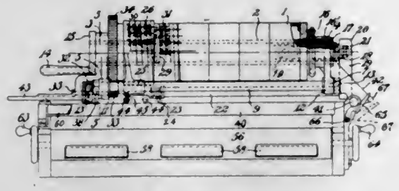
A gas cock comprising a body portion, opposed shoulders formed on the top of said body portion, recesses adjacent said shoulders, a valve having a reduced cylin-

drical end formed with an axial slot, a key formed to fit over said end of said valve, a pin carried by said key and passing through said slot and through and beyond one side of said key to co-act with said recesses, and a



spring connecting said valve and key and operable to cause said pin to co-act with slots in said body portion the shoulders serving as stops for limiting the movement of said pin in either direction as and for the purpose set forth.

1,500,869. TOY. CLARA HINSON, Sharon, Pa. Filed July 27, 1923. Serial No. 654,213. 2 Claims. (Cl. 46—41.)



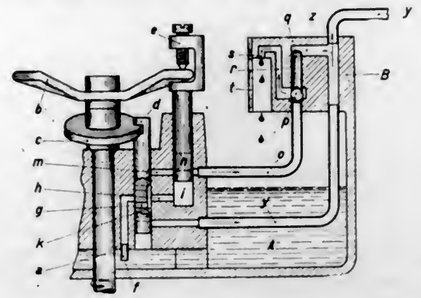
1. In a device of the character described, an elongated body of polygonal cross-section, said body being provided in its outer face with a groove extending longitudinally thereof, said groove being formed of a plurality of straight sections extending across the faces of the body at an inclination thereto, balls mounted within the groove to travel freely therein, and transparent closure means for said groove.

1,500,870. FOUNDATION STRUCTURE. CHARLES H. HOLDREDGE, Stonington, Conn. Filed Nov. 26, 1923. Serial No. 677,035. 2 Claims. (Cl. 72—72.)

1. A supporting structure of the class described comprising a plate provided at its axial center with a depending protuberance having a threaded opening, a stake having one end portion threaded within said opening, said plate being provided with means for coaction with a member superimposed thereon for maintaining said member in applied position.

1,500,871. INSTRUMENT FOR GRAPHICALLY RECORDING SERIES OF OBSERVATIONS INVOLVING TWO FACTORS. EDWARD HOLLAND and RONALD G. COLLINGWOOD, Cairo, Egypt. Filed July 27, 1923. Serial No. 654,256. 13 Claims. (Cl. 33—189.)

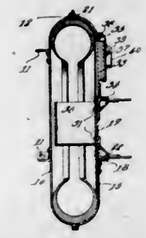
1. A plotting device comprising a hollow drum provided with graduations, means for rotating the drum and means for preventing axial movement of the drum, an index associated with said drum and adapted to be set to any graduation on the drum, means actuated by the rotation of said drum for moving said index longitudinally of the drum, a marking device carried by the index, and means for causing the marking device to plot a mark on a recording sheet corresponding to every setting of the index.



1,500,872. AUTOMOBILE BED. FRED W. HORTON, Eldora, Iowa, assignor of one-half to J. H. Hadley, Waterloo, Iowa. Filed July 26, 1921. Serial No 487,602. 3 Claims. (Cl. 5—118.)

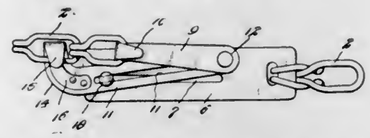
1. In a knock-down bed for vehicles, the combination of spaced sockets disposed at the rear thereof, with independent longitudinally extending rails having means to engage the front seat of the vehicle and hooked ends to removably interlock with said sockets whereby they are held in predetermined spaced relation against longitudinal and lateral movement to support the seat cushions of the vehicle, a flexible body member adapted to extend over said cushions when so positioned and provided with means for attachment to the rear of each of said rails, and means for adjustably connecting the other end of the flexible body to the vehicle.

1,500,873. LUBRICATOR DEVICE. EDMUND INGELFINGER, Waiblingen, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed May 18, 1922. Serial No. 561,929. 4 Claims. (Cl. 184—27.)



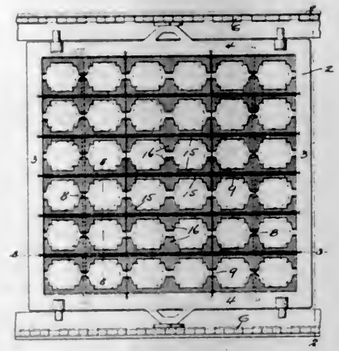
1. In a lubrication device, the combination with a lubrication pump, of a drop-indicator having a drop-feeding part, a pipe leading from said lubrication pump to said indicator, a pipe leading from said pump for delivery of oil for lubrication, a shut-off member controlled by pressures on opposite faces thereof arranged

between said first mentioned pipe and said pipe-feeding part of said indicator and having one face exposed to



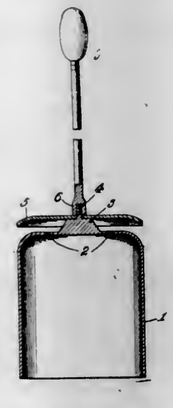
pressures in said first mentioned pipe, and a pressure-transmitting connection between said second mentioned pipe and the opposite face of said shut-off member.

1,500,874. AUTOMOBILE TIRE AND TOOL CASE. CHARLES R. ISHBURN, Helena, Ark. Filed Apr. 17, 1922. Serial No. 553,541. 1 Claim. (Cl. 224—29.)



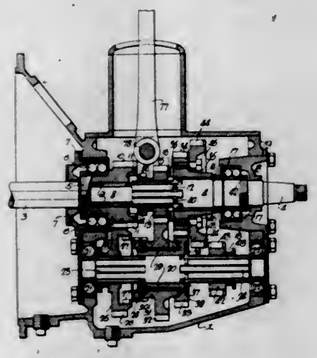
In a case of the class described, a circular back including a circumferential flange, a front section for partly closing a compartment formed between said section and the back, a segmental cover hinged to the said front section, and having an edge portion corresponding with the oppositely located portion of the back, said cover including a transverse solid portion, and having a cut-away portion adjacent thereto, a receptacle detachably connected with the inner side of said transverse portion, and a second cover hinged to the transverse portion, said receptacle being connected with the cover first named at a point between the hinged connection thereof and the hinged connection for the second cover, and devices for retaining the covers in horizontal position when opened.

1,500,875. CHAIN FASTENER. PACIFIC JOLIN, Le Bret, Saskatchewan, Canada. Filed July 10, 1922. Serial No. 573,849. 3 Claims. (Cl. 24—70.)



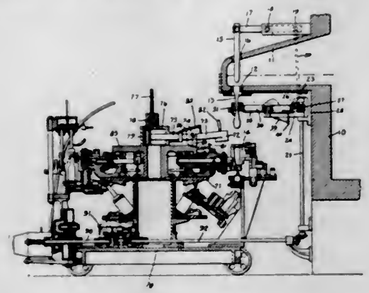
1. The combination with an anti-skid chain, of means for connecting the end links thereof, comprising a notched plate to which one of the end links is connected, a lever pivotally and slidably associated with the plate having a hooked end, and having a headed stud adjacent to its opposite end, a hook carrying strap pivotally secured to the last mentioned end of the lever, and the headed stud of the lever adapted to be received in one of the notches of the plate to allow the hook carrying strap to have its hooked end projected beyond one end of the plate to engage the second end link of the chain, and thereafter said lever designed to be moved on its rolling pivot to bring its hooked end to engage with a link of the chain adjacent that engaged by the hook of the strap.

1,500,876. EGG CARRIER. MORRIS KASSER, San Francisco, Calif., assignor to Kasser Egg Process Co., San Francisco, Calif., a Corporation of California. Filed Apr. 24, 1920. Serial No. 376,239. 3 Claims. (Cl. 99—6.)



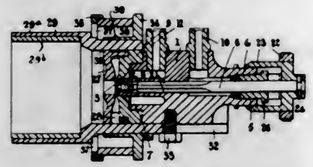
1. An egg carrier comprising a frame, a plurality of egg supporting leaves arranged in pairs in the frame, vertically movable cross-bars in which the leaves are pivoted at their ends and supporting rods disposed below and at right angles to the leaves, movement of the cross bars serving to move the leaves about their pivots.

1,500,877. MILK COOLER. JESSE C. KING, Lindley, N. Y. Filed Nov. 11, 1922, Serial No. 600,340. Renewed May 23, 1924. 1 Claim. (Cl. 259—143.)



A device for cooking and aerating milk, comprising an inverted cup-shaped member having its top provided with spaced circumferential apertures, said top being centrally formed with a boss provided with an outstanding threaded stem, a disk having a central opening receiving the stem therethrough and resting on the boss, said disk having its periphery flared toward the inverted cup-shaped member, and a handle having a threaded socket end screwed on the stem and contacting the disk.

1,500,878. POWER TRANSMISSION. JOHN F. KRUCHTEN, Philadelphia, Pa. Filed Apr. 6, 1922. Serial No. 549,980. 5 Claims. (Cl. 74—58.)

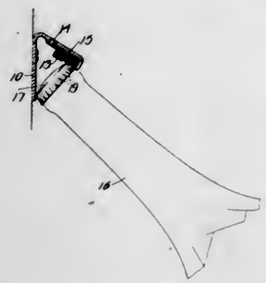


1. The combination in a power transmission, of a driving shaft; a driving hub thereon, said hub having gear teeth on its periphery and also having coupling teeth at one end; a driven shaft in line with the driving shaft; a gear hub splined to the driven shaft, said hub having coupling teeth at one side arranged to engage the coupling teeth on the driving hub, and also having gear teeth on its periphery; coupling teeth on the opposite side; a gear wheel loosely mounted on the drive shaft and having two sets of gear teeth on its periphery and having coupling teeth at one side arranged to engage the clutch teeth on the gear hub when said hub is moved in one direction; an intermediate shaft; a gear wheel on said shaft meshing with the teeth on the driving hub; a wheel on the shaft meshing with one set of teeth on the gear wheel loosely mounted on the drive shaft; another gear slidably mounted on the intermediate shaft and arranged to mesh with the other set of teeth on the gear wheel loose on the driven shaft; and means for actuating the several parts so that the driven shaft can be driven at different speeds.

1,500,879. GLASS-FEEDING MECHANISM. EDWARD MILLER, Columbus, Ohio, assignor to Chapman J. Root, Terre Haute, Ind. Filed Dec. 5, 1921. Serial No. 519,968. 38 Claims. (Cl. 49—5.)

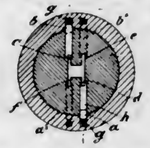
10. In apparatus of the kind described, a glass tank spout with a discharge opening in the bottom thereof, a shear arm mounted below the spout and having an opening through it registering with the opening in the spout, a knife reciprocably mounted on said shear arm for severing the glass, and means for lowering the shear arm as the glass descends from the spout and for elevating the shear arm after the glass has been severed.

1,500,880. LIQUID-FUEL BURNER. GEORGE URQUHART MORGAN, London, England. Filed May 5, 1923. Serial No. 636,937. 8 Claims. (Cl. 158—74.)



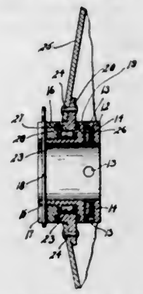
1. In a burner for liquid fuel, the combination of a body portion formed with a central nozzle aperture and with concentric chambers for the fuel and for an atomizing agent and an atomizing needle carried in a longitudinally adjustable manner in said body and formed with a cylindrical surface co-acting with a cylindrical part of the nozzle aperture and, with axially directed grooves disposed to the rear of the cylindrical surface and leading up to the latter.

1,500,881. CAP OR CROWN PULLER. HERBERT BERNARD MORIARTY, Memphis, Tenn. Filed May 1, 1922, Serial No. 557,546. Renewed May 12, 1924. 1 Claim. (Cl. 65—46.)



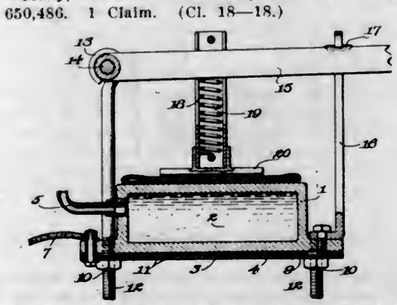
A puller for bottle caps or crowns comprising a base, an overhanging forward extension thereon, a lip on the extension adapted to hook the cap on a bottle, said lip having a recess located directly behind the same, and a yieldable filler in the recess, the filler being adapted to prevent the metal from coming in contact with the neck of the bottle being opened, substantially as set forth.

1,500,882. CAP OR CROWN PULLER. HERBERT B. MORIARTY, Memphis, Tenn. Filed Mar. 26, 1923. Serial No. 627,751. 6 Claims. (Cl. 65—46.)



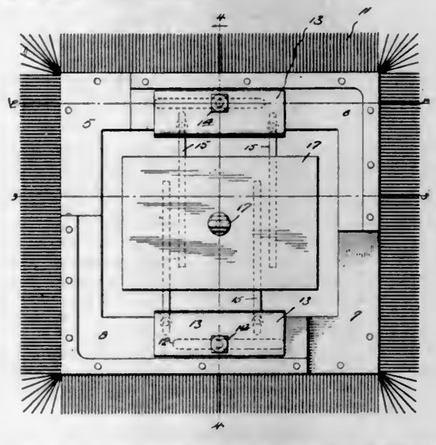
1. In a cap puller for bottles, a rear part for attachment to a fixed support, a part rigid therewith and extending forward at an angle thereto, a part extending downward from the edge of said angular part to catch under the edge of a bottle cap, and a spacing element located in the angle between the two last-named parts having a thickness slightly less than the width of said downwardly extending portion, substantially as set forth.

1,500,883. SAFETY LOCK. CARL AUGUST MÜLLER, Witzenhausen, Germany. Filed Mar. 9, 1921. Serial No. 450,894. 3 Claims. (Cl. 70—47.)



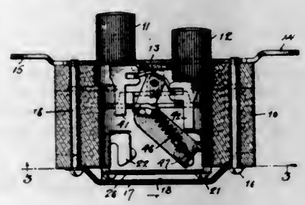
1. In combination, a lock of the pin tumbler type having rows of tumblers with their plungers all arranged in parallel planes, some rows being disposed on one side and some on the opposite side of and in parallel relation to the central vertical plane of the keyway, and a multiple-bearded key having beards crresponding in number to the number of rows of tumblers, substantially as set forth.

1,500,884. ADVERTISING DEVICE. JOHN A. MURNIN, Pittsburg, Kans. Filed July 16, 1923. Serial No. 651,860. 1 Claim. (Cl. 40—129.)



An advertising device for use on vehicle wheels, comprising a cap adapted to receive the hub of the wheel, a flange at one end of the cap, means for securing the cap to the hub, a nut threaded on the outer end of the cap, a collar surrounding the cap and arranged between the flange and said nut, roller bearings interposed between the cap and collar, the confronting faces of said flange and nut having annular grooves, felt washers arranged in said grooves and bearing against the opposed sides of said collar, said collar having an oil passage therein, a disk having a central opening to receive the cap, means for securing the disk to the collar, said disk having advertising matter on one side thereof, and means for holding the disk and collar stationary as the wheel rotates for the purpose specified.

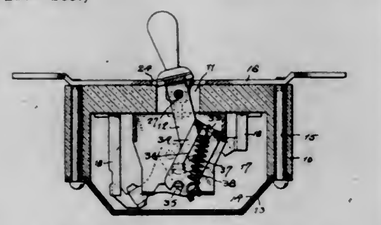
1,500,885. VULCANIZER. GUST A. NELSON, Sedro Woolley, Wash. Filed July 9, 1923. Serial No. 650,486. 1 Claim. (Cl. 18—18.)



A vulcanizer of the class described comprising a body having a water chamber in the upper part thereof, a lower chamber, a heating coil in the lower chamber, a removable bottom plate for the lower chamber, bolts for holding the same in place, the lower ends of the bolts being extended to form legs and the upper portions of the bolts at one end being extended, a shaft supported by the extended portions of these last mentioned bolts, a hand lever pivoted to the shaft, an upright at the other end of the body having notches therein for receiving a part of the hand lever, a member having a slot therein through which the hand lever passes, a spring in said member engaging the lever, means for introducing water into the chamber and means for connecting the heating coil with a source of supply.

1,500,886. CHIMNEY BRUSH. TENNIE NELSON, Kilbourn, Wis. Filed Sept. 21, 1923. Serial No. 663,990. 3 Claims. (Cl. 15—163.)

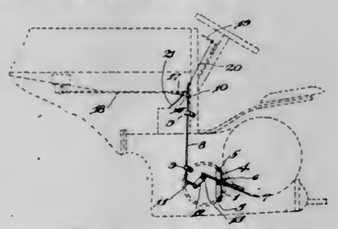
1. In a brush of the character described, four substantially L-shaped bristle carrying brush sections originally arranged in the form of a square and having their adjacent ends in overlapping relation, means positioned directly upon adjacent ends of certain diametrically opposite ones of the overlapped ends of said bristle carrying brush sections for adjustably securing said adjacent ends together, and means carried by said first mentioned means for adjustably securing the opposite adjustably connected sections together.



1,500,887. ELECTRIC SWITCH. ARVID H. NERO, New Britain, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 7, 1920. Serial No. 356,822. 11 Claims. (Cl. 200—72.)

1. An electric switch comprising a skeleton switch frame, having a web lying in a plane substantially parallel to the axis of oscillation of a rocker, said rocker being pivoted on said frame and passing through said web, a push button having a rocker-engaging jaw extending in the plane of oscillation of said rocker and having a sliding engagement with the rocker to actuate the same, together with a guide member on said button

passing through the frame to guide the button for rectilinear movement, together with a switch yoke pivoted on the rocker, and a switch spring extending between the free end of the switch yoke and the frame, substantially as described.



1,500,888. ELECTRIC SWITCH. ARVID H. NERO, New Britain, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 26, 1920. Serial No. 368,961. 3 Claims. (Cl. 200—168.)

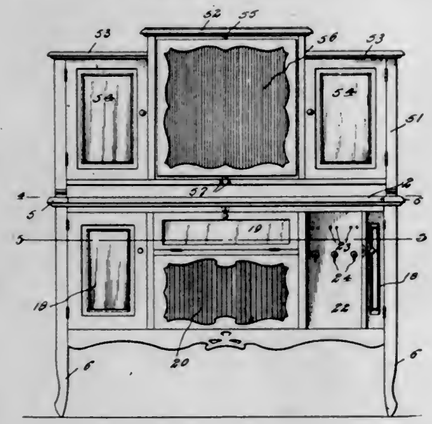
2. In an electric switch, a one-piece switch frame struck from sheet metal and comprising spaced side plates joined by marginal bridge straps at one end and having offset securing lugs at the opposite end of the side plates, together with strut lugs integral with one of said side plates and extending from the side edges thereof to the opposed side plate, in combination with oscillating members pivoted on said plates, one of said oscillating members working between the bridge straps and the other of said oscillating members working between said offset strut lugs and having its travel limited thereby.

3. In an electric switch, a switch yoke having a lug offset therefrom to form an open bearing slot, together with a switch blade carried by said yoke and secured thereto by said offset lug.

1,500,889. FOOT ACCELERATOR. ELI J. PFEIFFER, Union Grove, Wis. Filed Nov. 3, 1923. Serial No. 672,647. 2 Claims. (Cl. 74—39.)

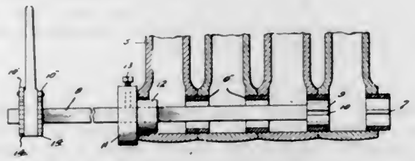
1. An accelerating device including a rotatable rod, a crank arm at one end of the rod, a pivoted foot treadle having connection with the crank arm, a connecting arm at the other end if the rod, a connecting rod having loose connection with the outer end of the connecting arm, a second connecting rod loosely connected with the arm at one end and having its other end connected with the hand throttle of a motor, said first rod having connection with the accelerator rod of a motor, and a spring member having one end connected to a stationary part of the motor and the other end attached to the loose connection between the arm and the aforesaid rods.

1,500,890. RECLAMATION OF LOW-MELTING-POINT SALTS FROM BLACK LIQUOR. JOSEPH E. PLUMSTEAD, Wilmington, Del., assignor to The Jessup & Moore Paper Co., Philadelphia, Pa., a Corporation of Massachusetts. Filed Dec. 15, 1923. Serial No. 681,008. 9 Claims. (Cl. 23—22.)



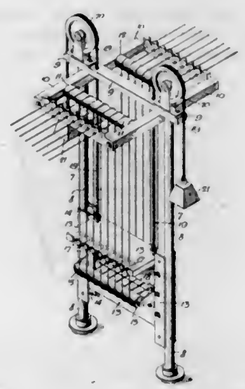
1. A process of recovering values from black liquor which includes the steps of causing said liquor to pass through heat zones of varying intensity whereby evaporation takes place and black ash is produced, said material reaching the heat zone having the maximum temperature before evaporation is complete.

1,500,891. STEPLADDER. WILLIAM R. QUEHL, St. Louis, Mo.; Cathryn E. Quehl administratrix of said William R. Quehl, deceased. Filed Dec. 23, 1922. Serial No. 608,695. 5 Claims. (Cl. 228—37.)



1. A ladder including a pair of sections hingedly connected together at one end, steps carried by one of the sections and each including hingedly connected sections, brace members pivotally connecting the sides of the other section and each including a pair of sections hingedly connected together, longitudinally shiftable bars connected with the steps and brace members at their hinged connections, one of the bars being provided with an opening and a pin carried by the other bar and adapted to be received in the opening, and a handle on one of the bars whereby to shift both bars longitudinally to break the hinged connection of the steps and brace members to collapse the ladder.

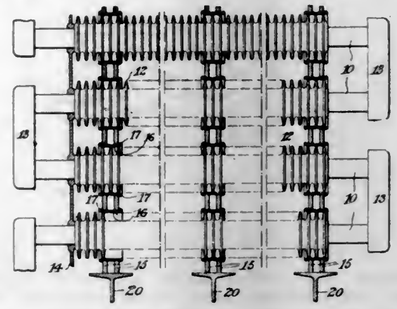
1,500,892. RADIOGRAFONOLA. FRANK J. RENNER, Madison, Wis. Filed Apr. 18, 1922. Serial No. 554,853. 3 Claims. (Cl. 179—100.1.)



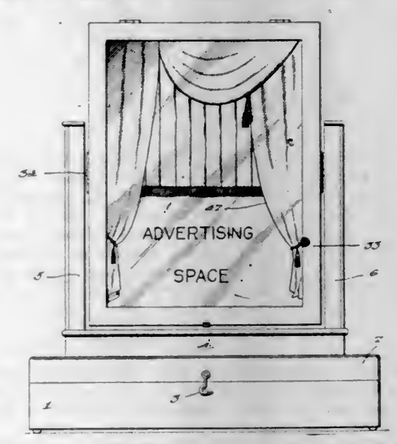
1. In combination, a phonograph mechanism including a tone arm provided with a downturned gooseneck, a radio amplifier provided with a downturned gooseneck arranged adjacent to the first mentioned gooseneck and a horn formed with an upturned gooseneck movable into and out of registration with either of said first named goosenecks, and manual means for bringing the last mentioned gooseneck into and out of registration with either of said first named goosenecks.

1,500,893. RADIATOR WRENCH. JOHN ROBERTS, Bowling Green, Ky. Filed June 19, 1923. Serial No. 646,344. 1 Claim. (Cl. 81—71.)

In a tool for removing the securing bushings between radiator sections, wherein said bushings are formed with longitudinally extending bosses, a rod adapted for projecting through said bushings, a head formed upon one end of said rod and formed with longitudinal channels for the reception of said bushing bosses, means for rotating said rod in opposite directions for the insertion or removal of the bushing, and means for limiting the inward movement of the rod with respect to the radiator sections, said means being adjustable.



1,500,894. WARP-DYEING MACHINE. GEORGE W. ROBERTSON and WILLIAM T. HOGG, Danville, Va., EDWARD T. GARSED, Charlotte, N. C., and WILLIAM G. BENEFIELD, deceased, late of Danville, Va., by J. D. Harrison, administrator, Danville, Va. Filed Dec. 19, 1919. Serial No. 346,110. 4 Claim. (Cl. 8—19.)

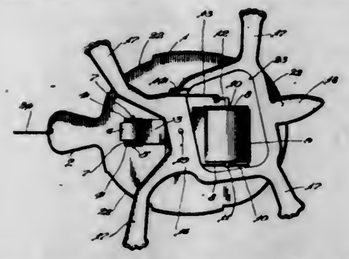


2. The method of dyeing warps, which consists in passing the warps through a boiling tank, then through a cooling tank, then through a compensator mechanism to collect and refeed any slack in the warp, and then to a dyeing tank operated at a different speed than the first mentioned tanks.

1,500,895. SUPPORT FOR CORRUGATED HEATING ELEMENTS. RICHARD H. ROVER, Dansville, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Aug. 23, 1922. Serial No. 583,772. 4 Claims. (Cl. 248—34.)

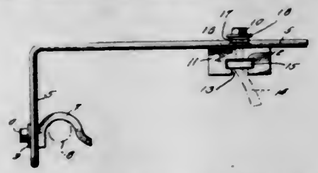
1. A support for corrugated tubular heating elements comprising a pair of spaced apertured plates, and collar-like members carried thereby and fitted in the apertures therein to support said elements, said collars having outwardly flaring flanged portions to guide the corrugated portions into the supporting collars.

1,500,896. CHANGEABLE EXHIBITOR. JOHN F. RYAN, Huntington, W. Va. Filed Sept. 21, 1923. Serial No. 664,073. 2 Claims. (Cl. 40—36.)



1. In a device for the purpose set forth, a base having hollow standards thereon, a housing having trunnions journaled in the standards, said housing divided into communicating compartments having cards therein shiftable upon the turning thereof and the diagonally opposed end cards movable from one into the other compartment on such turning, a cam on one of the trunnions having opposed flat faces, spring means engaging therewith when the housing is sustained in upright position, a freely mounted sprocket wheel on the second trunnion, a cam wheel fixed on said trunnion, a motor in the base, shafts driven thereby, means reducing the speed of the outer shaft, a sprocket wheel carried thereby, a sprocket chain trained therearound and around the first mentioned sprocket wheel, and said chain having outstanding pins to engage the last mentioned cam to revolve the housing.

1,500,897. FIGURE WHEELED TOY. CHARLES JOHN SLADEK, Chicago, Ill. Filed Aug. 14, 1922. Serial No. 581,727. 2 Claims. (Cl. 46—45.)

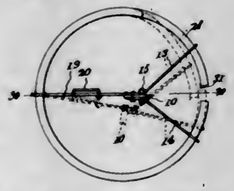


1. A toy comprising a body shaped to simulate the body of an animal, a support attached to the body, a leg assembly pivotally connected to said support, depending arms formed upon the support, shafts carried

by said arms, rollers mounted on said shafts, a crank arm formed on one of said shafts, a rod connected to said crank arm and leg assembly for oscillating the leg

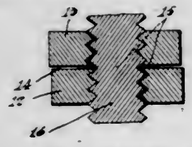
assembly upon rotation of the shaft, said depending arms having instruck bosses thereon about said shafts for preventing lateral movement of the rollers.

1,500,898. LAWN-MOWER SHARPENER. FRANK SCHMOLL, Clear Lake, Iowa. Filed Mar. 14, 1923. Serial No. 625,030. 3 Claims. (Cl. 76—82.)



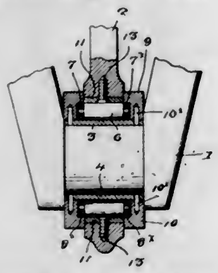
1. A device for attachment to a lawn mower including a length of rigid wire bent in U shaped formation and then bent intermediate its ends to provide an L shaped bracket, means for supporting one leg of the bracket on a lawn mower, a file holder slidably mounted on the other leg of the bracket and having a slot in its under face to receive the cutting edges of the mower blade, and a sharpening element mounted in the slot engaging the cutter edge of the cutter blade.

1,500,899. COMPOSITION FOR REMOVING PAINT AND VARNISH. ARTHUR W. SCOLES, Tulsa, Okla. Filed Aug. 14, 1922. Serial No. 584,780. 1 Claim. (Cl. 87—5.)



A composition for the purpose stated comprising a mixture of caustic soda 80%, ammonium carbonate 8%, and corn starch 12%.

1,500,900. RIM TOOL. WILLIAM C. SELBREDE, Billings, Mont. Filed Dec. 15, 1923. Serial No. 680,903. 1 Claim. (Cl. 157—1.)

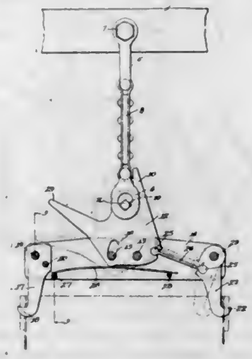


A tire rim tool comprising a hand lever, an anchoring arm pivoted at one end upon the lower portions of said hand lever and provided at its outer end with rim interlocking means for holding the anchoring arm from movement in either direction upon the rim, a pair of claws pivotally secured to the opposite sides of the hand lever and in spaced relation to the anchoring arm, said hand lever being adapted to be swung backwardly upon the anchoring arm for drawing said claws inwardly with respect to the anchoring arm and said claws having interlocking means upon their outer ends for engagement with the rim to hold the claws from movement in opposite directions upon the rim, said claws having knuckles adjacent their pivoted ends adapted to hinge at right angles to the pivot of the claws and said handle being adapted to be swung laterally and backwardly for contracting said claws and turning the same upon their pivots and upon said knuckles whereby the contraction and lateral swinging of the handle is adapted to move one end of the rim past the opposite end thereof and to subsequently overlap said ends and contract the rim.

1,500,901. LOCKED ADJUSTABLE DEVICE. HENRI A. SÉVIGNÉ, Winthrop, Mass., assignor to Security Engineers Incorporated, Lowell, Mass., a Corporation of Massachusetts. Filed Mar. 2, 1923. Serial No. 622,288. 5 Claims. (Cl. 287—117.)

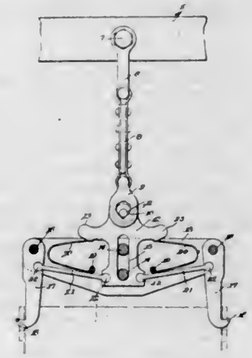
1. A device of the character described comprising male and female threaded members for the purpose of transmitting motion from one to the other, said members coacting in effecting and maintaining a variation in the length of said device, one of said members having some of its threads displaced relatively to its other threads to cause the threads of the two members to bind in interengaged relationship without requiring any additional agency to effect the binding action.

1,500,902. CRANK-SHAFT AND CONNECTION-ROD BEARING. JOHN W. SEWELL, Alton, Ill. Filed Mar. 6, 1922. Serial No. 541,384. 3 Claims. (Cl. 64—62.)



3. The combination of a crank shaft having spaced portions and an intermediate portion, of circular cross-section, between said spaced portions, a connecting rod surrounding and spaced from said intermediate portion of the crank shaft, housings surrounding the intermediate portion of the crank shaft and interposed between the sides of the connecting rod and the spaced portions of said shaft, and anti-friction means interposed between the intermediate portion of the crank shaft and the connecting rod and confined between the said housings.

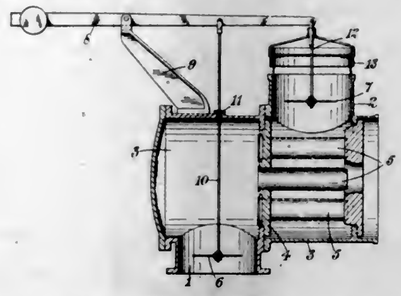
1,500,903. ICE-CAN LIFTER. THOMAS SHIPLEY, York, Pa. Filed Dec. 10, 1923. Serial No. 679,791. 7 Claims. (Cl. 294—106.)



1. In an ice can lifter, the combination of a frame carrying can engaging members relatively movable toward and from each other; combined suspending and

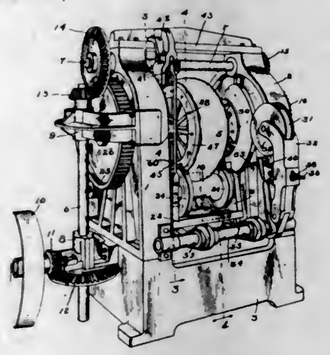
actuating means for said frame arranged to move said members in can engaging direction, under the load of a suspended can; stop means limiting such movement;

yielding means arranged to urge said members in can engaging direction; and a part associated with the suspending means arranged to overpower said yielding means by its weight when lowered.



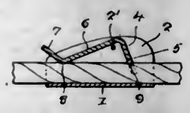
1,500,904. ICE-CAN LIFTER. THOMAS SHIPLEY, York, Pa. Filed Dec. 10, 1923. Serial No. 679,792. 4 Claims. (Cl. 294—106.)

1. In an ice can lifter, the combination of a frame; a pair of can-engaging hooks pivoted to said frame; a supporting member mounted for limited sliding movement in said frame and operatively connected with said hooks to move the same in can engaging direction under the weight of said frame; a spring assisting said motion; and suspending means for said supporting member, adapted to overpower said spring by its weight when lowered upon said supporting member.



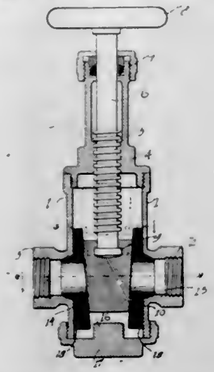
1,500,905. GAS-MIXING DEVICE. EDGAR THOMAS, Jarrow-on-Tyne, England. Filed Aug. 4, 1923. Serial No. 655,731. 3 Claims. (Cl. 48—180.)

1. In a fluid-mixing device, the combination with two conduits leading to a point of admixture of fluids conveyed through them, of flow-regulating means comprising a movable baffle located in one of said conduits, a second movable baffle located in the second of said conduits, a valve controlling the flow of fluid in the said second conduit and operatively connected to said second baffle, and means so operatively connecting the two baffles together



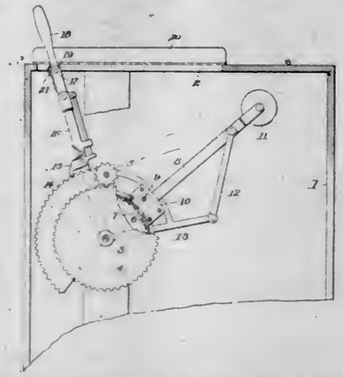
that the forces operative on the baffles under the combined opposed action of the two currents of fluid balance one another, substantially as described.

1,500,906. METAL BENDING AND SHAPING MACHINE. BERT E. THOMPSON and TEDDY A. GREEN, Indianapolis, Ind., assignors to Metal Auto Parts Company, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 18, 1922. Serial No. 582,713. 17 Claims. (Cl. 153—58.)



1. In a metal bending and shaping machine, a primary roller, auxiliary rollers co-operating therewith for bending a section of metal passing between the primary and auxiliary rollers, and pivot means operable by means in conjunction with the primary roller for automatically positioning one of the auxiliary rollers for causing a strip of metal to bend or extend in a straight line.

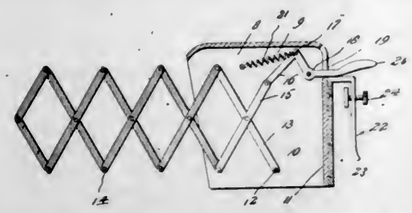
1,500,907. CLAMP. STEPHEN C. TUCKER, Atlanta, Ga., assignor of one-third to George W. Farmer, Atlanta, Ga. Filed Jan. 2, 1924. Serial No. 684,008. 1 Claim. (Cl. 24—248.)



A rope clamp, as herein described, comprising a U-shaped body, a toothed jaw having trunnions journaled in the sides of the body, said jaw merging into an angle extension that in turn merges into an outward angle portion providing a handle, and the juncture between the last mentioned portions being sharpened and formed with teeth, for the purpose set forth.

1,500,908. VALVE. CURTIS A. VAN DERSON, Modesto, Calif. Filed June 17, 1921. Serial No. 478,389. 1 Claim. (Cl. 251—167.)

A valve of the class described, including a body portion, oppositely disposed co-axial inlet and outlet openings in said body, adapter seats each having a tapered sleeved opening inserted in said inlet and outlet openings, the inside faces of said seats being flat and spaced apart, a non-rotatable gate adapted to be raised and lowered between said flat faces of said adapter seats for the purpose of controlling the port area between said inlet and outlet openings, means for raising and lowering said gate and means provided for the ready removal of said adapter seats without removing said gate from its position within the body of said valve.

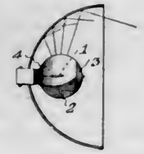


1,500,909. HAND LEVER FOR MOTOR RESETTERS. MORRIS VICTORSOHN, Brooklyn, N. Y. Filed Sept. 19, 1922. Serial No. 589,047. 4 Claims. (Cl. 185—27.)

1. The combination with a motor of the character described, of a resetting lever adapted to have a reciprocating movement, and a handle pivoted to the free end of said lever and adapted to fold over thereon in the plane of movement of said lever for the purpose specified.

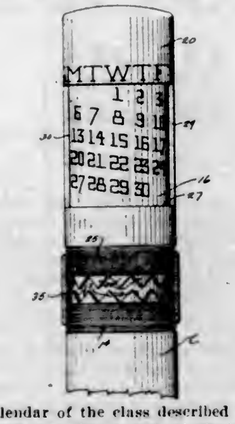
1,500,910. VEHICLE DIRECTION INDICATOR. CLYDE A. WESSON, Atlanta, Ga. Filed May 28, 1923. Serial No. 641,841. 1 Claim. (Cl. 116—40.)

A direction indicator comprising a casing, a bell crank lever pivoted within the casing and having an end portion projecting beyond the side thereof, a series of lazy tong bars pivotally connected with each other, the free end of one of the terminal bars being pivoted in the casing, the free end portion of the other terminal bar which is located in the casing being shorter than the free end of the pivoted terminal lazy tong bar, a link pivotally connected with the inner end of the bell crank lever, and pivotally connected with the shorter end portion of the terminal lazy tong bar, a spring connected at one end with the pivot between the links and the bell crank lever and connected at its other end with the casing, the point



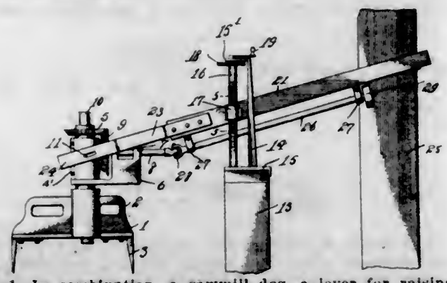
of connection between the spring and the casing being to one side and above the point of pivotal connection between the crank lever and the casing whereby when the inner end of the bell crank lever is disposed toward the point of pivotal connection between the spring and the casing, the link will be held transversely across the point of pivotal connection between the terminal lazy tong lever bar and the casing.

1,500,911. RAILWAY RAIL CONSTRUCTION. HENRY H. WHITAKER, Titusville, Fla. Filed Aug. 17, 1923. Serial No. 657,961. 2 Claims. (Cl. 238—144.)



1. In a railway rail construction, the combination of a base having a shank and a recess in the upper edge of the shank at one side thereof, and also having a flange overhanging said recess, a head having a depending projection at its underside to seat in the recess of the base shank and a flange to fit under and interlock with the said flange of the base shank, a fish plate having a base flange seated in the recess in the base and also having a concavity at its inner side opposed to the inner side of the base shank and an upper portion bearing against the side of the projection on the head remote from the overhanging flange of the base shank, and connections extending through the shank of the base and the fish plate and entirely clear of the head.

1,500,912. LAMP FOR VEHICLE HEADLIGHTS AND THE LIKE. LEWIS GARFIELD WILLIAMS, Godrergraig, Wales. Filed Oct. 23, 1923. Serial No. 670,318. 1 Claim. (Cl. 176—16.)

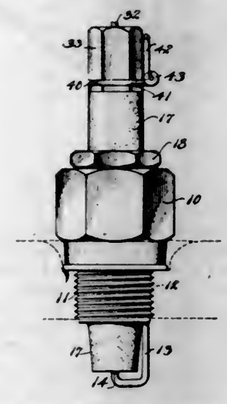


A bulb for use with a parabolic reflector having a coating of an opaque substance upon one side wall thereof, and a coating of red ray absorbing substance upon its remaining surface, the latter coating having a maximum density at the base and nose of the bulb and at the intermediate portion of said remaining surface decreasing in density from the base to the nose.

1,500,913. PERPETUAL CALENDAR. DONALD R. ADAMS, Anchorage, Alaska. Filed May 22, 1923. Serial No. 640,751. 2 Claims. (Cl. 40—108.)

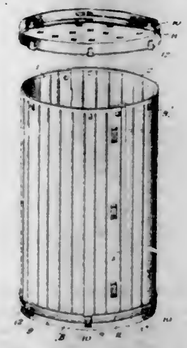
1. In a calendar of the class described the combination of a cylindrical shaped supporting body having the upper end thereof annularly reduced and at the juncture of said annularly reduced portion with the body, the latter having substantially V-shaped teeth annularly arranged about the body, said body being screw threaded adjacent said teeth, means carried by the reduced portion designating a set of numerals arranged in the form of a calendar month, a sleeve member for receiving therein the reduced portion of said cylindrical body, said sleeve member having a transverse opening therein with indicia arranged along an edge of said opening representative of the days of the week, the sleeve member when receiving the reduced portion of the cylindrical body therein, having a set of numerals of the reduced portion displayed through said opening in the form of a calendar month having a predetermined number of days therein with the first day of the month selectively falling on a particular day of the week as designated by the indicia on said sleeve, said sleeve at an end thereof having substantially V-shaped teeth extending therefrom for interengagement with the teeth of said body, said sleeve adjacent said teeth having screw threads thereon oppositely threaded with respect to the threads of said body, and a coupling band internally screw threaded in opposite directions from the ends thereof adapted for threaded engagement with the threads of the cylindrical body and said sleeve whereby upon rotation of said coupling band the teeth of the sleeve and body may be forced into locking engagement for maintaining the sleeve in a desired relation upon the reduced portion of said cylindrical body.

1,500,914. SAWMILL-DOG HANDLING AND OPERATING MECHANISM. JAMES C. ADAMS, McColl, S. C. Filed July 13, 1922. Serial No. 574,702. 4 Claims. (Cl. 143—126.)



1. In combination, a sawmill dog, a lever for raising and lowering the sawmill dog, said sawmill dog being mounted rotatably on one end of the lever, a post situated adjacent the other end of the lever, a shaft rotatable on the lever, a wheel on the shaft adapted to be placed in and out of engagement with the post for rotation thereof upon movement of the lever, and means actuated by the shaft for rotating the sawmill dog.

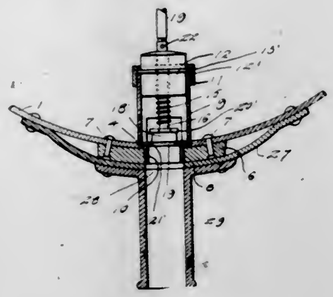
1,500,915. DYES AND PROCESS OF MAKING SAME. ROBERT ARNOT, Bushey, England. Filed Aug. 31, 1921. Serial No. 497,353. 10 Claims. (Cl. 260—86.)



3. The process which comprises distilling a resin with lime, nitrating the phenol-like body formed thereby, reducing the resulting nitro compound to an amino compound, diazotizing the resulting amino compound and coupling the resulting dinzo compound with another compound to form an azo dye.

1,500,916. SPARK PLUG. WILLIAM L. BARRON, Oklahoma City, Okla. Filed Apr. 27, 1923. Serial No. 635,082. 4 Claims. (Cl. 123—169.)

1. In a spark plug, a supporting shell provided with an electrode, an insulating sleeve arranged within said shell and projected beyond the lower end thereof, a tubular electrode within said sleeve, a valve casing mounted upon said electrode at its upper end, a tensioned valve in said casing controlling an air intake to said tubular electrode and having an extended operating stem, and a cap carried by said valve casing to partially enclose and guide the extended end of the valve stem.

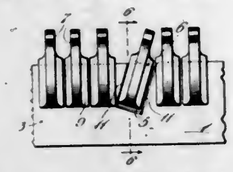


1,500,917. BARREL CONSTRUCTION. ROBERT J. BELL, Richmond, Va., assignor to Economy Barrel Corporation, Richmond, Va., a Corporation of Virginia. Filed Mar. 2, 1923. Serial No. 622,361. 2 Claims. (Cl. 220—5.)

1. A barrel comprising a body formed of sections, hooks on one edge of each section, hook receiving parts on the abutting edge of the adjacent section, each part being

formed by slitting the metal twice and punching the part between the slits inwardly, teats on each section and holes in the sections for receiving the teats, end pieces for the barrel and means for detachably connecting them with the body.

1,500,918. OUTLET VALVE. PHILIP W. BOLTON and WILLIAM N. MINNIEAR, Coffeyville, Kans., assignors of one-fifth to George D. Minnlear, one-fifth to Noal G. Ryman, and one-fifth to Bertha Bolton, all of Coffeyville, Kans. Filed Nov. 30, 1920. Serial No. 427,316. 3 Claims. (Cl. 137—21.)

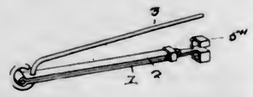


1. In combination, a car tank having an outlet opening, a valve casing secured in said opening and having inlet openings and a discharge neck, a reinforcing plate secured to the tank and having an opening to receive the discharge neck, a second plate secured to the tank and overlying the reinforcing plate and having an opening in alinement with the discharge neck, a nozzle secured to said second plate and in alinement with the discharge neck, and a valve in said valve casing.

1,500,919. HAIR CURLER. CURTIS E. BRADBURN, Garden City, Kans., assignor of one-half to Charles Rewerts and one-half to Julia Bradburn, both of Garden City, Kans. Filed Dec. 3, 1923. Serial No. 678,268. 5 Claims. (Cl. 132—42.)

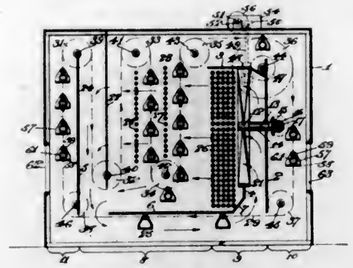
2. A hair curler including a body portion, a hair retaining tongue adapted to extend longitudinally thereof, a floating pivotal connection between the tongue and body portion, cooperating means upon the tongue and body portion for fastening the tongue against movement relative to the body portion, and elastic, supplemental hair retaining means.

1,500,920. GRATE SECTION. WILLIAM F. BRADLEY and JOHN W. HULSON, Keokuk, Iowa, assignors to Hulson Grate Company, Keokuk, Iowa. Filed Nov. 15, 1923. Serial No. 674,940. 2 Claims. (Cl. 126—180.)



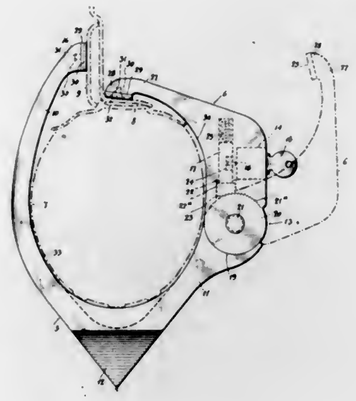
1. A grate section comprising a bar having a longitudinal rib on one vertical side and a shallow recess in its opposite vertical side, said recess being inclined with respect to the axis of said bar and opening through the upper edge of said bar, and a transverse finger member having a pair of depending legs adapted to straddle said bar, said legs being spaced apart a distance substantially equal to the horizontal distance between said sides of the bar exclusive of said rib, the inner side of one leg having a transverse groove to receive the aforesaid rib, the other leg being of a width for reception in the aforesaid shallow recess when the finger is inclined with respect to the axis of the bar, said recess extending horizontally into the bar a sufficient distance to permit said leg to clear said rib when said other leg is in said recess.

1,500,921. FLEXIBLE PIPE LINE. MOGENS LOUIS BRAMSON, JAMES HANSON, and THOMAS BETHELL CALDWELL, Stafford, England. Filed June 21, 1919. Serial No. 305,817. 2 Claims. (Cl. 285—92.)



1. A flexible pipe comprising rigid pipe sections, a cup member disposed at the end of one section, a portion of a ball disposed at the adjacent end of the adjoining section having a flat inner end, a flat flexible and distortable washer of rectangular cross section disposed on said flat inner end and forming an extension of the ball portion said washer being open to the pressure in the pipe line, the adjacent rigid pipe section of the ball portion extending through said ball portion and constituting a spigot over which the said flat flexible distortable washer is positioned, and a bearing ring adapted to engage the open end of the cup member and force the ball member into operative engagement with the interior face of the cup member so that the peripheral edge of the flexible washer conforms to the curvature of such interior face.

1,500,922. HAIR CURLER. HARRIET L. BRANN, Des Moines, Iowa. Filed Aug. 15, 1923. Serial No. 657,584. 3 Claims. (Cl. 132—41.)

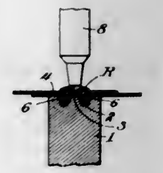


1. A device of the class described comprising a pair of jaw members, a clip for holding the jaw members together, a hook on one of the jaw members, a member hingedly connected with the jaw members and adapted to have its free end placed under the hook.

1,500,923. DRYING APPARATUS. JOSEPH L. BUCKLEY, Trenton, N. J., assignor, by mesne assignments, to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 19, 1920. Serial No. 367,108. 11 Claims. (Cl. 34—12.)

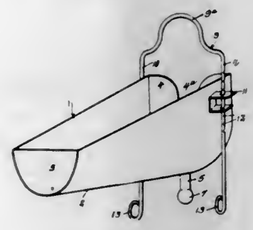
1. Apparatus of the character described comprising, an enclosure, carrier means for transporting articles to be dried through said enclosure in a course including substantially vertical elements, a fan located at one side of a majority of the said elements for generating an air current in a substantially horizontal direction, heating means between the fan and the said majority of elements, and heating means between other elements.

1,500,924. THEFT WARNING SIGNAL OR WHEEL LOCK FOR VEHICLES. WILLIAM E. CHADWICK and JOHN A. CREIGHTON, Los Angeles, Calif., assignors to Gustavus Edward Westberg, Los Angeles, Calif. Filed May 5, 1923. Serial No. 636,940. 10 Claims. (Cl. 70—90.)



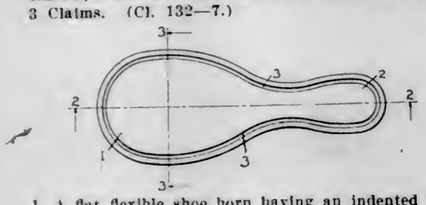
2. A device of the class specified comprising tire embracing arms having ends pivotally connected to form a hinge and one of the arms provided with a road surface engaging point, the upper end of one arm being shaped to engage the side portion of a wheel and the upper end of the remaining arm disposed at an angle for downward engagement with relation to another part of the wheel and rim, and means for releasably locking the device in closed position.

1,500,925. MOISTENER. GEORGE D. COLEMAN, Atlanta, Ga. Filed Sept. 14, 1923. Serial No. 662,778. 1 Claim. (Cl. 91—54.4.)



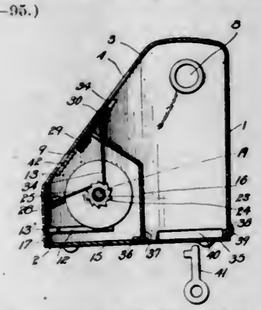
A moistener of the character described comprising a sponge, and a holder therefor, said holder being formed from a single length of bendable material and reversely bent at both ends to define an open finger receiving portion and a clamp for securing the sponge to the holder.

1,500,926. ANVIL. CHARLES M. CURRY, Tulsa, Okla. Filed Oct. 7, 1918. Serial No. 257,185. 3 Claims. (Cl. 218—1.)



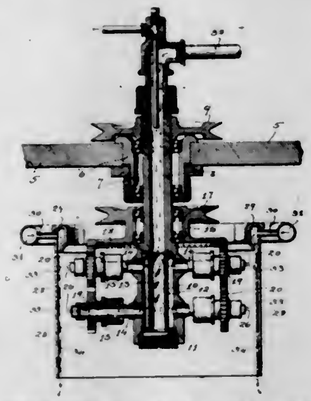
1. An anvil or die for forcing tubular rivets through sheets of material to be fastened together, and upsetting the same, the working end or face of said anvil or die having an annular curved groove or recess therein, leaving a tapering central stud and a surrounding surface, the outer ends of which are substantially flat and flush with each other, the external diameter of the outer end of the stud and the internal diameter of the tubular rivet to be upset being approximately the same, whereby to cause a sheering action between the stud and rivet upon the material to be riveted, thereby causing the rivet first to cut its own way through the material and then have its cutting end upset.

1,500,927. EAR BASIN. FREDERICK A. DAVIES and CARL L. ROGERS, Wilkinsburg, Pa. Filed Aug. 26, 1922. Serial No. 584,438. 4 Claims. (Cl. 128—275.)



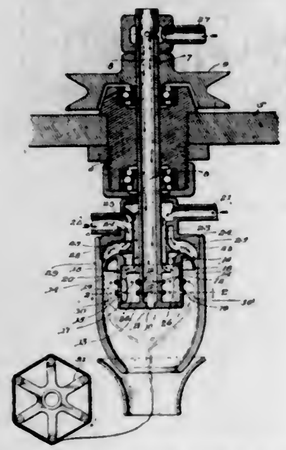
1. In a device of the character described, a receptacle adapted to fit behind and about the lower portion of a person's ear, and a member adjustably secured to the receptacle and adapted to fit about the upper portion of the ear and co-operating with said receptacle for holding the same in position upon and about the ear.

1,500,928. LEATHER SHOEHORN. JOHN H. DAVIS, Covington, Ky., assignor to Robert P. Hargitt, Cincinnati, Ohio. Filed Apr. 16, 1923. Serial No. 632,222. 3 Claims. (Cl. 132—7.)



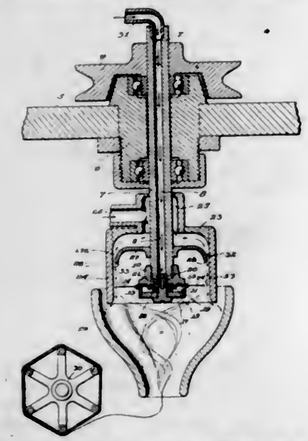
1. A flat flexible shoe horn having an indented border substantially as and for the purpose described.

1,500,929. BANK. PAUL A. HOLMES, Kansas City, Mo. Filed Feb. 10, 1922. Serial No. 535,621. 2 Claims. (Cl. 194—95.)



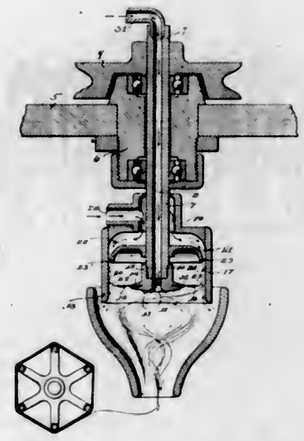
1. A bank comprising a housing having coin slots and windows therein, a registering mechanism case within the housing and having an open face adjacent to the windows, a transverse bar secured to the case, upstanding flexible strips carried by the bar and fulcrumed against the edge of the case, depending pawls carried by the upper ends of the strips, the upper ends of the strips terminating above the bottoms of the coin slots, wheels within the case, ratchets on the wheels for engagement with the pawls, a transverse bar in front of the wheels having pawls for engagement with the ratchets to prevent retrograde movement thereof, and means for removably securing the case within the housing.

1,500,930. APPARATUS FOR FORMING AND TWISTING THREADS. JAMES P. HOOPER, Ruxton, Md., assignor to James P. Hooper Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed Apr. 18, 1922. Serial No. 554,723. 14 Claims. (Cl. 18—8.)



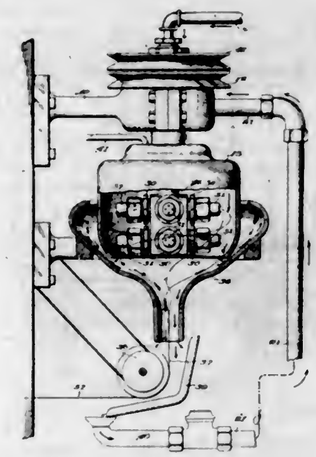
1. A mechanism for forming threads including a spinneret having a thread-discharge outlet, means for supplying a thread-forming material to the spinneret and means for rotating the spinneret and simultaneously moving the rotating spinneret through a circular path to impart an orbital movement thereto while the material is being discharged in the form of a thread.

1,500,931. CENTRIFUGAL SPINNERET. JAMES P. HOOPER, Ruxton, Md., assignor to James P. Hooper Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed Feb. 23, 1922. Serial No. 538,733. 14 Claims. (Cl. 18—8.)



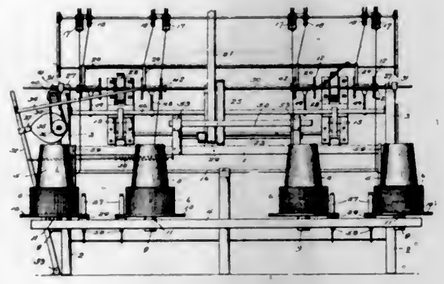
1. A mechanism for forming threads including a rotating member having a plurality of passages through a wall thereof, means for supplying a thread-forming substance to said member, means for rotating said member at a rate of speed to contrifugally discharge said substance through said passages in the form of threads, means for maintaining a wall of setting solution around the rotating member and means for twisting the threads together.

1,500,932. APPARATUS FOR PRODUCING THREADS. JAMES P. HOOPER, Ruxton, Md., assignor to James P. Hooper Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed Feb. 23, 1922. Serial No. 538,734. 16 Claims. (Cl. 18—8.)



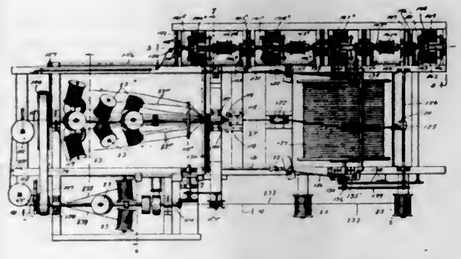
1. A mechanism for forming threads including a plurality of needles, revolving means for rapidly moving the needles through a circular path and means for supplying a thread-forming solution to said needles as they move to be ejected by centrifugal force.

1,500,933. THREAD-FORMING APPARATUS. JAMES P. HOOPER, Ruxton, Md., assignor to James P. Hooper Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed Feb. 23, 1922. Serial No. 538,735. 12 Claims. (Cl. 18—8.)



1. A mechanism for forming threads including a rotating head, a series of needles moving with the head and means for flowing a thread-forming solution over an exterior surface of the head to feed the same to the needles.

1,500,934. SPINNERET. JAMES P. HOOPER, Ruxton, Md., assignor to James P. Hooper Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed Feb. 23, 1922. Serial No. 538,736. 11 Claims. (Cl. 18—8.)

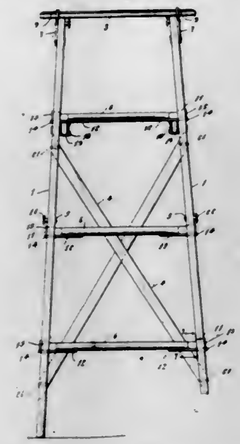


1. A device for forming threads including a plurality of radially arranged suspended nozzles with means for rapidly moving the same through a circular path, means for supplying a thread-forming material to said nozzles to be ejected therefrom by centrifugal force in the form of continuous threads as the nozzles are moved and means for setting the ejected threads.

1,500,935. MACHINE FOR WINDING WIRE UPON SPOOLS. AMASA G. HOOVENS, Goshen, Ind. Filed May 26, 1923. Serial No. 641,635. 3 Claims. (Cl. 247—25.)

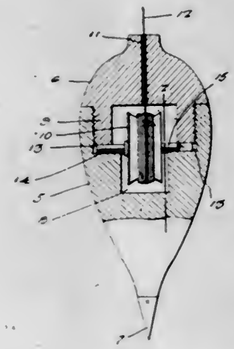
1. In a machine for winding wire upon spools, a plurality of vertical take-off drums, a plurality of horizontal receiving spools, an overhead frame having guide pulleys located above said drums and spools and adapted to guide the wire from the drums over and downwardly to said spools, means for rotating said spools to thereby feed the wire from the drums, means for distributing the wire upon the spools including a horizontal reciprocatory bar located below said pulleys and above and common to and having arms extending over said spools, and means for reciprocating said bar including an operating lever located at one end of the machine.

1,500,936. MACHINE FOR MANUFACTURING WIRE CABLE. AMASA G. HOOVENS, Goshen, Ind. Filed Sept. 24, 1923. Serial No. 664,455. 4 Claims. (Cl. 117—17.)



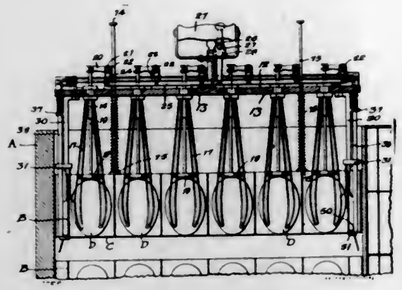
1. In a machine for twisting wire strands or subsidiary ropes to form a still larger rope, means for supplying a plurality of core strands or ropes, means for supplying wire strands or ropes and twisting the same around said core strands to form an outer wrapping, and means for positively and evenly feeding said core strands from their take-off spools adapted to prevent the twisting of the core strands and to hold them straight.

1,500,937. KNOCKDOWN STEPLADDER. GEORGE F. HOTOPP, Cincinnati, Ohio. Filed Dec. 13, 1923. Serial No. 680,499. 4 Claims. (Cl. 228—57.)



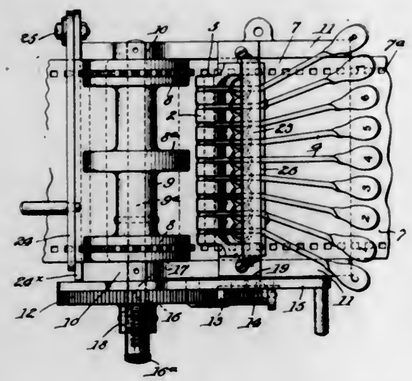
1. In a ladder of the character described, uprights provided with slots in the length thereof, clips secured to the rungs and each provided at its outer end with a crosshead which is adapted to pass through a slot of

the upright and to be turned to assume a position crosswise thereof and on the opposite side of the upright



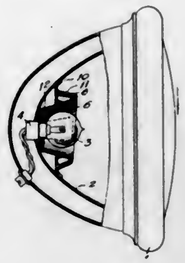
from the end of the rung to secure the rung to the upright, and a lock secured to the upright and engaging the crosshead of the clip to prevent movement thereof.

1,500,938. PLUMB BOB. JOHN R. HOWARD, Redwood City, Calif., assignor of one-fourth to Daisy Fanning, Cooperstown, N. Y. Filed Oct. 16, 1923. Serial No. 668,884. 2 Claims. (Cl. 33—217.)



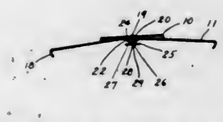
1. A plumb bob having a drum rotatably mounted therein, a spring for rotating said drum in one direction to wind a plumb line thereon, centrifugally operable means for arresting rotation of said drum in its opposite unwinding movement upon the rotation of the drum in the last mentioned direction attaining a predetermined speed, said last named means being operable to maintain the drum against rotation for preventing unwinding of the plumb line from the drum when the plumb bob is out of contact with the supporting surface and its weight imposed upon said line, whereby the occurrence of slack in the line is prevented, means to automatically release said arresting means upon relieving the plumb line of the weight of said bob, said bob comprising upper and lower sections detachably joined, the lower section having transversely aligned grooves, and means for mounting the drum within the bob embodying a transverse shaft having its ends removably seated in said grooves respectively.

1,500,939. EGG-CRATE UNPACKING AND REPACKING APPARATUS. DAVID A. HOWELL, Brooklyn, N. Y. Filed Mar. 20, 1923. Serial No. 626,437. 11 Claims. (Cl. 294—87.)



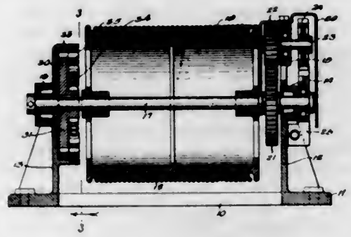
1. An egg crate packing and unpacking device comprising a member, means carried by said member for engaging and supporting the eggs therefrom, means carried by said member for engaging and supporting the filler elements therefrom, independent means for releasing the egg and the filler element engaging and supporting means, and means carried by said member for stripping the filler elements from the eggs when said filler element engaging and supporting means is released.

1,500,940. PUNCH MECHANISM FOR MAKING PATTERN STRIPS. KENNETH HOWIE, Norristown, and WILLIAM O. TAYLOR, Limerick, Pa., assignors to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Feb. 16, 1923. Serial No. 619,415. 10 Claims. (Cl. 164—112.)



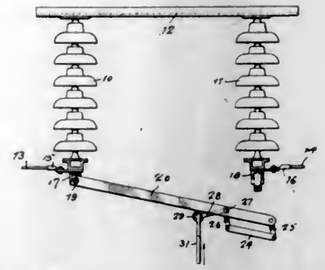
1. In combination in a machine for punching strips for use as pattern bands, a series of punches arranged in line transversely across the path of the strip, a guide for the strip, finger levers pivotally mounted, spring plungers operated by the finger levers, and feed means for the strip, comprising toothed members to engage openings along the margins of the strip, and means for operating said feed members manually and independent of the operation of the finger levers, either step by step, or continuously, substantially as described.

1,500,941. GLARE PREVENTER FOR HEADLIGHTS. ROBERT HAMILTON IRELAND, Richmond Hill, N. Y., assignor of one-half to George Seaman, Union Hill, N. J. Filed Apr. 7, 1923. Serial No. 630,545. 3 Claims. (Cl. 240—48.6.)



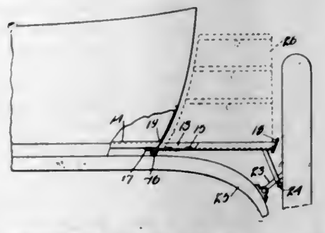
1. A glare preventing device for headlights, comprising an opaque cup-shaped member having apertures in the side walls, and an apertured ring substantially radiating rearwardly from the top of said member, the apertures in the ring and the cup-shaped member being staggered.

1,500,942. SWIMMER'S FOOT AID. ALBERT B. JOHNSON, Hartford, Conn. Filed Aug. 23, 1923. Serial No. 659,016. 1 Claim. (Cl. 9—21.)



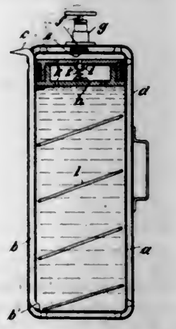
A swimmer's foot-aid comprising a longitudinally directed supporting plate, a wing structure on the under side of said plate, and a backing plate on the under side of said wing structure, said wing structure comprising a middle plate and a pair of wings connected individually to the opposite lateral edges thereof, said backing plate having flanges for cooperating with said wings as back-stops, and said middle plate, wings, and backing plate being made of sheet metal.

1,500,943. FIRE ESCAPE. JEAN D. JOLKOVSKI, New York, N. Y. Filed July 12, 1923. Serial No. 651,124. 3 Claims. (Cl. 254—151.)



1. A fire escape comprising a frame, a shaft rotatably mounted in the frame, a drum fixed to the shaft, a cable for winding on the drum, an escapement device mounted on the frame and connected to the drum for controlling the unwinding of the cable, and a governor attached to the shaft co-operating with the escapement device to control the speed of rotation of the drum during the unwinding of the cable.

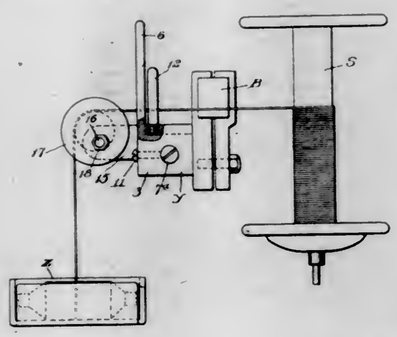
1,500,944. ELECTRIC SWITCH. MARVIN R. KIMBRELL, Charlotte, N. C., assignor, by mesne assignments, of one-half to Memco Engineering & Manufacturing Co., Inc., Long Island City, N. Y., a Corporation of New York. Filed Mar. 23, 1922. Serial No. 546,002. 5 Claims. (Cl. 200—169.)



1. An electric switch having a movable blade, latching means engaging the blade to hold it in circuit closing position, and a latch-freeing member mounted on the blade and having a parallel ruler motion with respect thereto.

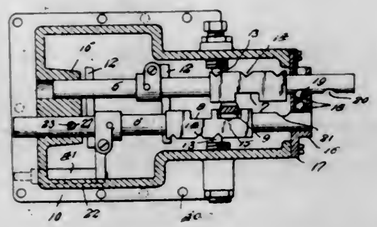
1,500,945. LUGGAGE CARRIER FOR VEHICLES. WILLIAM A. KING, Seattle, Wash. Filed May 24, 1923. Serial No. 641,203. 8 Claims. (Cl. 224—29.)

1. A disappearing luggage carrier for vehicles comprising a rack slidably mounted at the rear of a vehicle body, a stop at the front end thereof to limit its rearward movement, a member at the rear end matching and forming a continuation of the outer covering of the body, and a lock for securing the rack with the said member in matching position, substantially as set forth.



1,500,946. PORTABLE FIRE EXTINGUISHER. FRIEDRICH EMIL KRAUSS, Schwarzenberg, Germany. Filed May 4, 1923. Serial No. 636,746. 4 Claims. (Cl. 169—31.)

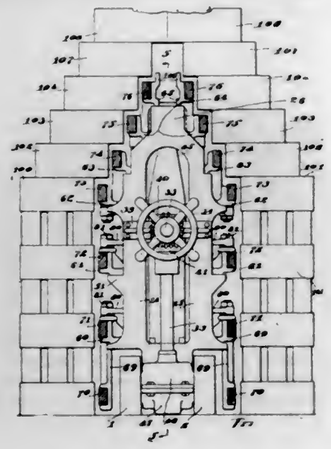
1. In a fire extinguisher operating with a liquid under gas pressure, the combination of a receptacle containing the liquid, a pressure gas container in communication with



said receptacle, a piston between the liquid and the inlet for the gas under pressure and a pressure actuated valve in said piston.

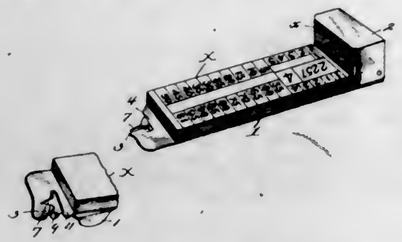
1,500,947. THREAD GUIDE. HENRY N. LESSARD, Manchester, N. H. Filed July 5, 1923. Serial No. 649,558. 8 Claims. (Cl. 242—157.)

1. A guide of the class described comprising two sections, means for adjusting the same one with respect to the other, said sections being provided with upstanding blades providing jaws between which a thread is adapted to be disposed, and an upstanding guiding post carried by one of the sections, a side of the guide post being substantially aligned with the inner edge of one of the blades.



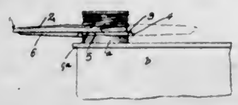
1,500,948. GEAR-SHIFT LOCK FOR AUTOMOBILES. ALBERT R. LONG, Ranshaw, Pa. Filed July 31, 1923. Serial No. 654,820. 6 Claims. (Cl. 70—126.)

1. In combination with the sliding rods of a motor vehicle gear shifting mechanism respectively movable in opposite directions for meshing the reverse and high speed gears of the transmission, and a gear shift lever selectively engageable with said rods for sliding the same one at a time, of means for permitting movement of one of the rods in one direction for meshing the reverse gear and for permitting subsequent movement of the other rod for meshing the high speed gear without disturbing the reverse gear, means to automatically lock the first named rod against movement with the reverse gear in mesh when the other rod is moved for meshing the high speed gear, and a manually operable lock for preventing movement of said other rod when positioned for meshing the high speed gear.



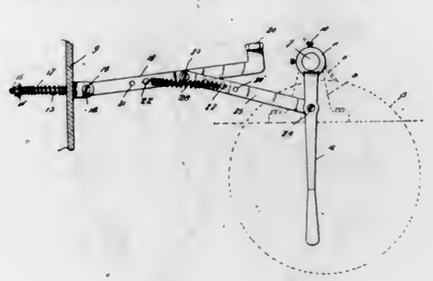
1,500,949. COLLAPSIBLE ARCHFORM FOR BRICK-KILNS. GRAFTON E. LUCE, Chicago, Ill. Filed Apr. 5, 1923. Serial No. 630,136. 16 Claims. (Cl. 25—132.)

1. Apparatus of the kind described, consisting in a form for setting arches in a brick kiln, having brick engaging and aligning means for both sides and top of the arch, in combination with means to withdraw the brick engaging members before the form is removed from the arch, said



withdrawing means simultaneously drawing inwardly and downwardly the brick engaging members.

1,500,950. CHECK-NOTCHING DEVICE. WILLIAM H. MCFALL, Philadelphia, Pa., assignor to Globe Ticket Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1922. Serial No. 538,175. 6 Claims. (Cl. 33—198.)



1. A check notching device comprising a support having a platen formed thereon, and a cooperative notching member pivotally connected to the support to swing edgewise on one side thereof and having a notching tongue arranged to overlie the platen on the opposite side of the support and movable toward and from said platen during said swinging movement of the member.

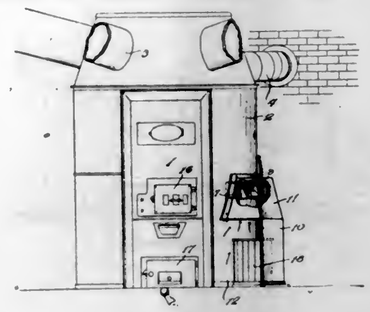
1,500,951. POURING SPOUT. JOHN A. MCGHEE, McKees Rocks, Pa. Filed June 6, 1921. Serial No. 475,390. 3 Claims. (Cl. 221—23.)

3. In a pouring spout, a sheet metal body provided at its inner end with a collar of inverted U-shape in cross-section, the inner element of said collar being vertically disposed and adapted to fit about a can nozzle, said inner element of the collar due to its inherent resiliency being held in close contact with the cam nozzle so as to grip the same frictionally and form a tight closure about the nozzle.

1,500,952. DOCTOR CONTROLLER FOR PAPER-MACHINE DRIERS. JOHN J. MALICKE, Wisconsin Rapids, Wis. Filed Mar. 24, 1923. Serial No. 627,511. 2 Claims. (Cl. 92—74.)

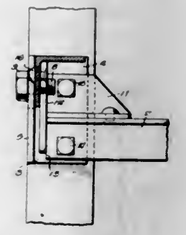
1. In combination with a paper machine doctor, a lever keyed upon one end of the doctor shaft, an arm resiliency connected to the machine frame, a link connection between said arm and said lever, and means between said link, and said arm for maintaining the doctor in an operative position.

1,500,953. SAFETY RAZOR. MACE LOWRANCE MASTERS, Mount Ulla, N. C. Filed Dec. 13, 1921. Serial No. 522,110. 6 Claims. (Cl. 30—12.)



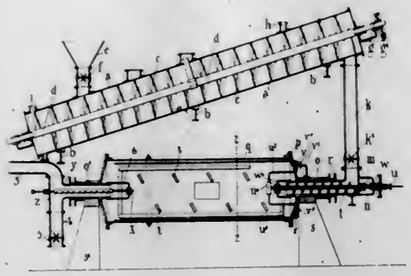
1. A safety razor including a handle, a guard forming a continuation of and located in the plane of the handle and having a guideway in one face thereof, a backing plate, a blade interposed between the guard and backing plate, locking means carried by the backing plate and extending through said blade and guard, and means slidably mounted in the guideway of the guard adapted to engage said locking means for locking all of said parts against relative separation and exerting tension on the blade.

1,500,954. MANUFACTURE OF LEAD ALLOYS. WALTHER MATHESIUS and HANS MATHESIUS, Charlottenburg, Germany. Filed Oct. 21, 1922. Serial No. 596,128. 9 Claims. (Cl. 204—19.)



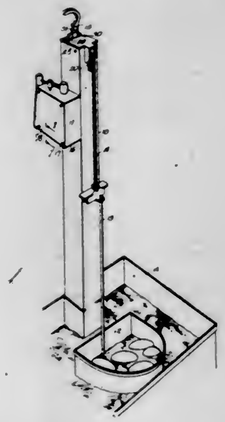
1. An alloy containing lead as its major constituent together with smaller amounts of an alkali-forming metal and copper, such copper being added in the form of a compound thereof with an alkali-forming metal.

1,500,955. DUST REMOVER. WILLIAM A. MATZ, Clinton, Iowa. Filed July 31, 1923. Serial No. 654,909. 1 Claim. (Cl. 126—242.)



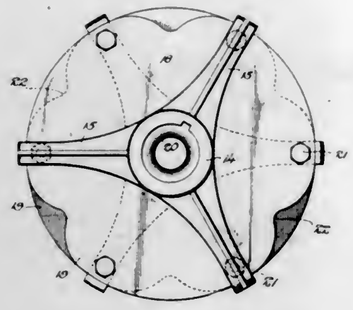
The combination with a furnace having an opening in its side establishing communication with the fire-box of the furnace at a point removed from the fuel door, of a tube enclosing and extending laterally from said opening, a closure hinged at the upper edge of the outer end of said tube and adapted to entirely cover the outer end of the tube, a housing secured to the side of the furnace and including an upper hood completely housing said tube and the closure therefor and having an open bottom below the tube, the lower portion of said housing extending from the lower edge of the hood to the floor upon which the furnace rests and having its front side open to admit a receptacle, and a rack bar pivoted to said closure and extending therefrom through the top of the hood and engageable with the top of the hood to support the closure in open position.

1,500,956. BED CONSTRUCTION. ANASTASIO MESTAS, Mexico, Mexico. Filed Oct. 2, 1923. Serial No. 666,136. 2 Claims. (Cl. 5—294.)



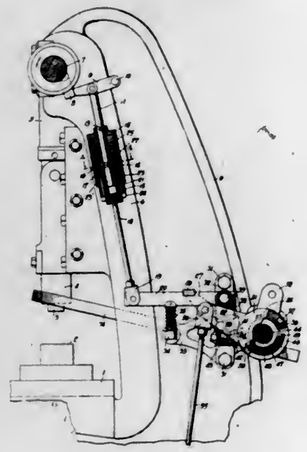
1. A bed construction which includes a post, a clamping plate attached thereto having a right-angle, slotted wing portion, an angle head rail attached to said post and bearing against said clamping plate, the end of the head rail being spaced slightly from the wing portion of the clamping plate, the slot in said wing portion being inclined downwardly and inwardly toward the post, a side rail having a headed stem projecting from the end thereof, said stem adapted to lie in said slot, and a guiding plate on the end of the side rail having a lateral and an end surface of substantial length, said end surface adapted to bear against the clamping plate within the space between the end of the head rail and wing portion of the clamping plate, to prevent relative movement of the side rail with respect to the clamping plate, the lateral surface of said guiding plate adapted to bear against the vertical and horizontal faces of the end of the angle head rail to prevent relative movement between the head rail and the side rail.

1,500,957. APPARATUS FOR EXTRACTING OIL, FATS, AND WAXES, AND FOR CONDITIONING MAIZE AND OTHER GRAIN. JOSEPH NIELD, Salisbury, South Rhodesia, South Africa. Filed May 1, 1924. Serial No. 710,464. 3 Claims. (Cl. 87—6.)



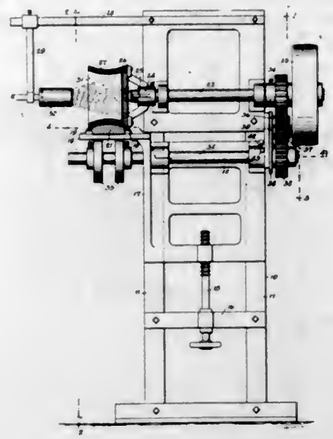
1. An apparatus for the continuous extraction of oils, fats, waxes and the like from materials containing the same and the simultaneous recovery of solvent from the treated material, comprising an inclined extraction cylinder, means for feeding material to be treated thereto, a screw conveyor having a hollow shaft within said cylinder for conveying material upwardly through the cylinder, means permitting the introduction of solvent at the upper end of said cylinder whereby the solvent is caused to travel in a counter-current to and in contact with the material under treatment, a rotary heated solvent recovery cylinder in communication with the extraction cylinder, said recovery cylinder having a hollow trunnion at each end, means for feeding the material into one end of said cylinder through one of the hollow trunnions as well as affording access for a heating medium thereto, discharging means at the other end of said cylinder in the other trunnion and means for separately discharging spent material and solvent therefrom.

1,500,958. EGG BOILER. ANGELO CESARE PARODI, Jersey City Heights, N. J. Filed Nov. 24, 1923. Serial No. 676,817. 5 Claims. (Cl. 161—16.)



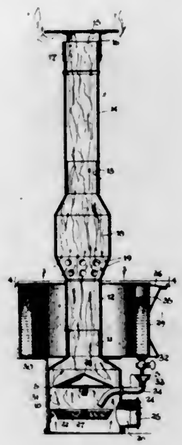
1. In an egg boiler of the type including a boiling vessel, and a basket to be positioned in said vessel or lifted therefrom as well as having clockwork controlling the lifting of the basket and disposed in the vertical plane of the boiling vessel; a clockwork box having a front cover and a bottom member, said bottom member formed with a lip overlapping and extending beneath the edge of said cover, to prevent the direct entrance of steam when the box expands when heated by the steam from the boiling vessel.

1,500,959. FLEXIBLE COUPLING. JOHN N. POWERS, Washington, D. C. Filed Mar. 29, 1922. Serial No. 547,878. 12 Claims. (Cl. 64—96.)



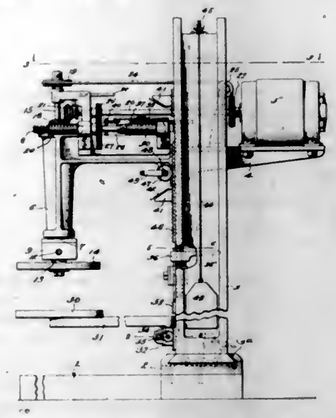
1. A shaft coupling comprising driving and driven elements, and a flexible connection between said elements consisting of an annular member having relatively spaced end portions, means securing both of said end portions to each of said driving and driven elements, and means independent of said securing means mutually and positively connecting said end portions.

1,500,960. POWER-PRESS GUARD. EDWARD C. REGAN, New Haven, Conn. Filed Nov. 11, 1920. Serial No. 423,406. 6 Claims. (Cl. 192—134.)



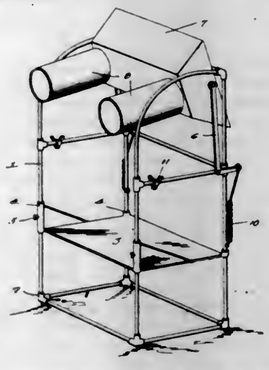
1. A guard mechanism for power presses, comprising a guard ring, means for actuating said guard ring, resilient connections between the actuating means and the guard ring, means for locking the actuating means at a predetermined point in its movement, and power-releasing means operative during the movement of the locking means.

1,500,961. EMBOSSING MACHINE. EDWIN HENRY REIBER, West Webster, N. Y. Filed Feb. 20, 1923. Serial No. 620,271. 5 Claims. (Cl. 101—8.)



1. In an embossing machine, a roller having an embossing surface and an open end, means for feeding a slab into engagement with said embossing surface, and a heating element arranged to project a flame into the open end of said roller to heat the same.

1,500,962. ORCHARD HEATER. FRANK LOUIS SLEZINSKY, Kingsville, Tex. Filed Apr. 24, 1923. Serial No. 634,498. 7 Claims. (Cl. 158—91.)

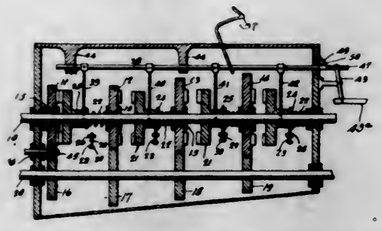


1. In an orchard heater including a lower burner casing having an upper reduced neck portion, a stack including upper and lower adjustably telescoping extensions of which the lower section adjustably telescopes the upper neck portion of the burner casing, said lower stack section having an enlargement intermediate its ends forming a combustion space therein and provided around its lower portion with draft openings, and a fuel pan within the burner casing having a fuel feed pipe opening therein and provided with a portion exteriorly of the casing.

1,500,963. COMBINED DRILL AND GRINDING MACHINE. WILLIAM A. SPEEGLE, Morganton, N. C., assignor of one-eighth to Walter E. Wilson, Morgantown, N. C. Filed June 6, 1922. Serial No. 566,255. 2 Claims. (Cl. 29—26.)

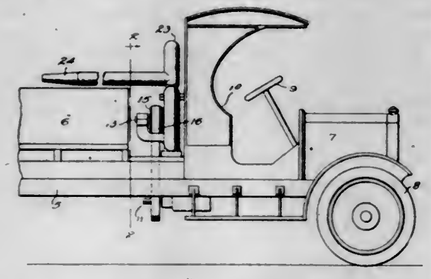
1. A device of the class described comprising an upright, a platform movable therein, a feed screw connected with the platform, a nut carried by the upright engaging the screw, a motor on the platform, a tool carrying member actuated by the motor, means actuated by the motor for rotating the feed screw, reversing means associated with such means for turning the feed screw in either direction and adjustable stop means for automatically actuating the reversing means to cause the platform to be reciprocated in the upright.

1,500,964. SACKER. LYMAN O. STARKS, Burlington, Iowa. Filed Mar. 4, 1924. Serial No. 696,792. 1 Claim. (Cl. 226—58.)



A sacker comprising a frame, a sack support mounted thereon, levers pivoted upon the frame, spring means connected with the levers and the frame for normally holding end portions of the levers in elevated positions, and a trough carried by the levers and having spouts adapted to enter the sacks.

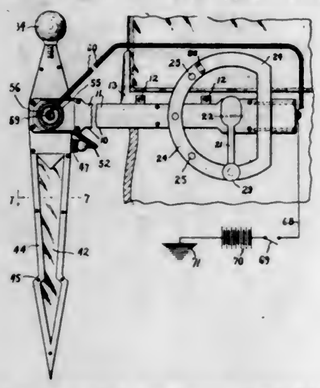
1,500,965. TRANSMISSION GEARING. FRANK S. STRENG, Strattonville, Pa. Filed Aug. 31, 1922. Serial No. 585,544. 3 Claims. (Cl. 74—58.)



1. In a variable speed transmission mechanism, a drive shaft, gears mounted for rotation thereon, a driven shaft, gears fast upon the driven shaft and engaging the gears upon the drive shaft, spring actuated clutches

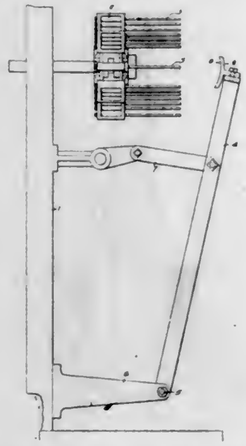
mounted upon the drive shaft for locking the gears thereto, spring actuated means for holding the clutches in neutral position, electrically operated means for selectively releasing any of the clutch holding means, means including a shifting rod common to all of the clutches for

returning them to normal position and means included in the electrically operated means and controlled by the operation of the shifting rod to render the releasing means inoperative when any one of the clutches is in engaged position.



1,500,966. PNEUMATIC LOADING AND UNLOADING APPARATUS. ETTA E. SUPINGER, Richmond, Va. Filed Aug. 10, 1923. Serial No. 656,757. 2 Claims. (Cl. 302—17.)

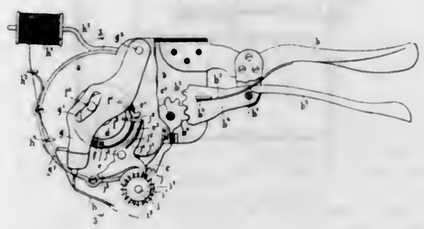
1. In combination with a motor truck, having a longitudinal propeller shaft, and provided with a frame or chassis upon which are mounted a front driver's seat and a rear open top body arranged in spaced relation to each other, a fan blower mounted upon the frame or chassis between said seat and said body, operative connections between said propeller shaft and said fan blower, and means associated with the outlet of said blower for utilizing the air currents from the latter for selectively loading grain from the said body into a receptacle or car positioned beside the truck, or for loading the same from said receptacle or car into said truck body, at will, said last named means comprising a vertical pipe having a lower lateral branch, and an upper lateral branch extending at right angles to each other, and a swivelled connection between the outlet of said blower and said vertical pipe.



1,500,967. DIRECTION SIGNAL FOR VEHICLES. FRED F. THOMSEN, Omaha, Nebr. Filed Aug. 23, 1922. Serial No. 583,792. 1 Claim. (Cl. 177—327.)

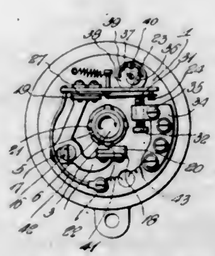
A vehicle signal comprising a tubular housing, a shaft journaled therein and having one end projecting beyond said housing, means for selectively rotating said shaft in opposite directions, a tubular cross shaft driven by said first named shaft, a signal element fixed to said tubular cross shaft and being hollow, illuminating means contained within said hollow signal element, a conducting rod passing in insulated relation through said hollow cross shaft, a lead connecting the outer end of said rod with said illuminating means, a housing at the back of said cross shaft, a resiliently pressed contact member in said housing bearing against said rod, a casing secured to the end of the firt mentioned shaft which projects beyond said housing, said casing being tubular and having a stem axially therein projecting from one end of the casing to an intermediate point therein, resiliently pressed contact fingers carried at opposite sides of said

stem, and a conducting ring having insulated portions carried fixedly by said shaft and received in the end of the casing not occupied by said stem, a source of electricity connected to one of said resiliently pressed contact fingers, and a lead connecting the other contact finger in said casing with the spring pressed contact element bearing against said conducting rod.



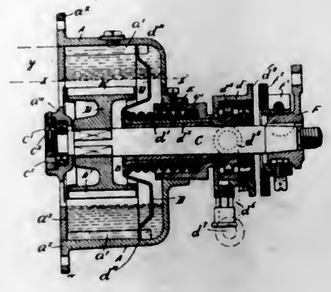
1,500,968. PUSHER FOR KNITTING MACHINES. GEORGE C. L. TISCH, Elizabeth, N. J., assignor to Tisch Machine Die Works, Elizabeth, N. J., a Corporation of New Jersey. Filed May 19, 1923. Serial No. 640,148. 3 Claims. (Cl. 66—12.)

1. In a knitting machine provided with thread bar shifting pins, a pusher lever, and a foot carried by the lever for shifting said pins, said foot being formed with a concave face.



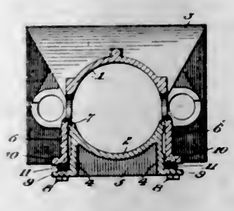
1,500,969. THREAD-TACKING MACHINE. GASTON VENDITTI, Paris, France. Filed Aug. 9, 1922. Serial No. 580,768. 8 Claims. (Cl. 112—169.)

1. A portable machine for running tacking threads through two superimposed thicknesses of cloth or the like along a predetermined outline, comprising a housing, a needle carrier pivotally mounted thereon, means for imparting to the said needle carrier an alternating movement of a stroke sufficient to allow of the needle entering and passing through both thicknesses of material and coming back out therefrom after having formed and left behind, each time, a loose loop of thread upon the under face of the lower cloth, locking means for automatically stopping the machine during the period the needle enters



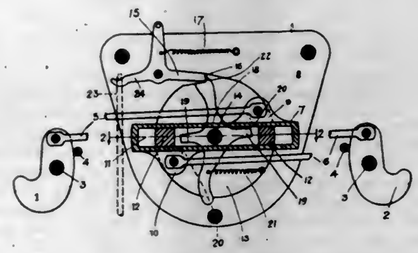
the two thicknesses of material, means for automatically stopping the movement of the needle when it reaches the end of its backward stroke, means for automatically releasing the locking means of the machine, and hand actuated means for advancing said machine along the predetermined outline to the extent of a distance corresponding with the spacing apart of two consecutive loops of thread, for the purpose described.

1,500,970. TIMER. WILLIAM F. WAGNER, San Diego, Calif., assignor of thirty-five per cent to Arthur W. Pearsons, San Diego, Calif. Filed Aug. 4, 1921. Serial No. 489,841. 3 Claims. (Cl. 200—21.)



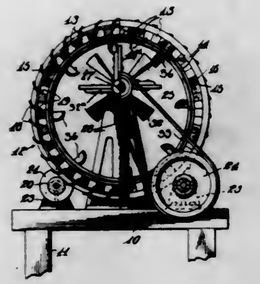
2. A timer comprising a base, a rotatable shaft extending through the base, a stationary contact carried by the base, a lever pivotally and slidably mounted upon the base at a point diametrically opposite the rotatable shaft from the stationary contact and having diverging arms, one arm extending toward the stationary contact and carrying an abutment element extending toward the shaft, a contact carried by the second arm of the lever and extending parallel to the first arm upon the opposite side of said shaft, resilient means yieldably holding the lever against movement, and means carried by said shaft for engaging the abutment element of the lever as the shaft rotates, rotation of the shaft in one direction imparting swinging movement to the lever to bring the movable contact into rubbing contact with the stationary contact and reverse rotation of the shaft imparting sliding movement to the lever with the contacts out of engagement.

1,500,971. FRICTION CLUTCH. WILLIAM WALLACE, Oldham, England. Filed Apr. 30, 1924. Serial No. 710,164. 3 Claims. (Cl. 192—109.)



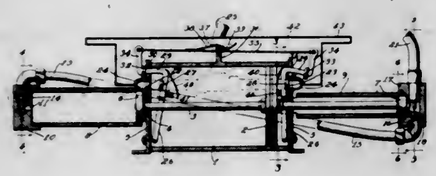
1. A method of modifying the action of a clutch which includes the step of opposing the centrifugal force of a rotating body of lubricant by changing its bodily dimensions.

1,500,972. STOKER CYLINDER. ARTHUR WATHEY, Cleveland, Ohio. Filed June 3, 1922. Serial No. 565,638. 4 Claims. (Cl. 110—109.)



1. The combination in a stoker cylinder, of a detachable bottom member approximately semi-circular in cross-section adapted to rigidly support the weight of a ram in said cylinder and means for adjusting said bottom member transversely of the cylinder for the purpose specified.

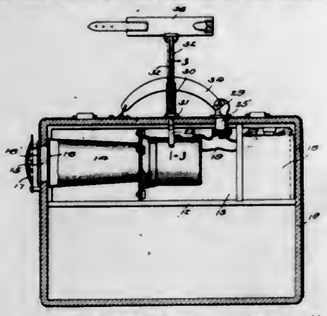
1,500,973. MEANS FOR RELEASABLY SUSPENDING A MASS AND FOR LIKE PURPOSES. GORDON AUGUSTUS WEARHAM, London, England. Filed Mar. 2, 1921. Serial No. 449,209. 12 Claims. (Cl. 244—1.)



1. Apparatus for suspending a load at two points and releasing it at both points simultaneously, comprising two load suspending and releasing devices connected with a coupling piece which is capable of two independent motions, one of which is adapted to release the load at both points simultaneously and the other of which is adapted to release the load at one point if the connection with the load suspending and releasing device at the other point be ruptured.

1,500,974. MACHINE FOR DRYING FRUIT AND VEGETABLES. FRED L. WEBSTER, Adams, N. Y. Filed Oct. 23, 1922. Serial No. 596,403. 10 Claims. (Cl. 34—5.)

5. In a drying device of the class described a drying cylinder, means rotatably mounting said drying cylinder, said cylinder being formed with a plurality of longitudinal openings, air deflecting means arranged on said cylinder adjacent said openings for directing air through said openings to the interior of said cylinder during its rotation, a conveying spiral arranged in said cylinder and means for rotating said cylinder.

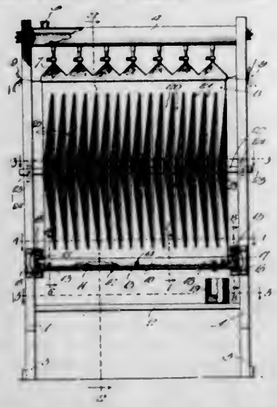


1,500,975. VACUUM-OPERATED MECHANISM. JOHN B. WHITTED, Roland Park, Baltimore, Md., assignor of twenty-four and eight-tenths per cent to J. Henry Miller and twenty-four and eight-tenths per cent to Donald H. Waddington, both of Baltimore, Md. Filed Jan. 9, 1922. Serial No. 527,943. Renewed May 27, 1924. 4 Claims. (Cl. 121—164.)

1. In a vacuum operated engine the combination with a cylinder having inlet and outlet ports, of a piston mounted for reciprocation within the cylinder, members mounted for movement adjacent each limit of the stroke of the piston, a pair of valves carried by each member for alternately closing the respective inlet and outlet ports adjacent thereto, a connection between the members for insuring simultaneous movement thereof, co-operating means upon said connection and the cylinder for holding the members yieldingly in either of two extreme positions, the outlets of the cylinder being in communication with a vacuum, and yielding means on the members for engagement by the piston to actuate the members.

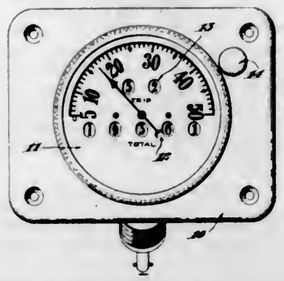
1,500,976. THEFT-ALARM CARRIER. EMIL A. WIESE, West Hoboken, and OSCAR A. WIESE, Union Hill, N. J. Filed Sept. 11, 1922. Serial No. 587,443. 6 Claims. (Cl. 177—314.)

1. The combination with a carrying case for valuables, of a theft alarm therefor arranged within said case and comprising an audible electric signal, a source of electric energy, and means insertable in said case and attached to the wrist of the carrier of the same, which is



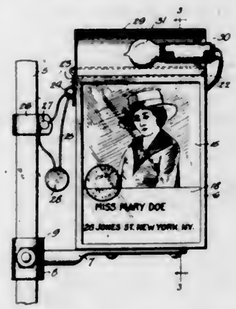
operable upon withdrawal to effect the coupling of the alarm with the source of energy to actuate the same.

1,500,977. STRONG OR SAFETY BOX. GEORGE WITTY, New York, N. Y., assignor of one-half to Fannie I. Powers, Brooklyn, N. Y. Filed Nov. 10, 1922. Serial No. 600,115. 6 Claims. (Cl. 224—26.)



1. A device of the class described comprising a receptacle including mating sections, a bolt engageable with said sections, and body engaging means carried by the receptacle and secured in a locked position about the body by means of said bolt.

1,500,978. COOLER AND HUMIDIFIER. SAMUEL WILEY WOMACK, Quanah, Tex. Filed Oct. 12, 1922. Serial No. 594,086. 6 Claims. (Cl. 299—20.)



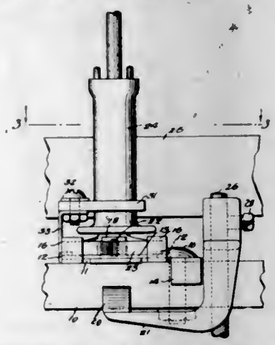
1. A humidifying device comprising a frame, a plurality of strips of absorbent material mounted within said frame in close relation, means connected with said strips for moving the same to a desired spaced relation, and means for moistening said strips.

1,500,979. ODOMETER. THOMAS DONALD ADAIR, JR., Dorchester, Mass., assignor to Standard Thermometer Company, Roxbury, Mass., a Corporation of Maine. Filed Nov. 16, 1922. Serial No. 601,287. 1 Claim. (Cl. 235—97.)

An odometer having, in combination, a total mileage train consisting of a tenths element provided with a higher element driving dog and a plurality of higher elements driven therefrom, a trip mileage train consisting of a units element provided with a transmission gear and star gear, a higher element driven therefrom, an intermediate connecting element provided with a transmission gear and star gear, the former meshing with the transmission gear of the trip mileage units element, and the latter being arranged to be operated by the dog of the total mileage tenths element, and means for actuating the total mileage tenths element.

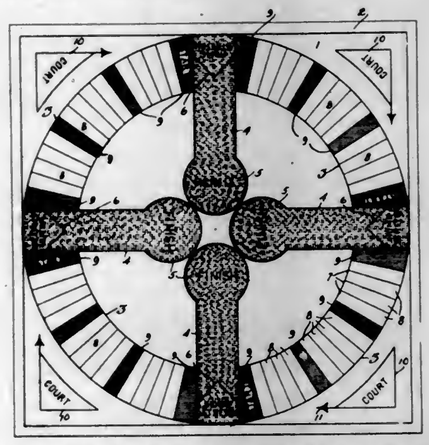
1,500,980. IDENTIFICATION DEVICE FOR VEHICLES. RAFFAELE ALFISI, Brooklyn, N. Y. Filed Oct. 26, 1923. Serial No. 671,035. 2 Claims. (Cl. 40—2.2.)

1. In an identification device for vehicles, a casing having a transparent front, a partition in said casing combining with said front to form a compartment for receiving an identification card, said compartment having an opening, a closure for said opening pivotally connected to said casing, a latch carried by said closure, a hasp carried by said casing for receiving said latch, and means engageable with said hasp for latching said closure in closing position.



1,500,981. ADJUSTABLE GARMENT. ABRAM K. BAER, Baltimore, Md., assignor to Strouse-Baer Company, Baltimore, Md., a Corporation of Maryland. Filed Nov. 19, 1921. Serial No. 516,360. 2 Claims. (Cl. 2—106.)

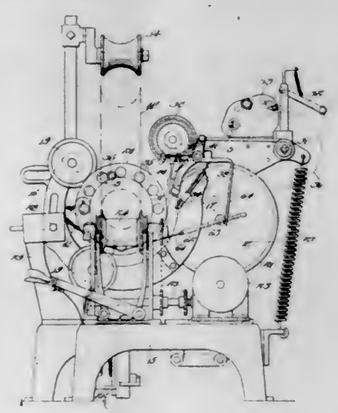
1. In an adjustable middy blouse, a body having a bottom portion adapted to be folded to shorten the garment, said folded portion being adapted to be folded vertically at the sides of the garment to shorten the



garment circumferentially and pairs of snap fasteners arranged at the lines of vertical folds for retaining the same in folded position.

1,500,982. SPINDLE STOP-MOTION ATTACHMENT FOR SPINNING MACHINES. ERNEST CLARENCE CUSHMAN, Westerly, R. I. Filed July 13, 1923. Serial No. 651,364. 5 Claims. (Cl. 118—7.)

1. In combination with a driving member, a spinning spindle comprising a base, a plate mounted to reciprocate on the base, a spindle carried by the plate and normally retained in engagement with the driving member, and means directly engaging the plate to move the spindle out of engagement with the driving member.

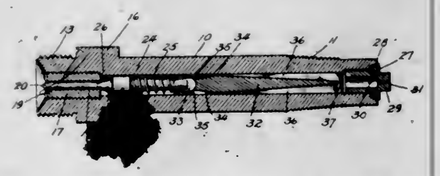


1,500,983. GAME APPARATUS. JAMES H. DEEN, New York, N. Y. Filed Sept. 7, 1921. Serial No. 499,030. 2 Claims. (Cl. 46—63.)

1. A game apparatus comprising a field having a circular track provided with a plurality of radial lines defining divisions, groups of which are blank and the divisions between the groups of blank divisions being alternately colored red and blue, game pieces movable on said track, and counters having numbered faces to

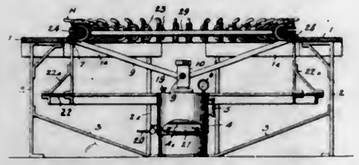
indicate the number of divisions for a playing piece to move and having red and blue faces to indicate movement of a playing piece to a correspondingly colored division on the track.

1,500,984. WRAPPING MACHINE. JASPER DERRY, Medford, Mass., assignor to Andrew Terkelsen, Boston, Mass. Filed May 9, 1923. Serial No. 637,618. 9 Claims. (Cl. 242—6.)



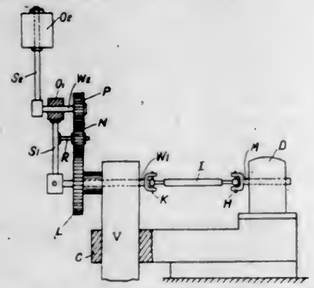
1. In a wrapping machine, in combination, an annular shuttle, means removed from said shuttle for supplying a strip of wrapping material thereto, means for rotating said shuttle to wrap said strip about the work, means for severing said strip between the shuttle and the source of supply, and means engaging the severed portion of said strip adjacent its free end for holding and controlling the same until it is completely wrapped about the work.

1,500,985. METHOD FOR PRODUCING ANTITOXINS. RICHARD DEUTSCHMANN and WILHELM KOTZENBERG, Hamburg, Germany. Filed Aug. 6, 1923. Serial No. 656,134. 2 Claims. (Cl. 167—7.)



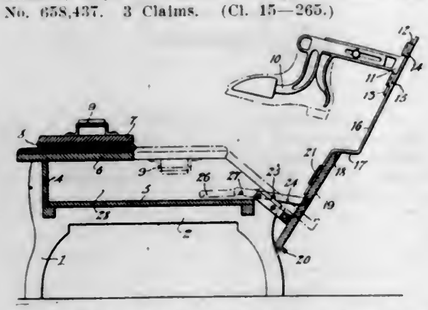
2. A method for producing an antitoxic serum, comprising inoculating a mixture of one part of substance of ovarium and four parts of substance from testicles into the organism of an animal and gaining the serum from the blood of the thus inoculated animal.

1,500,986. INJECTOR. WILLIAM JAMES FISH, Rousville, Pa. Filed Dec. 22, 1921. Serial No. 524,280. 5 Claims. (Cl. 123—32.)



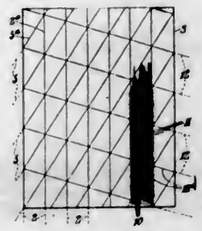
1. In a device of the class described a housing adapted to be inserted in the wall of an engine cylinder, means for supplying fuel to said housing, a valve, a spray plug and a stand interposed between said valve and said spray plug and provided with continuous tapering slots to dissipate the back pressure through said housing.

1,500,987. SKIN MARKING. OLAF HANSEN FOSS, Maddock, N. Dak. Filed June 20, 1923. Serial No. 646,647. 10 Claims. (Cl. 101—21.)



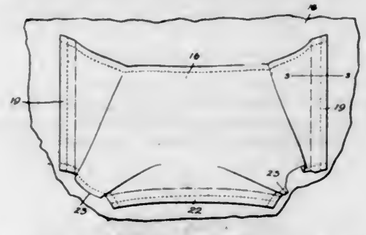
1. A skin marking device, comprising a jaw structure between which a skin is adapted to be inserted, a marking member carried by one of the jaws of the structure, which jaw is movable relative to the other, and means for applying a heating fluid to said marking member, such means applying said fluid automatically during relative movement of the jaws.

1,500,988. MECHANISM FOR CONVERTING ROTARY INTO RECIPROCATORY MOTION. RUDOLF GOLDSCHMIDT, Berlin, Germany, assignor to Det Tekniske Forsøgsaktieselskab, Charlottenlund, Denmark, a Company of Denmark. Filed June 22, 1921. Serial No. 479,573. 11 Claims. (Cl. 74—14.)



1. Mechanism for converting rotary into reciprocatory motion comprising a reciprocatory member, an arm pivoted to said member and subdivided into three or more parts jointed together, driving connections between the arm parts for rotating each arm part relative to the adjacent arm part, means for rotating the innermost arm part and a weight on the outer part of said arm.

1,500,989. SHOE-POLISHING BENCH. CHARLES P. HADLEY, Maywood, Ill. Filed Aug. 20, 1923. Serial No. 658,437. 3 Claims. (Cl. 15—265.)

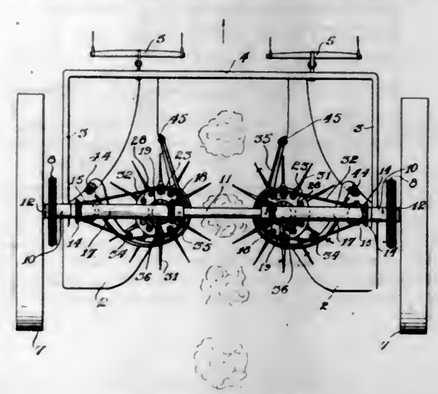


1. In a shoe polishing bench, a body formed with a hinged platform at one end, a shoe rest disengageably mounted on the platform, a locking arm swingably secured to the platform, said arm being formed with a plurality of notches, and a pin carried by said body adapted to engage the respective notches for holding the platform in different positions.

1,500,990. METHOD OF CUTTING MATERIAL FOR BUFFING WHEELS. WESLEY F. HALL, Matawan, N. J., assignor to A. P. Munning & Co. of New York, New York, N. Y., a Corporation of New Jersey. Filed Sept. 26, 1921. Serial No. 503,411. 6 Claims. (Cl. 164—17.)

1. In the art of making buff wheels out of unit pieces cut from sheet material, the steps in the manufacture of the wheel which comprise severing a sheet of material along a series of lines parallel to one edge of the sheet, also severing the sheet along a series of parallel lines inclined to such edge, and along a further series of parallel lines inclined to both of said above-mentioned series of lines.

1,500,991. POCKET FOR SHOWER-BATH CURTAINS. KURT HEITLER, New York, N. Y. Filed Dec. 20, 1922. Serial No. 608,001. 2 Claims. (Cl. 4—154.)



1. As a new article of manufacture, a shower bath curtain and a pocket formed on the inner side of said curtain consisting of a strip of material having cutaway corners at the lower portion, the side and lower edges of said strip being attached to the curtain with the upper edge and lower cutaway corners free for respectively providing a mouth at the upper end of the pocket for receiving the articles and drain outlets at the lower corners.

1,500,992. COTTON PICKER. HERBERT G. IRWIN, Floydada, Tex. Filed Sept. 1, 1920. Serial No. 407,383. 8 Claims. (Cl. 56—14.)

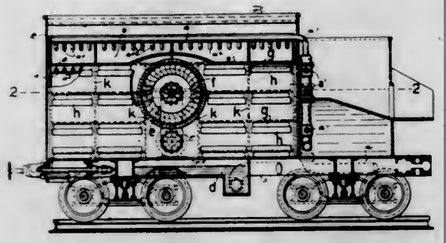
1. In a cotton-picking machine, the combination of a cylinder, a plurality of pickers carried by the cylinder and constantly radial thereto, means for rotating the cylinder about a vertical axis whereby to carry the pickers into and out of engagement with a plant, and scrapers fixed above and below the pickers, the ends of the scrapers being disposed in advance of and outwardly beyond the cylinder respectively and radially beyond the arcs described by the free ends of the pickers, and the intermediate portions of the scrapers extending from a point close to the cylinder eccentrically around the cylinder in rear of the same to a point removed therefrom a distance greater than the length of the pickers.

2. In a cotton-picking machine, the combination of a vertically disposed cylinder, a plurality of pickers extending from the cylinder constantly on radii thereof and mounted for rotation about their own axes in the wall of the cylinder, said pickers being disposed in vertical series, a plurality of shafts mounted vertically in the cylinder and each adjacent and geared to one vertical series of pickers, gears on the upper ends of said shafts in fixed relation to the cylinder, a relatively stationary rack disposed above the cylinder in the horizontal plane of said gears at the inner side of the path traveled by them, means for rotating the cylinder, means engaging the said gears and acting thereon at the outer side of the

path traveled by them, said means being positively caused to travel in opposition to the direction of rotation of the cylinder, the rotation of the cylinder causing the gears to successivel engage said last-mentioned means and the rack whereby the pickers will be positively rotated in opposite directions during successive periods in the rotation of the cylinder.

1,500,993. MANUFACTURE AND PRODUCTION OF CAUSTIC SODA. RICHARD OWEN JONES, Cricklewood, London, England, assignor to Courtaulds Limited, London, England, a Company of Great Britain. Filed June 9, 1922. Serial No. 567,201. 2 Claims. (Cl. 23—22.)

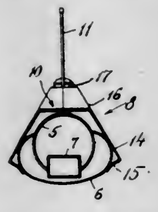
1. The manufacture of comparatively concentrated solutions of caustic soda from sodium carbonate by causticizing with lime as completely as possible a solution containing about 20 per cent of sodium carbonate, then filtering off the liquor, then dissolving in this liquor about a further 10 per cent of sodium carbonate, and then causticizing the solution again as completely as possible with lime, whereby, on cooling, a liquor is obtained which contains at least 18 per cent of caustic soda and some sodium carbonate.



1,500,994. EFFECTING THE SEPARATION OF SODIUM CARBONATE FROM LIQUORS OR SOLUTIONS CONTAINING CAUSTIC SODA. RICHARD OWEN JONES, Cricklewood, London, England, assignor to Courtaulds Limited, London, England, a Company of Great Britain. Filed June 9, 1922. Serial No. 567,202. 5 Claims. (Cl. 23—22.)

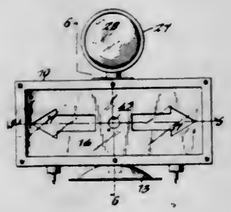
1. Reducing the amount of sodium carbonate in a caustic soda solution by treating the said solution with calcium carbonate, thereby forming and precipitating the insoluble double compound of calcium carbonate and sodium carbonate as hereinbefore explained.

1,500,995. MANUFACTURE OF CAUSTIC SODA. RICHARD OWEN JONES, London, England, assignor to Courtaulds Limited, London, England. Filed Mar. 9, 1923. Serial No. 624,030. 3 Claims. (Cl. 23—22.)



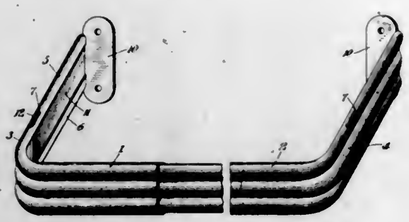
2. In the manufacture of caustic soda, the steps of chilling below 0° C. a causticized sodium carbonate solution, and separating from the cold solution the crystallized sodium carbonate.

1,500,996. WATER COOLER FOR LOCOMOTIVES. REINHARD KLINGELHÖFFER, Werden-on-the-Ruhr, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 29, 1921. Serial No. 525,648. 8 Claims. (Cl. 261—118.)



1. A reflex cooler for locomotives provided with a condenser, said cooler being formed with a plurality of sections, vertically disposed walls forming said sections, said sections being divided into separate cooling cells, and approximately horizontal partitions forming said separate cooling cells.

1,500,997. SUBMARINE CONSTRUCTION. SAMUEL LIPPINCOTT GRISWOLD KNOX, New York, N. Y. Filed May 9, 1922. Serial No. 559,512. 5 Claims. (Cl. 114—16.)

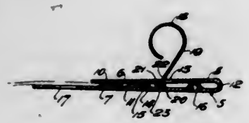


1. A submarine, the external surfaces of which make an angle with the vertical so as to reflect upwardly or downwardly supersonic waves striking them from the side.

1,500,998. VEHICLE SIGNAL. CLARENCE A. KUHN, Forks, N. Y. Filed Feb. 20, 1922. Serial No. 537,812. 2 Claims. (Cl. 177—329.)

1. A vehicle signal, comprising a casing having a central lamp compartment and end lamp compartments at opposite sides thereof formed by a curved partition arranged centrally in an upright position in said casing and isolating the central compartment from the end compartments, the casing having a rear wall bearing a "stop" indication located opposite the concave side of said partition and direction indications located opposite said end compartments, said casing having a front wall bearing direction indications located opposite said end compartments, the concave and convex sides of said partitions forming reflecting surfaces for the lamps in the central and end compartments, respectively.

1,500,999. CURTAIN SUPPORT. WILLIAM E. KURTZ, Los Angeles, Calif., assignor to The John Kroder & Henry Reubel Company, Brooklyn, N. Y., a Corporation of New York. Filed June 11, 1920. Serial No. 388,194. 2 Claims. (Cl. 156—19.)



2. In a curtain support, a bracket member having a slide piece extending therefrom, a rod member, one end portion of which is telescopically slidable with regard to said slide piece with sufficient play to permit a certain amount of up and down movement of the rod member when engaging the slide piece, said slide piece and rod end portion having a vertically opposed projection and recess adapted to cooperate to oppose relative sliding between the members when the latter are fully engaged but permitting relative up and down movement therebetween, said projection and recess being located at a substantial distance from the end of the rod when the members are in said last-mentioned position, whereby the rod may tilt downwardly by its own weight when fully engaged, to a position in which the projection fits in the recess.

1,501,000. LAUNDRY MARKER. EDWIN LANE, New York, N. Y., assignor to Carolyn Laundry, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1923. Serial No. 681,635. 19 Claims. (Cl. 40—23.)

18. A reusable marker of the class specified having a pair of flat resilient metal jaws with opposed inwardly projecting interacting imperforate indentations, vent openings being formed across the jaws and adjacent to and in alternation with the indentations, and means for opening the jaws.

1,501,001. MARKER. EDWIN LANE, New York, N. Y., assignor to Carolyn Laundry, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1923. Serial No. 681,636. 18 Claims. (Cl. 40—23.)

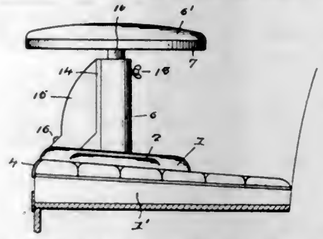
18. A marker of the class specified having normally closed spring jaws provided with interacting impenetrating opposed holding means at a distance rearwardly from the free ends of the jaws, a rigid part of the marker being formed with a slot therethrough for hanging the marker and the article or piece attached thereto, and releasing means insertable between the jaws for opening the jaws.

1,501,002. LAUNDRY MARKER. EDWIN LANE, New York, N. Y., assignor to Carolyn Laundry, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1923. Serial No. 681,638. 9 Claims. (Cl. 40—23.)

5. A marker of the class specified having an identifying means and a pair of normally closed resilient jaws, the jaws being respectively formed with impenetrative tongues and openings in alternate relation in the two jaws, the tongues and openings varying in dimensions, and means insertable through one of the jaws in rear of the openings and projections thereof for opening the jaws.

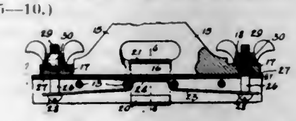
1,501,003. LAUNDRY MARKER. EDWIN LANE, New York, N. Y., assignor to Carolyn Laundry, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1923. Serial No. 681,639. 5 Claims. (Cl. 40—23.)

2. A reusable laundry marker consisting of an intermediately bent flat strip of spring metal provided with flat body members with a clear space between them and having closed jaws extending therefrom in straight lines, normally in parallel relation and in close contact the jaws being provided with opposed inwardly projecting angularly disposed securing means adjacent to and wholly in rear of the free end edges of the jaws to permit the marker to be fully applied up to the bend over the edge of an article or piece adapted to be laundered.



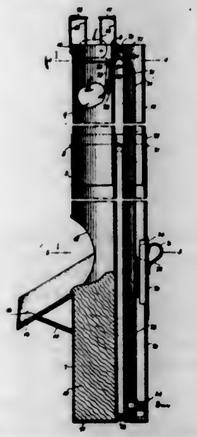
1,501,004. HAMMER CONTROL FOR TABULATING MACHINES. CLAIR D. LAKE, Binghamton, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Mar. 6, 1922. Serial No. 541,45 . 7 Claims. (Cl. 235—58.)

1. In a tabulating machine, a plurality of type, and carriers therefor, a plurality of pivotally mounted hammers, an impacting means therefor, and means for selectively displacing one or more of the said hammers out of the path of said means when it is desired to suppress the printing from one or more type.



1,501,005. STOOL. CARL M. LARSEN, Glyndon, Minn. Filed June 4, 1923. Serial No. 643,381. 1 Claim. (Cl. 155—11.)

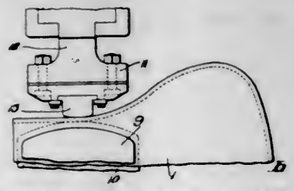
In a device for the purpose set forth, an angularly disposed base designed to rest on the seat of an automobile, a hook on the outer portion thereof to engage the cushion of the automobile seat, a hollow pedestal arising centrally from the base having inner threads, a cross sectionally U-shaped guide on the outer face of the



pedestal, a plate receiver therein and secured to the base, a cushion seat, a threaded post depending therefrom received in and engaging the threads of the pedestal, and means for locking the post adjusted in the pedestal.

1,501,006. RAKE. BERT ELWOOD LEAS, Luverne, Minn. Filed Mar. 6, 1923. Serial No. 623,222. 3 Claims. (Cl. 55—10.)

2. A rake including a handle and a head, of a connection therebetween to permit of relative angular movements therebetween, said connection comprising a forked sleeve carried by one end of the handle, a cross rod connecting the forked portion of the sleeve, a strap secured to the head having a semi-circular portion embracing the cross rod, apertured lugs projecting from the forked portion, apertured portions in the head, bolts extending through said apertured lugs and apertured portions, and a leaf spring having notched opposite extremities embracing the bolts, said spring having a medial bearing portion on the head and engaging at its opposite ends the bolt heads for tensioning said head against angular movement.



1,501,007. FRUIT PICKER. DAVID G. LEONARD, Schaghticoke, N. Y. Filed Nov. 21, 1922. Serial No. 602,409. 4 Claims. (Cl. 56—340.)

2. A fruit picker consisting of a telescopic gathering tube having a lower outlet and cushioning means adjacent to the outlet, gathering means above the upper open end of the tube, a telescopic tube of less diameter than and connected to the gathering tube for uniformity of adjustment, a tilting receiver mounted in the upper extremity

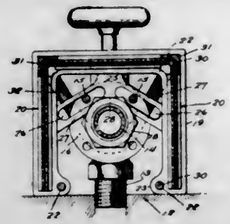
of the gathering tube and having a cushioning means, and a weight freely movable in the smaller telescopic tube and connected to the tilting receiver to normally hold the latter in horizontal position but overcome by the weight of the fruit on the receiver to permit passage of the fruit through and discharge thereof outwardly from the gathering tube.

1,501,008. METHOD OF COLD FLANGING IRREGULARLY SHAPED SHEET-METAL PLATES. HUGH MCCABE, Lawrence, Mass. Filed July 31, 1922. Serial No. 578,590. 10 Claims. (Cl. 153—16.)

10. The method of cold flanging irregularly shaped sheet metal plates, which consists in clamping successive convex areas of the body portion adjacent to the flange portion, and at each clamping operation subjecting the flange portion adjacent thereto to the flange forming action of a convex faced bender.

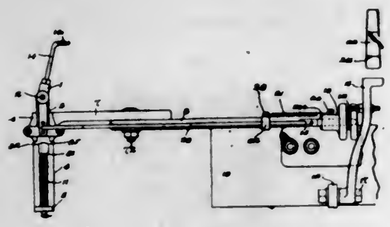
1,501,009. TENNIS BALL AND METHOD OF MANUFACTURING THE SAME. THOMAS W. MILLER, Ashland, Ohio, assignor to The Faultless Rubber Company, Ashland, Ohio, a Corporation of Ohio. Filed Dec. 23, 1922. Serial No. 608,752. 3 Claims. (Cl. 154—16.)

2. The method of manufacturing sponge rubber tennis balls and the like, which consists first in forming by vulcanization a sponge rubber ball of the desired size and weight, then dipping the same in a rubber cement containing a percentage of floc, then applying to the surface of said ball before it dries a coating of loose wool floc, and finally vulcanizing said cement coating under slight compression.



1,501,010. SALIVA EJECTOR. FRANK L. DAILEY, New Brunswick, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed Feb. 27, 1923. Serial No. 621,550. 2 Claims. (Cl. 32—33.)

1. A saliva ejector including a tubular member having a short arm or mouth piece the ultimate portion of which is disposed at an angle to the main body portion, said mouth piece having a saliva intake a wall of which is flattened and reversed to constitute a guard for the intake, the terminal of the guard overlying the opposite wall of the intake, but floated with respect thereto to provide for expansion and contraction.

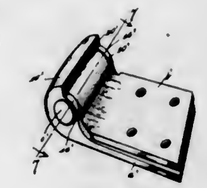


1,501,011. GLASS-GAUGE PROTECTOR. PAUL B. HUYETTE, Germantown, Pa., assignor to The Paul B. Huyette Co., Incorporated, Philadelphia, Pa., a Corporation of New Jersey. Filed Jan. 31, 1923. Serial No. 616,067. 8 Claims. (Cl. 73—54.)

1. As an article of manufacture a gauge glass protector adapted for association with a glass gauge having a guard rod, comprising a protector cage and valve engaging means rigidly carried by the cage and having a

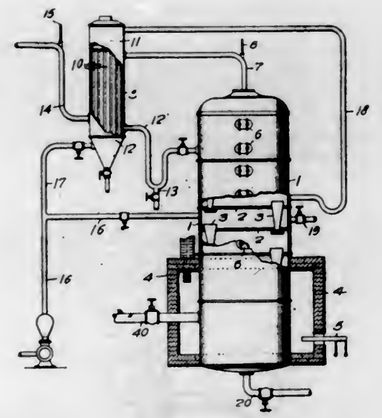
slot, said slot being so arranged in said means that an edge thereof will contact with a guard rod for holding the cage in position.

1,501,012. FEELER MOTION FOR LOOMS. SIMEON S. JACKSON, Hyde Park, Boston, Mass., assignor to The Stafford Company, Readville, Mass., a Corporation of Massachusetts. Filed Oct. 15, 1923. Serial No. 668,617. 9 Claims. (Cl. 139—286.)



1. In a mechanism comprising a latch connected with change-calling mechanism of a loom, a weft-hammer adapted to engage said latch to actuate thereby said mechanism into performance of its functions, and a side-slipping feeler-member mounted with capacity to reciprocate in a fore-and-aft direction in a feeling action as well as to swing sidewise for indicating purposes, the combination with the said elements of bolt-guiding means, and a sliding bolt which controls the position of the latch vertically, and which through sidewise slipping movement of the feeler-member is moved endwise relative to said guiding means, with consequent vertical movement of the latch into position to be engaged and actuated by the weft-hammer.

1,501,013. STOP HINGE. STUART W. PARSONS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 24, 1922. Serial No. 546,232. 5 Claims. (Cl. 16—191.)

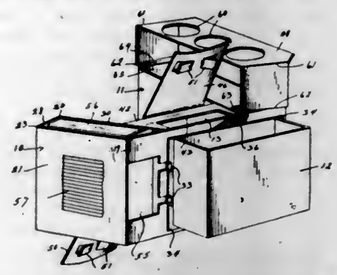


1. A stop hinge comprising a pair of leaves constructed of sheet metal, one of said leaves having a wall at one end curved to form a socket, and side portions integral with the side edges of said wall and at right angles thereto, the other leaf having a continuous, unbroken

knuckle positioned within said socket and extending substantially the entire distance between said side portions, a pintle supported by said side portions, said knuckle

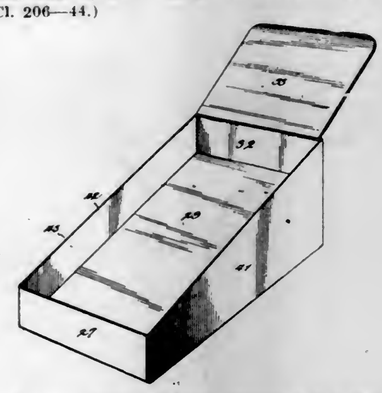
having a long bearing surface on said pintle, and means for preventing relative rotation between said pintle and side portions.

1,501,014. DISTILLATION WITH ALUMINUM CHLORIDE. ALMER MCD. MCAFEE, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Mar. 29, 1922. Serial No. 547,813. 7 Claims. (Cl. 196—25.)



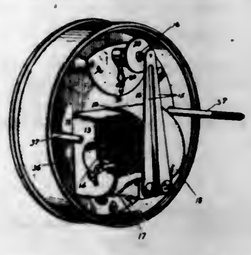
1. The process of distilling oils with aluminum chloride which comprises establishing and maintaining a vertical downwardly flowing current of oil through a zone of progressively increasing temperature and supplying aluminum chloride thereto at a midpoint.

5. In the catalysis of oils with aluminum chloride, the process which comprises passing aluminum chloride vapors upwardly through successive transverse layers of downwardly flowing hot oil.



1,501,015. AUTOMOBILE ACCESSORY. JAMES MEDLEY, Ironwood, Mich. Filed Dec. 27, 1923. Serial No. 683,032. 8 Claims. (Cl. 206—30.)

1. In combination with a receptacle, means for attaching the receptacle in a vertical position to an inclined columnar support including upper and lower plates associated with the receptacle, the lower plate being the wider, an upwardly extending tongue formed on the upper plate and a downwardly extending tongue formed upon the lower plate, said tongues being aligned one with another and being at an angle to the receptacle



equal to the angle of the columnar support to the vertical, and means carried by said tongues and passing about the steering post to secure the same thereto.

1,501,016. COMBINED DISPLAY AND SHIPPING CONTAINER. CHARLES YOUNG, New York, N. Y. Filed Jan. 3, 1921. Serial No. 434,660. 4 Claims. (Cl. 206—44.)
